
Matthews, Claude, politician, born in Bethel, Ky., Dec. 14, 1845; died in Indianapolis, Ind., Aug. 28, 1898. He was graduated at Center College, Danville, Ky., in 1867, and in 1869 went to Vermillion County, Ind., where he devoted his time to farming and cattle raising. He organized the first

breeders' live-stock association formed in the United States. In 1876 he was elected to the Indiana Legislature on the Democratic ticket in a strong Republican county; in 1882 was a candidate for State Senator, but was defeated. In 1890, when the Farmers' Alliance was at the height of its prosperity, he was elected Secretary of State as the representative of the farming interest. In 1892 he was chosen Governor of Indiana. The coal miners struck soon after his inauguration, but he called out the State militia and subdued the rioting in a few days. A question arising as to the payment of the troops, he pledged his personal credit with the banks for \$41,000 in order to secure the money for the soldiers. He had a bitter fight with a corporation organized for the purpose of conducting winter races in Lake County, and won. Mr. Matthews was a Free-Silver Democrat, and had a large following when mentioned as a possible candidate for the presidency in 1896.

Maynard, John Parker, physician, born in Boston, Mass., in 1826; died in Dedham, Mass., Feb. 26, 1898. He was educated in the Boston Latin School and Yale College and was graduated at Harvard Medical School in 1848. After practicing for four years at Newton Lower Falls, he settled permanently in Dedham. Dr. Maynard claimed to have been the discoverer of collodion, a distinction likewise claimed by Josiah Curtis, M. D. Without going into the controversy, it may be said that in a communication addressed to Dr. John D. Fisher, of Boston, under date of March 18, 1848, which communication was read before the Boston Society for Medical Improvement nine days later, Dr. Maynard narrated the history of what he termed his discovery. He also detailed his method of applying liquid adhesive plasters, or ethereal solutions of prepared cotton, in dressing wounds and in surgical operations. The preparation afterward received the name of collodion. The discovery was regarded in medical circles as one of superior importance.

Meredith, Henry Clay, actor, born in Philadelphia, Pa., in 1830; died in New York, Feb. 28, 1898. He began life as a seaman in the United States navy. He enlisted at the outbreak of the civil war and continued in active service until its close with the exception of nine months, during which he was imprisoned at Andersonville. He first appeared on the stage as a supernumerary at the Boston Museum, and gave such evidence of ability that he was soon advanced to the playing of responsible parts. In 1880 he was leading man in support of Adèle Belgarde. He was the first dramatic representative of Copeau in "L'Assommoir" in the United States when that play was produced at the Olympic Theater, New York city, in the autumn of 1880. His next triumph was in the part of Malvolio in an elaborate production of "Twelfth Night" made by Robson and Crane at the Fifth Avenue Theater, New York, in the autumn of 1881. He was thenceforth esteemed an excellent character actor. During the season of 1881-'82 he played the principal male rôles with Mme. Fanny Janauschek in "Brunhilde," "Medea," "Mother and Son," "Macbeth," "Mary Stuart," "Bleak House," and "Deborah." In the seasons that followed until 1889 Mr. Meredith traveled as a star, with his own company, playing a melodrama called "Ranch 10." After the popularity of this play was worn out he returned to the place of a leading man.

Merrill, Joseph, historian, born in Amesbury, Mass., in 1814; died there, Feb. 9, 1898. He was town clerk from 1844 till 1880. In 1844 he was the Democratic candidate for the Legislature in the three-cornered contest in which John Greenleaf

Whittier was the nominee on the Abolitionist ticket. He published "A History of Amesbury" (1881).

Mills, Sebastian Bach, pianist, born in Cirencester, England, March 13, 1838; died in Wiesbaden, Germany, Dec. 21, 1898. At the age of seven he appeared before Queen Victoria. He afterward attended the Leipsic Conservatory, where he received his musical education. He also was a pupil on the pianoforte of Bennett, Moscheles, and Liszt, and in harmony and composition of Hauptmann and Richter. In 1855 he was organist of the Roman Catholic cathedral at Sheffield. About 1857 he came to New York city. Since 1859 he had appeared as a concert pianist throughout the United States, and in 1859, 1867, and 1878 he made successful tours through Germany. In May, 1897, he went to Wiesbaden, and there established himself in his profession. He was a popular, though not prolific composer. Some of his best-known compositions are "Barcarolle vénétienne," op. 12; "Murmuring Fountain," op. 22; "Recollections of Home," op. 23; "Fairy Fingers," op. 24; "Toujours gai," polka, op. 25; "Rosebud Mazurka"; and "Fair Lillian."

Mitchell, Mrs. Zerviah Gould, Indian princess, born in Massachusetts in 1807; died in North Abington, Mass., March 6, 1898. She was a lineal descendant of Massasoit, representing the seventh generation, and was the sixth generation removed from King Philip. She was educated in Abington and Boston, was married when seventeen years old, and taught a private school in Boston for many years. When seventy-one years old she assisted Ebenezer W. Pierce in the compilation of a work on Indian history.

Mizner, John Kemp, soldier, born in Geneva, N. Y., March 2, 1837; died in Washington, D. C., Sept. 8, 1898. He was graduated at the United States Military Academy and entered the army as brevet 2d lieutenant in the 2d Dragoons, July 1, 1856; was promoted 2d lieutenant, Feb. 28, 1857; 1st lieutenant in the 2d Cavalry, May 9, 1861; captain, Nov. 12, 1861; major in the 4th Cavalry, Jan. 26th, 1869; lieutenant colonel in the 8th Cavalry, Jan. 9, 1886; colonel in the 10th Cavalry, April 15, 1890; brigadier general, May 26, 1897; and was retired June 7 following. In the volunteer service he was commissioned a colonel in the 3d Cavalry of Michigan, March 7, 1862; brevetted brigadier general of volunteers, March 13, 1865; and was mustered out of the service, Feb. 12, 1866. During the civil war he was assigned first to the defenses at Washington; later on he was engaged in the Mississippi campaign and in the siege of Corinth as chief of cavalry of the Army of the Mississippi under Gen. Rosecrans. He joined the army of Gen. Grant, took part in the campaign against Pemberton's troops, and was placed in command of the left wing of the 16th Army Corps under Gen. Oglesby. In the latter part of 1863 his brigade again served at Corinth. In 1864 his command became part of the 7th Army Corps, serving in Arkansas under Gen. Steele. Early in 1865 he was sent with his brigade to New Orleans to take part in the operations against Mobile. After the fall of Mobile the 3d Michigan Cavalry with other troops went under Gen. Merritt to San Antonio, Texas, where it took part in the demonstration along the border; Col. Mizner succeeded Gen. Custer in command of the central district of Texas, where he remained till his regiment was mustered out. In 1867, as captain in the 2d Cavalry, he served on the frontier, accompanying Gen. Dodge, chief engineer of the Union Pacific Railway. In 1888, as lieutenant colonel of the 8th Cavalry, he marched with his regiment from Fort Concho, Texas, to Fort Meade, Dak., a distance of 1,500 miles.

Moebius, Bernard, metallurgist, born in Hartha, Saxony, in 1852; died at sea in May, 1898. He studied chemistry and metallurgy under the best German teachers, and was engaged in mining in Germany, Austria, Spain, and Mexico before settling in the United States, of which he became a citizen. In 1884 he discovered a method of extracting gold and silver from their ores by electricity, which he perfected in 1895. The electrolytic process of parting and refining the precious metals, which bears his name, is now in use in the United States, Mexico, and Europe.

Morrill, Justin Smith, Senator, born in Stratford, Vt., April 14, 1810; died in Washington, D. C., Dec. 28, 1898. His early life was spent on his father's farm, and he was educated in the common schools and academies near his home. He engaged in mercantile pursuits till 1848, when he turned his attention to agriculture. Without seeking a nomination, he was unanimously named for the national House of Representatives in 1854, and on Dec. 3, 1855, began his long career in Congress. He was re-elected for the five succeeding terms, and was then transferred to the Senate as a Republican, taking his seat March 4, 1867. From that time his service was continuous, and he had the longest unbroken term in the history of the Senate. For this reason he was known as "the Father of the Senate." In 1855 he delivered a speech in the House of Representatives in opposition to the admission of Kansas as a slave State. He opposed the tariff bill pending in 1857 because it failed to care properly for the agricultural interests; and in 1861 he came into national prominence through the Morrill tariff, a measure prepared largely by his own labors. At that time he was the leading working member of the Committee on Ways and Means and chairman of the Sub-Committee on Tariff and Taxation. When he became Senator, in 1867, he was almost immediately made a member of the Committee on Finance, and a few years later its chairman, which place he held until his death. He also served on the Committee on Public Buildings and Grounds, Education and Labor, Census, and Revolutionary Claims, and on the Select Committee on Additional Accommodations for the Library of Congress. He took part in every important controversy over either tariffs or coinage, and his speeches against the re-monetization of silver are noted. His literary labors were confined almost entirely to the preparation of bills and reports to be submitted to Congress. He published one book, however, "The Self-consciousness of Noted Persons" (1886). Senator Morrill was for years a trustee of the University of Vermont and the Vermont State Agricultural Society, and he received the degree of LL. D. in 1874. He also received the degree of M. A. from Dartmouth College in 1857, and LL. D. from the University of Pennsylvania in 1884.

Morse, Elijah Adams, manufacturer, born in South Bend, Ind., May 25, 1841; died in Canton, Mass., June 5, 1898. He was of New England ancestry, and when eleven years old accompanied his father to Massachusetts. He was educated in the public schools of Massachusetts and at Onondaga (N. Y.) Academy, and engaged in manufacturing in Canton. In 1860 he enlisted in the 4th Massachusetts Volunteers as a private. He served three months under Gen. Butler in Virginia and a year under Gen. Banks in Louisiana, and was taken prisoner at the capture of Brashear City, La. On returning home he resumed manufacturing. In 1876 he was elected to the State House of Representatives; in 1877 to the Governor's Council; in 1886 and 1887 to the State Senate; and in 1888, 1890, 1892, and 1894 to Congress as a Republican. Both in the Legislature and in Congress he earnestly

advocated the cause of free public schools, restriction of immigration, additional naturalization requirements, and safeguards for the ballot. (See GIFTS AND BEQUESTS.)

Mueller, Louis, clergyman, born in Bavaria, Germany, March 23, 1819; died in Charleston, S. C., April 14, 1898. His father was a royal forester. The son received his preparatory training in the gymnasium of Zweibruecken, Bavaria, and in the University of Utrecht, Holland, where he became distinguished as a scholar. In 1842 he emigrated to New York and was licensed as a minister in the Lutheran Church. After serving congregations in New York and Brooklyn for six years, he was constrained by failing health to seek a milder climate and in February, 1848, he removed to Charleston, S. C., where he entered on his duties as pastor of the congregation which he served to the end of his life. He received the degree of D. D. from Newberry College, South Carolina. Dr. Mueller was a distinguished scholar, a critical master of the principles of music and art, and an eloquent speaker.

Mundweiler, Fenton, clergyman, born in Germany about 1828; died in St. Meinrad, Ind., Feb. 14, 1898. He was educated and became a Roman Catholic priest in his native country, came to the United States soon after his ordination, and was first assigned to missionary work among the Germans of Kentucky and Indiana. When the late Bishop Martin Marty (see "Annual Cyclopædia" for 1896) erected St. Meinrad's priory in Spencere County, Ind., in 1865, and was made its first superior. Father Mundweiler was one of several German and Swiss priests whom he gathered there. In 1870 St. Meinrad's was raised to the rank of an abbey, the priests connected with it were organized into the Helveto-American congregation, and Dr. Marty was appointed a mitred abbot. A few years later Dr. Marty resigned his office to engage in missionary work among the Sioux Indians, and Father Mundweiler was appointed his successor as abbot. The work that Dr. Marty had projected both for the abbey and for the theological seminary he had established in connection with it was earnestly taken up by his successor, and was carried forward till his death with large results.

Munger, Albert A., manufacturer, born in Chicago, Ill., in 1845; died in Mackinac, Mich., Aug. 27, 1898. The system of elevators known as the Munger-Wheeler system was begun by his father, and he himself continued to operate them till 1890. He was a patron of the Art Institute of Chicago, and his pictures, which were on exhibition there at the time of his death, were valued at \$306,000. One of them, "The Bathers," by Bougereau, which was Mr. Munger's favorite, cost \$28,000. Another well-known painting is "The Vidette," by Meissonier, which cost \$36,000. Munkacsy's "The Wrestler's Challenge" and Gérôme's "The Grief of the Pasha" are also in the collection, which by Mr. Munger's will was bequeathed to the Art Institute. (See GIFTS AND BEQUESTS.)

Nash, Stephen Payu, lawyer, born in Albany, N. Y., Aug. 26, 1821; died in Bernardsville, N. J., June 4, 1898. He was a descendant of Thomas Nash, one of the original settlers of New Haven, Conn., and was educated at the Albany Academy and the French College at Chambly, Canada. He studied law in Saratoga, and assisted Judge Cowen and Nicholas Hill in their work in the voluminous "Cowen and Hills Notes to Phillips's Evidence." He was admitted to the bar in January, 1843, and returned to Albany to become a partner of Mr. Hill, then State reporter, whom he assisted in the later volumes of his reports. Two years afterward he settled in New York city. During his long profes-

sional career he particularly distinguished himself in equity cases. He also became an expert on laws affecting religious corporations. Mr. Nash was a trustee of Columbia University and of the General Theological Seminary of the Protestant Episcopal Church, a former president of the New York Law Institute and of the Association of the Bar of New York city.

Neafie, Jacob G., manufacturer, born in Monmouth County, N. J., Dec. 25, 1815; died in Philadelphia, Pa., Jan. 16, 1898. In early life he went to New York city, where he acquired his education and business training. At the time of his death he was president of the Neafie and Levy Ship and Engine Building Company. Despite his age he continued to direct his extensive business till within a few days of his death. The firm operates a large plant on Delaware river, in Philadelphia, which was established in 1844 as the Penn Iron Works. During the Mexican War the firm built vessels for the Government, and during the civil war it constructed the engines for 120 naval vessels, some of them the largest in the service. (See GIFTS AND BEQUESTS.)

Newton, George Baxter, benefactor, born in West Hartford, Vt., Sept. 10, 1833; died in Tarrytown, N. Y., Feb. 11, 1898. In his infancy he was taken by his parents to Norwich, Vt., where he acquired his early education and began working. In 1851 he settled in Mauch Chunk, Pa., and engaged in coal mining. Two years afterward he removed to Philadelphia, and he continued in the anthracite coal business for thirty-six years, a large part of the time in association with the late Asa Packer. After retiring from business he established an elegant estate in Tarrytown. Among all the charitable and philanthropic objects of his aid his largest interest was in the Tarrytown Public Hospital, which he founded several years ago, and of which he was president. Every day he went to the hospital, visited each ward, and personally looked after the comfort of the inmates.

Northrop, Birdsey Grant, educator, born in Kent, Conn., July 18, 1817; died in Clinton, Conn., April 27, 1898. He was graduated at Yale in 1841, and at its divinity school four years later, and was ordained in the Congregational Church in Saxonville, Mass., in 1847. In 1857 he became agent of the Massachusetts State Board of Education, and in 1866 secretary of the Board of Education of Connecticut. While holding the last office he was intimately connected with the movement for furnishing an American education to Chinese and Japanese youth who were sent to the United States. When seventy-eight years old he went to Japan, where he was received with special honor and witnessed the outgrowth of his efforts. During the last years of his secretaryship he gave much time to village improvement and ornamental tree planting, and after his retirement from the office in 1882 he applied himself with enthusiasm to the promotion of these interests throughout the country. He originated and introduced the observance of Arbor Day in the schools, and was widely known as the "Father of Village Improvement Societies." In 1863-'64 he was a member of the Board of Visitors to the United States Military Academy; in 1864-'66 was president of the American Institute of Instruction; in 1866, president of the National Association of School Superintendents; and in 1873, president of the National Educational Association. It was also through his efforts that the late Daniel Hild, of Guilford, Conn., gave the American Missionary Association \$1,500,000 for the benefit of the freedmen. Williams College gave him the degree of LL. D. in 1872.

O'Brien, Veronica (Mother Hieronymo), born in Washington, D. C., April 19, 1819; died in Roches-

ter, N. Y., Jan. 30, 1898. She entered the order of the Sisters of Charity at Emmitsburg, Md., at the age of twenty-two. In 1843 she began mission work in Pittsburg, was later sent on a mission to Norfolk, W. Va., and went to Buffalo, N. Y., to care for victims of the ship fever in 1856. She went to Rochester, N. Y., in 1857 and opened a hospital in a two-room cottage, caring for many cases of typhoid fever. When the civil war began the quarters were enlarged, and 700 soldiers were there at a time, thousands in all receiving her care. From this grew the present St. Mary's Hospital, which was completed in 1865. Mother Hieronymo was sent on a mission to New Orleans in 1870, in 1871 returned to Rochester to Nazareth Convent, and soon afterward became Superior of St. Patrick's Orphan Girl's Asylum, where she remained till June, 1873. With the help of generous friends she established in that city a Home of Industry for young girls, where they might learn housework and receive a good Catholic education, and through her efforts a well-appointed building was erected for this purpose in 1888. Here she established an employment bureau, where no fee was charged those applying for situations, and all who were sent out had received careful training. Many young women working in the city whose homes were out of town boarded at the home, where their welfare and their pleasures were alike looked after. Mother Hieronymo was widely known and beloved by those of every creed. It was said that her only fault was that she gave credence to any who told of misery or want. A large company of those who had received benefits or admired her disinterested philanthropy assembled at her funeral.

Osborn, Thomas A., diplomatist, born in Meadville, Pa., Oct. 26, 1836; died there, Feb. 4, 1898. He received a common-school education, learned the printer's trade, studied law, and was admitted to the bar at Pontiac, Mich., in 1857. Removing to Topeka, Kan., to practice, he was elected attorney of Doniphan County in 1858, State Senator in 1859, President of the Senate and Lieutenant Governor of the State in 1862, and Governor in 1872 and 1874. He was also United States Marshal in 1864-'66. In May, 1877, he was appointed United States minister to Chili, where he served four years and conducted important negotiations between various South American governments. On the expiration of his term he was appointed minister to Brazil, and he served there another four years. For special services to the empire, he received from the Emperor the highest honor that could be conferred on a foreigner, the Grand Cross of the Order of the Rose.

Packard, Silas Sadler, educator, born in Cummington, Mass., April 28, 1826; died in New York city, Oct. 10, 1898. In 1833 he removed with his father to Ohio, and at the age of twelve he began to teach, first in Ohio and then in Kentucky. A part of his work was the painting of portraits. In 1848-'51 he was a teacher of penmanship in Cincinnati. He taught writing, bookkeeping, and drawing in Lockport, N. Y., in 1851-'53. In the latter year he founded the "Ningara River Pilot," in Tonawanda, N. Y., and conducted it till 1856, when he became associated with the business college of Bryant & Stratton in Buffalo. After a brief engagement in Chicago he began his work in New York city in 1858, by establishing a business college in connection with Bryant & Stratton. In 1859-'60 he prepared a series of text-books on bookkeeping, which were considered standard works. More recently he published "The Packard Manual of Bookkeeping and Correspondence" and "The Packard Arithmetic." His scheme of instruction was copied by the business schools in Paris, Rouen, and Antwerp.

In 1868-'70 he published "Packard's Monthly," in which appeared the famous article entitled "The Wickedest Man in New York." In 1893 he was president of the Congress of Business Education at the World's Fair in Chicago. Mr. Packard was a ready and entertaining public speaker.

Parker, Jennie (MRS. MARY JANE PARKER CHAMPNEY) actress, born in Athens, N. Y., in 1836; died in Philadelphia, Pa., Dec. 2, 1898. She was one of the most versatile actresses of the United States during a long career—as a member of stock companies and as a star. Equally admirable in tragedy and comedy, she was for many years a great favorite in the Western States and in California. Her first appearance on the stage was at the old Eagle Street Theater in Buffalo, as Duke of York in "Richard III," with the elder Booth as Gloster, in 1845. She then became a member of the Eagle Street Theater stock company, and for five years served an arduous apprenticeship, during which she rose to a leading place. She married in 1853 Frederick M. Kent, a popular actor, with whom she went to California and engaged successfully in joint starring performances for several years in San Francisco, Sacramento, and the mining towns of the Sierras. Mr. Kent died on Dec. 24, 1857, and his widow continued to play as a leading representative of the full round of standard dramatic heroines until 1863, when she married Mr. Champney and retired from the stage. Her last marriage was unfortunate, and, a modest fortune acquired by her ability as an actress having been dissipated, she separated from her husband and endeavored to resume her calling. After playing for a few years as leading woman in Boston, Albany, and Philadelphia, she retired to the Forrest Home near Philadelphia, where she remained until her death.

Parsloe, Charles Thomas, actor, born in New York city, Oct. 1, 1836; died there, Jan. 22, 1898. He was the son of an elder Charles Thomas Parsloe, an English actor, who came to the United States in 1829. The youngest Parsloe became a call boy at Burton's Chambers Street Theater in 1850. After a time he was intrusted with small parts and acquired a reputation as an actor of ability. He went in 1857 to Wallack's Theater, in Broadway near Broome Street, and here he became popular as a comic dancer and pantomimist as well as an eccentric comedian. After some years of service in the stock companies at Wallack's and the Union Square Theaters he shared the honors of the success of Bartley Campbell's play "My Partner" at the latter playhouse, Sept. 16, 1879. His representation of a good-natured California Chinaman, "Wing Lee," a character strange to metropolitan audiences, was a positive element in the favor with which the play was accepted. A business association between Louis Aldrich and Mr. Parsloe resulted, and "My Partner" was played by them for many years in the principal theaters of the United States and Canada with great financial and artistic profit. Mr. Parsloe and Mr. Aldridge always played their original parts in the drama, the former the Chinaman and the latter Joe Saunders, the heroic miner. Mr. Parsloe retired from the stage about six years before his death.

Parvin, Theophilus, physician, born in Buenos Ayres, Argentine Republic, Jan. 9, 1829; died in Philadelphia, Pa., Jan. 29, 1898. He was graduated at the University of Indiana in 1847, and at the medical department of the University of Pennsylvania in 1852, and settled in Indianapolis, Ind., to practice. In 1864-'69 he held a professorship in the Ohio Medical College; in 1869-'72 in the medical department of the University of Louisville; and in 1872-'83 that of Obstetrics and Diseases of Women and Children in the Indiana Medical College.

From 1883 till his death he held the chair similar to the last in Jefferson Medical College, Philadelphia. He was president of the Indiana State Medical Society in 1861, and of the American Medical Association in 1879. Dr. Parvin was a high authority on his specialties and his technical works. An original treatise on "The Science and Art of Obstetrics" (Philadelphia, 1886) and an edition of "Winchel on Diseases of Women" (1887) were cordially received.

Peet, Isaac Lewis, educator, born in Hartford, Conn., Dec. 4, 1824; died in New York city, Dec. 27, 1898. He was graduated at Yale in 1845, and at once entered upon his life work as an instructor of the deaf and dumb. In 1867 his father retired from the principalship of the New York Institute after a service of thirty-six years, and the son, succeeding him, served for twenty-five years, when he was retired with the title of principal emeritus. He was graduated at Union Theological Seminary in 1849, but was never ordained. Columbia College conferred the degree of LL. D. upon him in 1872. He was a member of, and held office in, many societies connected with his work. In 1886 his inaugural address as president of the Medico-Legal Society of New York on "The Psychical Status and Criminal Responsibility of the Uneducated Deaf and Dumb" attracted much attention. He was a prolific writer on subjects relating to his special work. His chief works were "A Monograph on Decimal Fractions"; "Language Lessons for the Deaf and Dumb"; and "A Manual of Vegetable Physiology."

Pepper, William, physician, born in Philadelphia, Pa., Aug. 21, 1843; died in Picasanton, Cal., July 28, 1898. He was the second son of William Pepper, M. D., for several years professor in the University of Pennsylvania, and was graduated at the collegiate department of that institution in 1862, and at the medical in 1864. In 1868 he was chosen lecturer on morbid anatomy in the university, and in 1870 lecturer on clinical medicine. From 1876 till 1887 he was Professor of Clinical Medicine, and he then succeeded Dr. Alfred Stillé as Professor of the Theory and Practice of Medicine. In 1881 he was elected provost of the university, and he held the office till 1894, when, on resigning, he presented the university with \$50,000. During his administration as provost the number of professors and instructors increased from 88 to 268, and of students from 981 to 2,180; the amount of land belonging to the institution, from 15 to 52 acres; and the value of grounds, buildings, and endowments, from \$1,600,000 to more than \$5,000,000. The Wharton School of Finance and Economy, the School of Philosophy, the School of Biology, the School of American History, and the departments of veterinary medicine, archaeology and palæontology, and hygiene were added during this period. Dr. Pepper was also chiefly instrumental in securing the establishment of the University Hospital, on a site given by the city at his solicitation. His most important work in the development of the university was in the line of higher medical education. The extension of the course of study to four years was a result of his appeals to the trustees and friends of the institution and his personal pledge to give \$50,000 toward a permanent endowment of \$250,000 for the medical department and \$1,000 annually for five years toward a guarantee fund of \$20,000 per annum during that time. Dr. Pepper was medical director of the Centennial Exposition of 1876; was the founder of the "Philadelphia Medical Times," and its editor in 1870-'71; was largely instrumental in the founding of the Pennsylvania Museum and School of Industrial Art; was for many years a member of the Assay Commission of the United

States mint; and was president of the Association of American Physicians in 1891, and of the first Pan-American Medical Congress in Washington in 1893. He had an exceptionally large private practice, but found time to perform a large amount of literary and editorial work, the most important of which was the editing of the "Systems of Medicine by American Authors" (5 vols., Philadelphia, 1885-'86). His publications include "Trephining in Cerebral Disease" (1871); "Local Treatment of Pulmonary Cavities" (1874); "Sanitary Relations of Hospitals" (1875); "Higher Medical Education: The True Interest of the Public and the Profession" (1877); "Report of the Medical Department of the Centennial Exposition" (1877); "Catarrhal Irritation" (1881); "Epilepsy" (1883); "Phthisis in Pennsylvania" (1886); and "A Text-book of the Theory and Practice of Medicine" (1893).

Perry, William Stevens, clergyman, born in Providence, R. I., Jan. 22, 1832; died in Dubuque, Iowa, May 13, 1898. He was a nephew of Bishop Stevens of Pennsylvania and was graduated at Harvard in 1854. He took deacon's orders in the Episcopal Church in 1857 and priest's orders in 1858, and after serving as assistant in St. Paul's Church, Boston, from May to October, 1858, became rector of St. Luke's Church, Nashua, N. H., where he remained until April, 1861. He then assumed the rectorship of St. Stephen's Church, Portland, Me., which he held until November, 1863, and after serving for a year as an editor of the "Church Monthly" became rector of St. Michael's Church, Litchfield, Conn., remaining there until April, 1869. From 1869 to 1876 he was rector of Trinity Church, Geneva, N. Y., and while there was for two years Professor of History in Hobart College, and from April to September, 1876, president of that institution. On Sept. 10, 1876, he was consecrated Bishop of Iowa. He was widely known throughout the Anglican communion, and was the recipient of more honorary degrees than any bishop of the American Episcopal Church. He was much given to literary pursuits, and the number of his published works, edited and original, is very large. The principal ones include "Journals of the General Conventions of the Protestant Episcopal Church," with illustrative notes, with F. L. Hawks (Philadelphia, 1861); "Documentary History of the Protestant Episcopal Church," with F. L. Hawks (New York, 1863-'64); "Historical Collections of the American Colonial Church" (1871-'78); "Life Lessons from the Book of Proverbs" (New York, 1872); "Some Summer Days abroad" (Davenport, 1880); "The Church's Year" (Davenport, 1881); "The History of the American Episcopal Church, 1587-1883" (Boston, 1885); "General Ecclesiastical Constitution of the American Church" (1890); "The American Church and the American Constitution" (1895); "The Episcopate in America" (New York, 1895). Bishop Perry was secretary to the House of Deputies at the General Convention of 1868, and also at those of 1871 and 1874, and was historiographer of the American Church from 1868 until his death.

Peters, Augustus W., politician, born in St. John, N. B., in 1844; died in New York city, Dec. 29, 1898. He studied law in St. John till 1867, when he removed to New York and became a stock broker. In 1878 he was made chairman of the Consolidated Stock and Petroleum Exchange, which office he held till he was elected president of the Borough of Manhattan in 1897. He had served but one year out of the four at the time of his death. He was a prominent figure in Tammany Hall in the days of John Kelly, and for many years he was chairman of the General Committee of that organization.

Pillsbury, George Alfred, manufacturer, born in Concord, N. H., in 1816; died in Minneapolis,

Minn., July 17, 1898. His early life was passed in Concord and Warren, N. H. His son Charles first went to Minneapolis and engaged in milling. The success of the venture induced the father and two other sons to join Charles, and in 1872 the firm of Charles A. Pillsbury & Co. was formed. This in 1889 was merged into the Pillsbury-Washburn Flour Mills Company. The development of the business of the Pillsburys was coextensive with that of the industry that has made Minneapolis one of the largest markets for grain in the world. One of the mills of the firm is the largest of its kind in existence, having a capacity of 10,500 barrels a day, and the entire plant can turn out 17,500 barrels a day. Mr. Pillsbury was one of the most widely known men in the Northwest, and had extensive lumber and financial interests. All the family were noted for their public spirit and generosity, and the father's benefactions in his lifetime aggregated more than \$500,000. (See GIFTS AND BEQUESTS.)

Pillsbury, Parker, abolitionist, born in Hamilton, Mass., Sept. 22, 1809; died in Concord, N. H., July 7, 1898. When five years old he was taken to Henniker, N. H., where he grew up on his father's farm with only such education as the common schools afforded. After reaching his majority he worked for three years in Lynn, Mass., then returned to farm work, and in 1835 entered Gilmanston Theological Seminary, where he was graduated three years later. He continued his studies for a year at Andover, and was then settled over the Congregational Church in New London, N. H. Within a year he was so stirred by the pleas of William Lloyd Garrison in advocacy of the abolition of slavery that he abandoned the ministry and joined the band of antislavery lecturers who traveled over New England and the West. Mr. Pillsbury was one of the most zealous and effective of the abolition orators, and represented the New Hampshire, Massachusetts, and American Antislavery Societies. He was sent to England in 1854 and delivered addresses in the principal cities. He was at times editor of the "Herald of Freedom," in Concord, and of the "National Antislavery Standard," New York. After the legal extinction of slavery he urged the continuance of the American Antislavery Society in behalf of the political elevation of the freedmen, and when this course was deemed inexpedient he engaged in the cause of woman suffrage. In 1868-'70 he was associated with Elizabeth Cady Stanton and Susan B. Anthony in editing "The Revolution" in New York, and when that publication was discontinued he became a preacher to free religious societies in several Western cities till advanced years forced him into retirement. His reminiscences of the antislavery cause and its leaders were published under the title of "Acts of the Antislavery Apostles" (Rochester, 1883).

Plaisted, Harris Merrill, lawyer, born in Jefferson, N. H., Nov. 2, 1828; died in Bangor, Me., Jan. 31, 1898. He was brought up on a farm, was graduated at Waterville College (now Colby University) in 1853, and in 1855 at the Albany Law School. The following year he was admitted to the bar and settled in Bangor to practice. On Oct. 30, 1861, he was commissioned lieutenant colonel of the 11th Maine Volunteers. He was promoted colonel May 12, 1862; took part in McClellan's Peninsula campaign; commanded a brigade before Charleston; served under Grant in the movements against Richmond and Petersburg, leading the "Iron Brigade"; and was brevetted brigadier general and major general of volunteers in February and March, 1865. After the war he returned to his practice in Bangor. In 1867-'68 he served in the Maine Legislature, in 1868 was a delegate to the National Re-

publican Convention, and in 1873-'75 was Attorney-General of the State. While holding the last office he was elected to Congress as a Republican, to fill a vacancy. In 1878 he joined the national Greenback party, and in 1880 was elected Governor of Maine, through a fusion of the Greenback and Democratic parties, after a close and bitter fight. For several years after his retirement he was editor of "The New Age," in Augusta, Me.

Poland, John Scroggs, military officer, born in Princeton, Ind., Oct. 14, 1836; died in Asheville, N. C., Aug. 8, 1898. He was graduated at the United States Military Academy and appointed a 2d lieutenant in the 2d Infantry in May, 1861; was promoted 1st lieutenant the following month; captain, June 27, 1862; assigned to the 6th Infantry, July 14, 1869; major, 18th Infantry, Dec. 15, 1880; lieutenant colonel, 21st Infantry, March 1, 1886; colonel, 17th Infantry, Aug. 1, 1891; and brigadier general in May, 1898. He was brevetted major, Dec. 13, 1862, for gallant services in the battles of Antietam, Shepardstown Ford, and Fredericksburg, and lieutenant colonel, May 3, 1863, for the battle of Chancellorsville. Gen. Poland served with the Army of the Potomac till after the battle of Gettysburg, and was then assigned to the defenses of Washington. In 1865-'69 he was Assistant Professor of Geography, History, Ethics, and Drawing at the United States Military Academy, and during the next ten years was principally employed on frontier duty. He was chief of the department of law at the United States Infantry and Cavalry School, in Leavenworth, Kan., in 1881-'86. At the beginning of the war with Spain he was commissioned a brigadier general, and at the time of his death was in command of the 2d division, 1st Army Corps, at Chickamunga Park, Ga. He contracted typhoid fever in the camp, and went to Asheville a few days before his death with the hope of recovery. Gen. Poland was author of "Digest of the Military Laws of the United States from 1861 to 1868" (Boston, 1868) and "The Conventions of Geneva of 1864 and 1868 and St. Petersburg International Commission" (Leavenworth, 1886).

Pool, Maria Louise, author, born in East Abington (now Rockland), Mass., in August, 1841; died there, May 19, 1898. She was educated in the public schools of her native town and prepared herself for teaching, but after a year of that employment she was obliged to give it up on account of her health. She spent several seasons in the South and among the Carolina mountains, where she found her inspiration for literary work. Her first writings comprised the "Ransome" letters in the "New York Tribune." Subsequently she made a specialty of depicting the life and character of New England, where almost all her life was passed. Her best-known works are "Dolly" and "Against Human Nature," both relating to life in the Carolina mountains, "A Vacation in a Buggy," Rowen in Boston, "Mrs. Keats Bradford," "The Two Salomes," "Katharine North," "Out of Step," "In the First Person," "In a Dyke Shanty," "Mrs. Gerald," and "Friendship and Folly" (1898).

Potts, Stacy Gardner, organist, born in Trenton, N. J., in 1858; died in Brooklyn, N. Y., April 11, 1898. He was graduated at the Columbia law school in 1879. After admission to the bar he practiced with his father till the latter's death, and then abandoned his profession for literature and music. From 1881 till his death he was continuously employed as organist and choir master in churches in New York and New Jersey, his last engagement being with the Church of the Epiphany, in Brooklyn. For several years before his death he was one of the editors and the musical critic of "The Churchman," the American correspondent of

"The London Musical Times," and a musical writer for "The Living Church" and other publications. He was a skillful director and performer, and composed several popular hymns.

Purvis, Robert, abolitionist, born in Charleston, S. C., Aug. 4, 1810; died in Philadelphia, Pa., April 15, 1898. He was a son of William Purvis, a successful cotton merchant of English birth in Charleston, by a free-born woman of Moorish descent. In 1817 the father, who had retired from business, sent the mother and their three sons to Philadelphia, expecting to settle permanently in England. On his own arrival, finding there was no school of a high grade for colored children, he established one on Spruce Street, and paid the teacher's salary for a year. The elder Purvis, who was a practical abolitionist even at that early day, died before completing arrangements to return to England, and Robert was educated in various schools in Pennsylvania and New England, finishing at Amherst College. He made his permanent home in Philadelphia. He first became interested in antislavery work in 1830 by making the acquaintance of Benjamin Lundy and William Lloyd Garrison, the latter having just been released from a Baltimore prison. In 1833 he was one of sixty persons who organized the American Antislavery Society in Philadelphia, of which he was vice-president for many years, and of which also he was the last survivor. He was also for a long time president of the Pennsylvania Antislavery Society, and was an organizer of the famous "underground railroad." His house was one of the best-known stations on this "road," and his horses, carriages, and personal attendance were always at the service of fugitive slaves. During the period 1833-'61 his life was frequently in peril, and on one occasion he and the gentle Whittier were mobbed together in Pennsylvania Hall. After the proclamation of emancipation he became first vice-president of the Woman's Suffrage Society, and in recent years he was active in the local movement for better municipal government.

Putnam, Mrs. Mary Traill Spence (Lowell), author, born in Boston, Dec. 3, 1810; died there in June, 1898. She was the daughter of the Rev. Charles Lowell and the elder sister of Hon. James Russell Lowell, and married Samuel R. Putnam, a Boston merchant, in 1832. She contributed occasionally to periodicals, and translated from the Swedish Fredrika Bremer's "The Handmaid" (1844). She was also the author of "Records of an Obscure Man" (1861); "The Tragedy of Errors" (1862); "The Tragedy of Success" (1862), the two last-named works being the two parts of a dramatic poem; "Memoir of William Lowell Putnam" (1863); "Fifteen Days" (1866); and "Memoir of Charles Lowell" (1885).

Quintard, Charles

Todd, clergyman, born in Stamford, Conn., Dec. 22, 1824; died in Meridian, Ga., Feb. 15, 1898. He was a medical graduate of the University of the City of New York in 1847, and for a time practiced his profession in Athens, Ga. He was subsequently professor for several years in a medical college at Memphis, Tenn. He took deacon's orders in the Episcopal Church in 1855, and was admitted to the priesthood the next year. During 1857 he was rector of Calvary Church,

Memphis, and from 1858 to 1862 of the Church of the Advent at Nashville. From 1862 to 1865 he served as chaplain of the 18th Tennessee Regiment in the Confederate army, and on Oct. 11 of the latter year was consecrated Bishop of Tennessee, the ceremony being held in St. Luke's Church, Philadelphia. In 1866 he began the restoration of the University of the South at Sewanee, Tenn., which had been ruined by the civil war, and he was able by his untiring efforts to put it in a more flourishing condition than ever before. He was an "advanced" Churchman, but was not unduly aggressive, and under his care the Episcopal Church in Tennessee has grown and prospered.

Rains, George Washington, military officer, born in Craven County, N. C., in 1817; died in Newburg, N. Y., March 21, 1898. He was a brother of Gen. Gabriel J. Rains of the Confederate army, and was graduated at the United States Military Academy in 1842. He entered the army as a second lieutenant of engineers, but in the following year was transferred to the 4th United States Artillery. In 1844-'46 he was on duty at the Military Academy as Assistant Professor of Chemistry, Mineralogy, and Geology. During the Mexican War he served on the staffs of Gens. Scott and Pillow, and won the brevets of captain and major for gallantry at Contreras, Churubusco, and Chapultepec. In 1849-'50 he took part in the Seminole Indian War in Florida, and in 1856 he resigned his commission and engaged in the manufacture of iron at Newburg, N. Y. When the civil war broke out he offered his services to the Confederacy, and was commissioned a colonel in the Confederate army and assigned to the building and equipment of a powder mill at Augusta, Ga. He was in charge of these works through the war, and was promoted to brigadier general for his services there. Two years after the war he became Professor of Chemistry and Pharmacy in the medical department of the University of Georgia, and for many years was also dean of the faculty. Gen. Rains was interested in the construction of portable steam engines, and had obtained several patents for improvements thereon. Besides numerous essays, he published "Steam Portable Engines" (Newburg, 1860); "Elementary Course of Analytical and Applied Chemistry" (Augusta, 1872); "Chemical Qualitative Analysis" (New York, 1879); and "History of the Confederate Powder Works" (Augusta, 1882). In accordance with his wish, the Confederate flag which he took from the Augusta arsenal when he was about to evacuate that post, and which was the last garrison flag of the Confederacy, was buried with him.

Rasmussen, Peder A., clergyman, born in Stavanger, Norway, Jan. 9, 1829; died in Lanesboro, Minn., Aug. 15, 1898. He emigrated to America in 1850, and in 1851 settled in Lisbon, Ill. He taught school for a few years, and in 1853 the Norwegians who had settled in and around Lisbon called him as their pastor. He studied theology in the seminary at Fort Wayne, Ind., and in 1854 was ordained as a minister of the Lutheran Church. He was pastor at Lisbon forty-four years, was one of the founders of the Norwegian Theological Seminary at Northfield, Minn., and one of the leaders in the United Norwegian Church in America.

Rector, John Benjamin, jurist, born in Jackson County, Ala., Nov. 24, 1837; died in Austin, Texas, April 9, 1898. He accompanied his parents to Texas in 1847, was graduated at Yale in 1859, studied law, and settled in Austin. In the civil war he enlisted in Terry's Texas Rangers, with which he served till the close of the war. Resuming law practice at Bastrop, he was elected district attorney of the 2d Judicial District of Texas in 1866, but lost the office in the following year under the re-

construction Government. From 1871 till 1876 he was a judge of the State court in the same district, and from 1876 till 1892 engaged in private practice in Austin. In March, 1892, he was appointed judge of the United States Court for the Northern District of Texas, which office he held till his death.

Reeder, Howard J., jurist, born in Easton, Pa., in December, 1843; died there, Dec. 28, 1898. He was a son of Andrew H. Reeder, one of the Governors of Kansas during the antislavery struggle there, and was educated at Princeton College. While in the senior year he was appointed a lieutenant in the 1st Regular Infantry, and he served at Island No. 10, where he was wounded and obliged to give up the service. He recovered and became a captain in the 153d Pennsylvania Volunteers, taking part in the battles of Chancellorsville and Gettysburg. After the war he studied law at Harvard, and was admitted to the bar in 1867, taking up his practice in Easton. In 1881 he was appointed judge, and in 1884 was chosen judge of the Northampton Common Pleas. He was commissioned, under appointment by the Governor, judge of the Superior Court, June 28, 1895, and elected in the autumn for the term beginning Dec. 19, 1895.

Remenyi, Edouard, violinist, born in Heves, Hungary, in 1830; died in San Francisco, Cal., May 15, 1898. He was a pupil of Bohn at the Vienna Conservatory, began giving violin recitals in 1849, and traveled to all the principal cities in Europe and America. He was so successful in England that he was appointed solo violin to the Queen. In 1860 he was appointed court violin master to the Emperor of Austria. For several years before his death he was a resident of New York city. He died on the stage of the Orpheum Theater, in San Francisco, when about to begin a response to a recall after an enthusiastic reception given to the first number which he had played on his first appearance in a *vaudeville* performance.

Renier, Monsignor, Antonio, Count, bishop, born in Chioggia, Italy, Aug. 29, 1825; died in New York city, Dec. 11, 1898. He was educated at the University of Padua, where he received the degree of doctor of theology and philosophy. For a time he taught law and edited a newspaper in Florence. He was made secretary to Pope Pius IX, serving in that capacity nearly fifteen years, and received the title of bishop, but never was appointed to a see. After the death of Pope Pius IX he met with reverses, and in 1890 he came to the United States, very poor. He officiated nearly a year in a small church in the southern part of Texas with little success, and then came to New York, where he settled in the Italian quarter, and was beloved because of his modest labors and charities.

Richards, Dexter, benefactor, born in Newport, N. H., in 1810; died there, Aug. 7, 1898. He received a common-school education, and engaged in business with his father till 1853, when he acquired an interest in a flannel mill. He accumulated a large fortune in manufacturing and in financial and railroad enterprises. After holding nearly all the offices in the gift of the town, he served three terms in the lower house of the Legislature and two in the upper. He was a man of large benevolence, and among his gifts to the town were a handsome public library and a high-school building.

Richards, Matthias Henry, educator and author, born in Germantown, Pa., June 17, 1841; died in Allentown, Pa., Dec. 12, 1898. His father was a distinguished theologian of the Lutheran Church. The son was graduated at Pennsylvania College, Gettysburg, Pa., in 1860, and became a teacher and a student of theology. On the invasion of Pennsylvania by Lee's army, 1863, he en-

listed "for the existing emergency" in the 26th Pennsylvania Militia, and shared all its campaign experiences until mustered out. He was ordained in 1864, and supplied various pulpits. In 1865 he became pastor of a congregation at South Easton, Pa., and in January, 1866, he took charge of a congregation at Greenwich, N. J., where he remained until November, 1867. In 1868 he was elected Professor of English and Latin in Muhlenberg College, and removed to Allentown. He held this chair until the spring of 1874, when he became pastor of a Lutheran congregation in Indianapolis, Ind., where he remained until January, 1877, when he was recalled to his former chair in Muhlenberg College. As professor, while nominally of the English language and literature, he taught, at one time or another, everything in the college course except the natural sciences. His place in college he retained until his death. Besides his college work he was connected with the schools of Allentown from 1879 as director, member of the Board of Control, and secretary of the board. He was editor of the "Church Lesson Leaves" and "The Helper," 1880-'96; editorial writer for "The Lutheran," 1884-'98; editor of the "Church Messenger" for several years; a regular contributor to the "Gettysburg Quarterly" and the "Lutheran Church Review"; and from 1896 was associate editor of "The Lutheran" and a contributor to the General Council's new series of Sunday-school publications. He was in demand as a lecturer, preacher, and teacher, especially at the Pennsylvania Chautauqua. In June, 1889, he received the degree of D. D. from Pennsylvania College.

Richmond, George Borden, inventor, born in Chardon, Ohio, in 1849; died in Lansing, Mich., Aug. 3, 1898. He was left an orphan in early life, and went to live with relatives in Watertown, Mich., where he worked on a farm till eighteen years old. Then he studied dentistry, and settled in North Lansing to practice. He was an earnest student, an accomplished chemist, and a genius in mechanics. His undisputed inventions included an electric motor. He claimed the invention of the telephone, and old residents of Lansing testified to his experiments and to the successful working of his device. On applying for a patent he was informed that one had just been granted to Alexander Graham Bell. He accumulated much evidence to substantiate his claims, but allowed them to go by default.

Roberts, Charles W., military officer, born in Oldtown, Me., in 1829; died in Bangor, Me., March 23, 1898. At the outbreak of the civil war he entered the national army as lieutenant colonel of the 2d Maine Volunteers, and was promoted to the command of the regiment. Subsequently he was brevetted brigadier general for meritorious conduct on the field. After the battle of Antietam, in September, 1862, he was forced by illness to take a furlough, but he retained command of his regiment till January, 1863, when his condition led him to resign. He was for a short time collector of the port of Bangor by appointment of President Johnson, but failed of confirmation by the Senate, and he held the office under confirmation from 1887 till 1891. In 1870 and 1875 he was the unsuccessful Democratic candidate for Governor of Maine.

Roberts, Joseph, soldier, born near Middletown, Del., Dec. 30, 1814; died in Philadelphia, Oct. 19, 1898. He was graduated at the United States Military Academy and entered the army as brevet 2d lieutenant in the 4th Artillery, July 1, 1835; promoted 2d lieutenant, June 10, 1836; 1st lieutenant, July 7, 1838; captain, Aug. 20, 1848; major, Sept. 3, 1861; lieutenant colonel, Aug. 11, 1863; colonel, Jan. 10, 1877; and was retired July 2, 1877. In the volunteer service he was commis-

sioned a colonel in the 3d Artillery of Pennsylvania, March 19, 1863; was brevetted brigadier general of volunteers, April 9, 1865; and mustered out of the service Nov. 13, 1865. He served at Fort Hamilton, N. Y., in 1835-'36; took part in the operations against the Creek Indians; and served in the Florida war of 1836-'37 as captain of a regiment of mounted volunteers. In 1838-'39 he was Assistant Professor of Natural and Experimental Philosophy at the Military Academy. He was again sent to Florida, and took part in the Indian war of 1849. In 1853 he commanded Fort Mifflin, in 1857 was transferred to Fort Leavenworth, Kan., and later assumed charge of Fort Monroe. He served through the civil war, was in command of Fort Monroe in 1861, in October of that year was made chief of artillery in the 7th Army Corps, and in 1863 was in charge of the 4th Artillery Corps. After the war he held the office of assistant inspector general of the department in Washington and superintendent of the Artillery School, at Fort Monroe. At the time of his retirement, in 1877, he was on duty at the Presidio, in San Francisco. He published "A Handbook of Artillery" (1860).

Robertson, William H., lawyer and politician, born in Bedford, N. Y., Oct. 10, 1823; died in Katonah, N. Y., Dec. 6, 1898. After preliminary studies in Union Academy, Bedford, he was admitted to the bar in 1847. He practiced in New York city a few years, beginning with 1861; but his life practice was in the adjoining county of Westchester, of which he served as county judge twelve years. Beginning life as a Whig, he afterward became a Republican, and was a delegate to numerous conventions of that party. Between 1848 and 1891 he was three times a member of the State Assembly and eight times a member of the State Senate, of which he was uniformly the chairman of the Judiciary Committee and often the president *pro tem*. He was chairman of the Military Committee of his senatorial district in 1862. In 1876 he was sent to Florida by President Grant to witness the count of the electoral vote. He was a Representative in the 40th Congress. Williams College conferred upon him the degree of LL. D. in 1876. Three incidents in his later life made him a most important factor in the politics of the United States. The first was in May, 1880, when, two months before the Republican National Convention, to which he was a delegate, he announced himself for Blaine as against Grant, thus breaking over the time-honored custom of the "unit rule" that required the votes of all the delegates from a State to be cast for one candidate. He thus became the leader in the movement that resulted in nominating Garfield. The second was in March, 1881, when President Garfield had nominated him for collector of customs of the port of New York. The State Senate, of which he was a member at the time, approved his nomination, but it was not approved by Roscoe Conkling and Thomas C. Platt, who were the United States Senators from New York, and who claimed the privilege of nominating appointees to Federal offices in that State. They thereupon resigned and appealed to the Legislature for a reelection. During the long struggle that followed President Garfield was assassinated. The Legislature refused to return the two Senators, and elected others in their places. Judge Robertson, in the meantime, had been confirmed by the United States Senate, and he held his office four years, ending in 1885. Upon his retirement his conduct of the office was commended even by men of other political parties. The third and most far-reaching incident arose out of a trivial proxy in the Republican State Convention of 1892. The delegates were

evenly balanced between the two candidates for Governor, Alonzo B. Cornell (for re-election) and Charles J. Folger, who was then Secretary of the Treasury under President Arthur. The Blaine men were for Cornell, the Arthur men for Folger, both sides looking to the presidential nomination in 1884. Robertson, who was a delegate to the convention, was for Cornell and Blaine. He was unable to attend, and an alleged proxy from him was voted upon and turned the scale in favor of Folger. After the convention had adjourned it was discovered that the proxy was a forgery. This so incensed the Cornell-Blaine voters that they stayed away from the polls in large numbers, and the election for that reason went to Grover Cleveland by the unprecedented majority of 193,000. When Mr. Blaine was a candidate for the presidency in 1884 he was opposed by enough of the Folger-Arthur men of 1882 to compass his defeat.

Robinson, Frank Torrey, art critic, born in Salem, Mass., July 16, 1845; died in Roxbury, Mass., June 3, 1898. He was educated in Harvard and Warren schools, Charlestown. In his sixteenth year he enlisted in the 5th Massachusetts Volunteers and he served in the North Carolina and Virginia campaigns. On his return from the war he followed various occupations, finally taking up news correspondence. He was local reporter for the Boston "Journal," Boston "Advertiser," and "Bunker Hill Times"; in 1875 began art criticisms; and from 1879 till 1883 was editor of the Boston "Sunday Times." For three years he was art director of the New England Manufacturers' Institute. Subsequently he became art critic for the Boston "Traveler," and later of the Boston "Post." He was editor of a periodical, "American Art," published in Boston between 1886 and 1888; contributed many articles to the "Art Interchange," of New York, under the pseudonym Torrey; and for years acted as literary curator of the Metropolitan Museum of Art, New York, where he edited catalogues and handbooks. He wrote "The History of the 5th Regiment, Massachusetts Volunteers." He also published "Quaint New England"; "Living New England Artists" (1808); "Christmas Morning" (1890); and "Winds of the Seasons" (1890).

Roche, John Alexander, clergyman, born in Stillpond, Md., Aug. 30, 1813; died in New York city, Feb. 15, 1898. He was ordained in the Methodist Episcopal Church in 1834, joining the Philadelphia Conference. Immediately after ordination he took the regular course in the Philadelphia College of Medicine, and afterward practiced for many years, but only to help the poor. His active ministry covered a period of more than sixty years, and extended over charges in Pennsylvania, Maryland, Virginia, Delaware, and New York. He was widely known in his denomination as a preacher, debater, and author, and, besides much work in biography and on themes connected with the doctrine, discipline, or usages of his denomination, he published "Life of the Rev. John Price Durbin, D. D." (New York, 1889) and "Life of Mrs. Sarah A. Lankford Palmer" (1898).

Rogers, William Augustus, physicist, born in Waterford, Conn., Nov. 13, 1832; died in Waterville, Me., March 1, 1898. He was graduated at Brown University with the degree of A. M. in 1857. A call to the mathematical department of Alfred University was promptly accepted, and in 1859 he was made full professor of that subject. In 1864 he enlisted in the United States navy, in which he remained until the autumn of 1865, when he resumed his duties at Alfred and engaged in the building and equipping of the university observatory. In 1866 he was appointed first professor in charge of the department of industrial mechanics,

In 1866-'67 he spent some time in the Sheffield Scientific School of Yale University, specially devoting his attention to those subjects that would fit him for the new appointment. Four years later he resigned his chair at Alfred and became assistant in the observatory of Harvard University, receiving in 1875 further recognition by his promotion to the assistant professorship in astronomy. In 1886 he was called to the chair of Physics and Astronomy in Colby University, Waterville, Me., where he continued until his death, although he had accepted the appointment of Professor of Physics at Alfred, to take effect from April 1. The physical laboratory of which he was to take charge was planned by him, and when the corner stone was laid, June 23, 1897, he delivered the dedicatory address. At Harvard University his special work consisted in observing and mapping all the stars, down to the ninth magnitude, in a narrow belt, a little north of our zenith. The observations on this work extended over a period of eleven years and required fifteen years for their reduction. His results were published in the "Annals of Harvard Observatory," as follow: "Observations made with Meridian Circle, 1871-1872"; "Observations of Fundamental Stars made with Meridian Circle, 1870-1886"; "Catalogue of 8,627 stars between 49° 50' and 50° 10' of North Declination, 1875"; "Discussion of Proper Motions of Zone Stars, 1870-1883"; "Journal of Zone Observations during the Years 1870-1875"; "Journal of Zone Observations during the Years 1875-1883." One of the earliest difficulties that he met with in his researches was the finding of micrometer spider webs that were suitable for his work. After numerous experiments he succeeded in etching glass with the moist fumes of hydrofluoric acid so satisfactorily that he received from the United States Government the order for the plates that were used by the expeditions sent out by this country to observe the transits of Venus. His study of this subject, extending over a quarter of a century, made him an authority in all that pertains to micrometrical work. The articles on "Measuring Machines" and "Ruling Machines" in "Johnson's Universal Cyclopædia" were written by him. He made a specialty of construction of comparators for the determination of differences in length, thus establishing useful working standards of measurement for practical mechanical work, which resulted in the Rogers-Bond Universal Comparator, built by the Pratt & Whitney Company, of Hartford, Conn., who were thus enabled to establish their system of standard gauges. In 1880 he visited Europe and obtained authorized copies of the English and French standards of length, which were used by him as the basis of comparison for bars which he constructed and ruled, and these are now the chief standards in the most important laboratories in the United States. His micrometer rulings, both on metal and on glass, are known to microscopists for their accuracy and for the character and beauty of the lines. Subsequent to his acceptance of a chair in Colby he began the study of certain mercurial thermometers, and by comparison with these he secured a standard for the measurement of very low temperatures. In connection with Prof. Edward W. Morley, he applied optical methods to the determination of minute changes of length, and later determined the coefficient of linear expansion of Jessop steel with a degree of precision never before attained. The degree of A. M. was conferred on him by Yale in 1880, that of Ph. D. by Alfred in 1886, and that of LL. D. by Brown in 1892. In 1873 he was elected a fellow of the American Academy of Arts and Sciences, and in 1880 he was elected a fellow of the Royal Microscopical Society of London, becoming

an honorary fellow a year later, and he was president of the American Microscopical Society in 1887. He was a vice-president of the American Association for the Advancement of Science in 1882-'83, presiding over the section on mathematics and astronomy, and delivered a retiring address in 1883 "On the German Survey of the Northern Heavens," and in 1894 he presided over the section on physics, delivering an address on "Obscure Heat as an Agent in the Expansion of Metals." He invented and manufactured various forms of apparatus, and was the author of nearly 70 published papers that related principally to his specialties.

Romero, Don Matias, diplomatist, born in Oaxaca, Mexico, Feb. 24, 1837; died in Washington, D. C., Dec. 30, 1898. He was educated at the Institute of Arts and Sciences in his native city. In 1853 he went to Mexico city, and entered the

Foreign Office. While employed there he studied law, and was admitted to the bar in 1857. When President Juarez was forced to leave Mexico, in 1857, Señor Romero accompanied him to Vera Cruz, where he continued in the service of the Department of Foreign Relations. In December, 1859, he was sent to Washington as secretary of the Mexican legation, and in August, 1860, was made *chargé*

d'affaires, remaining such till 1863. In that year he returned to Mexico and took part in the war against the French as colonel and chief of staff to Gen. Diaz. Soon after this he was sent to Washington as envoy extraordinary and minister plenipotentiary, resigning at this post from October, 1863, till January, 1868. From 1868 till 1872 he was Secretary of the Treasury in the Cabinet of President Juarez, retiring on account of failing health to devote himself to agriculture in Soconusco. In 1876 he became a Senator, from 1877 till 1878 he again served as Secretary of the Treasury under President Diaz, and in 1880 he was appointed Postmaster-General. In March, 1882, he was again sent as minister to the United States, and remained in that capacity till his death, with an interruption of ten months in 1892, when, for the third time, he was called to serve as Secretary of the Treasury. Señor Romero was a member of the International American Conference, and one of its two vice-presidents; in the conference he voted for the establishment of the Bureau of American Republics, and he was a member of the Executive Committee of the bureau when it was organized. He published more than fifty volumes, chiefly official reports. Some of his more important works are "Circulars and Other Publications made by the Mexican Legation at Washington during the French Intervention" (2 vols., Mexico, 1868); "Coffee Culture on the Southern Coast of Chiapas" (1875); "Correspondence of the Mexican Legation at Washington during the French Intervention" (9 vols., 1870-'85); "Historical Sketch of the Annexation of Chiapas and Soconusco to Mexico" (1877); "The State of Oaxaca" (Barcelona, 1886); "Coffee and India-Rubber Culture in Mexico" (1898); "Geographical and Statistical Notes on Mexico" (1898); and "Mexico and the United States" (1898).—His wife, **Lucretia Allen**, was born in Philadelphia, Pa., in 1851, and died in Atlantic City, N. J., July 29, 1898. She was the daughter of W. E. Allen, of Virginia, and was edu-

cated at the Convent of the Sacred Heart, Manhattanville, N. Y., and at the Chegory Institute, Philadelphia. In 1868 she married Señor Romero, whom she accompanied to Mexico, where she became proficient in the Spanish and French languages. She returned with her husband to Washington in 1882.

Rooker, Myron Holley, journalist, born in Lyons, N. Y., April 17, 1824; died in Albany, N. Y., July 19, 1898. He removed to Albany at an early age, and learned the trade of a printer. For two years he was editor of the "Evening Transcript." In 1839 he became night editor of the "New York Tribune," which place he held until the last year of the civil war. In 1864 he was made manager of the New York State Associated Press. Resigning this office in 1869, he was manager of the New York City Associated Press in Albany till 1881. In 1866 he went to San Francisco in the vain endeavor to combine all the newspapers into one association for collecting and distributing news. In 1870 he became part proprietor and associate editor of the Albany "Sunday Press," and his relations continued after the absorption of the "Knickerbocker" and throughout his life. He was a brother of Thomas N. Rooker.

Rooker, Thomas Newberry, journalist, born in Hudson, N. Y., Dec. 1, 1815; died in New York city, June 6, 1898. He moved, with his father, to Lyons, N. Y., at an early age, and for a short time he was a driver on the Erie Canal. He learned the trade of a printer in Albany and Troy. In 1841 he set type on the first number of the "New York Tribune," and three years later he became foreman, a place that he retained till 1877. He was secretary of the Tribune Association for many years, beginning with 1868. In 1897 he retired from active work, but so great was the appreciation of his services that the association voted to him half pay for the remainder of his life.

Roosevelt, Blanche (Marquise d'ALLIGRI), author and opera singer, born in Sandusky, Ohio, in 1856; died in London, England, Sept. 10, 1898. She was a daughter of W. A. Tucker, first United States Senator from Wisconsin, was educated in music in Italy, and made her *début* at Covent Garden, London, in the rôle of Violetta in "Traviata," under the name of Blanche Roosevelt, in 1876. In 1877 she was engaged for concerts in Milan, where she met and married Signor Mæchetta, who subsequently became Marquis d'Alligri. In 1877, after a short engagement in Holland and Belgium, she retired from the stage and devoted herself to literary work. On Sept. 23, 1879, she reappeared as Josephine, in "Pinafore," at the Opéra Comique, London, and subsequently she came to the United States, where she sang the same rôle, as well as that of Mabel, in "The Pirates of Penzance." She wrote a libretto from Longfellow's "Masque of Pandora," and produced it, with music by Alfred Cellier, in Boston, in 1882. She then permanently relinquished the stage and became correspondent in London for several European and American journals. Her books are "Home Life of Henry Wadsworth Longfellow" (New York, 1882); "Marked 'In Haste'" (New York, 1883); "Stage Struck; or, She would be an Opera Singer" (New York, 1884); "Life and Reminiscences of Gustave Doré" (New York, 1885); "The Copper Queen," a novel (London, 1886); and "Verdi, Milan, and Othello" (London, 1887).

Rosecrans, William Starke, soldier, born in Kingston, Ohio, Sept. 6, 1819; died near Redondo, Cal., March 11, 1898. He was graduated at the United States Military Academy, and commissioned brevet 2d lieutenant in the Engineer Corps, July 1, 1842; promoted 2d lieutenant, April 3, 1843; resigned, April 1, 1854; appointed brigadier general,

May 16, 1861; resigned, March 28, 1867; reappointed brigadier general, Feb. 27, 1889; and was retired from the service March 2, 1889. In the volunteer service he was commissioned colonel of the 23d Ohio Infantry, June 12, 1861; honorably mustered out, June 16, 1861; appointed major general, March 21, 1862; and honorably mustered out of the service Jan. 15, 1866. After his graduation in 1842, he was employed in engineering work at Hampton

Roads for a year; returned to the Military Academy as instructor in engineering for a year, and as Assistant Professor of Natural and Experimental Philosophy for another year. For seven years he served as engineer in harbor and river improvements and at the Washington Navy Yard. He resigned in 1854, and established himself as an architect and civil engineer in Cincinnati; also becoming

superintendent and president of the Cannel Coal Company, and later took charge of the Preston Coal Oil Company. He began his career in the civil war by organizing and drilling the home guard in Ohio; and in June, 1861, was placed in charge of Camp Chase. He was appointed colonel of the 23d Ohio volunteers, and soon afterward was promoted to brigadier general in the regular army. He was second in command to Gen. McClellan in the operations in West Virginia, and fought and won the action at Rich Mountain, July 11, 1861. He commanded the National forces at Carnifex Ferry, W. Va., Sept. 10, 1861, and then went into winter quarters at Wheeling. During the winter of 1861-'62 Gen. Rosecrans was much in Washington. Having plans and opinions of his own for the prosecution of the war, he succeeded in obtaining hearings from both President Lincoln and Gen. McClellan, but his suggestions were not acted upon. In May, 1862, he commanded the right wing of the Army of the Mississippi under Gen. Halleck during the siege of Corinth; June 11, 1862, he was put in command of the Army of the Mississippi; and Sept. 19, 1862, fought the battle of Iuka. On Oct. 3, 1862, he successfully defended Corinth; defeated the Confederates under his classmate Gen. Van Dorn, and repelled them after two days of hard fighting. On Oct. 26, 1862, Gen. Rosecrans relieved Gen. Bnell of the command of the Army of the Cumberland. He established bases and lines of communication, and organized inspector general's and topographical departments, and engineer and pioneer corps. On Oct. 30 he began his memorable march to Nashville, and Nov. 5 defeated a Confederate attack on that city; and on Dec. 31 the two days' fight at Stone River or Murfreesboro began, which resulted in the defeat of the Confederates under Gen. Bragg. By this time Fort Henry, Fort Donelson, and Clarksville had been added to Gen. Rosecrans's department, and he was in command of three army corps. During the spring of 1863 the army was busy with the advance on Tullahoma, which consisted of a series of intricate flank movements to dislodge the Confederates from the mountain passes; and the capture of Tullahoma, July 1, resulted from these operations. During the delay at Nashville and the subsequent movements Gen. Rosecrans had been steadily losing favor at Washington. He was urged forward daily, but protested that he was acting for the best, and stoutly defended his course. Eight months after he had received the thanks of Con-

gress military misfortune overtook him. On Sept. 19 and 20 the right wing of the army which he commanded was defeated at Chickamauga and forced back to Chattanooga, where it was besieged by Gen. Bragg. On Oct. 23, 1863, Rosecrans was superseded in command by Gen. Thomas, and three months later was assigned to the Department of Missouri, succeeding Gen. Schofield. He was deprived of his command without explanation, Dec. 9, 1864, and, retiring to Cincinnati, remained inactive till the close of the war. In 1865 he was offered and refused the Union nomination for Governor of Ohio; and he declined a similar Democratic nomination in 1869. He was appointed minister to Mexico July 27, 1868, and served nine months. From 1869 till 1881 he devoted himself to railway and industrial enterprises, mainly in Mexico. In 1871 he was made president of the San José Mining Company, and in 1878 became president of the Safety Powder Company of San Francisco. He was elected as a Democrat to the House of Representatives in 1880, re-elected in 1882, and served as chairman of the Committee on Military Affairs. In June, 1885, he was appointed Register of the Treasury, and he held the office till May 31, 1893. An act was passed in February, 1889, restoring him to the rank and pay of a brigadier general and placing him on the retired list of the army.

Ross, Lawrence Sullivan, military officer, born in Bentonsport, Iowa, Sept. 27, 1838; died in College Station, Texas, Jan. 4, 1898. His father was a noted Indian fighter, who removed his family to Waco, Texas, a few months after the son's birth. Lawrence was graduated at the University of Northern Alabama in 1858, and returned home just as a United States military force under Major Earl Van Dorn was about to set out on an expedition against the Comanche Indians. He hurriedly raised a company of friendly Indians, reported to Major Van Dorn for service, and in October of that year greatly distinguished himself in the battle of Wichita and also rescued a little white girl who had been an Indian captive from infancy. In 1859 he was commissioned by Gov. Houston a major in the State militia, and placed in command of the Texas Frontier Battalion, with which he did much toward breaking up the Comanche confederation. At the beginning of the civil war Major Ross resigned his commission and entered the Confederate army as a private, soon becoming major of the 6th Texas Cavalry, and in May, 1862, its colonel. For his skill in covering the retreat of Gen. Earl Van Dorn from Corinth, Miss., Col. Ross was promoted to brigadier general. He commanded the Texas cavalry in the Army of the West, and was credited with having participated in 135 actions of all kinds and having 7 horses killed under him, without receiving a scratch. His only wounds were received in his fights with Indians. After the war he engaged in farming, but soon became interested in politics. He was elected sheriff of McLennan County in 1873, member of the State Constitutional Convention in 1875, State Senator in 1881, and Governor of Texas in 1886 and 1888. At the time of his death he was president of the Texas Agricultural and Mechanical College.

Sage, George R., jurist, born in Erie, Pa., in 1828; died in Lebanon, Ohio, Nov. 19, 1898. He was graduated at Granville College (now Denison University) in 1849, and admitted to practice law at Frankfort, Ky., in 1852. In 1852 he was admitted in Ohio; in 1853 became a member of the law firm of King, Anderson & Sage, and so continued till 1857, when he entered into partnership with Thomas Corwin. The firm removed to Lebanon, Ohio, in 1858, where he practiced till Gov. Corwin's death, in December, 1865. He went back to Cincinnati in January, 1866, and, as a member of

the firm of Sage & Hinkle, practiced his profession till 1883, when he was appointed by President Arthur United States Judge for the Southern District of Ohio. He retired from the bench in August, 1898.

Salpoite, Jean Baptiste, clergyman, born in St. Maurice, Puy-du-Dôme, France, Feb. 21, 1825; died in Tucson, Arizona, July 16, 1898. He studied the classics in the College of Clermont, and theology and philosophy in the Seminary of Clermont-Ferrand, and was ordained a Roman Catholic priest in 1851. After a service of eight years as curate and teacher he was sent to the missionary field in New Mexico. For seven years he was parish priest at Mora, and was then appointed vicar-general of Arizona. In 1869 he was promoted to the vicariate apostolic of Arizona, and consecrated as bishop of Doryla *in partibus*. The territory under his jurisdiction was both sparsely settled and extensive, comprising Arizona, New Mexico, and the contiguous part of Texas, but he undertook its management with much ardor. He organized many new congregations, founded schools and hospitals, and in less than sixteen years increased the number of church buildings from fewer than half a dozen to 23, and he had also built 15 chapels. In 1885 he was appointed coadjutor to Archbishop Lamy, of Santa Fé, whom he succeeded in 1888.

Scanlan, William James, author, actor, and singer, born in Springfield, Mass., Feb. 14, 1856; died in White Plains, N. Y., Feb. 19, 1898. In his earliest youth he was noted for a sweet voice and natural musical ability. From his thirteenth year he was known in New England as "the Boy Temperance Singer," accompanying and assisting lecturers on temperance. He began to compose and sing Irish songs when about fifteen years of age. In 1876 he became associated with William Cronin in minstrelsy. The sketches and songs in which this well-remembered "team" appeared were generally written by Scanlan. He subsequently became the leading support of Miss Minnie Palmer in a musical comedy, in the performance of which he remained associated with her for two years. He was then engaged by W. H. Power to head a company in a play called "Friend and Foe," which had been adapted for Scanlan by Bartley Campbell. In this play Scanlan first sang his famous song "Peekaboo!" He also played "The Irish Minstrel" for the first time while under Power's management. In 1881 he was engaged by Augustus Pitou to star in Irish comedy in parts that were to be especially adapted to his powers as a singer. "Shane na Lawn," by James Connor Roach, was the first of this series of popular plays to be produced. To this were added in succession "The Irish Minstrel," "Myles Aroon!" and "Mavourneen," the last from the pen of George H. Jessop. In these plays he sang for the first time his sweet songs "My Nelly's Blue Eyes," "What's in a Kiss?" and "Plain Molly, O!" While playing in the hundredth performance of "Mavourneen" at the Fourteenth Street Theater, New York, on Christmas Eve, 1891, he became insane from the effects of paresis and was removed, first to his hotel, and two weeks afterward to Bloomingdale Asylum, where he remained in helpless imbecility until his death. He was not brilliant as an actor, but his rare gift of minstrelsy gave him the affectionate liking of theater goers. It is said that he wrote and composed music for more than 100 songs.

Schaeffer, Charles A., educator, born in Pennsylvania in 1843; died in Iowa City, Iowa, Sept. 25, 1898. He was graduated at the University of Pennsylvania in 1861, and afterward studied in Germany. He was Professor of Chemistry and Mineralogy at Cornell University from 1869 till 1887, dean of the Cornell Faculty in 1866-'67,

and had been president of the University of Iowa since 1887.

Seguin, Edward Constant, neurologist, born in Paris, France, in 1843; died in New York city, Feb. 19, 1898. He was a son of Dr. Edouard Onesimus Seguin, who came to the United States soon after the revolution of 1848. The younger Seguin was graduated at the College of Physicians and Surgeons, New York, in 1864, and spent two years in the medical department of the National army while a student. A pulmonary trouble contracted in the army unfitted him for professional work in New York city, and, re-entering the army, he spent several years in New Mexico, where his health was completely restored. On the establishment of the Connecticut Hospital for the Insane he was appointed pathologist to it, and he held that post ten years. In 1869-'70 he made a special study of nervous diseases with the best French specialists, and on his return settled in New York for general practice. He became a member of the faculty of the College of Physicians and Surgeons in 1871; was lecturer there on diseases of the spinal cord, and on insanity from 1871 till 1885; and founded a clinic for nervous diseases in 1873. Despite the shock of a terrible domestic tragedy, he continued his professional work till 1896. Dr. Seguin was one of the founders of the American Neurological Association and of the New York Neurological Society. He bequeathed to the Academy of Medicine his special collection of monographs and pamphlets on the nervous system, which he was thirty years in gathering. To the Pathological Laboratory of the College of Physicians and Surgeons he gave all his instruments and appliances for study of the nervous system: his microscopes, objectives, microtomes, knives, models, and charts, his collection of pathological specimens, and all the books in his library relating to the anatomy and physiology of the nervous system.

Seidl, Anton, composer and musical conductor, born in Buda-Pesth, Hungary, May 6, 1850; died in New York city, March 28, 1898. He entered the Leipsic Conservatory in 1870, from which he became in 1872 a pupil of Hans Richter, director of the Opera House at Buda-Pesth. Wagner at this time was preparing the Nibelung music dramas for production at Baireuth, and asked Richter to recommend a young musician for the post of assistant, and Seidl was sent to assume that post. He was a member of Wagner's household, and was the great composer's chief assistant during all the time of the rehearsal and production of the great works that resulted in the musical festival of 1876. In 1878, on the completion of his engagement at Baireuth, Seidl became musical stage manager of the Royal Opera House, Vienna, and in 1879 conductor at Leipsic. In 1882 he was engaged to conduct the performances of Wagner's ring dramas at her Majesty's Theater in London. In 1883 and 1884 he was the conductor of a traveling company that produced the Wagner operas throughout Germany, Austria, Hungary, Italy, Holland, and Belgium. In 1885 he became conductor of the Bremen Opera House. On the death of Dr. Leopold Damrosch Seidl was invited to the conductor's chair of the Metropolitan Opera House, New York city. Although not retained in the place of conductor by Abbey, Schoefel & Gran, he was, under the insistence of Jean de Reszke, engaged to conduct the Wagner operas during the seasons of 1895-'96 and 1896-'97. When Theodore Thomas went to Chicago Seidl was selected as the musical conductor of the New York Philharmonic Society, beginning his duties in that place Nov. 20, 1890. He was also chosen leader of the permanent orchestra. The summer concerts conducted by him were a constant

feature at Brighton Beach. In the summer of 1897 he went to Baireuth, and on July 20 conducted the ninety-third performance of "Parsifal" given there. During the winter of 1897-'98 he conducted a series of Sunday-night concerts at the Metropolitan Opera House, and another series at the Waldorf-Astoria, New York city. His death was sudden and was supposed to have resulted from accidental ptomaine poisoning.

Seuter, De Witt Clinton, politician, born in Harriman, Roane County, Tenn., in 1831; died near Morristown, Tenn., in June, 1898. In early manhood he became active in public affairs, and locally was prominent in the Whig party prior to the formation of the Republican. Before the civil war opened he had served in the lower house of the State Legislature. In 1861 he espoused the cause of the Union and was a delegate to the Union convention held in Knoxville and in Greenville. He made many speeches in the presidential canvass of 1868, when he was a candidate for elector on the Grant and Colfax ticket. The same year he was elected to the State Senate, of which he became president. On the election of Gov. William G. Brownlow to the United States Senate by the Legislature of 1868-'69, President Seuter became Governor by virtue of his office. He succeeded to the office at a time when the extremely radical policy of Gov. Brownlow had provoked much bitterness throughout the State. By pursuing a more conservative course Gov. Seuter did much to restore harmony and peace, and because of this he was elected to the office for the succeeding term by a large majority.

Sexton, William, billiard player, born in Burlington, Vt., April 8, 1854; died in New York city, April 25, 1898. He was virtually reared in a billiard room. In 1872 he came to New York city, and two years later defeated Charles E. Effler, the Albany champion. In 1875 he encountered A. P. Rndolphe, of France, and defeated him in 33 out of 35 games. He won a match for \$1,000 with George F. Slosson in 1876; went to France the same year and lost to Maurice Vignaux. On his return he set out to tour the United States with Slosson. He twice defeated Joseph Dion in 1877, and in 1879 defeated Slosson for the championship of the world. The honor was wrested from him the next year by Schaeffer, whom he in turn defeated in 1881 in a match for \$2,500 a side.

Shallenberger, Oliver Blackburn, electrician, born in Rochester, Pa., in 1860; died in Colorado Springs, Col., Jan. 23, 1898. He was graduated at the United States Naval Academy in 1881, was present at the bombardment of Alexandria, and was honorably discharged from the navy in 1883. Entering the employment of the Westinghouse Company at Pittsburg, he there rose to the post of chief electrician, which he retained till failing health compelled him to resign in 1891. After his retirement he applied himself as closely as his health would permit to electrical experiments in his own laboratory at his birthplace. While he was in the employment of the Westinghouse Company Mr. Shallenberger invented several electrical devices. The most noteworthy of these was the electric meter, known the world over and adopted by the Government Board of Trade of Great Britain as the standard instrument for accurate measurement of electric currents. In co-operation with George Westinghouse he was the first to demonstrate in the United States the efficiency and safety of the alternating current. He also originated many of the devices in use in central lighting stations.

Sharpe, Frieda Stevenson, author, born in Reykjavik, Iceland, Jan. 8, 1861; died in Chicago, Ill., Nov. 4, 1898. She was educated in her native

town. About 1878 she went to Chicago, where she soon learned the English language. She became a frequent contributor to magazines, her work consisting of short stories and poems, as well as translations of Scandinavian and Icelandic stories. She wrote an Icelandic play, "Jon," and at the time of her death had just finished a translation of Kielland's novel, "Jakob."

Sheldon, Charles H., farmer, born in Johnson, Vt., in 1840; died in Deadwood, S. Dak., Oct. 20, 1898. His boyhood was spent mainly on a farm in Lamoille County. At the outbreak of the civil war he enlisted as a private in the 7th Vermont Infantry; and he was mustered out with the rank of captain, March 14, 1866. After the war he went to Illinois, where he lived eleven years. He then went to Kentucky, and in 1881 settled on a farm near Pierpont, S. Dak. He was elected to the Territorial Council, made permanent chairman of the Republican State Convention in 1890, elected Governor of South Dakota in 1892, and re-elected in 1894.

Sheldon, Isaac Esleek, publisher, born in Albany, N. Y., Dec. 20, 1835; died in Rye, N. Y., June 30, 1898. He was a son of the late Smith Sheldon, founder of the New York publishing house of Sheldon & Co., and was graduated at the University of Rochester in 1857. He was brought up in the publishing house, and for many years had been at its head both as a firm and as a corporation. At the time of the historic sea fight between the "Monitor" and the "Merrimaek" he was within the lines at Fort Monroe, and witnessed the encounter. While he was on his way to New York the late George W. Childs insisted that he should leave his train and write an account of the battle, and the Philadelphia "Ledger" thus obtained the first report.

Shipman, William D., jurist, born in Chester, Conn., Dec. 29, 1818; died in Astoria, N. Y., Sept. 24, 1898. He worked on a farm at his home from his fourteenth till his twenty-fourth year, when he went to Springfield, N. J., where he taught a school. In 1842 he removed to East Haddam, Conn., studied law, and in 1850 was admitted to the bar. He was elected judge of the Probate Court in 1852; member of the State Assembly in 1853; and in July, 1853, was appointed United States Attorney for the district of Connecticut, and reappointed in 1856. In 1860 he was made United States district judge for Connecticut, which office he held thirteen years. Judge Shipman retired from the bench in 1873, came to New York city, and took up the practice of law, becoming senior member of the firm of Shipman, Barlow, Larocque & Macfarlane. He withdrew from the firm in 1895. He received the honorary degrees of M. A. and LL. D. from Trinity College, Hartford.

Showalter, John William, jurist, born in Mason County, Kentucky, Feb. 8, 1844; died in Chicago, Ill., Dec. 10, 1898. He was graduated at Yale in 1867, and studied law. He went to Chicago in 1869, and was admitted to practice in 1871. He joined the law firm of Abbott & Oliver, which, on the death of Mr. Abbott, in 1890, became known as Oliver & Showalter. He was the Democratic candidate for judge of the Superior Court in 1893, but was defeated by Judge Gary. On Feb. 25, 1895, he was appointed Judge of the 7th Judicial District of the United States circuit court, and he held the office till his death.

Singerly, William Miskey, capitalist, born in Philadelphia, Pa., Dec. 27, 1832; died there, Feb. 27, 1898. He was graduated at the high school of Philadelphia in 1850; spent ten years as clerk in a produce commission house, and then became associated with his father in the management of street-railway lines. In 1868 he went to Chicago, and built up a successful business, which was ruined by

the fire of 1871. He returned to Philadelphia, became manager of the Germantown Passenger Railway Company, and on his father's death, in 1878, came into possession of stock of that company, which he sold for \$1,500,000. Mr. Singery in 1877 purchased "The Public Record," changed its name to "The Philadelphia Record," introduced new methods, and soon made it one of the best-known newspapers of the country. He purchased and operated a large paper mill at Elkton, Md. He also purchased large tracts of real estate in the northwest section of Philadelphia, erected hundreds of houses, and practically created a new residence portion of the city. At one time he owned the Empire Theater, which was burned in 1886. In 1887 he took an active part in establishing the Chestnut Street National Bank, of which he was the second president. He was also president of the Chestnut Street Savings Fund Company. In 1894 he was the Democratic candidate for Governor of Pennsylvania, but was defeated by Gen. Hastings. Financial misfortune overtook Mr. Singery in 1897; the extreme shrinkage in the price of paper and the resulting depreciation in the value of his paper mills at Elkton were the primary causes of his embarrassment, and of the suspension of the bank and trust company with which he was identified. Mr. Singery turned over all his personal assets, including his interest in "The Record," and the assignees were engaged on a plan of rehabilitating the institutions at the time of his death. Mr. Singery owned a celebrated stock farm at Elkton, Md.

Smith, Joseph Patterson, journalist, born in West Union, Adams County, Ohio, Aug. 7, 1856; died in Miami, Fla., Feb. 5, 1898. His ancestors emigrated from Argyshire, Scotland, to the north of Ireland, and thence to America, and settled in New Hampshire as early as 1730. His grandfather, Judge David Campbell Smith, went to Ohio in 1813, and settled at Franklinton (now Columbus). His father, Judge John M. Smith, settled in West Union in 1840. Joseph received his early education in the public schools and in his father's printing office, and then went to work in a nail factory at Bellaire, Ohio. He removed to Greencastle, Ind., and obtained work on a newspaper, working at night and attending college during the day. He taught several country schools in Ohio and Illinois, studied law, and was admitted to the bar, but never practiced. In 1876 he took charge of the political department of the Cincinnati "Commercial." He was successively editor of the West Union "New Era," Clermont "Courier," Lebanon "Star," Urbana "Citizen," and Toledo "Commercial." He was also Columbus correspondent for several winters of several dailies, and was journal clerk in the Ohio Senate. He was always an ardent supporter of Gov. McKinley, serving more than four years as State Librarian under him, resigning in May, 1896, to take an active part in the presidential campaign. He was appointed by President McKinley, on March 29, 1897, director of the Bureau of American Republics, and he prepared a comprehensive handbook on Hawaii and Alaska, and the Commercial Directory, also articles on trade relations in America in the monthly bulletin. He compiled and edited the speeches made by Gov. McKinley while Congressman and Governor, and also wrote the sketch of McKinley in the "Annual Cyclopaedia" for 1896. A few weeks before his death he finished a "History of the Republican Party in Ohio." His widow died Sept. 13.

Smith, Richard, journalist, born in County Wexford, Ireland, Jan. 30, 1823; died in Cincinnati, Ohio, April 22, 1898. He received a common-school education, and in 1841, after the death of his father, came to the United States with his

mother, and went to Cincinnati, where an elder brother had settled. The mother bought a farm and removed to it with her seven other children, leaving Richard in Cincinnati. Unable to procure mercantile employment, Richard learned the carpenter's trade. About the time his apprenticeship expired he secured a place as reporter in the commercial department of the "Chronicle." In 1845 he was appointed assistant superintendent of the newly established Chamber of Commerce, and four years afterward superintendent. At this time he also bought the "Price Current." On the extension of the telegraph to Cincinnati, in 1846, he became agent for the newspapers of the city, and was the first to secure the news of the New York Associated Press. During his connection with the Chamber of Commerce he wrote all the daily and weekly market reports for the Cincinnati papers, for which they paid the Chamber; wrote financial articles for the "Gazette"; and built up a high reputation for his "Price Current" by collecting and publishing statistics of the Western hog crop. In 1854 he purchased an interest in the "Gazette," and two years afterward applied himself wholly to supervising the business department and the financial and commercial columns of that paper. Subsequently he was made its managing editor. In 1881 the "Gazette" and the "Commercial" were consolidated under the title of the "Commercial-Gazette," of which Mr. Smith became business manager and Murat Halstead editor. On Mr. Halstead's removal to New York, Mr. Smith assumed general control, and a reorganization in 1891 left the latter free to resume editorial work, which he kept up till within a few years of his death.

Spencer, Jesse Ames, clergyman, born in Hyde Park, N. Y., June 17, 1813; died in Passaic, N. J., Sept. 2, 1898. He was graduated at Columbia College in 1837 and at the General Theological Seminary in 1840. In the latter year he was ordained deacon, and in 1841 was advanced to the priesthood. His earliest rectorship was at Goshen, N. Y., 1840-'42, and from 1863 to 1865 he was rector of St. Paul's Church, Flushing. But it was as author and classical scholar that he was best known. He was Greek Professor at the College of the City of New York from 1869 to 1879, and emeritus professor two years longer. His published books comprise "The Christian instructed in the Ways of the Gospel and the Church" (New York, 1844); "History of the English Reformation" (1846); "The New Testament in Greek with English Notes," edited (New York, 1874); "Calvin's Commentaries, with English Notes," edited (1848); "The East: Sketches of Travel in Egypt and the Holy Land" (New York, 1850); "History of the United States to the Death of Lincoln" (1856-'69); "Pierpont's Course of English Reading," edited; "Greek Praxis" (1870); "The Young Ruler who had Great Possessions" (1871); "Sketch of the History of the Protestant Episcopal Church in the United States" (1878); "The Five Last Things: Studies in Eschatology" (1887); and "Recollections of Sixty Years." In 1883 he was appointed by the House of Bishops custodian of the Standard Bible.

Stark, Sarah (Mrs. JAMES STARK), actress, born in New York city in 1823; died in San Francisco, Cal., Dec. 9, 1898. She was first known on the stage in New York city, where she made her appearance as the wife of John Hudson Kirby, the favorite actor, who was the subject of the saying "Wake me up when Kirby dies!" After a long term of service in the Bowery Theater Mrs. Kirby went with her husband to England, where she supported him in a very successful starring tour. On Mr. Kirby's sudden death in England, in 1848, Mrs. Kirby returned to New York, where she resumed

her place as a stock actress. In 1849 she married a New York politician named Wingart, with whom, on the news of the discovery of gold in California, she joined the members of the Argonauts. Upon her arrival in San Francisco she was immediately engaged by Thomas Maguire, the pioneer California manager, as leading lady of the Jenny Lind Theater, the first permanent playhouse of San Francisco. While waiting for the completion of the theater in San Francisco she played a short engagement at the Eagle Theater, in Sacramento, and on Nov. 4, 1850, began at the Jenny Lind Theater a prosperous career as the principal actress of "Early Days in California." There were many New Yorkers in San Francisco and Sacramento who had known and admired her as an actress at home, and from the opening night her place as a favorite was assured. On Nov. 17, 1850, Mr. Wingart was killed by an accident, and on June 4, 1851, the actress married James Stark, an actor of high reputation, the leading man of Maguire's company. On her marriage to Mr. Stark she ceased to use the name of her first husband (Kirby), by which she had been professionally known up to that time, and was always known thereafter as Mrs. James Stark. In 1852-'53 Mr. and Mrs. Stark, who had gained great favor in the theaters of San Francisco and Sacramento, began to play as stars. They traveled to all the interior towns and mining camps of the State, taking with them a company of capable actors and playing the Shakespearian and standard plays in the public halls, courthouses, and hotel dining-rooms. In the summer of 1854 Mr. and Mrs. Stark went to Australia, where they were so successful as tragic stars that they remained in that country three years and returned to California with a comfortable fortune, most of which was invested in real estate in San Francisco and carefully improved. On April 5, 1858, Mrs. Stark and her husband began an engagement at Wallack's Theater, New York city, which lasted several weeks with great success. The opening play was "The Gamester," and this was followed with "The Lady of Lyons," "Richelieu," "Othello," "Hamlet," and "The Stranger." After a few short engagements in other cities they returned to the Pacific coast, and for about ten years occupied the theaters of its new cities. Mr. Stark died in San Francisco, Oct. 12, 1875, both he and his wife having been for some years retired and living in that city. Mrs. Stark was again married, Sept. 18, 1883, to the well-known actor Charles Thorne, Sr.

Stockton, Robert Field, lawyer, born in Princeton, N. J., Jan. 22, 1832; died in Trenton, N. J., May 5, 1898. He was the great-grandson of Richard Stockton, a signer of the Declaration of Independence, and a son of Commodore Robert F. Stockton. He was graduated in 1851, and admitted to the bar in 1854. He was made brigadier general, Jan. 30, 1858, and became adjutant general of New Jersey, which office he held during the civil war. In 1867 he resigned, and was brevetted major general. He was elected Comptroller of New Jersey in 1877, and held the office three years. He was president of the Delaware and Raritan Canal Company from 1866 till 1872, when it was merged into the United New Jersey Railroad and Canal Company, of which he was president till his death. He was an incorporator of the Mercer and Somerset Railway Company.

Stranahan, James Samuel Thomas, "first citizen of Brooklyn," born in Peterborough, N. Y., April 25, 1808; died in Saratoga, N. Y., Sept. 3, 1898. He spent his early years on his father's farm, studied in winter; and at the age of seventeen taught in the village school, at the same time studying civil engineering. In 1827-'28 he visited the upper lake

region of the Northwest, with a view of opening trade with the Indians. Unable to enlist others in his scheme, he abandoned it, to embark in the wool business in Albany. In 1832 he was induced to take charge of a township of land in Oneida County for the purpose of founding a manufacturing village; and developed the town of Florence, which he represented in the State Assembly in 1838-'40. He removed in 1840 to Newark, N. J., where he engaged in the building of railroads, and in February, 1845, went to Brooklyn, where he remained the rest of his life. At first he undertook the business of a railroad contractor, and later began a scheme for developing the water front of Brooklyn, and succeeded in making one of the most perfect and systematic basins in the world, the Atlantic dock. He was elected alderman in 1848, defeated for mayor in 1851, and elected to Congress in 1854. He was appointed a member of the newly organized Metropolitan Police Board in 1857, and was reappointed in 1858. He became a Republican in 1860, was a delegate to the national conventions of 1860 and 1864, and was president of the War Fund Committee of Brooklyn during the civil war. He was president of the Park Board from 1860 till 1882, during which time Prospect Park was developed into the second in size in the country. A bronze statue of Mr. Stranahan was erected in Prospect Park, and unveiled June 6, 1891. Mr. Stranahan was at the head of a company of capitalists organized in 1869 to build the New York and Brooklyn Bridge, and presided at its opening ceremonies May 24, 1883. He was one of the earliest advocates of the Greater New York, his first public utterance in favor of it being made at a dinner of the Chamber of Commerce May 8, 1883, and he was a member of the original commission appointed to bring about the consolidation. He was at different times a member of the Board of Directors of the Polytechnic Institute, the Academy of Music, and the Brooklyn Institute.

Sturtevant, Edward Lewis, agriculturist, born in Boston, Mass., Jan. 23, 1842; died in Framingham, Mass., July 30, 1898. He was graduated at Bowdoin College in 1863, and at the medical department of Harvard in 1866, spending one of the intervening years as captain in the 24th Maine Volunteers. On leaving Harvard he engaged in scientific agriculture and the breeding of choice dairy cattle at South Framingham. During 1881-'87 he was director of the New York State Agricultural Experiment Station at Geneva. He was once president of the Society for the Promotion of Agricultural Science, and a fellow of the American Association for the Advancement of Science. Dr. Sturtevant was a frequent contributor to the periodical press and a lecturer on subjects relating to his life work. He edited the "Scientific Farmer" in 1876-'79; the "North American Ayrshire Register"; and the annual "Reports of the New York Agricultural Experiment Station" (1882-'87); and, with Joseph N. Sturtevant, published a monograph on the Ayrshire breed of cattle under the title "The Dairy Cow" (Boston, 1875).

Sutro, Adolph Heinrich Joseph, mining engineer, born in Aix-la-Chapelle, Prussia, April 29, 1830; died in San Francisco, Cal., Aug. 8, 1898. He came with his mother, six brothers, and four sisters to New York city in 1850; went to Baltimore; and, having established the family in that place, went to San Francisco, arriving there Nov. 21, 1850. For nine years he conducted a small business there, till in 1860 he saw his great opportunity in the condition of the Comstock and other mines. He visited Nevada, learned of the unfavorable state of the mines, and conceived the plan of the great Sutro Tunnel, through the mountains where lay the

Comstock lode. He interested capitalists in the project, and obtained a charter from the Nevada Legislature, Feb. 4, 1865, and the authorization of Congress, July 25, 1866. Actual work was begun on the tunnel, Oct. 19, 1869; it proceeded rapidly, and by 1871 four vertical shafts had been opened along its line; and when it was completed, in 1879, it had cost nearly \$4,000,000. The main tunnel is 1,650 feet below the surface, is 20,000 feet long, and has lateral branches amounting to nearly 4,000 feet. It is 12 feet wide and 10 feet high. Mr. Sutro's contract with the mine owners called for \$2 royalty on every ton taken from the mines, and when the work was completed he had about \$5,000,000. He sold out his interest in the tunnel, went to San Francisco, invested largely in real estate in all sections of the city, and was soon numbered among the richest men of the Pacific slope. He created and opened to the public a beautiful park, which was a sand waste in 1880; gave to the city statues and fountains; and built an aquarium and salt-water baths. He formed a collection of books, known as the Sutro Library, containing more than 200,000 volumes, particularly rich in early Americana, and documents relating to the Pacific coast. It also contains many Japanese and Sanskrit manuscripts. He was elected Mayor of San Francisco in 1894 on the Populist ticket. In February, 1894, he was adjudged incompetent, and a guardian of his person and estate was appointed. (See GIFTS AND BEQUESTS.)

Taliaferro, William Booth, military officer, born in Belleville, Gloucester County, Va., Dec. 28, 1822; died in the same house in which he was born, Feb. 27, 1898. He was educated at Harvard and at William and Mary Colleges, being graduated at the latter in 1841, and afterward studied law. In April, 1847, he entered the army as captain in the 11th United States Infantry; in August following he was promoted to major of the 9th Infantry; and in August, 1848, after a creditable service, he was mustered out and engaged in law practice. At the beginning of the civil war he was commissioned a colonel in the Provisional Army of Virginia and placed in command of the forces at Gloucester Point. On the organization of the Confederate army he was transferred to it and became a brigadier general on March 4, 1862, and a major general on Jan. 1, 1865. He was engaged in most of the battles of the Army of Northwestern Virginia till March, 1863, when he assumed command of the district of Savannah, Ga. In July following he commanded the defenses on Morris Island, S. C., and in August the forces on James Island. During the first half of 1864 he was in command of a division in Florida and of the 7th Military District of South Carolina, and toward the close of the year his command was extended over the entire State. His most distinguished service was his defense of Fort Wagner from July 10 to Sept. 6, 1863, against the assaults of Gen. Gillmore by land and Admiral Dahlgren by water. After the war he resumed law practice, but was soon elected to the House of Delegates, where he served till the days of readjustment. He became judge of Gloucester County in 1892, and held the place till within a few months of his death.

Thayer, William Makepeace, author, born in Franklin, Mass., Feb. 23, 1820; died there, April 7, 1898. He was graduated at Brown University in 1843 and began the study of theology. From 1849 till 1857 he was in charge of the Orthodox Congregational Church of Ashland, Mass., but in consequence of a throat trouble he gave up the ministry and devoted himself to literary work. He went back to Franklin in 1858, and served two terms in the Legislature, in 1857 and in 1863. He was secretary of the Massachusetts Temperance Alliance from 1860 till 1876. Mr. Thayer was a prolific

writer. His published works include "Hints for the Household" (1853); "Life at the Fireside" (1854); "Spots in our Feasts of Charity" (1854); "Pastor's Wedding Gift" (1854); "The Morning Star" (1856); "The Poor Boy and the Merchant Prince" (1857); "Doing and Not Doing" (1858); "From Poorhouse to Pulpit" (1858); "The Poor Girl and True Woman" (1858); "The Bobbin Boy" (1860); "Tales from the Bible for the Young" (1867); "The Printer Boy" (1860); "Working and Winning" (1862); "The Pioneer Boy and how he became President" (1863); "The Old Horseshoe" (1863); "Tales from Genesis for the Young" (1863); "The Farmer Boy and how he became Commander in Chief" (1863); "Soldiers of the Bible, for the Young" (1864); "Character and Public Service of Abraham Lincoln" (1864); "Youth's History of the Rebellion" (1864-'66); "Communion Wine and Bible Temperance" (1869); "Nelson" (1878); "Charles Jewett" (1879); "Tact, Push, and Principle" (1880); "From the Log Cabin to the White House" (1881); "In the Meshes" (1881); "Our French Visitors" (1882); "From Pioneer Home to the White House" (1882); "From the Tannery to the White House" (1885); "From Farmhouse to White House" (1890); "Success and its Achievers" (1891); "Ethics of Success" (1893); "Aim High" (1895); "Around the Hearthstone" (1896); "Men who Win" (1896); and "Women who Win" (1896).

Todd, Sereno Edwards, journalist, born in Lansingville, Tompkins County, N. Y., June 3, 1820; died in Orange, N. J., Dec. 26, 1898. For several years he was a scientific and practical farmer and he was subsequently agricultural editor of the New York "Times." His writings include "The Young Farmer's Manual" (1860); "The American Wheat Cultivator" (1868); "Todd's Country Homes and how to save Money" (1868); "The Apple Culturist" (1871)—works which enjoyed a wide sale. He left unpublished "Rural Poetry and Country Lyrics." He was a lineal descendant of Jonathan Edwards.

Tome, Jacob, philanthropist, born in Manheim Township, York County, Pa., Aug. 13, 1810; died in Port Deposit, Md., March 16, 1898. His parents, who were German Lutherans, instilled into their son's mind the cardinal principles of honesty, industry, economy, and self-reliance. The struggles in which his early life abounded tended to develop his strong character. Farming, fishing, merchandise, one year's teaching, were the stepping-stones that led to his rich business experience. In 1833 he went to Port Deposit and began the dealings in lumber and grain which were the foundation of his wealth. His operations soon extended to the manipulation of banks, railways, and steamboat lines. To his enterprise and generosity Port Deposit owes much of its present success. The Methodist Episcopal church in the town, erected at a cost of \$60,000, stands as a memorial to him. In 1864 Mr. Tome, as chairman of the Finance Committee of the Maryland Senate, relieved the seemingly hopeless financial condition of the State and reduced its indebtedness to less than \$1,000,000. Public offices—among them the secretaryship of the Treasury under President Grant—were declined by him. Presidents Lincoln, Grant, Hayes, Arthur, Garfield, placed high estimates upon his judgment and often solicited his counsel. His lack of early educational advantages led him to covet such advantages for others, and throughout life his interest in the establishment of schools was great. In 1884 he presented to Dickinson College, of which institution he was a trustee, a handsome building for scientific uses. The Jacob Tome Institute, at Port Deposit, Md., is the recipient of the largest share of his

munificence, its trustees having received prior to his death \$1,600,000, which has been increased by his will to more than \$3,500,000. This school, opened in the autumn of 1894, is coeducational and comprises a whole school system in miniature. Its courses extend from the kindergarten through the high school, and, in addition to the usual branches, include instruction in art and several kinds of manual work, as well as science and modern and ancient languages.

Toucey, John M., railroad manager, born in Newtown, Conn., in 1828; died in Fishkill Landing, N. Y., Sept. 23, 1898. He began his career as a railroad man in Connecticut. In 1855 he entered the employ of the Hudson River Railroad, and in 1862 he was appointed assistant superintendent. From 1867 to 1881 he was superintendent of the Hudson River division of the New York Central and Hudson River Railroad. From 1881 to 1890 he was general superintendent of the whole system, and from 1890 to 1898 he was general manager. He retired in May of the latter year, with the unusual honor of a pension. He was considered one of the ablest railroad operators in the United States.

Townsend, Franklin, soldier, born in Albany, N. Y., in 1820; died there, Sept. 11, 1898. He was adjutant general of the State of New York for three terms, the terms beginning respectively in 1867, 1875, and 1877. Under his last administration the labor riots were successfully ended without a resort to arms. During his several administrations the State recovered large sums of money from the United States in the way of war claims, the system of rifle practice was instituted, the service was supplied with a book of regulations, the military code was formulated, and the first steps were taken in uniforming and equipping the National Guard, which resulted in the adoption of the present service uniform. So great were his services in this line that he was universally known as "the Father of the National Guard." He served a term in the State Assembly, and he was mayor of Albany in 1850.

Trescott, William Henry, diplomatist, born in Charleston, S. C., Nov. 10, 1822; died in Pendleton, S. C., May 4, 1898. He was graduated at Charleston College in 1840, studied at Harvard, and was admitted to the bar in 1843. He was appointed secretary of the United States legation at London in December, 1852, and Assistant Secretary of State in June, 1860, which office he held till South Carolina seceded. He served in the Legislature of that State from 1862 till 1866, and also on the staff of Gen. Roswell S. Ripley. At the close of the war he was sent to Washington in behalf of South Carolina to adjust differences growing out of the reconstruction acts. He removed to Washington in 1875 and resumed his law practice. In June, 1877, he was counsel for the United States before the Fishery Commission at Halifax; in April, 1880, he was one of the commissioners appointed to revise the treaty with China; in February, 1881, was appointed to represent the United States in the negotiations with reference to its rights on the Isthmus of Panama; and in the same year was special envoy to the belligerents in Peru, Chili, and Bolivia. He was also a commissioner in 1882 with Gen. Grant to negotiate a commercial treaty with Mexico. He published works on diplomatic topics, including "A Few Thoughts on the Foreign Policy of the United States" (1849); "The Diplomacy of the Revolution" (1852); "Diplomatic System of the United States" (1853); "An American View of the Eastern Question" (1854); "The Diplomatic History of the Administrations of Washington and Adams" (1857); and "Address before the South Carolina Historical Society" (1859); and orations and political pamphlets.

Tripp, Seth D., inventor, born in Rochester, Mass., in 1826; died in Lynn, Mass., Jan. 7, 1898. When about twenty years old he invented a machine for pegging shoes, which was a pronounced success and found its way into many factories. He next invented a counter skiver, and later secured patents on rolling machines, sole molders, shank cutters, heel polishers, sole dyers, and welt-cutting and beating-out machines.

Trotter, Newbold Hough, artist, born in Philadelphia, Pa., Jan. 4, 1827; died in Atlantic City, N. J., Feb. 21, 1898. He was graduated at Haverford College in 1845, entered a wholesale dry-goods house, and withdrew in 1858 to devote himself to art. He joined the Germantown Home Guards in 1861, and took part in the battle of Antietam. He resumed his profession in 1867. Later he was engaged by the United States Government to paint all the mammalia of North America for a publication to be issued under its auspices. He had completed about 40 of these pictures when the appropriation for the work was exhausted. His chief works are "After the Combat," "Grizzly Bears," "Wounded Buffaloes," "The Last Stand," "Indian Encampment," and others painted for the War Department. Three pieces, representing the progress of travel in Pennsylvania during fifty years, are his most notable historic paintings. He was a member of the Pennsylvania Academy of Fine Arts, the Philadelphia Society of Artists, the Art Club of Philadelphia, and the Artists' Fund Society.

Tyng, Stephen Higginson, clergyman, born in Philadelphia, June 28, 1839; died in Paris, France, Nov. 17, 1898. He was a son of Rev. Stephen Higginson Tyng, long prominent in New York city as rector of St. George's Church, and was educated for the ministry at the Theological Seminary in Alexandria, Va. After taking deacon's orders in 1861, he assisted his father at St. George's for more than two years, until his admission to the priesthood, in 1863. From 1863 to 1865 he was rector of the Church of the Mediator in New York city, and in the latter year he organized the Church of the Holy Trinity in New York and was its only rector until his resignation, in 1881. Soon after this he went to Paris and engaged in life insurance and at the time of his death he was president of the American Chamber of Commerce in Paris and director general of the Mutual Reserve Fund Life Association for the Continent of Europe. In 1867 he created a sensation by preaching in a Methodist church in New Brunswick, N. J., and was brought to trial for so doing by Bishop Potter. In 1872 he received the degree of D. D. from Williams College. He was the author of "The Square of Life," "He Will Come," and "Our Church Work."

Underhill, Edward Fitch, stenographer, born in Wolcott, N. Y., in 1830; died in New York city, June 18, 1898. He received a common-school education, studied stenography in 1847, and became a reporter on the St. Louis "Republican" in 1849. He was a member of the Phonetic Council in 1850, came to New York city in 1853, and was connected with the "Times" and later with the "Tribune." He acted as war correspondent for the "Times," was captured, taken to Harper's Ferry, tried as a spy, and acquitted. He left the "Times" in 1862, became a law reporter, studied law, and was admitted to the New York bar. He was at various times official stenographer of the New York Supreme Court, the Legislature, the Constitutional Convention of 1867-'68, and at the impeachment trial of Gov. Holden of North Carolina. For thirty years previous to his death he was chief stenographer of the Surrogate Court.

Upham, John J., soldier, born in Delaware, July 25, 1837; died in Milwaukee, Wis., Oct. 21,

1898. He was graduated at West Point in 1859; was assigned to the 9th Infantry, and took part in the Indian wars till the civil war broke out. In 1861-'62 he served in the defense of Washington as a captain in the 6th Infantry. He participated in the Peninsula campaign and the battle of Gettysburg. For gallant and meritorious conduct he was brevetted major in 1863. He was appointed executive officer of the infantry and cavalry school in Leavenworth, Kan., and then was put in command of Fort Gibson, Indian Territory. In 1876 he was ordered into the field in the Department of the Platte. He was with the Little Big Horn and Yellowstone expeditions. After the Indian campaigns he served at several Northwestern posts, and then was sent by the United States to witness the war between Russia and Turkey. In 1887 he witnessed the manoeuvres of the French army. After being made a colonel in 1892, he was retired at his own request, having served in the army for more than thirty years.

Van Horn, James J., soldier, born in Mount Gilead, Ohio, Feb. 6, 1835; died in Fort Russell, Wyo., Aug. 30, 1898. He was graduated at the United States Military Academy in 1858, and joined the 1st Infantry in garrison at Fort Columbus, N. Y., as 2d lieutenant. When the civil war broke out he was on duty at San Antonio, where he was detained as a prisoner for a year. He then became aid-de-camp in the Army of the Potomac, and was engaged in the battles of South Mountain, Antietam, and Bethesda Church. He was brevetted major in 1864 for gallant services at Cold Harbor. From 1865 to 1867 he was recorder of the Board of Tactics at West Point, after which he served with his regiment in several posts at the South till 1870. After that date he commanded posts in Arizona, New Mexico, Montana, and Wyoming. He was with the Yellowstone expeditions of 1872-'73. He was promoted major of the 13th Infantry, 1879; lieutenant colonel, 25th Infantry, 1885; and colonel, 8th Infantry, 1891. He commanded the latter regiment before Santiago, Cuba, in 1898.

Van Ingen, Henry, art educator, born in Holland, Nov. 12, 1833; died in Poughkeepsie, N. Y., Nov. 17, 1898. He was educated at the Academy of Design at the Hague, and studied under J. B. Tom and Van de Iande Baekhuysen. He came to the United States about 1861, and for a time taught in Rochester, N. Y. At the opening of Vassar College, in 1865, he became the head of its art department and he was continuously identified with its growth. Mr. Van Ingen was a member of the Tulehri Studio, the Hague, and of the American Water-Color Society, to whose exhibits, as well as others, he often contributed.

Veazey, Wheelock Graves, lawyer and soldier, born in Brentwood, N. H., Dec. 5, 1835; died in Washington, D. C., March 22, 1898. He was graduated at Dartmouth College in 1859, and at the Albany Law School in 1860, and admitted to the bar of Vermont in December, 1860. He began practice in Springfield, Vt., but when the civil war broke out he enlisted as a private in Company A, 3d Vermont Volunteers. He was elected captain of the company in May, 1861; promoted major, August, 1861; shortly afterward was made lieutenant colonel; and in October, 1862, was promoted colonel of the 16th Vermont Volunteers. His regiment formed a part of Stannard's brigade in the famous flank attack upon Pickett's division at Gettysburg. He was mustered out with the regiment in August, 1863, and returned to his law practice. He was reporter of the Supreme Court of Vermont from 1864 till 1872, publishing 9 volumes of decisions; served as register in bankruptcy a short time; was elected State Senator in 1872; appointed a member of a commission to revise the laws

of Vermont in 1878; and was made a judge of the Supreme Court of the State in 1879, serving till 1889. In 1889 he was appointed a member of the Interstate Commerce Commission, but he resigned the office in 1897, because of failing health. He was one of the founders of the Grand Army of the Republic in Vermont; was department commander, 1871-'73; on the staff of the commander in chief in 1877 and 1888; and in 1890 was elected commander in chief of the national organization. He was a trustee of Dartmouth College for many years, and received the degree of LL. D. from it.

Verbeek, Guido F., missionary, born in Zeist, Holland, in 1830; died in Tokio, Japan, March 9, 1898. He was educated at the Moravian Seminary, Zeist, came to the United States in 1852, and was graduated at Auburn Theological Seminary in 1859. He was sent as a missionary to Nagasaki, Japan, remained till 1868, and then went to Tokio. He spent eleven years of work for the Japanese Government in connection with education, and as translator of judicial works. He rejoined the mission in 1879, took part in the translation of the Bible into Japanese, and taught in the theological department of the Meiji Gakuin. He received the decoration of the Rising Sun from the Japanese Government in 1877, and a special passport in 1891.

Wagner, Jacob, artist, born in Bavaria, Jan. 27, 1852; died in New York city, Nov. 5, 1898. He came to the United States when four years of age, worked from the age of twelve at picture-frame making, and learned the art of restoring pictures. In 1874 he began to study art in the evening classes at Lowell Institute; later went to work in the art store of J. Eastman Chase, taking charge of the manufacturing department and the restoring of paintings; and in 1883 devoted himself to art, first painting landscapes and later portraits. He exhibited three pictures at the World's Columbian Exposition. He was a member of the Boston Art Club and the Boston Water-Color Society.

Walcutt, Charles Carroll, soldier, born in Columbus, Ohio, Feb. 12, 1838; died in Omaha, Neb., May 2, 1898. He was graduated at the Kentucky Military Institute in 1858, and became a civil engineer. When the war broke out he raised a company; was made major in June, 1861; became colonel in 1862; and promoted brigadier general July 30, 1864, for gallantry at Atlanta. He took part in the march to the sea. He was wounded at Shiloh, at Kenesaw Mountain, and again at Griswoldville. For bravery at the last place he was brevetted major general. He was mustered out of the service in February, 1866; became warden of the Ohio Penitentiary; was a presidential elector in 1868; and was appointed internal-revenue collector in May, 1869, serving three years. He was elected mayor of Columbus in April, 1883, and re-elected in 1885. He served as a member of the School Board of Columbus several years, and as its president seven years.

Walthall, Edward Cary, lawyer, born in Richmond, Va., April 4, 1831; died in Washington, D. C., April 21, 1898. He studied law in Holly Springs, Miss.; was admitted to the bar in 1852, and began to practice in Coffeeville, Miss. He was elected district attorney in 1856, and re-elected in 1869. He resigned to enter the Confederate army as lieutenant in the 15th Mississippi Regiment. He was promoted brigadier general Dec. 13, 1862, and major general June 6, 1864, serving through the war. He resumed his law practice in Coffeeville, and in 1871 removed to Grenada. Mr. Walthall was a delegate at large to the Democratic National Conventions of 1868, 1876, 1880, and 1884. He was appointed United States Senator in 1885 to succeed Senator L. Q. C. Lamar,

resigned; took his seat March 12, 1885; and, in January, 1886, was elected to fill the unexpired term. He was re-elected in 1888, and again in 1892, more than three years before the expiration of his term. He resigned in January, 1894, for the rest of that term, but returned and took his seat at the beginning of his next term, March, 1895. He served as chairman of the Committee on Military Affairs, and was a member of the Committees on Public Lands and on Improvement of the Mississippi River.

Ward, Hamilton, jurist, born in Salisbury, N. Y., July 3, 1829; died in Belmont, N. Y., Dec. 28, 1898. He was admitted to the bar in 1851, and from 1857 to 1863 was district attorney of Allegany County, N. Y. He was a member of the 39th, 40th, and 41st Congresses, and during his service therein he was a member of the committee on the assassination of President Lincoln, and also of the committee charged with preparing articles of impeachment against President Johnson. In 1879 he was elected Attorney-General of the State of New York, on the Republican ticket. While in that office, for but one term of two years, he broke up the system of private sales of land in the Adirondaek mountains, whereby the State had been a heavy loser. In 1890 he was one of a commission to propose amendments to the State Constitution. Early in 1891 he was appointed a justice of the Supreme Court in the 8th District to fill a vacancy, and in November of that year he was elected to that office on the Republican ticket. In 1895, under the new Constitution, he was designated to serve in the appellate division of that court, in Rochester.

Wardrop, David W., soldier, born in Philadelphia, Pa., in 1824; died in Boston, Mass., July 12, 1898. At the beginning of the civil war he was commissioned colonel of the 3d Massachusetts Volunteers. He was mustered out July 22, 1861; re-entered the service, Aug. 21, 1861, as colonel of the 99th New York Infantry, Naval Brigade; and was finally mustered out of the service Jan. 17, 1865, with the rank of brevet brigadier general, having served as military governor of Roanoke island. He was department commander of the Veteran Union of Massachusetts at the time of his death.

Waring, George Edwin, sanitary engineer, born in Poundridge, N. Y., July 4, 1833; died in New York city, Oct. 29, 1898. He was educated

in the public and private schools of Stamford, Conn.; studied in Bartlett's School, Poughkeepsie, from 1847 till 1849; and in 1853 took a course in agriculture and agricultural chemistry under Prof. Mapes. He lectured during the winters of 1853-'55, before farmers' clubs, on improved methods of farming, and attracted the attention of

Horace Greeley, who made him manager of the Greeley experimental farm at Chappaqua, N. Y. In 1857 he was appointed agricultural and drainage engineer of Central Park. He planned the present system of drainage there, and held the office till the civil war began. He was commissioned major of 39th New York Volunteers (Garibaldi Hussars) in May, 1861, and served three months in the Army of

the Potomac. In August following he was transferred to the Department of the Southwest as a major of cavalry under Gen. Frémont. He was detailed for recruiting in St. Louis; raised six troops of cavalry called the Frémont Hussars, which, with the Benton Hussars, were formed into the 4th Missouri Cavalry, and was made colonel of the regiment, and served with it till the end of the war. He was mustered out of the service in March, 1865. From 1867 till 1877 he was manager of the Ogden Farm, at Newport, R. I. He gave up this post to devote his entire time to sanitary engineering. At the time of the outbreak of yellow fever at Memphis, in 1878, he changed the sewerage system of that city, separating house drainage from surface drainage, and this system was adopted in a large number of cities of the United States. In 1882 Col. Waring was appointed a member of the National Board of Health, which post he held several years. For a time, in 1894, he was assistant engineer of New Orleans. On Dec. 30, 1894, he was selected by Mayor Strong as commissioner of street-cleaning for New York city. He took charge Jan. 15, 1895, and remained in office till Jan. 1, 1898. He systematized the work of the department, and not only cleaned the streets of the city, but kept them clean. A novel innovation made by him was the uniforming of the street sweepers in white canvas suits. In 1898, when it was decided to appoint a commission to choose camp sites in Cuba for the American army of occupation and to suggest plans for improving the sanitary condition of Havana, Col. Waring was the first man selected. He was appointed Oct. 2, and went to Cuba shortly afterward. He spent some time in Havana, and soon after his return to New York was fatally stricken with yellow fever. In his report to the President, completed a few days before his prostration, he suggested improvements which would cost several million dollars. He was the candidate of the Citizens' Union for State Engineer and Surveyor at the time of his death. Col. Waring was an honorary member of the Royal Institute of Engineers, Holland; member of the Institution of Civil Engineers, England; fellow of the Sanitary Institute of Great Britain; and corresponding member of the American Institute of Architects. He published "The Elements of Agriculture" (1854); "Draining for Profit and Draining for Health" (1867); "Earth Closets" (1869); "Earth Closets and Earth Sewage" (1870); "Handy Book of Husbandry" (1870); "Whip and Spur" (1875); "A Farmer's Vacation" (1876); "Sanitary Drainage of Houses and Towns" (1876); "The Bride of the Rhine" (1877); "Sanitary Condition of City and Country Dwelling Houses" (1877); "Village Improvements and Farm Villages" (1877); "Tyrol and the Skirt of the Alps" (1880); "How to Drain a House" (1885); "Sewerage and Land Drainage" (1889); and "Modern Methods of Sewage Disposal for Towns" (1894).

Warren, Nathan Boughton, author and composer, born in Troy, N. Y., July 4, 1805; died there, Sept. 3, 1898. He was the first to introduce the choral service of the English Church into American use, which he did in 1844 in a mission church which his mother had founded. He was exceptionally skilled in musical knowledge, and received the degree of doctor of music from Trinity College. Besides composing several anthems he was the author of "The Order of Daily Service with the Musical Notation as used in English Churches" (New York, 1846); "The Ancient Plain Song of the Church" (1855); "The Holidays; Christmas, Easter, and Whitsuntide, their Social Festivities, Customs, and Carols" (1868); "Hidden Treasure: A Goblin Story for Christmas" (1872); "Lanford Hall and

Other Tales"; "Recollections of Revolutionary Times"; and "A Midsummer Night's Dream."

Washington, Ella Bassett, author, born in Hanover County, Va., in 1839; died in New York city, Jan. 17, 1898. She was a descendant of George Washington's family; was the daughter of George Washington Bassett, and the wife of Col. Lewis William Washington, of West Virginia. During the civil war she lived near Richmond. Among notable acts of courage which she performed was the capture of a Federal officer, for which she was voted a gold medal by the Confederate Congress. Mrs. Washington was a member of the Ladies' Mount Vernon Association, the Society of Colonial Dames of Virginia, and the Daughters of the Revolution of New York. She was a frequent contributor to magazines, and some of her poems, notably "The Song of the Sea" and "The Ruined Castle," were widely published.

Waterman, Thomas Whitney, lawyer, born in Binghamton, N. Y., June 28, 1821; died there, Dec. 7, 1898. He studied at Yale College; was admitted to the bar of New York in 1848, and till 1870 practiced his profession in New York city, when he removed to Binghamton. Besides editing a large number of legal works he was the author of the following books: "Treatise on the Civil Jurisdiction of Justices of the Peace" (1849); a substantially new edition of the "American Chancery Digest," with very full notes, known as the "Third Edition" (1851); "Treatise on the Civil and Criminal Jurisprudence of Justices for Wisconsin and Iowa" (1853); "Treatise on the Principles of Law and Equity in the Granting of New Trials in Cases Civil and Criminal" (1855); "Digest of the Reported Decisions of the Superior Court and of the Supreme Court of Errors of Connecticut" (1858); "Treatise on the Law of Set Off, Recoupment, and Counter Claims" (1869); "Treatise on the Law of Trespass" (1875); "Digest of Decisions in Criminal Cases" (1878); "Treatise on the Specific Performance of Contracts" (1881); "Treatise on the Law of Corporations Other than Municipal" (1888).

Weeks, Robert Dodd, educator, born in Clinton, N. Y., April 4, 1819; died in East Orange, N. J., Feb. 23, 1898. He learned the printers' trade, worked for a time as a compositor, and then assisted in his father's school, continuing his studies and acquiring a liberal English and classical education. He taught a public school in Newark, N. J., from 1846 till 1851; was Professor of English Literature and Farm Economy in the Michigan State Agricultural College till the autumn of 1857, and afterward was employed in the office of the Auditor General of Michigan. In February, 1860, he became a clerk in the Mutual Benefit Life Insurance Company of Newark, where he continued till his death. He published "Jehovah—Jesus" (1876); "Genealogy of the Family of George Weekes" (1885); and "The New Dispensation" (1898).

Wells, David Ames, political economist and publicist, born in Springfield, Mass., June 17, 1828; died in Norwich, Conn., Nov. 5, 1898. He was a lineal descendant on his father's side of Thomas Welles, Governor of the colony of Connecticut in 1655-'58, and on his mother's side of David Ames, who, under Washington, established and built the national armory at Springfield. Mr. Wells was graduated at Williams College in 1847, and shortly afterward became assistant editor, with Samuel Bowles, of the Springfield "Republican." During this period he was associated in the invention of a mechanism for folding newspapers and books by machinery in connection with power-printing presses. The first of these machines successfully operated was built at his expense and worked under his direction in the office of the Springfield

"Republican." Through the sale of his interest in the invention he was enabled to enter, in 1849, the Lawrence Scientific School of Harvard University. Besides taking the regular course, from which he was graduated with the first class in 1851-'52, he was a special pupil of Prof. Agassiz, who had then but recently arrived in this country. Immediately after his graduation he received the appointment of assistant professor in the Scientific School, and also that of lecturer on physics

and chemistry in Groton Academy, Massachusetts. In 1849, while at Cambridge, he began, in association with George Bliss, the publication of an annual report on the progress of science and the useful arts, which, under the title "The Annual of Scientific Discovery," was continued many years. During the next ten years Mr.

Wells was occupied chiefly with his teaching and the preparation of a series of scientific schoolbooks which at one time had an extensive circulation. Two of the series were soon translated into the Chinese language, and an elementary treatise on chemistry was adopted as a text-book at West Point. The first public appreciation of Mr. Wells as an economist was through an essay of his read before a literary society of Troy, N. Y., in 1864. This was entitled "Our Burden and our Strength," and discussed the resources and debt-paying ability of the United States. The enormous debt and great load of taxation, with which the civil war was burdening the nation had shaken public confidence, both at home and abroad, in the ability of the country to recover. This essay was the means of bringing Mr. Wells to the notice of President Lincoln, who, much impressed by it, sent for the author to come to Washington and confer with him and the Secretary of the Treasury, Mr. Fessenden, on the best methods of dealing with the finances of the country. One result of this conference was the passage by Congress in March, 1865, of a bill creating a commission of three persons for the purpose of inquiring into and reporting "on the subject of raising by taxation such revenue as may be necessary in order to supply the wants of the Government," etc. Mr. Wells was the chairman of this committee; and its work, which was practically Mr. Wells's work, formed the first systematic attempt in the United States to gather and use national statistics for national purposes. On the termination of the Revenue Commission in 1866, Mr. Wells was immediately appointed for a term of four years to an office created for him under the title of "special commissioner of the revenue." The first work that claimed his attention was a reconstruction and repealing of the system of excessive taxation which had been found necessary during and immediately after the war. Under his initiation and supervision were originated nearly all the forms of importance in our national revenue system, internal and customs, that were adopted by Congress between the close of the war and 1870—the redrafting of the whole system of revenue laws, the reduction and final abolition of the cotton tax and the taxes on manufactured and crude petroleum, the creation of supervisory districts and the appointment of super-

visors, the origination and the use of stamps for the collection of taxes on tobacco, distilled spirits, etc., and the creation of the Bureau of Statistics. An episode in his official career which strikingly illustrates his practical foresight was that connected with the taxing of distilled spirits. Mr. Wells took strong ground against the attempt to collect a tax of 1,000 per cent. (\$2 a gallon), pointing out the invariable inefficiency of such an excessive tax in producing revenue, and the fraud and dishonesty which it would be certain to create. He was not listened to, however, until the great increase of illicit distilling and largely diminished revenue made some action absolutely necessary. In the winter of 1867-'68 Congress reduced the tax to 50 cents a proof gallon, and the result was a most remarkable confirmation of Mr. Wells's prediction. During the last year of the \$2-tax the revenue was \$18,665,000; during the first year of the 50-cent tax it was \$45,071,000. In 1867, with a view to qualifying himself for special work, on the revision of the war tariff, Mr. Wells went to Europe, where his studies of the industries competitive with the United States, for which he had unusual advantages as an official of the Government, led him to a radical change of view regarding the free-trade policy. He had been up to this time an extreme advocate and believer in the theory of protection; but gradually, and much against all his preconceived ideas, he came to believe that free trade, made subordinate to revenue and gradually entered upon, was for the best interests of the whole country. The announcement of these views and the publication of his report in 1869 created much dissatisfaction among the protectionists, and Horace Greeley publicly charged Mr. Wells with having been "corrupted through British gold," although the charge was the grossest libel, as every one personally acquainted with Mr. Wells knew, yet it gained wide circulation and credence, and was no doubt, in conjunction with the personal antagonism between Mr. Wells and the Secretary of the Treasury, Mr. Boutwell, largely responsible for his retirement from Washington, which occurred on the expiration of his office as special commissioner in 1870. Upon his retirement a large number of members of both houses of Congress, without distinction of party, united in a letter of appreciation, from which the following is an extract: "The undersigned, members of the 41st Congress, who have been cognisant of your labors as special commissioners of the revenue, take the occasion of your retirement from public duties to express to you their appreciation of the work you have accomplished and the great ability with which you have discharged the duties of your office. How much soever they may perhaps have differed with you touching the matter of your conclusions upon particular points, they desire, nevertheless, to bear testimony to the great value of your work, and to the honesty and the faithful and untiring zeal which have characterized your whole public career." Shortly after leaving Washington Mr. Wells was appointed chairman of a New York State committee for investigating the subject and the laws relating to local taxation. He was a member, or received honorary degrees from a great number of societies and institutions, of which the following are the most important: He was elected a member of the French Academy in 1874 to fill the chair left vacant by the death of John Stuart Mill. In the same year he received the degree of D. C. L. from the University of Oxford, England. Williams College had already conferred upon him the degree of LL. D., and the Berkshire Medical College that of M. D. In 1870 he had become a member of the Cobden Club, and in 1871 was elected an honorary member of the Royal Statis-

tical Society of England. He was president of the American Social Science Association in 1875, in 1877 a foreign associate member of the Regia Accademia dei Lincei of Italy, and in 1881 was elected president of the American Free-Trade League. He was closely connected with the reorganization of the Erie Railroad in 1879, and in the same year was chosen by the associated railroads of the United States, together with Charles Francis Adams and John M. Wright, a member of a board of arbitration to which the associated railroads agreed to refer all disputes and all arrangements for pooling, etc. The following list comprises the most important of Mr. Wells's writings not already mentioned: In 1875, "The Creed of the Free Trader" and "The Production and Distribution of Wealth"; in 1876, "Robinson Crusoe's Money"; in 1878, "Why we Trade and how we Trade" and "The Silver Question; or, The Dollar of the Fathers vs. the Dollar of the Sons"; in 1882, "Our Mercantile Marine: How it Rose, Increased, became Great, Declined, and Decayed"; in 1884, "The Primer of Tariff Reform"; in 1885, a series of essays entitled "Practical Economics"; in 1886, "Principles of Taxation"; in 1887, "A Study of Mexico"; in 1888, "A Short and Simple Catechism" and "The Relation of the Tariff to Wages"; in 1889, "Recent Economic Changes." The substance of the last-mentioned book appeared as articles in the "Popular Science Monthly," the title there being "Economic Disturbances since 1873." In December, 1895, he began in the same journal the publication of a series of articles entitled "The Principles of Taxation," an expansion of his lecture on this subject, which was printed as a small volume in 1886. The series was much delayed, owing to Mr. Wells's precarious state of health, but had been almost completed at the time of his death. He himself considered this work the most important of anything he had ever undertaken, it being an epitome of the facts and principles in which he came to believe after many years spent in studying these questions. He frequently referred to it as his "best and most lasting monument." Besides these works, Mr. Wells wrote a great number of pamphlets and magazine articles. Some of these attained a very wide circulation, and received much attention and commendation from foreign governments. That entitled "Our Burden and our Strength" was reprinted in England and translated into both French and German. Mr. Wells's chief claim to distinction lay in his combination of scholarship with ability to apply it to the solution of the practical problems of the statesman and the publicist. It is not an overstatement to say that he was chiefly to be credited with the system of finance which bore the United States Government safely through the dangerous economic conditions during and following the civil war, and enabled it to handle the enormous debt with such remarkable ease. The four volumes of the report of the special commissioner of revenue (1866-'69) are among the standard works of statistical science. Personally, Mr. Wells was of slight build and medium height. A simple but very earnest manner, combined with remarkable facility of expression, rendered him an extremely agreeable as well as convincing talker. During the last ten years of his life he suffered from an incurable organic disease, but despite his knowledge that he might die at any time, his intellectual work was continued to within a few weeks of his death, and his interest and insight regarding economic matters was sustained to the last. He was twice married, first in May, 1860, to Mary Sanford Dwight, and in June, 1879, to Ella Augusta Dwight, both of whom were daughters of James S. Dwight, of Springfield, Mass., and Elizabeth Lee, of Norwich, Conn. He had one

son by his first wife, David Dwight Wells, who survives him.

West, Joseph Rodman, soldier, born in New Orleans, La., Sept. 19, 1822; died in Washington, D. C., Oct. 31, 1898. He studied at the University of Pennsylvania, but was not graduated, leaving to serve as a captain of volunteers in the Mexican War. He went to California in 1849 and engaged in business. At the beginning of the civil war he entered the army as lieutenant colonel of the 1st California Infantry; served in the Southwest; was promoted brigadier general of volunteers, Oct. 25, 1862; and when honorably mustered out of the service, Jan. 4, 1866, was brevetted major general. He settled in New Orleans, where he became successively chief deputy United States marshal, auditor of the customs, and administrator of improvements. He was elected United States Senator from Louisiana as a Republican, and served from 1871 till 1877. From 1882 till 1885 he was commissioner of the District of Columbia.

Westcott, Edward Noyes, novelist, born in Syracuse, N. Y., Sept. 24, 1847; died there, March 31,

1898. He was a banker in his native city, and his only book, "David Harum: A Story of American Life," was issued soon after his death. It is a careful study of life in central New York, and the excellence of the workmanship and the fidelity of its descriptions have attracted much attention to it and given it a wide circulation.

Weston, Byron, manufacturer, born

in Dalton, Mass., April 9, 1831; died there, Nov. 8, 1898. He began to fit himself for the profession of civil engineer, but changed his plans and was apprenticed to the trade of paper making. So rapidly did he advance in this work that at the age of twenty he was superintendent of 7 large mills. Soon afterward he became interested financially in paper mills in Hartford, Conn., and in Dalton. It is said that he was the first to invent the process for making paper from wood pulp. In 1862 he raised a company for the 49th Massachusetts Volunteers, became its captain, and served till the end of the civil war. He served a term in the State Senate. In 1879 he was elected Lieutenant Governor of Massachusetts, John D. Long being the Governor. He was a generous benefactor of Williams College, notably in the gift of its athletic field, and that college conferred on him the honorary degree of master of arts.

White, George G., illustrator, born in Philadelphia, Pa., in 1830; died in New York city, Feb. 24, 1898. He was educated at Girard College. During the gold fever he went to California; later, spent some time in South America, and in 1863 came to New York city. He worked as a war correspondent for "Frank Leslie's Illustrated Newspaper," and after the war opened a studio. He made a specialty of illustrating schoolbooks and novels.

Wikoff, Charles A., soldier, born in Easton, Pa., March 8, 1837; died near Santiago, Cuba, July 1, 1898. He enlisted in the civil war as a private in the 1st Pennsylvania Infantry, April 20, 1861; was appointed 1st lieutenant, 15th Infantry, regular army, May 14, 1861; promoted captain, Aug. 15,

1864; transferred to 24th Infantry, Sept. 21, 1866; transferred to 11th Infantry, April 25, 1869; promoted major, 14th Infantry, Dec. 8, 1886; lieutenant colonel, 19th Infantry, Nov. 1, 1891; and colonel 22d Infantry, Jan. 28, 1897. He took part in the battles of Shiloh, Chickamauga, and Missionary Ridge during the civil war. At the battle before Santiago, July 1, 1898, he commanded the 3d brigade of the 1st division, 5th Army Corps, and was killed while superintending the fording of San Juan river by his brigade. His body was brought to the United States and interred in Easton, Oct. 21, and the military camp on Montauk, Long Island, was named in his honor.

Wild, John, actor, born in Manchester, England, Dec. 29, 1843; died near Troy, N. Y., March 9, 1898. He was brought to New York city by his parents, who settled there in 1845. He was employed in a grocery in 1855, became a newsboy, and subsequently was driver of a passenger stage in Harlem. About 1859 he became a negro minstrel, and in 1860 he was engaged with a company that occupied No. 444 Broadway. He came at once into favor as a delineator of the negro of the Thompson Street type, and, with the exception of a few engagements in Philadelphia, he remained for thirty years "on Broadway," the most popular black-face comedian of the country. On Jan. 28, 1878, at the Theater Comique, 514 Broadway, New York, he began his association with Edward Harrigan and Tony Hart as Capt. Simpson Primrose, the dandy coon, in the first of the great series of "Mulligan Guard" comedies of New York's good-natured lower life. The only departure from black-face comedy that he had to make in the Mulligan plays was "Lemons," as a tramp in "The Mulligan Guard's Picnic." In January, 1889, he began a starring tour in a play which it was thought was suited to his quaint humor. This was called "Running Wild." It lasted but a few months, and in the autumn of the same year Wild was playing again in New York. On Dec. 29, 1890, he again joined Edward Harrigan at Harrigan's Theater, now the Garrick, in West Thirty-fifth Street, near Broadway, and played "Salvator Magnus" in "Reilly and the 400." He remained with this theater until the vogue of Harrigan comedies declined. His last appearance on the stage was at Proctor's Twenty-third Street Theater in January, 1898.

Wilkinson, Melville C., soldier, born in New York, Nov. 14, 1835; died on Bear island, Minn., Oct. 6, 1898. He entered the volunteer service as 1st lieutenant, 23d New York Infantry, May 16, 1861; resigned, Nov. 7, 1861; commissioned 1st lieutenant, 107th New York Infantry, July 28, 1862; promoted captain, Aug. 9, 1862; resigned, Jan. 26, 1863; commissioned 1st lieutenant in the Veteran Reserve Corps, Aug. 13, 1863; promoted captain, Dec. 10, 1863; and was honorably mustered out of the service, June 30, 1866. He entered the regular army as 2d lieutenant, 42d Infantry, July 28, 1866; was transferred to the 6th Infantry, April 22, 1869; unassigned, June 28, 1869; assigned to 3d infantry, Aug. 3, 1870; promoted 1st lieutenant, Jan. 1, 1871; and captain, April 24, 1886. He was brevetted major, Feb. 27, 1890, for service in the war with the Idaho Indians in 1877. He was sent from Fort Snelling, Minn., to Leech Lake in October, 1898, to quiet the Pillager Indians, and in the skirmish that took place was shot dead.

Willard, Frances Elizabeth, social reformer, born in Churchville, N. Y., Sept. 28, 1839; died in New York city, Feb. 18, 1898. She was graduated at the Northwestern Female College, Evanston, Ill., in 1859; became Professor of Natural Science in her *alma mater* in 1862; and subsequently taught in the Pittsburg Female College and was principal of

Genesec Wesleyan Seminary, Lima, N. Y. In 1868-'70 she traveled in Europe and the East, spending a part of her time in studying in Paris, Berlin, and Rome. From 1871 till 1874 she was Professor of *Æsthetics* in Northwestern University and dean of the Woman's College, where she developed an original system of self-government. She left her profession in 1874 to identify herself with the Woman's

Christian Temperance Union. She was corresponding secretary of the national organization from 1874 till 1878, and in 1879 was elected president, which office she held till her death. She succeeded her brother in 1879 as editor of the Chicago "Evening Post," but resigned a few years later to give her entire attention to temperance work. She became

a member of the Executive Committee of the Prohibition party in 1882, and in 1883 founded the World's Christian Temperance Union on the same plan as that of the United States. In 1886 she was placed at the head of the White Cross movement in all her unions, and in 1888 was elected president of the American branch of the International Council of Women. In 1893 she was at the head of the Women's Committee on Temperance Meetings at the World's Columbian Exposition. Miss Willard received the degree of LL. D. from Ohio Wesleyan University in 1894. She was editor-in-chief of "The Union Signal," contributed frequently to magazines, and published "Nineteen Beautiful Years" (1868); "Hints and Helps for Woman's Christian Temperance Workers"; "Woman and Temperance," (1883); "How to Win" (1886); "Woman in the Pulpit" (1888); "Glimpses of Fifty Years" (1889); "A Year's Bright Chain" (1890); "A Classic Town, Evanston" (1891); "A Wheel within a Wheel" (1895); and, with Mary A. Livermore, "A Woman of the Century" (1893).

Williams, John Stuart, soldier, born in Montgomery County, Ky., in 1820; died near Mount Sterling, Ky., July 17, 1898. He was graduated at Miami University, Oxford, Ohio, in 1840; studied law in Paris, Ky.; and was admitted to the bar of Kentucky. He served in the Mexican War, first as captain and afterward as colonel. In the famous victory gained by Gen. Scott over Santa Anna, April 18, 1847, he led a gallant charge, which caused the sobriquet of "Cerro Gordo" to be applied to him. He was in command of the 4th Kentucky Volunteers from Oct. 4, 1847, till July, 1848. After the Mexican War he became a farmer on his estate in Montgomery County, traveled in Europe, Asia, and Africa, and was present at the siege of Sebastopol. He raised a brigade for the Confederate army and was commissioned brigadier general in 1862. He was elected a member of the Kentucky Legislature of 1851, and again in 1873: was defeated for the nomination for Governor in 1875; was a Tilden elector in 1876; and served as United States Senator from 1879 till 1885. From that time he was engaged in farming, promoting railways in Kentucky, and improving land in Florida.

Winfield, Charles Hardenburg, lawyer, born near Port Jervis, N. Y., Nov. 8, 1829; died in Jersey City, N. J., March 9, 1898. He was graduated at

Rutgers College in 1852, studied law in Jersey City, and was admitted to the bar in 1855. He was elected a member of the New Jersey Senate in 1865 and served one term. He was appointed Prosecutor of the Pleas for Hudson County in 1883, reappointed in 1888 and again in 1893, and resigned the office, Feb. 4, 1898. He was the author of "History of Land Titles" (1872); "History of Hudson County" (1874); "Adjudged Words and Phrases" (1882); and "The Founding of Jersey City" (1892).

Wingfield, John Henry Ducachet, clergyman, born in Portsmouth, Va., Sept. 24, 1833; died in Benicia, Cal., July 27, 1898. He was graduated at William and Mary College in 1853, and after being principal of the Ashley Institute, at Little Rock, Ark., several years was ordained deacon in 1858. After serving as rector in Petersburg, Va., and elsewhere he became rector of Trinity Church, San Francisco, in 1874, and in the same year was elected Missionary Bishop of Northern California. His consecration took place on Dec. 2, 1874, and in addition to his episcopal duties he accepted in 1875 the rectorship of St. Paul's Church, Benicia. In 1869 he received the degree of D. D. from his *alma mater*, and in 1874 that of LL. D.

Wise, Daniel, clergyman, born at Portsmouth, England, Jan. 10, 1813; died Dec. 19, 1898. He came to the United States in 1832, entered the ministry of the Methodist Episcopal Church, and filled various pastorates from 1837 to 1852. From 1838 to 1844 he edited the first Methodist Sunday-school paper in America, and he was editor of "Zion's Herald" in 1852-'56. From the latter year till 1872 he edited the Sunday-school publications of the Methodist Episcopal Church. His numerous writings, some of which appeared under the pseudonyms Francis Forrester, Esq., and Laurence Laneewood, are largely, though not entirely, intended for young people. They include "Life of Lorenzo Dow" (1840); "History of London" (1841); "Personal Effort" (1841); "McGregor Farm" (1845); "Cottage on the Moor" (1845); "Infant Teacher's Manual" (1846); "Lovest Thou Me?" (1846); "Guide to the Saviour" (1847); "Path of Life" (1848); "Benevolent Traveler"; "Christian Love"; "Devout Soldier"; "Life of Ulrich Zwingli" (1850); "Bridal Greetings" (1850); "Young Man's Counselor" (1850); "Young Lady's Counselor" (1851); "Aunt Effie" (1852); "My Uncle Toby's Library" (12 vols., 1853); "Living Streams" (1854); "Precious Lessons" (1854); "Popular Objections to Methodism considered"; "Sacred Echoes"; "Swiss Reformer"; "Voice from the Vale of Death"; "Willow Grove Cottage"; "Methodism in Earnest" (1856); "Pleasant Pathways" (1859); "Revival Miscellanies"; "Voice from the Main Deck"; "Sidney de Gray" (1865); "Nellie Warren" (1866); "Lindendale Stories" (1868); "Little Peachblossom" (1873); "Hollywood Series" (1873); "Glen Morris Stories" (1874); "The Squire of Walton Hall" (1874); "The Story of a Wonderful Life" (1874); "Our King" (1875); "Summer Days on the Hudson" (1875); "Vanquished Victors" (1876); "Winwood Cliff Series" (4 vols., 1876-'80); "Oscar's Boyhood" (1879); "Heroic Methodists of the Olden Time" (1882); "Our Missionary Heroes and Heroines" (1884); "Boy Travelers in Arabia" (1885); "Men of Renown" (1886); "Young Knights of the Cross" (1887); and "Remarkable Women" (1887).

Woodbury, Charles Levi, jurist, born in Portsmouth, N. H., May 22, 1820; died in Boston, Mass., July 1, 1898. He was educated in Washington, D. C., studied law, and was admitted to the bar of the District of Columbia. He went to Alabama in 1840, and practiced there four years. In 1845 he removed to Boston, Mass., where he resided till his

death. In 1857 he was appointed United States district attorney for Massachusetts, and in 1870-'71 was a member of the Massachusetts Legislature. Mr. Woodbury was one of the compilers of "Woodbury and Minot's Reports," in three volumes; editor of the second and third volumes of "Levi Woodbury's Writings" (Boston, 1852); and was also the author of several pamphlets on international diplomatic questions.

Woodruff, Wilford, president of the Mormon Church, born near Hartford, Conn., March 1, 1807; died in Salt Lake City, Utah, Sept. 3, 1898. He received a common-school education in Farmington, Conn., and was brought up under the influences of the Orthodox Congregational Church. In 1833 he became a convert to Mormonism, and was ordained a priest. In 1839 he was ordained one of the Twelve Apostles, with the special designation "the Banner of the Gospel." During his first six years' connection with the Mormons he had traveled with the main body, or with detachments, through Arkansas, Tennessee, Kentucky, Ohio, and Illinois. In 1840 he made a missionary tour of England. In 1842 he joined the Mormons at their chief rendezvous, in Nauvoo, Ill., where he was appointed a member of the city council. In 1847 he joined in the hegira to Utah, and he was the last survivor of that band. In 1850 he was elected a Senator of the provisional State of Deseret. On the death of Brigham Young, in 1877, John Taylor succeeded to the presidency of the Church, and Woodruff was made president of the Twelve Apostles, which office he held through life, and when President Taylor died, in 1887, Woodruff became president of the Church. He was also president of St. George's Temple, in southern Utah, which was completed and dedicated by Brigham Young shortly before his death. President Woodruff from 1875 was the historian and general recorder of the Church. He took a great interest in all the jubilees and anniversaries of the Church, and he was the central figure at the pioneer jubilee in 1897. For twenty-two years he was a member of the Legislature of Utah. He was a practical polygamist till polygamy was forbidden by a law of the United States, and just before the admission of Utah as a State he issued a manifesto declaring his intention to abide by the law, and advising all Mormons to do the same. The Twelve Apostles unanimously approved the manifesto. He was a man of great physical endurance. It is said that he had traveled in Great Britain and in 23 States and 5 Territories of the Union, and that from the beginning to the end of his ministry he had covered 172,369 miles, had held 7,665 meetings, had delivered 3,226 discourses, and had organized 51 branches of the Church and 7 preaching stations.

Wright, Charles Barstow, financier, born in Wysox, Pa., Jan. 8, 1822; died in Philadelphia, Pa., March 24, 1898. He began business while a mere boy, at the age of twenty was a successful banker and merchant in Braddock, and in 1843 went to Chicago, where within two years he amassed a small fortune in real estate. In 1863 he was actively engaged in the development of the petroleum interests of Pennsylvania, took a prominent part in the construction of the Philadelphia and Erie Railroad, and later became general manager of the united railway companies in the oil regions. He became a director of the Northern Pacific Railroad in 1870, and in 1874, as its fourth president, assisted in its reorganization and the completion of the road to Puget Sound. He resigned the presidency in 1878, remaining a director. He took an active part in the founding of the city of Tacoma, and endowed the Annie Wright Seminary for girls and the Washington College for boys.

Wylie, Theodore William John, clergyman, born in Philadelphia, Pa., Oct. 3, 1818; died there, June 11, 1898. He was graduated at the University of Pennsylvania in 1836, was ordained to the ministry, and became associated with his father in the pastorate of the First Reformed Presbyterian Church of Philadelphia, succeeding him in 1852. He was corresponding secretary of the Board of Missions of his Church from 1843 till 1849, and professor in the Reformed Presbyterian Theological Seminary, 1847-'51, 1854-'57; and 1859-'61. He received the degree of D. D. from the University of New York in 1859. He edited "The Juvenile Missionary Intelligencer" (1835-'37); "The Missionary Advocate" (1838-'41); and "The Banner of the Covenant" (1845-'55); and published "An English, Latin, and Greek Vocabulary" (1839); "The God of Our Fathers" (1854); and "Washington a Christian" (1862).

Yandell, David Wendell, physician, born near Murfreesboro, Tenn., Sept. 12, 1826; died in Louisville, Ky., May 2, 1898. He was graduated at the University of Louisville in 1846; studied two years in Europe, and began to practice medicine in 1848. He became a professor in the University of Louisville in 1859, and was a medical director in the Confederate army from 1861 till 1866. In 1870 he established "The American Practitioner." He was elected president of the American Medical Association in 1871, and was appointed Professor of Surgery in Indiana Medical College in 1874.

Zachos, John C., educator, born of Greek parents in Constantinople, Turkey, in 1820; died in New York city, March 20, 1898. He was brought to the United States by Dr. Howe, studied at Amherst College, and was graduated at Kenyon College, Ohio, in 1840. He studied medicine in Cincinnati, but after completing his course he adopted literature as a profession, and in 1853 became Professor of English in Antioch College, Yellow Springs, Ohio. He served from 1862 till 1864 as acting surgeon in the National army, being assigned to the superintendency of Paris Island, in Beaufort Bay, S. C. He occupied the Unitarian pulpit in West Newton, Mass., for two years, and in 1866 became Professor of Rhetoric in the Meadville, Pa., Theological School. In 1871 he came to New York city, and was appointed curator of Cooper Union, which office he held till his death. Mr. Zachos was one of the founders of the Ohio Society of New York city, and also of the Beta Theta Pi Society. He published "A New American Speaker" (1852); "Analytic Elocution" (1861); "New System of Phonic Reading" (1863); and "Phonic Primer and Reader" (1864); and edited "A Sketch of the Life and Opinions of Peter Cooper" (1876).

Ziegler, Henry, educator and author, born in Center County, Pa., Aug. 19, 1816; died in Selinsgrove, Pa., Nov. 25, 1898. He was graduated at Pennsylvania College, Gettysburg, in 1841, studied theology there, and was ordained by the Pittsburg Synod. His first pastorate was at Selinsgrove, and he assisted also the pastors at Sunbury and Lewisburg, and served the congregation at Liverpool. In 1845-'50 he labored in the Pittsburg Synod as traveling missionary, having as his territory Crawford, Venango, Mercer, Beaver, Butler, and Allegheny Counties. He was pastor at Williamsport, Pa., in 1850-'53; and organized the first English Lutheran congregation of that city. He was agent of the parent education society of the General Synod in 1853-'55 and was pastor in Clinton and Center Counties in 1855-'58. In the latter year he became Professor of Theology in Missionary Institute (now Susquehanna University), Selinsgrove, Pa., and he held that chair until 1881, when failing health compelled him to retire. For many years he was

the only instructor of theology in the institution. He prepared his own text-books, three of which ("Catechetics," "The Pastor," and "The Preacher") have been published; three others ("Natural Theology," "Evidences of Christianity," and "Dogmatic Theology") were printed only for the use of the students; while others were copied by the students from his manuscripts. One hundred students were trained by him for the ministry. He was a frequent contributor to Church periodicals, and was the author of numerous books, including "Luther's Small Catechism" (Philadelphia, 1887) and "Heavenly Recognition" (York, Pa., 1895).

OBITUARIES. FOREIGN. **Abrantes, Duke d',** a Spanish statesman, born in 1843; died in Madrid early in May, 1898. As Marquis de Sardoal he was elected a Deputy in 1867, and warmly embraced democratic and revolutionary principles in 1868, becoming Alcalde of Madrid in 1869. Affiliating with the Radical party, he continued to preside over the municipality under King Amadeus, and when the republic was declared in 1873 he rallied to that form of government, but gave his adherence to the monarchy after the restoration, and in 1883 became Minister of Fomento in the Cabinet of Práxida Herrera.

Ahmud Khan, Sir Saiyid, an Indian statesman, born in Delhi in 1817; died in Allahabad in March, 1898. He was descended from a family tracing its lineage to the Prophet, which entered India from Herat with the Mogul conquerors and held high offices in the court of the emperors at Delhi. In 1837 he entered the British service after studying law, and was connected with the tribunals until he retired. While at Bijnor, in Rohilkand, at the time of the mutiny, he saved all the British in the station from massacre by the exercise of great courage and tact. He was rewarded for his fidelity and devotion to the British in this critical period, and after the mutiny he gave his whole mind to the cause of Mohammedan education, perceiving that his coreligionists could not take the part in Indian Government which the British were disposed to assign to them unless they equipped themselves intellectually as the Hindus of Bengal were doing. He founded a society for the translation of books on history and modern science, which grew into a permanent institute at Aligahr, the town where he resided. In connection with this he established a printing office and published a journal. In 1873 he founded an Anglo-Oriental college at that place for the education of Mohammedans of the higher classes. In defense of his religion he was an able dialectician, and frequently contributed articles to English newspapers and magazines. In answer to his friend Sir William Muir's "Life of Mahomet" he published in 1870 "A Series of Essays on Mahomet." Retiring from the magistracy in 1876, he was appointed in 1878 a member of the Viceroy's Council by Lord Lytton, and was reappointed by Lord Ripon. He received the order of the Star of India in 1888. He assailed the Indian National Congress from its inception, keeping Mohammedans generally from going into that movement, and was regarded as the political leader of the whole Mohammedan community of India.

Alvary, Max (Achenbach), singer, born in Düssel-dorf, Germany, in 1856; died in Grosztabarz, Thuringia, Nov. 8, 1898. He was the son of Andreas Achenbach, a noted German painter. In his early youth he was passionately devoted to music, and as a member of local singing societies and choirs of his native city became celebrated for the strength and purity of his voice. He determined to adopt the lyric stage, and put himself under the tutelage of Lamperti in Italy. He continued his studies with Julius Stockhausen at Frankfort, and sang in

concert and oratorio. His *début* in opera was made in Weimar in 1882, in the part of Stradella at the Court Theater. For two years he continued to grow popular in Germany, and in 1884 he was engaged for the Metropolitan Opera House, New York city, where he opened that autumn as Don José to Lilli Lehman's Carmen. During two seasons in New York he was received with favor, and in this time he played Adolar in Weber's "Euryanthe," first produced Dec. 23, 1887. But when Wagner's "Seigfried" was produced Alvary's rendition of Seigfried struck a tremendously magnetic chord of public favor. He was Seigfried indeed, the very realization of Wagner's imaginings. New York press and public trumpeted the young tenor's triumph. When he closed his engagement in 1889 an ovation such as had never been witnessed in America attended his last appearance. He was received in Europe as a great singer upon the faith of the American verdict. At Beyreuth he sang Tannhäuser and Tristan, and repeated his American successes in the principal cities of his native land. In the spring of 1895, he returned to New York as a member of Walter Damrosch's German Opera Company. During this engagement he sang Tristan in "Tristan and Isolde" for the first time in the United States. He again came to New York with Damrosch in 1896. While playing an engagement at Mannheim, Germany, in 1895, Alvary fell through a trap that had been negligently left open on the stage during a rehearsal, and suffered internal injury, to which he was at first somewhat indifferent. It was not, indeed, until the following year, during his engagement in New York, that he began to be alarmed. An operation was performed, but it was discovered that cancer had taken seat at the place of injury. He then retired to his home in Thuringia, where, after a series of expensive but hopeless operations which consumed his savings, he died in an agony of pain intensified by the dependence upon him of a widow and nine children.

Anderson, Sir William, an English engineer, born in St. Petersburg, Jan. 5, 1835; died in London, Dec. 11, 1898. He took the highest honors in the commercial school of St. Petersburg, and in 1849 went to London to take the course in applied science at King's College, after completing which he was apprenticed to Sir William Fairbairn in 1851. As a member of a firm in Dublin, from 1855 till 1864, he was engaged in building railroad bridges, and made in connection with this work a study of diagonally braced girders that gave him note in the engineering world. He was the head of the firm of Easton & Anderson, of Erith, when in 1889 he was appointed director-general of the British ordnance factories. In this public post he has had legal controversies with several inventors of high explosives.

Aueling, Edward Bibbins, an English journalist, born in Stoke-Newington, Nov. 29, 1851; died in London, Aug. 4, 1898. He was of Irish descent, was educated at University College, London, studied medicine, went to Cambridge as Prof. Michael Foster's assistant in physiology, and was afterward Professor of Chemistry and Physiology at New College and of Comparative Anatomy at the London Hospital. In 1882 he was a member of the London School Board. He gave up his profession to advocate the doctrines of socialism as propounded by Karl Marx. He became an editor, writer, and lecturer in this cause, and a leader of the social democrats of Great Britain. He wrote books and plays with political motives, and many text-books and other works designed to popularize Darwinian scientific theories and the politico-economic doctrines of Marx. He also translated the writings of Continental socialists. In 1886 he visited the United

States in company with Wilhelm Liebknecht, and lectured in the principal cities. He left his wife in England, and was accompanied by Eleanor Marx (daughter of Karl), who was an effective public speaker as well as an attractive woman, and was very earnest in disseminating her father's ideas. His wife died, and in 1898 he married again, whereupon Miss Marx committed suicide. It was said that Aveling procured the poison for her, and there was to be a legal investigation, but his own death, from natural causes, followed so soon as to prevent it.

Baden-Powell, Sir George S., an English economist, born in Langton, Kent, in 1847; died in London, Nov. 20, 1898. He was educated at St. Paul's School and Balliol College, Oxford, where he was graduated with honor in 1876, became private secretary to the Governor of Victoria, special commissioner to the West Indies in 1882, Sir Charles Warren's assistant in Bechuanaland in 1884, a member of the Malta Commission in 1887, Bering Sea Commissioner in 1891, and member of the joint commission at Washington in 1892. He represented a division of Liverpool in Parliament from 1885. He published "New Homes for the Old Country," "Absorption of Small States by Large," "Protection and Bad Times," "State Aid and State Interference," and numerous articles on colonial, financial, and economic subjects.

Ball, John Thomas, an Irish jurist, born in Dublin in 1815; died in Dundrum, March 17, 1898. He was graduated from the University of Dublin in 1836, was called to the Irish bar in 1840, attained a high reputation in the equity and common law courts and as a civilian in the ecclesiastical courts, and was made Queen's advocate in 1865. In that year he was defeated as the Liberal candidate for Parliament in the representation of the University of Dublin, but in 1868 he was elected by the votes of Conservatives who wished to secure his services in defense of the Irish Church, then threatened with disestablishment. Mr. Disraeli, on becoming Prime Minister, appointed Dr. Ball Solicitor-General, and afterward Attorney-General. Mr. Gladstone soon returned to power and carried through his Irish Church bill, which Dr. Ball from the front bench of the Opposition succeeded in having modified in some important particulars. Lord Beaconsfield reappointed him Attorney-General in 1874, and in the following year made him Lord Chancellor of Ireland, which office he held till Mr. Gladstone returned in 1880.

Barrow, John, an English author, born in 1808; died at Chipping Norton, Oxfordshire, in December, 1898. He was a son of Sir John Barrow, the arctic explorer, and was himself a noted traveler, but usually in more temperate regions than those affected by his father. His published works comprise "Excursions in the North of Europe" (1835); "Visit to Iceland" (1835); "Tour around Ireland" (1836); "Tour in Austria, Lombardy, Bavaria, etc." (1840); "Memoir of Sir John Barrow"; "Life of Sir Francis Drake" (1843); "The Naval Worthies of Elizabeth's Reign" (1845); "Life of Admiral Sir William Sydney Smith" (1848); "Expeditions on the Glaciers" (1864); and "Mountain Ascents in Westmoreland and Cumberland" (1886).

Beardsley, Aubrey, an English artist, died in Mentone, March 16, 1898. Without receiving a regular artistic training, he developed a genius in black and white, a faculty for weaving a pattern with the pen, a power in the treatment of the line partaking of the qualities of Japanese art, an imaginative and grotesque symbolism and weird fantastic idealism that were peculiarly his own and had a far-reaching influence on contemporary art, not alone in England, but in Germany, Austria, and the

United States. His work was first seen in the "Yellow Book" and the "Savoy Magazine," after which he illustrated books of poetry and gave direction to the development of art in the production of advertising posters, analogous to the work of French artists who likewise had drawn inspiration from the Japanese.

Bessemer, Sir Henry, an English inventor, born in Charlton, Hertfordshire, Jan. 19, 1813; died in London, March 15, 1898. He was the son of an artist who was a member of the French Academy. All his life he was a prolific and assiduous inventor. One of his first successful inventions was gold paint, which he compounded with his own hands in his house at St. Pancras in order to keep the process secret. At the time of the Crimean War, when the study of guns and projectiles engaged the attention of many ingenious minds, he worked on a method of giving a rotary motion to the shot without rifling the barrel. This attracted the attention of the Emperor Louis Napoleon, but the results that he obtained only convinced him that it would be useless to work on projectiles until guns could be made stronger and better. Therefore he gave himself up to the study of gun metal, erecting shops at St. Pancras in which to carry on his experiments. Abandoning all other business, at the end of two years he struck upon the central principles of the Bessemer process for converting cast iron into cast steel. Before that the decarbonization of iron could only be effected by the tedious, difficult, and unhealthful process of puddling, which consisted in turning and kneading great molten masses at the end of long rods until every part was exposed to the air. Bessemer's idea was to force a blast of air through the molten metal until it was sufficiently decarbonized. After he had read a paper before the British Association in 1856 descriptive of his process, a number of firms bought the right to use it, but it was not yet perfect, and after others, who had experimented on what they supposed to be his method, had pronounced it a failure, they took no pains to apply and develop the invention. He, however, set to work to remove its defects, and after two more years of costly experimentation, he produced steel that could not be distinguished from that made by the old process. The ironmasters declined to give any more attention to the subject, having made up their minds that the invention was a failure. Finding no one willing to take it up, he determined to go into the manufacture himself. His steel works were built at Sheffield, and gradually the product was brought upon the market, until the steelmakers of Sheffield suddenly became aware that they were being undersold £20 a ton, and rushed to obtain licenses at a higher price than was demanded before. At the same time the manufacturing business of Henry Bessemer & Co. went on, paying in profits six times the invested capital every year of the fourteen during which the partnership existed. In royalties the inventor received over £1,000,000. Martien's patent, which covered a process similar to his, though proceeding from a false theory, he bought up, and Mushet's idea of restoring carbon with manganese to the completely decarbonized iron by mixing spiegeleisen with it he made use of, and acknowledged by paying an annual allowance to that inventor, although his suggestion was not patentable. In 1865 he showed at the meeting of the British Association samples of steel that he made with recarbonization or the admixture of manganese by arresting the process of decarbonization at exactly the right stage. Bessemer was an adept in hydraulics, as he used delicate hydraulic machinery in moving the great vessels of molten iron, and in his earlier experiments on projectiles he had employed hydraulic power to shape the shot.

He invented a suspended saloon for passenger steamers for the avoidance of seasickness, which was controlled by a hydraulic apparatus. In association with Sir E. J. Reed he had a great paddle-wheel steamer made on this plan to run across the English Channel. In the first trip in 1875 it ran into the pier at Calais, and in the following year the vessel was sold and the swinging cabin was taken out, as it had not proved successful. Sir Henry Bessemer, who received the honor of knighthood in 1879, retired from active business on the advice of his physician. He then returned to mechanical invention as a recreation and employed his time in making reflecting telescopes. He proposed to make reflectors 8 or 10 feet in diameter by mounting sheets of plate glass in heavy iron castings to which they would be held fast by atmospheric pressure, the surface of both being perfectly flat and the air between them pumped out. The surface of the reflector he expected to shape into the right curve by means of a great lathe. He also invented hydraulic apparatus for adjusting telescopes.

Black, William, an English novelist, born in Glasgow, Scotland, in November, 1841; died in Brighton, England, Dec. 10, 1898. In 1877 he wrote a short autobiographical sketch, which is as follows: "I am informed, on what I hold to be ex-

cellent authority, that I was born in Glasgow on either Nov. 13 or 15, 1841—the precise day is not a point likely to drive the world into convulsions of dispute. I never had any systematized education to speak of, but I managed to pick up a vast array of smatterings—a crude and confused jumble of hydraulics, Latin verbs, vegetable physiology, Czerny's exercises

for the piano, and a dozen other things; a perhaps not unnatural outcome of all which was that I found myself engaged, at one and the same time, on a translation of Livy, which was to excel in literary accuracy anything the world had ever seen before; on the formation of a complete collection of British flowering plants—the grasses and cryptogams were a trifle beyond me; and on the construction—on paper—of a machine which should demonstrate the possibility of perpetual motion. The translation of Livy did not get beyond half a book or so; that monument of learning is at the disposal of any publisher who will pay for it. The perpetual-motion machine was never forwarded to the Royal Society, but its phantom on paper at least succeeded in puzzling a good many worthy persons, who could only bring against it the objection that in time friction would destroy the mechanism—a puerile and vulgar argument. The scant herbarium remains to this day; a poor enough treasure house of botanical lore, but a rich treasure house of memories of innumerable and healthful wanderings by hill and moorland and seashore, through the rain and sunlight and beautiful colors of the western Highlands. But the chiefest of my ambitions was to become a landscape painter, and I labored away for a year or two at the Government School of Art, and presented my friends with the most horrible abominations in water color and oil. As an artist I was a complete failure, and so quali-

fied for becoming in after life—for a time—an art critic. My first essay in literature took the form of a series of elaborate articles on the chief writers of the day, and these I forwarded anonymously to the editor of a Glasgow daily newspaper, which is now dead. They appeared, so far as I can recollect, in large type and in a prominent position; and no doubt the public came to the conclusion that there was something gravely wrong about this or that theory of Mr. Ruskin, or some hidden virtue never before discovered in this or the other passage of Mr. Charles Kingsley, when this important critic pointed these things out. I think I was then about seventeen or eighteen. I do not know whether Mr. Ruskin ever amended his ways in obedience to my serious remonstrances, and I am afraid Mr. Carlyle never heeded the protests I made, in Carlylese, against Carlylese. But the public was doubtless impressed. My next departure was a series of sketches of rambles in the country, written in imitation of Christopher North. These were contributed to 'The Weekly Citizen,' then and now conducted by Mr. James Hedderwick, author of 'Lays of Middle Age,' and a charming essayist. I subsequently joined the staff of 'The Citizen' and went through the ordinary curriculum of becoming in turn dramatic critic, musical critic (I could play 'The Blue Bells of Scotland' with both hands), reviewer, and assistant subeditor, while on one occasion—though I am really ashamed to make the confession—I wrote a leading article on the American civil war, and severely condemned the miserable tactics of a particular general, I forget whom. I left Glasgow for London in 1864, and very soon became a facile manufacturer of leading articles. In 1866 'The Morning Star' sent me out as its special correspondent to describe the Prusso-Austrian war, my chief qualification for the task being that I knew about enough German to enable me to ask for a railway ticket, and that I had attentively studied the wars of the Jews in the history of Josephus, that being the only secular book which we children were allowed to read of a Sunday evening. I never saw any fighting, but I managed to get forward in time to see the dead bodies lying on the field of Königgratz—and a very pretty sight that was. My subsequent connection with journalism may be briefly summed up. I was for about a year editor of 'The London Review,' and afterward, for a short period, of 'The Examiner.' Then for three or four years I was assistant editor of 'The Daily News.' My career as a journalist ended in 1875. Now I come to my novels. I had written and published in Glasgow a short story in one volume; there was nothing in it. In 1868 I published 'Love or Marriage' in three volumes. Not having read this story since, I have only a vague impression that it aimed at the reconstruction of the whole social system; that it was largely flavored with Feuerbach's 'Essence of Christianity,' and that it deified the Prussian nation. A young author who has no established public to whom he directly appeals naturally turns to the middlemen—the reviewers—to learn if there is any merit in his book. He can not, of course, accept the judgment of his friends, because his friends—apart from the inevitable mild praise—are generally possessed by the delusion that they know the originals of his characters, and are otherwise cleverly familiar with the 'materials' which he has 'worked up.' But I never could quite make out what the reviewers thought of 'Love or Marriage,' for one said it was a striking example of the destructive effect on fiction of Herbert Spencer's philosophy, and another said that it conveyed a high moral lesson in showing the awful results in allowing a skeptical person to be introduced into an orthodox family.

'In Silk Attire' followed. This was a combination of theatrical life with life in a Black Forest village; the sketches of deer shooting are very well done, but the book obtained a greater success than it deserved. The opposite was the case with 'Kilmeny'—a sort of Alton-Locke story, though I tried to cure my hero of his *Weltschmerz* by removing him into the freer and more joyous life of an art student in Bavaria. 'A Daughter of Heth' was published anonymously—for various reasons—in 1871, and I think the book must have been pretty widely read, for I do not know how often I have seen it since, under various titles and guises, with the name of some amiable and industrious lady on the title-page. 'The Strange Adventures of a Phaeton'—a book in which there is nothing strange but the total absence of adventures—was founded on a driving excursion I made from London to Edinburgh. There was a thread of romance running through its pages, but all the same it may be taken—and has been taken, I am glad to say, though mostly by Americans—as a sufficiently accurate guidebook to the villages, roads, and inns to be met with on that delightful journey. 'A Princess of Thule' appeared in 1873, and since that time has not failed to puzzle a good many people on both sides of the Atlantic, they being apparently as ignorant (to take modern literature only) of Thompson as of Whittier, with regard to the pronunciation of its title. The controversy raged most fiercely in America, and the contagion would seem to have spread into Canada, for the other day I got a pamphlet containing a number of poetical contributions toward the study of this recondite question which had been written by members of the Canadian House of Commons and presented to Lord Dufferin. 'Three Feathers' was my next novel. 'The Saturday Review' said that this was a very good book, and 'The Spectator,' appearing on the same day, said it was a very bad one, and when I asked my friends which I was to believe they said, 'Of course, "The Saturday Review."' But the fact is I had by this time been studying the craft of story-telling for about ten years, and I began to despair of obtaining any enlightenment from the young gentlemen who, fresh from college, were equally ready to lecture a Chancellor of the Exchequer about his ignorance of the first principles of taxation and to prove to an African traveler that his statements of what he actually saw were preposterously absurd. I could not blame these young men, for I had a painful recollection of my own escapades in that direction; but I gave up all hope of learning anything from them about my own business. My last published novel, 'Madcap Violet,' already appears to be most popular of these books of mine, as it undoubtedly contains the best work of which I am capable. But as to the 'something serious' which Mr. Carlyle once suggested I should write—in offering this cruel hint he did not know how he was revenging himself on me for my juvenile impertinence in praising him—who can tell? My more intimate friends—one half of whom seem to consider my novels facetious and trivial, the other half complaining of them as far too gloomy and tragic—appear to agree in thinking that there ought to be something 'beyond these voices.' Perhaps I shall satisfy them in time. Perhaps I shall end as I began—with a series of suggestions for the better government of the universe." Mr. Black was married and had several children. The family had a house in London, one at Oban, Scotland, and one in Brighton, where he spent most of his time in his maturer years, and did all his writing. His study was at the top of the house, where he retired to work two hours after breakfast and one hour after dinner.

He was devotedly fond of his native land, and has written fine descriptions of its scenery. Outdoor life and sports were greatly to his liking, and he did much traveling. Besides the books already mentioned, Mr. Black wrote "James Merle: An Autobiography" (1864); "Mr. Pisistratus Brown, M. P., in the Highlands" (1871); "The Monarch of Mining Lane" (1871); "The Maid of Killeena" (1874); "Lady Silverdale's Sweetheart" (1876); "Green Pastures and Piccadilly" (1877); "MacLeod of Dare" (1878); a biography of Oliver Goldsmith (1880); "White Wings: A Yachting Romance" (1880); "Sunrise: A Story of These Times" (1881); "The Beautiful Wretch" (1882); "The Four Macnicals" (1882); "The Pupil of Aurelius" (1882); "Shandon Bells" (1883); "Yolande" (1883); "Adventures in Thule" (1883); "Judith Shakespeare" (1884); "White Heather" (1885); "Wise Women of Inverness" (1885); "Stand Fast, Crag Royston" (1886); "Sabina Zembra" (1887); "The Strange Adventures of a House-boat," a sequel to the "Phaeton Adventures" (1888); "In Far Lochaber" (1889); "The New Prince Fortunatus" (1890); "Donald Ross of Heimra" (1891); "Handsome Humes" (1893); "Highland Cousins" (1894); "Briseis" (1896); and "Wild Eelin" (1898).

Bond, Sir Edward Augustus, an English librarian, born at Hanwell, England, Dec. 31, 1815; died Jan. 2, 1898. He was the son of the Rev. John Bond, then master of a large school at Hanwell, and was educated at the Merchant Tailors' School, London, and received in 1833 an appointment in the Public Record service. In 1837 he became an assistant in the manuscript department in the British Museum, and he was appointed keeper of the department in 1867. In 1878 he was made principal librarian of the museum, retiring from that office in 1888. It was due to his influence that the printing of the British Museum Catalogue was undertaken, a work now brought nearly to completion, and the introduction of the electric light into the reading room is also due to him. In 1879 he received the degree of LL. D. from Cambridge, and in 1885 he was made a C. B. The title of K. C. B. was conferred upon him the day before his death. He was the founder, with Mr. E. M. Thompson, of the Paleogeographical Society, and he edited, among other works, the speeches of Warren Hastings (London, 1859-'61).

Boudin, Eugène, a French painter, born in 1835; died in Deauville early in August, 1898. A love of painting came to him while contemplating the ocean, and on seeing his first efforts Troyon and Isabey counseled him to devote himself to art. Between 1853 and 1877 he exhibited numerous canvases which were not appreciated by the public at their worth. It was not till 1880 that dealers and amateurs began to seek the painter whom Corot had called the "king of skies." His subjects were taken mostly from the coasts of Normandy and the fields of Provence.

Brin, Benedetto, an Italian statesman and naval constructor, born in 1833; died in Rome, May 24, 1898. He was a Piedmontese, and was educated in Turin, where he qualified as a naval architect. He rose to the top of his profession in the navy yard at Leghorn, became the chief authority in naval architecture, and raised the prestige of the Italian navy by the construction of the monster ironclads "Lepanto," "Duilio," and "Dandolo." In 1876 he became Minister of Marine, and three times afterward he filled that office, which he held at the time of his death. Under Premier Giolitti he was Minister of Foreign Affairs.

Buffet, M., a French statesman, born in Mirecourt, Vosges, in 1818; died in Paris, July 7, 1898. He studied law and practiced as an advocate till

1848, when he was elected a Deputy. Though he had voted with the Orleanists, Louis Napoleon made him Minister of Commerce and Agriculture in 1849. At the end of that year he resigned with Odilon Barrot. He took a prominent part in 1850 in getting a law passed to restrict the suffrage, and in 1851 he returned to office, but resigned with the rest of the Cabinet six months afterward because Louis Napoleon proposed to repeal this act. After the *coup d'état* he retired from politics until 1864, when he was elected to the Corps Législatif, in which he took his seat with the Moderate Opposition. When Napoleon III turned for refuge to the Liberals in 1870 and appointed a Cabinet with Émile Ollivier at the head, M. Buffet accepted the portfolio of Finance, which he resigned, however, when the Emperor determined to appeal to a *plébiscite*, upsetting, in his view, the basis of the parliamentary system. After the war M. Buffet sat with the Right Center, the Orleanists, and in April, 1873, was elected President of the National Assembly, in succession to Jules Grévy. Retaining this post till the Assembly was dissolved, he actively and effectively aided the Reactionaries in their plans for forcing President Thiers to resign. In March, 1875, after he had accepted the republic, he became Prime Minister and Minister of the Interior in a Moderate Cabinet containing both Republicans and Royalists. He had disagreements with M. Dufaure and Léon Say in the Cabinet, and gave such offense to the people by the harsh measures that he took as Minister of the Interior and by his reactionary spirit and disagreeable manners, that when the election came in February, 1876, he could not get a seat for any one of the four constituencies in which he was a candidate. Resigning the premiership, he was elected a Senator for life a few months later by a majority of only a single vote in the Senate. Too unpopular to be taken into the Ministry of the Duc de Broglie, he attended the meetings of the Senate faithfully for the rest of his life, cut off from any further prominent part in affairs, and yet a keen debater on fiscal subjects and economic measures.

Burne-Jones, Sir Edward, an English painter, born in Birmingham, Aug. 22, 1833; died in London, June 17, 1898. He was of Welsh descent. He went to Oxford with the intention of studying for the Church, and there fell in with William Morris and other young disciples of the preraphaelite school, who so inspired him with their love of art that he left the university in 1856 and went to London with the intention of making painting his profession. There he was strengthened in his hope and determination by his intercourse with Rossetti, whose theory and aims in art coincided with his ideas, and from whose hints and practice he caught the suggestions for his earliest drawings and efforts in color, mystical and romantic pieces, such as "Christ and the Knight." For the first dozen years few people were interested in his work, or ever saw any of it except an occasional drawing shown in the rooms of the Water Color Society. His designs in stained glass and tapestries, carried out by his friend Morris, first attracted the attention of the public, and roused in some unbounded admiration, in others strong aversion. His illustrations for books, also produced by Morris, had the same characteristics, and their working was the same. After the Grosvenor Gallery was opened in 1877 his works were the center of interest in the exhibitions, the most pronounced and characteristic of all the products of the new school that blazed into the public eye. He exhibited in succession the "Days of Creation," "The Golden Stair," "The Beguiling of Merwin," "The Annunciation," the "Pygmalion" series, "King Cophetua," and many more. Later, in the New Gallery, his paintings were the objects of the

keenest interest, drawing forth either passionate praise or fierce dislike. Everything that he produced was taken by one or another of his devoted admirers, and there was no standard by which the public estimation of his works could be tested until the largest collection came into the market on the death of its owner in 1886. Then his "Chant d'Amour" brought 3,000 guineas at auction. Shortly before his death his "Mirror of Venus" sold for 5,000 guineas. The faults in drawing that were glaring in his earlier paintings he corrected gradually by the most assiduous study and practice. The most generally admired of all his productions was the "Brier Rose" quartet of paintings. The mosaics in the American church at Rome are striking examples of his religious art, poetic and original, like all his work. In Celtic romance and mystery he showed an inborn racial aptitude. Many objected to the figures in his paintings as unreal types, psychological puzzles, but the wealth of decorative details and the beauty and variety of his coloring were artistic triumphs which no one could gainsay. "The Hours," the "Wheel of Fortune," "Laus Veneris," "The Resurrection," and "Pan and Psyche" are some of his most famous works in oil, and among his water colors "The Four Seasons," "Hope," "Night," and "Love among the Ruins." He designed the beautiful "St. Cecilia" for the window of Christ Church at Oxford. The color schemes, the decorative quality, the imaginative power, the legendary mysticism, the select refinement, the poetical inspiration of his work appeal to the artist nature, and have had influence in France as well as in England, and still more in America. He was elected an associate of the Royal Academy, exhibited one picture, and in 1893 resigned. He was created a baronet in 1894.

CaIRD, John, a Scottish divine and educator, born in Greenock in December, 1820; died there, July 30, 1898. He studied at Glasgow University, was ordained a minister of the Scottish Kirk, and in 1845 entered upon the charge of Newton-on-Ayr, which he exchanged in 1847 for one in Edinburgh, where he established a reputation as the most eloquent and impressive, and the most polished and intellectual preacher in the Established Church. He settled in 1849 in Errol, Perthshire, whence during the eight years of his pastorate he was frequently invited to preach in Edinburgh, Glasgow, and other towns. His sermon on "Religion in Common Life," preached before the Queen in 1855, was circulated in private form throughout Great Britain and America, and translated into German. After taking a pastorate in Glasgow in 1857, he published a volume of his most famous discourses. He resigned his charge in 1862 to become Professor of Divinity in Glasgow University, and in 1873 he was appointed principal and vice-chancellor of the university. His sermons on "The Unity of the Sciences" and "The Progressiveness of the Sciences," and one, preached before the British Medical Association in 1888, on "Mind and Matter," show a Hegelian tendency that he developed after turning his attention chiefly to philosophy and the philosophical aspects of religion. He published in 1880 "An Introduction to the Philosophy of Religion," the substance of a lecture that he had given at Edinburgh a year previous. In 1888 he published a study on "Spinoza." Having been appointed Gifford Lecturer in Natural Theology at Glasgow, he delivered a course of lectures in 1892 and another in 1895, and during the delivery of the second course he was stricken down with a weakening illness that incapacitated him for strenuous work. Principal Caird was the main contributor to the volume of "Scotch Sermons" issued in 1880 as an exposition of the ideas of the Broad Church party in the Church of Scotland.

Calderon, Philip Hermogenes, an English painter, born in Poitiers, France, in 1833; died in London, May 1, 1898. He studied art in Paris, settled in London, and exhibited "By Babylon's Waters" in 1853 at the Royal Academy, where he had one or more pictures every year until he was elected in 1867 a member, and from that time, too, he exhibited almost as regularly, extending his range from the historical subjects that first occupied his brush exclusively into the fields of realistic *genre*, poetic, and legendary art, portraiture, and other branches of painting. Some of his notable productions have been "The Jailer's Daughter" (1858); "The Return from Moscow" (1861); "Burial of Hampden" (1864); "Her Grace" (1866); "Whither?" (1868); "Sighing his Soul into his Lady's Face" (1869); "The Virgin's Bower" (1870); "On her Way to the Throne" (1871); "In a Palace Tower" (1872); "The Queen of the Tournament" (1874); "Cocoettes" (1875); "His Reverence" (1876); "The Bird's Nest" (1876); "Joan of Arc" (1878); "Home they brought her Warrior Dead" (1877); "Summer Breezes" (1878); "Captives of Bow and Spear" (1880); "Flowers of the Earth" (1881); "Joyous Summer" (1883); "Night" (1884); and "Morning" (1885).

Carlingford, Chichester Samuel Parkinson-Fortescue, Lord, a British statesman, born in County Louth, Ireland, Jan. 18, 1823; died in Marseilles, France, Jan. 30, 1898. He was a son of Lieut.-Col. Chichester Fortescue, who sat in the Irish Parliament, and was educated at Christ Church, Oxford, taking his bachelor's degree in 1845, and gaining the chancellor's prize for a Latin essay in 1846. In 1847 he was elected a member of Parliament for County Louth, which he represented continuously for twenty-seven years. He gained the ear of the House by his first speech, delivered in 1848, in support of Lord John Russell's bill for the removal of Jewish disabilities. He became an effective debater on the Liberal side, and in 1854 was appointed by Lord Aberdeen a Junior Lord of the Treasury. After filling various other offices, he was advanced in 1857 to the Under Secretaryship for the Colonies, which he held during the whole of Lord Palmerston's ministry, from 1859 to 1865. On the reconstruction Cabinet, after Lord Palmerston's death, Mr. Fortescue was appointed at a critical juncture in Irish affairs to the responsible post of Chief Secretary for Ireland. On account of Fenian activity the *habeas corpus* act was suspended in 1866. He suggested a plan for transferring to the Roman Catholics a part of the revenues of the Irish Church, and introduced a bill providing for long leases of land and the compensation of evicted tenants for permanent improvements, to be fixed by official valuers and measured by the increased letting value of the land. The Government fell before this bill came to a vote. When Mr. Gladstone came into power in 1868 he reappointed Chichester Fortescue Irish Secretary, and was aided by him in carrying through the disestablishment bill, and improved the land bill by adding a clause granting tenants compensation for disturbance. In 1870 he introduced a peace preservation bill, and at the beginning of the following year he was transferred to the office of President of the Board of Trade. By a warning circular to railroad companies in 1873 he induced them to guard against accidents, which through their negligence had grown alarmingly frequent. When the Liberal Government went out in February, 1874, Chichester Fortescue was raised to the peerage as Baron Carlingford, and thirteen years afterward he succeeded his brother as Baron Clermont. He was appointed Lord Privy Seal in 1881, and in 1883 succeeded Lord Spencer as Lord President of the Council, retiring when his party was defeated in 1885.

Carroll, Lewis. See DODGSON.

Cavalotti, Felice, an Italian statesman, born in Milan, Nov. 6, 1842; died in Rome, March 6, 1898. He belonged to the old Venetian family of Baffo-Cavalotti. From childhood he was filled with patriotic rage against the Austrian masters of Lombardy, and in 1859 published a political tract entitled "Germania e Italia." While a law student he joined Gen. Medici's volunteer legion for the deliverance of lower Italy in 1860, and six years later he fought the Austrians with Garibaldi's band, taking part in the battle of Vezza. After the campaign, instead of devoting himself to his profession, he plunged into journalism and politics. He started the republican journal "Gazzetina Rosa," which involved him in perpetual legal prosecutions and duels. He first gained celebrity in 1868 by publishing revolutionary and antidynastic poetry, was elected to the Chamber from Corteolona, and took the lead in the Extreme Left by his ardent and eloquent denunciations of political corruption and immorality of all kinds. He was the bitterest opponent of Francisco Crispi, whom he never forgave for deserting the republican principles of Mazzini. In discussions of foreign policy he took the lead of the Radicals who opposed the Triple Alliance and advocated a *rapprochement* with France. Cavalotti, who had fought 32 duels during his political career, was killed in one by Ferruccio Macola, a Conservative Deputy, whose newspaper he had charged with printing lies. Cavalotti was the author of a dozen plays that have been greatly admired in Italy. "Il Canzone" and "La figlia de Jephtha" have been played in other countries. His first drama, "I Pezzenti," was produced in Milan in 1871. His "Alecibiades" won a national prize. His last one was "Agatodemon," a comedy in four acts. He translated the poems of Tyrtæus into Italian.

Ceneri, Giuseppe, an Italian politician, born in Bologna in 1827; died there in June, 1898. He left the university as doctor of laws at the age of eighteen, joined the Piedmontese army in 1848, but returned soon, his health not being strong, to teach criminal law in the Athenæum at Bologna. In 1859 he became Secretary of Public Instruction in the Provisional Government, and as a Deputy voted for the abolition of the temporal power of the Pope. Nominated afterward to a judicial office, he preferred to return to his professorial chair. In 1867, however, he offered himself as a candidate for the Chamber, and in 1868 he was arrested in consequence of the political tumults and was deprived of his chair in the university, which shortly afterward was restored to him by the Correnti. He was elected over Minghetti in 1869, and again sat in the Chamber in 1882, voting with the Left. His course on Roman law in the university of Bologna was the most esteemed in Italy. He was one of the most brilliant of Italian orators.

Chapleau, Sir Joseph Adolphe, a Canadian statesman, born in Quebec in 1840; died in Montreal, June 13, 1898. He was educated in a college of his native province, studied law, was called to the bar in 1861, and was made a Queen's counsel in 1873 and appointed in that year Solicitor-General in the Quebec Government, holding the office, with an intermission of a year, till 1878. He was then chosen leader of the Conservative Opposition, and in 1879 was called upon to form a Cabinet. He remained Premier of Quebec until 1883, when he resigned in order to take the portfolio of Secretary of State in the Dominion Government. In 1892 he resigned that office to become Minister of Customs, and in 1893 he was appointed Lieutenant Governor of the province of Quebec. This post he filled for five years. Having founded in 1872 the *Crédit Foncier Franco-Canadien*, he was made by President

Grévy a commander of the Legion of Honor. In 1896 he was created a Knight of St. Michael and St. George.

Clark, George Thomas, an English genealogist and archaeologist, born in 1809; died at Tal-y-Garn near Llantrissant, Wales, Jan. 31, 1898. He was educated at the Charterhouse School, and in early life was a civil engineer. His attention was directed to archaeology early in his career, and for many years he devoted his leisure to examination of mediæval castles, the result of his investigations appearing in 1883 in a work in two volumes on "Mediæval Military Architecture in England." He knew his subject more thoroughly than any man of his time, and his great work is a standard authority. He possessed a clear, terse style, and his descriptions and explanations of castle arrangements leave very little to be desired. He published "The Land of Morgan: Its Conquest and its Conquerors" a volume relating to Glamorganshire (London, 1880); "Limbus Patrum Morganik and Glamorganik," a genealogical work (London, 1886); and "Cartæ et alia Munimenta quæ ad Dominum de Glamorgan Pertinent" (London, 1885-93).

Clarke, Mary Victoria Cowden, English authoress and Shakespearean editor, born in London, England, June 22, 1809; died in Genoa, Italy, Jan. 13, 1898. She was a daughter of Vincent Novello, an eminent musician and composer, and married, July 5, 1828, an intimate friend of her family, twenty-two years older than herself, Charles Cowden Clarke, an author and lecturer. The home of Mr. Novello was a resting place for many of the best literary, artistic, and dramatic persons of the day, and the little Victoria, as she was called in the home circle, became disposed toward literature at a very early age. In her childhood she was taught by Mary Lamb; and Charles Lamb, John Keats, Leigh Hunt, and Shelley were associates of her early years. After leaving the care of Mrs. Lamb she was sent to a boarding school in Boulogne-sur-Mer, France, for education in the language and letters of that country. Returning to London, she became a governess and spent the years that intervened until her marriage as such in one family. She began her literary work during this time with the contribution of several interesting articles to Hone's "Table Book." After her marriage her husband and she resided with her parents. Mr. Cowden Clarke was at this time dramatic writer for the "Examiner" and "Atlas" newspapers, and the young wife became deeply interested in the drama and in study of Shakespeare. She began her celebrated concordance to the plays of Shakespeare in 1829, and completed it in 1845. This book has gone through many editions both in England and America, and constitutes the best monument of the gentle compiler's worth. Thence ensued a busy life of book and essay writing, varied with social meetings in which mutually helpful groups of writers, singers, and actors were gathered around her. In an amateur performance of "The Rivals," Nov. 10, 1847, Mrs. Cowden Clarke played Mrs. Malaprop so charmingly that Charles Dickens easily induced her to join his famous company of literary players. With these eminent associates, among whom were Dickens, Mark Lemon, and John Forster, she played in the series of performances given in the principal cities of England in 1848. In 1856 she and husband removed to Nice. About the same time she was introduced to American literature by the Messrs. Appleton, who engaged her to edit an edition of Shakespeare published in 1858, thus bestowing upon her the distinction of being the first woman editor of the great dramatist. From that time she became also a contributor to American magazines. In 1860 her brother Alfred, founder of the music publishing house of Novello,

Ewer & Co., London, having retired from business, purchased an estate near Genoa, which he named "Villa Novello," and persuaded the Cowden Clarks to make their home with him. After the death of her husband, in his ninetieth year, March 13, 1877, Mrs. Clarke passed much of her time with her sister Clara, Countess Gigliucci, at Fermo, Italy. From 1877 to 1885 she traveled much on the Continent, principally in Germany and Austria, always returning to the Villa Novello. She was actively engaged as a writer of magazine articles during the closing years of her life. Her principal works are: "The Complete Concordance to Shakespeare" (London, 1845); "World-Noted Women" (New York, 1858); "The Girlhood of Shakespeare's Heroines"; "The Story of the Drop of Water, a London Legend," under the pseudonym of Harry Wandsworth Shortfellow (London, 1856); "Life and Labors of Vincent Novello" (London, 1864); "Trust and Remittance, Love Stories in Metrical Prose" (London, 1873); "A Rambling Story" (London, 1874); "Honey from the Weed" (London, 1881); "Slippery Ford: or, How Tom was Taught" (London, 1885); "A Centennial Biographic Sketch of Charles Cowden Clarke, by her whom he made his Second Self" (London, 1887); and "My Busy Life," an autobiography (New York, 1896).

Cochrane, William, clergyman and educator, born in Paisley, Scotland, in 1831; died in Brantford, Ontario, Canada, Oct. 17, 1898. He entered the University of Glasgow, but removed to the United States before he had completed the course of study. He was graduated at Hanover College, Indiana, in 1857. He was ordained to the ministry in 1859, and in 1862 became pastor of Zion Presbyterian Church, Brantford. In the conduct of this pastorate, which lasted through his life, he became prominent in all the affairs of his denomination, and he was conceded to be the most distinguished minister of the Presbyterian Church in Canada. He was for many years president of the Young Ladies' College in Brantford. In 1875 Hanover College conferred the degree of D. D. upon him. He published "The Heavenly Vision" (1873); "Christ and Christian Life" (1875); "The Church and the Commonwealth" and "Memoirs and Remains of the Rev. Peter Inglis" (1887); and "Future Punishment" (1888).

Crespo, Joaquin, ex-President of Venezuela, died in April, 1898. He rose to high political positions when Guzman Blanco was President, and was chosen by the latter to succeed him when the Constitution forbade him to occupy the presidential chair. Not content with the rôle of a substitute, Crespo drove Guzman Blanco from power. When he in turn fell from power in 1892, he took up arms against President Andueza Palacio, overturned him, and had himself elected in his place. After a tranquil administration he yielded up the chair to Gen. Andrade, whom he had chosen for his successor, and replaced the latter as Governor of Miranda. Gen. Hernandez, the opposing candidate, pretending to believe that Crespo had conducted the presidential election arbitrarily, began to recruit partisans in the interior in February, 1898, and in an encounter with these, in April, Gen. Crespo found his death.

Dauphin, Albert, a French statesman, born in Amiens, Aug. 26, 1827; died there in November, 1898. He was mayor of Amiens in 1870, in 1873 president of the Council of the Somme, and in 1876 was elected to the Senate, where he took his seat in the Left Center and supported the Dufame ministry. He was re-elected in 1882, presided in 1884 over one of the committees for the revision of the Constitution, and in 1886 received the portfolio of Finance in the Goblet ministry.

Davidson, Samuel, an Irish clergyman, born near Ballymena, Ireland, in 1807; died April 1, 1898. He was educated for the Presbyterian ministry at Glasgow University and at the Theological College of the Presbyterians in Belfast, Ireland, and became Professor of Biblical Criticism at the latter institution in 1835. His sympathies inclining him toward the Congregationalists, he became Professor of Biblical Literature in the Lancashire Independent College, Manchester, in 1842, but resigned this chair in 1857 on account of the dissatisfaction expressed regarding his supposed heterodox views. He then settled in London, which continued to be his home, absorbed in study and authorship. Although his views became somewhat more advanced with the lapse of time, he lived nevertheless to be regarded as comparatively conservative and firmly opposed to what he considered to be revolutionary views. He had great learning and was courageous in the expression of his opinions. He published "Revision of the Hebrew Text of the Old Testament" (London, 1855); "Facts, Statements, and Explanations connected with the Publication of the Second Volume of the Tenth Edition of Horne's 'Introduction to the Study of the Holy Scriptures'" (London, 1857); "Introduction to the Old Testament" (London, 1862-'63); translation of Fuerst's "Hebrew and Chaldee Lexicon to the Old Testament" (London, 1865); "An Introduction to the Study of the New Testament" (London, 1868); "On a Fresh Revision of the English Old Testament" (London, 1873); translation of "The New Testament from the Critical Text of Tischendorf" (London, 1875); "The Canon of the Bible: Its Formation, History, and Fluctuations" (London, 1877); "The Doctrine of Last Things contained in the New Testament" (London, 1882).

Delianoff, Count Ivan Davidovich, a Russian statesman, born in Moscow in 1818; died in St. Petersburg, Jan. 10, 1898. He was of Armenian parentage, and remained through life a communicant of the Armenian Church. He studied at the Moscow University, and at the age of twenty entered the Government service in the legislative department of the Imperial Chancellerie, being employed for a long time in the preparation of a new criminal code. He passed over in 1858 to the Department of Public Instruction, with which he was connected for the greater part of his subsequent career, first as curator of St. Petersburg and dependent provinces, then as assistant to the minister. In 1882 he was appointed Minister of Public Instruction. In carrying out the policy of Russifying the heterodox and alien populations of the empire under the present Czar he was zealous and energetic. All the educational privileges and distinctions were swept away in the Baltic provinces, Poland, and the Caucasus, and the Russian language and state religion introduced with the teachings of Muscovite patriotism. One of his last acts was to take away from the Armenian patriarchate the control of the Armenian Church schools and place them under the exclusive power of the Government, by which he gave great offense to his own people.

Dodgson, Charles Lutwidge, an English clergyman, born in Daresbury, Cheshire, Jan. 27, 1832; died in Guildford, Surrey, Jan. 14, 1898. He was a son of the Rev. Charles Dodgson, archdeacon of Richmond, Yorkshire, and was educated at Richmond, Rugby, and Oxford. In 1854 he was appointed mathematical lecturer at Christ Church, and he held that chair until 1881. He became a fellow of Christ Church in 1861 and so remained until his death. In the same year that he attained his fellowship he became a deacon in the Church of England, but he never was advanced to the priesthood. To a circumscribed circle he was known as the author of

abstruse mathematical works, but to the English-speaking world in general he was Lewis Carroll author of "Alice in Wonderland." His love for children was a marked feature in his character, and it was to amuse the children of Dean Liddell of Oxford that he began the tale which afterward developed into the delightful child's book which brought him fame, the name of Alice being borrowed from one of the Liddell children for his heroine. But his name never appeared on the title-page of this or his later books for children, and he never acknowledged their authorship in so many words. Only his mathematical works appeared with his own name on the title-page. Of the former, the "Alice" books are by far the best, but the peculiar, inimitable quality of his humor is seen in all. His life was very quiet and retired, and for more than forty years he occupied the same rooms in Christ Church, where children were always welcome. In his latest years he withdrew almost entirely from society and was seen only among the fellows when dining with them in the college hall. His writings include "A Syllabus of Plane Algebraical Geometry" (London, 1860); "The Formulæ of Plane Trigonometry" (Oxford, 1861); "Guide to the Mathematical Student" (Oxford, 1864); "Alice's Adventures in Wonderland" (London, 1865); "An Elementary Treatise on Determinants" (1867); "Phantasmagoria and Other Poems" (1867); "Through the Looking-glass and what Alice found there" (1871); "Facts, Figures, and Fancies" (1871); "Euclid—Book V proved Algebraically" (1874); "The Hunting of the Snark" (1876); "Euclid and his Modern Rivals" (1879); "Doublets: A Word Puzzle" (1879); "Rhyme? and Reason?" (1883); "A Tangled Tale" (1885); "Alice's Adventures Underground: A Facsimile Edition of the Original Manuscript of Alice's Adventures in Wonderland" (1886); "The Game of Logic" (1887); "A New Theory of Parallels" (1888); "Sylvie and Bruno Concluded" (1894); "Symbolic Logic," Part I (1896). The second and third parts of the last-named work were in process of completion at the time of the author's death.

Dowling, Richard, an Irish novelist, born in Clonmel, Ireland, June 3, 1846; died July 28, 1898. He was educated at St. Munchin's College, Limerick, and in 1870 became a member of the editorial staff of "The Nation" in Dublin. He removed to London in 1875, where he engaged in journalism, but soon devoted himself to novel writing. His work displays vigor of style and skill in construction, but the influence of Victor Hugo is apparent in his manner. A nearly complete list of his writings comprises "Babies and Ladders," a collection of humorous essays; "The Mystery of Killard: A Novel" (London, 1879); "The Spirit of Fate" (1880); "Under St. Paul's: A Romance" (1880); "London Town: Sketches of London Life and Character" (1880); "The Weird Sisters" (1880); "The Duke's Sweetheart" (1881); "The Husband's Secret" (1881); "A Sapphire Ring and Other Stories" (1882); "Sweet Inisfail" (1882); "The Last Call" (1884); "The Hidden Flame" (1885); "The Skeleton Key" (1886); "Tempest Driven" (1886); "Ignorant Essays" (1887); "With the Unchanged" (1887); "Miracle Gold" (1888); "An Isle of Surrey"; "Indolent Essays"; "A Baffling Quest" (1891); "A Dark Intruder" (1894); "While London Sleeps" (1895); "Catmur's Caves" (1896); "Old Corcoran's Money" (1897); "A Lance in Ambush" (1898).

Ebers, Georg Moritz, a German Egyptologist and novelist, born in Berlin, March 1, 1837; died in Tutzgau, Bavaria, Aug. 8, 1898. His education was obtained at the gymnasiums of Kottbus and Quedlinburg and the universities of Göttingen and Berlin, and in 1865 he became lecturer at the Uni-

versity of Jena, and subsequently Professor of Egyptian Archaeology there. In 1870 he was called to the professorship of Egyptology at the University of Leipzig, and he remained there until his retirement in 1889. He was already famous for his thesis "On the Twenty-sixth Egyptian Dynasty," "Egypt and the Book of Moses," and "Scientific Journey to Egypt," which latter book appeared

in 1869-'70, and to these works his elevation to the Leipzig chair was due. In 1872-'73 he made another journey to Egypt, and among other discoveries made by him at this time was that of the scroll since called the "Papyrus Ebers." In 1876 an attack of paralysis prevented him from walking, and he then turned his attention to the field of

historical novel writing, which in 1864 he had essayed by the publication of "An Egyptian Princess." "Uarda: A Romance of Ancient Egypt," appeared in 1877 and was immediately popular, being translated into English, as were a number of his subsequent works, by Clara Bell. His later novels were "Homo Sum" (1878); "The Sisters" (1880); "The Emperor and the Burgomaster's Wife" (1881); "Only a Word" (1883); "Lempis" (1885); "Margery" (1889); "Per Aspera" (1892); "Cleopatra" (1894); "In the Fire of the Forge" (1895); "In the Blue Pike" (1896); "Barbara Blomberg" (1897); and "Arachne" (1898). Among his other works are "Papyrus E: A Hieratic Manual of Egyptian Medicine" (1872); "Through Goshen to Sinai" (1872); "Egypt: Descriptive, Historical, and Picturesque" (1878); "Palestine: Descriptive, Historical, and Picturesque," with Guthe (1881); "Lorenz Alma-Tadema: His Life and Work" (1886); and "The Story of my Life," an autobiography (1893).

Elisabeth, Empress of Austria, born in Possenhofen, Bavaria, Dec. 24, 1837; died in Geneva, Switzerland, Sept. 10, 1898. She was the daughter of Duke Maximilian Josef of Bavaria, who supervised her education in the Schloss on the Lake of Starnberg, and had her trained in riding and swimming as well as in literary and artistic knowledge. Her cousin, the Emperor Franz Josef, fell in love with her while visiting her parents, and on April 24, 1854, they were married. The young Empress-Queen, who with the Emperor was crowned with the insignia of St. Stephen when the inauguration of the dual system was solemnized, made herself liked by the Hungarian as well as the Austrian people, but did not win easily some of the envious cliques of the court, who were taught in the end to admire and respect her by the exercise of her social talents. The constitutional compromise of 1867, by which the ancient liberties of Hungary were revived, was in a measure brought about by her influence. She was strongly attached to her family, the ancient house of Wittelsbach, and grieved at the deposition of her sister, the last Queen of the Two Sicilies, and was much affected by the tragic death of King Ludwig of Bavaria, and had other sorrows to endure before she was stricken with the crowning grief, the death of all her hopes, through the violent and mysterious end of her only son, the Crown-Prince Rudolf. Glad before to escape from the irksome formalism

of the court, and fond of roving to the hunting fields of England and Ireland, or in pedestrian tours in the Alpine country, or wherever she could find delight in art and nature and healthful pleasures, she became henceforth a wanderer and an exile from the scenes that recalled the terrible blow. When her sister, the Duchess d'Alençon, perished by fire in 1897, she was once more plunged in sorrow. The culmination of all the series of tragedies was her own death by the hand of an assassin, an Italian anarchist. Her dauntless courage, which she had displayed in many an emergency, did not desert her in the final scene. The Empress Elisabeth had a refined literary taste, delighting especially in the poetry of Heinrich Heine, Alfred de Musset, and Lord Byron, and also in painting and sculpture, with which she filled her summer palace in Corfu. She spent large sums in charity, and was accustomed to go privately among the poor and minister to their wants personally.

Eybesfeld, Baron Conrad von, an Austrian statesman, born in 1831; died in Gratz in July, 1898. He belonged to the group of Count Hohenwart, which was favorable to Federalism and the national aspirations of the Slavs, and the Clerical principles of the Germaus of the Alps. In questions of the Church and the schools he defended the Clerical standpoint with warmth, and in 1888 he was made Minister of Public Instruction and Worship in the Cabinet of Count Taaffe. After the fall of the ministry in 1885 he withdrew from public affairs, though remaining a member of the Chamber of Peers.

Fabre, Ferdinand, a French novelist, born in Bédarieux, Hérault, in 1830; died Feb. 16, 1898. He was originally destined for the priesthood, but preferred a literary career, and won a reputation by his scenes from clerical life and rural romances. His best works were "Courbezon," "Julien Savignae," "L'Abbé Tigrane," "Le Chevrier," "La Petite Mère," "Mon Oncle Célestin," "Le Roi Ramire," "Madame Fuster," "Ma Vocation," "Un Illuminé," "Ravière," and "Sylviane."

Faucit, Helena, Lady Martin, actress, born in London, England, Oct. 11, 1819; died in Brynny Silis, near Llangollen, Wales, Oct. 31, 1898. She was the daughter of John Saville Faucit, a well-known actor of his time, and was known of late years as Lady Martin from her marriage to Sir Theodore Martin. From the fact that her parents and other members of her immediate family were actors, it came about that she made her first public appearance on the stage at a very early age. In November, 1833, her elder sister Harriet was playing at the Theater Royal, Richmond, Surrey, and one day Helen and she were rehearsing the balcony scene of "Romeo and Juliet," with Helen as Juliet, when Willis Jones, manager of the theater, accidentally overheard the impromptu effort of the young girl. He was so pleased that he induced her parents to consent to her playing with him. She played Juliet in "Romeo and Juliet," Mariana in "The Wife," and Mrs. Haller in "The Stranger," with considerable success, but was withdrawn by her parents after these three performances and placed under the professional tutelage of Percy Farren, brother of William Farren, the elder, with the intention that at a later date she should enter formally upon the dramatic calling. This she did with instant and great success at the Theater Royal, Covent Garden, London, Tuesday, Jan. 5, 1836, as Julia in Sheridan Knowles's play "The Hunchback." Mr. Knowles playing the part of Master Walter and Mr. Charles Kemble that of Sir Thomas Clifford, the original performers of the same parts in the first production of the play in 1832. On Wednesday the play was announced for that night, Friday, and

Saturday, and on Thursday this notice headed the bill of the day: "Mr. Osbaldiston has the gratification of announcing to the public that in consequence of the complete overflow to all parts of the theater, the enthusiastic applause that again attended the entire performance of 'The Hunchback,' and the brilliant success that crowned the *début* and subsequent appearance of Miss Helen Faucit, in the character of Julia, that popular play will be repeated this evening, to-morrow, and Saturday." So it continued during the entire month of January, and Helen became the favorite of London. Her first formal engagement was for three months at the Covent Garden, but hers was the history of the English stage for forty years. Wednesday, Jan. 27, 1836, she made her first appearance in the character of Belvidera in Otway's "Venice Preserved," and Monday, Feb. 8, 1836, her first appearance in London as Mrs. Haller in "The Stranger." Then followed in quick succession the following first performances, all repeated to crowded audiences: Feb. 25, 1836, Margaret in Joanna Baillie's tragedy "Separation"; March 10, 1836, Juliet, Mr. Charles Kemble as Mercutio; March 26, 1836, Lady Townley in "The Provoked Husband"; April 16, 1836, Donna Florinda de Sandoval in the first production of "Don Juan of Austria" (from the French); May 27, 1836, Mariana in "The Wife" (first time in London); June 1, 1836, Clemanthe in Talfourd's "Ion," with Mr. Macready as Ion. Helen Tree had played Ion in the first production of the play a few nights before, May 25. On June 30, 1836, Miss Faucit took her benefit as Mrs. Haller in "The Stranger." Charles Kemble was in the last year of his career on the stage, and during the autumn months Helen Faucit played the opposites to him, including his farewell performances ending Dec. 23, 1836. During this time, in addition to the parts above enumerated, she played with him Sept. 24, 1836, Portia in "The Merchant of Venice"; Oct. 1, Lady Teazle in "The School for Scandal"; Oct. 6, Constance in "King John"; and on the same night Katherine in "Katherine and Petruchio," with Sheridan Knowles as Petruchio. On Dec. 23, 1836, she played Beatrice to Mr. Kemble's Benedick in "Much Ado About Nothing," his farewell to the stage. Thus in one year, the seventeenth of her age, this wonderfully gifted woman played for the first time fourteen greatly differing and arduous characters. On Jan. 4, 1837, she played the title rôle in the first production of "The Duchess de la Vallière," a new play by E. L. Bulwer (afterward Sir Edward Bulwer Lytton). Her other first appearances in this year at the Covent Garden were: March 13, 1837, "Bertran"; April 20, Erina in Sheridan Knowles's "Brian Borohme" (first production), with the song "Would you Hear my Sweet Harp?"; May 1, Lady Percy in Browning's "Strafford" (first time); May 8, Queen Catharine in "Henry VIII"; May 8, Editha in "Walter Tyrrell"; May 18, Imogen in "Cymbeline"; May 31, Marian in "The Wrecker's Daughter," for the benefit of the author, Sheridan Knowles. In July, 1837, Helen Faucit became the leading woman of William Charles Macready on his assuming the management of Covent Garden Theater, an association which continued many years to the glory of the English stage. During the first months of the season of 1837-38 Miss Faucit played many Shakespearean parts for the first time, as Cordelia, Desdemona, and Hermione. On Feb. 15, 1838, "The Lady of Lyons" was produced for the first time, and Miss Faucit contributed in the greatest degree to the triumph of the anonymous dramatist by her brilliant performance of Panline. It was announced next day, with the name of the author, for indefinite repetition. On March 7, 1839, Sir

Edward Lytton Bulwer achieved another great success in "Richelieu," wherein Miss Faucit was the Julie de Mortemar. Oct. 31, 1839, another original play of Bulwer's, "The Sea Captain," afterward called "The Rightful Heir," gave her an original part in Violet, the heroine. While Mr. Macready was at the Haymarket Theater, Dec. 8, 1840, Miss Faucit was the original of another of Bulwer's heroines, Clara Douglas in "Money." Other plays in which she acted the leading female rôle with Mr. Macready on their first productions were Knowles's "Woman's Wit" and "The Secretary," Talfourd's "Glencoe," Serle's "Master Clarke," Dr. Westland Marston's "Patrician's Daughter," Byron's "Marino Faliero," and Troughton's "Nina Sforza." In 1842 Miss Faucit accompanied Mr. Macready to Drury Lane Theater as his leading woman, and here on Feb. 23 she played Sophonisba in the first production of Gerald Griffin's tender tragedy of "Gissippus," after the gentle Irish boy had been laid in his humble grave at Cork. Browning's "Blot in the Scutcheon" was first produced Feb. 11, 1843, and in it Miss Faucit originated the character of Mildred Tresham. Mr. Macready's retirement from management left London without a home for classic plays, and Helen Faucit became a "star." She was hailed with acclamations of delight in Edinburgh, Dublin, Glasgow, and Manchester, and she continued traveling for two years. In 1845 she joined Macready again in a series of Shakespearean performances at the Salle Vendadour, Paris. They played there with great success, especially for Miss Faucit. "Othello," "Hamlet," "Macbeth," "King Lear," "Romeo and Juliet," "Werner," and "Virginius." In March, 1845, she played "Antigone" in Dublin, and was presented with a bracelet of Irish gold by the Royal Irish Academy. She also played "Iphigenia in Aulis" during the same engagement. After playing through the provincial towns, Miss Faucit reappeared in London, Nov. 5, 1846, with a wonderfully attractive performance of Rosalind in "As You Like It." One of the notable plays in which she was the original heroine was Dr. Marston's "Philip of France," in which her Marie de Meraine never has been equaled. On Aug. 25, 1851, Miss Faucit married Theodore Martin, author of the "Bon Gaultier Ballads," "The Life of the Prince Consort," "Translations of Horace," and other works. She continued to play, with intervals of rest. April 25, 1853, Robert Browning's play in five acts, "Colombe's Birthday," was presented at the Haymarket Theater, London, then under the management of J. B. Bickstone. Miss Faucit began a special engagement of ten performances in London on this occasion and personally directed the production of Mr. Browning's play, in which she charmingly executed the rôle of Colombe. In Mrs. Sutherland Orr's "Life of Robert Browning" (Vol. I, page 281) this event is thus noted: "Mrs. Browning writes about the performance, April 12th: 'I am beginning to be anxious about "Colombe's Birthday." I care much more about it than Robert does. . . I should like it to succeed.' She communicates the result in May: 'Yes, Robert's play succeeded, but there could be no run for a play of that kind. . . Miss Faucit was alone in doing us justice!' Mrs. Orr continues: "Mrs. Browning did see Miss Faucit on her next visit to England. She agreeably surprised that lady by presenting herself alone one morning at her house and remaining with her for an hour and a half. The only person who had 'done justice' to 'Colombe,' besides contributing to whatever success her husband's earlier plays had obtained, was much more than a great actress to Mrs. Browning's mind, and we may imagine it would have gone hard with her before she renounced the

pleasure of making her acquaintance." On July 6, 1855, she produced in London (having played it earlier in the provinces) her husband's version of "King Rene's Daughter," assuming the part of Iolanthe. For the most part, during subsequent years, she played only the characters of her very extensive repertory; but on Nov. 3, 1864, she assumed for the first time the part of Lady Macbeth at Drury Lane Theater. Her greatest Shakespearean presentations, however, were Juliet, Beatrice, Imogen, Portia, and Rosalind. After her appearance in 1864 Lady Martin (her husband had now been knighted) went into comparative retirement. On March 2, 1874, she played Lady Teazle in a performance of "The School for Scandal" at Drury Lane Theater, for the benefit of Ben Webster, and her last appearance in London was in June, 1876, when she played Iolanthe at the Lyceum Theater for Henry Irving to his Sir Tristram. In April, 1879, she played Beatrice in "Much Ado About Nothing" at the inauguration of the Memorial Theater, Stratford-on-Avon, to the Benedick of Mr. Barry Sullivan. In October of the same year, the sixtieth of her age, she played Rosalind at Manchester for the benefit of the widow of the actor Charles Culvert. This was her last appearance on the stage in character, but she frequently gave public readings at Llangollen for local charities. Sir Theodore and Lady Martin lived in quiet content in the Vale of Llangollen, sympathetic and often of practical help to young authors, actors, and artists. In her social sphere Helena Faucit was the friend of the greatest men of her time, among them Sir Walter Scott, Thackeray, Browning, Tennyson, Carlyle, Dickens, and Lord Lytton. She was honored with the personal friendship of her Sovereign, who, as a mark of her admiration of the purity and beauty of the actress's life, appointed her reader to the Queen. In her art Helen Faucit was true to the ideals of beauty and taste. She speedily overcame the injurious influence of the Macready mannerisms, and was always a model of fine diction. She excelled by a charm of manner rather than by natural force or startling innovations. Her book of essays, entitled "Some of Shakespeare's Female Characters" (1887) has gone through several editions.

Feuillée, Félix Martin, a French statesman, born in Rennes in 1830; died there in the beginning of August, 1898. He studied and practiced law in his native town, served in the war with Germany, receiving the cross of the Legion of Honor for bravery during the siege of Paris, was elected a Deputy in 1876 and became one of the most active members of the majority, took the under-secretaryship of the Interior in 1879, and in 1880 entered the Cabinet as Minister of Justice. He supported Jules Ferry, his chief, in important debates, but his reputation rests mainly on the judicial reforms that he proposed and saw partly carried into execution in 1882 after long discussions. His name is connected also with important administrative reforms, and he was one of the chief advocates of the law of divorce. In 1889 he lost his seat to a Conservative.

Fontane, Theodor, a German poet, born in Neu Ruppin, Dec. 30, 1819; died in Berlin, Sept. 21, 1898. He was educated as an apothecary, and followed this business in Leipsic and Berlin. The patriotic poems of his friend C. F. Scherenberg prompted him to try his hand at poetry. "Männer und Helden," a series of Prussian ballads, was followed by the epic poem "Von der schönen Rosamunde." During two visits to England he was attracted to Scottish subjects and inspired the ballad of "Archibald Douglas," followed later by poems on Mary Stuart, Lady Jane Grey, and the War of the Roses, in which an elevated romantic tone pre-

vails. Prussian historical themes he treated in a more popular style and with a martial and patriotic spirit. The former were too wild and stern for the taste of those days, and the subjects of the latter interested nobody. It was his volumes describing tours through Mark Brandenburg that first drew attention to the picturesqueness of the towns and to the peculiar charms of Nature in that sandy region and to the author as well. He wrote two novels to glorify Prussia, "Vor dem Sturm" and "Schach von Wuthenow." The Danish, Austrian, and French wars he saw as a newspaper correspondent, and in the last one was taken prisoner. Afterward he wrote on English politics, and then was for some time a dramatic critic. When the taste of the Berliners was suddenly captivated by the realism of Zola, instead of warring against the tendency like other old romanticists, Fontane determined to exercise his experienced hand in the new art, and therefore wrote novels of Berlin society in which the boldest modern realism is presented, without didactic or moral purpose, without pessimistic or other tendency, but with a purely artistic, literary design. He avoided repulsive, abnormal, and dreadful subjects and characters, and treated the griefs and joys, the mingled virtues and vices, which he depicted with an easy, careless grace and humor, a German objectiveness and scientific interest, distinguishing the school that he founded from the naturalistic writers of either France, Russia, or Scandinavia.

Fowler, Sir John, an English engineer, born in Sheffield in 1817; died in Bournemouth, Nov. 20, 1898. He was the pupil of J. F. Leather, the engineer who planned the waterworks of Yorkshire, and afterward assisted in preparing drawings and contracts for railroads, started on his own account at the age of twenty-six, and was employed as chief engineer for various railroads that were successively chartered by Parliament, gaining a great reputation among railroad promoters by his services to the Great Grimsby line. He designed also and carried through, against the opposition of local authorities and interests and the prognostications of the most eminent engineers, the London underground railroad. As consulting engineer to the Khedive Ismail Pasha he planned railroads and other schemes for the improvement of Egypt, for which he was made a Knight of the British Colonial order in 1885. He was associated with Sir Benjamin Baker in designing the Forth bridge, and was made a baronet in 1880.

Garashanin, Milutin, a Servian statesman, born in Belgrade in 1843; died in Paris, March 6, 1898. He studied for eight years in French colleges, and after returning home in 1868 cultivated his property at Grotzka until 1880, when, the opponents of Ristich gaining the upper hand, he became Minister of the Interior under Pirochanatz. He was appointed minister to Vienna on retiring from the Cabinet, and was recalled in 1884 to become Prime Minister. He remained at the head of the Government for three years, resigning in 1887 because he would not countenance King Milan's design to get rid of Queen Natalie by a divorce. In 1895 he was appointed Servian minister at Paris.

Garnier, Jean Louis Charles, a French architect, born in Paris, Oct. 6, 1825; died Aug. 4, 1898. He entered the École des Beaux-Arts in 1842, and remained there six years, receiving in 1848 the Grand Prix de Rome for his design for a Conservatoire pour Arts et Métiers. At the Salon of 1853 and at the Exposition Universelle in 1855 his polychromatic design for the restoration of the Temple of Jupiter in the island of Egina attracted much attention. In 1860 he was appointed architect to the city of Paris, and in the competition for the Paris

Opera House in 1861 his design was accepted unanimously. This building, his greatest work, was formally opened for performances on Jan. 5, 1875. His other important works include the Théâtre de la Terrasse at Monte Carlo, the Maison de Jeux at Monaco, the Observatoire at Nice, the Cercle de la Librairie on the Boulevard St. Germain, Paris, and at the Exhibition of 1889 a notable series of reconstructions of human habitations of various epochs, which occupied the whole front of the Champ de Mars. He wrote much and well upon architectural topics, and was honorary and corresponding member of 17 foreign academies.

Gee, Thomas, a Welsh politician, born in Denbigh in 1815; died there, Sept. 28, 1898. He was educated at Wrexham, entered his father's publishing business, and became the editor of the "Banner," the chief organ of the Welsh democracy, and a popular and effective public speaker on political and religious subjects. He was ordained a minister of the Calvinist Methodist denomination, but still devoted himself chiefly to his journalistic and political work. He was the accepted champion of the educational, religious, economical, and political interests of the Welsh. Besides some literary works in the Welsh language, he published "The Myrffyrrian Archaeology of Wales."

Gehrt, Karl, a German artist, born in Hamburg, May 11, 1853; died in Endenich, near Bonn, July 17, 1898. He was the son of a decorative artist, and after passing through the art school of his native city he went to Weimar in 1871, where he studied under Karl Gussow and Albert Baur. With the latter he settled in Düsseldorf in 1876. He made innumerable drawings illustrating "Reinecke Fuchs," "Tannhäuser," "Thomas à Kempis," and other works, humorous sketches for the "Fliegende Blätter," and artistic picture books, such as "Jagdleben der Gnomen," "Amor bei Jung und Alt," and "Ein Hochzeitsmärchen." His representations of gnomes, dwarfs, and elves are peculiar, and charm art lovers and children equally. His water colors, such as "Petruchio's Wedding," "The Pirate Claus Stortebek," etc., are admirable in technical execution as well as in composition, but his few oil paintings fall below them. His great work was the wall decoration of the stairway to the art gallery in Düsseldorf, depicting the history of art. This occupied ten years. When he died he was at work on drawings for the Rathaus in Hamburg.

Gholam, Hyder Khan, an Afghan soldier, died in March, 1898. He was an Orakzai chief, the son of Sikunder Khan, with whom he suppressed in 1887 the revolt of the Ghilzais. In the following year he alone, at the head of the Ameer's army, saved the throne for Abdurrahman by dispersing the forces of the pretender Ishak Khan. He had a large share in the reorganization of the Afghan army, directed all the annexation campaigns in the mountainous regions of western Afghanistan, subjugated Kafiristan, and during the recent rising of the Afridis against the British he faithfully observed the injunction of the Ameer to keep his tribesmen from actively aiding their brothers.

Gilbert, Sir John Thomas, an Irish historian, born in Dublin in 1829; died in London, May 23, 1898. He was educated in Dublin and in England, and received the appointment in 1867 of Secretary of the Irish Public Record Office, after having devoted himself to researches in the literary and historical antiquities of his native land. In 1875 he became inspector of Irish manuscripts. He gave an impetus to Celtic studies by editing the most important of the old Irish manuscripts. His principal works are: "History of Dublin" (1854-'59); "History of the Viceroy's of Ireland" (1865); "Historical and Municipal Documents of Ireland" (1870); Na-

tional Manuscripts"; "History of Affairs in Ireland, 1641-'52" (1879-'81); and "History of the Irish Confederation" (1882).

Goodenough, Sir William Howley, an English soldier, born in 1833; died in Cape Town, Oct. 24, 1898. He was a son of the Dean of Wells, was educated at Westminster School and the Woolwich Military Academy, and entered the Royal Artillery as second lieutenant at the age of sixteen. As a captain he fought gallantly in the Indian mutiny, and as major he filled important staff offices in England and served as military *attaché* in Vienna. In the Egyptian expedition of 1882 he commanded the Royal Artillery with the rank of brigadier general. As major general he commanded various districts in Great Britain, promoting the volunteer movement, especially the artillery association. He became a lieutenant general in 1891, and in 1894 was placed in command of the British forces in South Africa.

Grey, Sir George, a British administrator, born in Lisbon in 1812; died in London, Sept. 19, 1898. He was the son of an officer who fell at the storming of Badajoz before his birth, and was educated for the military profession at Sandhurst, went into the service at the age of eighteen, and while stationed in the west of Ireland saw so much misery that he determined to escape to the roomy regions of Australia, whither he sailed on an exploring mission for the Geographical Society. He landed in Hanover Bay, and passed through privations and suffering and had many hairbreadth escapes while exploring the waterless regions of northwestern Australia. The Governor of Western Australia appointed him resident at King George's Sound, and there he studied the nature of the Australian blacks until he was obliged to return to his regiment when his two years' leave expired. In England he published a book narrating his experiences which was much read and which impelled Lord John Russell, then Colonial Secretary, to select the young officer for the post of Governor of South Australia, an infant colony which was then falling into a state of anarchy. He arrived in 1841, and in four years, by retrenchment and reorganization, rescued the treasury from bankruptcy, and by aiding impoverished colonists from his own purse and promoting industry and winning the confidence of the common people by checking the monopoly of town sites by speculators and of fertile tracts by squatters, he brought the colony out of its difficulties and set it in the path of orderly development, although the squatter aristocracy and the speculative capitalists complained bitterly of his democratic innovations. Lord John Russell was well enough satisfied with his work to send him in 1845 to be Governor of New Zealand, which was in still more desperate straits, for the insurgent Maoris were then preparing to exterminate the British settlers. He collected troops and munitions at Adelaide, and two months after his arrival he ended the war by a treaty satisfactory not only to the whites but to the natives also, who had learned to trust his justice, firmness, and good faith. He reformed the financial administration of this colony also and introduced economy and efficiency. In order to understand thoroughly the native question he set to work to learn the Maori language without grammar or dictionary, and became deeply interested in the myths and customs of the New Zealand aborigines, collecting the materials for a great work on the subject, which were lost by fire. He began his labor over again, and published some years afterward his "Polynesian Mythology." He was so bent on preserving all the islands of the Southern Seas for a future great colonial empire of Great Britain that he importunately urged the home Government to prevent the French annexa-

tion of New Caledonia. Not alone in that did he offend his official superiors, but he disobeyed every order that came when he considered it unwise or inexpedient. A constitution that was sent to him to be promulgated he boldly set aside, declaring it suspended. He insisted on carrying out the principle that the lands of the Australasian colonies were the heritage of the British people and advocated allotments to cultivators only and the extreme claims of labor. When he returned to England the Duke of Newcastle, who was Secretary for the Colonies, refused to see him; yet he was impelled shortly afterward to make use of his genius for organization and conciliation for the purpose of extricating Cape Colony from its plight of disorder and bankruptcy. Delegates of the colonists had obtained representative institutions, but had left England sore and dissatisfied with the result of their mission. There were serious troubles with the Boers, and the Kaffirs were on the point of revolting. The Colonial Secretary, to avoid having his orders again set at naught, gave Sir George Grey unlimited discretion. When the new Governor arrived he granted to the Hottentots the rights that had been refused in London, came to an understanding with the discontented Boers, reorganized the finances and the civil service, and then had to face a general rebellion of the Kaffirs. The commanding general proposed to concentrate on an inner line of defense, but Sir George Grey ordered the feeble outposts to hold their ground, and in a short time he broke up the formidable confederacy and had the Kaffirs at his mercy. To save them from famine he distributed food among them, settled many thousands on lands in the colony, and employed the rest on public works. The Indian mutiny then broke out, and he took the bold initiative of directing transports bound for China to go to Calcutta, as well as dispatching troops, guns, and money from the Cape to India, leaving himself almost helpless against a renewal of the dangers scarcely past. In the next two years he thought out and freely enunciated the scheme of South African Confederation without caring about the policy of the British Government, and this led to his summary recall by the Conservative Colonial Secretary. Before he arrived in England the Duke of Newcastle had returned to the Colonial Office and had reappointed him, but when he again took up the reins of power at the Cape he found his authority and prestige weakened. The native chiefs were grateful and devoted, but his hopes of reconciling the interests of the Dutch and the English and welding them into a nation were blasted. His second term of office was marked by the construction of railroads and the founding of benevolent institutions. When he left the colony he gave to it his magnificent library and collection of manuscripts. He was appointed Governor of New Zealand once more in 1861. The Maoris were angry at the flagrant breaches of the treaty, and wholesale robbery of their lands, and through the laxness of the administration they had provided themselves with arms. Sir George Grey insisted that the Government should frankly acknowledge the wrongs it had committed and make reparation to the natives. The Cabinet hesitated to humiliate itself in this way until the war broke out. The Governor, when he was empowered to offer full amends to the injured natives, went among them, won over some of the chiefs to fight devotedly on his side, and with his native army carried without the loss of a man the stockades which the commander of the British troops was afraid to assail. The Maoris simply would not fight against their kindred after they knew of the promises that the Governor held out to them. After having pacified the island a second

time Sir George Grey retired in 1868. He had a promise of the governor-generalship of Canada, the stepping-stone to the viceroyalty of India, before he threw himself into the breach to save New Zealand, and thus placed himself out of the line of promotion. After returning to England he offered himself as a candidate for Parliament to the electors of Newark, but his extreme radical views on imperial and colonial questions alarmed Mr. Gladstone and Lord Granville, who refused to accept him as the party candidate. He proposed, in particular, a scheme for giving home rule to Ireland that differed little from Mr. Gladstone's own measure offered in 1886. Sir George Grey withdrew his candidature rather than give the seat to a Tory, and after a little while returned to New Zealand. In 1874 he threw himself into the political contest that was waged in the colony for the preservation of the provincial legislative bodies and autonomous institutions that were mainly his own creation. When his party came into power he was called upon to take the premiership. In this new and singular position he found freer scope than ever for his extremely democratic ideas. He devoted his efforts to strengthening the rule of the people, and carried through a measure practically conferring manhood suffrage and establishing the principle of one man one vote. In combating monopolies in every form he was a pioneer and was less successful, and in his proposals for the radical reform of taxation, the election of the Governor by the colonists, the nationalization of coal mines, and other radical innovations he sustained a series of mortifying defeats entailing his resignation. He continued for several years to sit in the Assembly. In 1890 he represented New Zealand in the Federal Convention of Australasia at Sydney. He made a tour through Australia, and was received by the workmen everywhere with enthusiastic demonstrations, to which he responded with expressions of ardent sympathy for the claims of labor and hope that its paramount rights would be secured through universal suffrage. After this he lived among his books in the luxurious paradise that he had created on the island of Kawau until 1895, when, bestowing his valuable library as a gift on the citizens of Wellington, he took up his abode in England, having in 1894 been appointed a member of the Privy Council. He was knighted in 1848.

Gurney, Alfred, an English clergyman, born in 1843; died at Roehampton, Nov. 28, 1898. He was educated at Exeter College, Oxford, took orders in 1873, and from 1879 till shortly before his death was vicar of St. Barnabas's Church, Pimlico, London. He was a pronounced High Churchman, but his "Our Catholic Inheritance in the Larger Hope" (1888) is an extremely liberal treatment of the theme. His other works are "The Vision of the Eucharist and Other Poems" (1882); "Day Dreams"; and "A Christmas Faggot" (1884).

Haweis, Mrs. Mary Eliza (Joy), an English artist and author, born in London, Feb. 21, 1832; died there, Nov. 28, 1898. She was the daughter of F. M. Joy, an artist. She studied art under his direction, and exhibited her first picture in the Royal Academy at the age of sixteen. In 1876 she married the Rev. H. R. Haweis, a popular English writer. She continued to practice her art after marriage, and was the cover designer and illustrator of all of her own and her husband's books. Her published works include "Chaucer for Children," which quickly passed through several editions (1876); "The Art of Beauty" (1877); "The Art of Dress" (1879); "Chaucer for Schools" (1880); "The Art of Decoration" (1881); "Beautiful Houses" (1882); "Chaucer's Beads," a birthday book, (1884); "Rus in Urbe" (1886); "Tales from

Chaucer" (edited; 1887); and "A Flame of Fire," a novel (1897).

Herz, Cornelius, a French adventurer, born in Besançon in 1848; died in Bournemouth, England, July 6, 1898. His parents were German Jews, and after passing through the schools of his native town he studied medicine in Germany. Settling in Paris, he had a hard struggle with poverty. At the beginning of the war of 1870 he joined the army of the Loire, served as adjutant, and in 1871 was admitted as a foreigner to the Legion of Honor. After the war he went to the United States, became an American citizen, obtained a medical diploma, married the daughter of a Boston manufacturer named Sarony, and established himself in business in San Francisco, devoting himself to the industrial applications of electricity. Returning to Paris in 1877, he started an electric-light concern, afterward took up the working of the patents of the inventor Marcel Despretz for the transmission of power by electricity, attempted to get control of the telephone company, and in 1879 organized the Paris Electric-Light Company. He became associated with politicians and played a rôle also in the scientific world, and in financial circles attained an influential place, attaining such eminence that in 1880 he was made a grand officer of the Legion of Honor. In the irregularities of the Panama Canal enterprise he was the chief intermediary, and when the scandal transpired, pursued by detectives, he fled from France to Italy, then to Germany, and finally took refuge in England, fallen from his great estate, yet formidable in the possession of all the secrets of the dark business. He was condemned by default to five years' imprisonment and expelled from the Legion of Honor, and the French Government applied persistently for his extradition, but his lawyers, by means of medical certificates of failing health and other pleas and delays, defeated the proceedings. In 1897 Dr. Herz made an offer to reveal everything to the Panama Inquiry Committee, but when the committee set out for Bournemouth he withdrew his promise.

Jenner, Sir William, an English physician, born in Chatham in 1815; died in Bishop's Waltham, Dec. 11, 1898. He was the son of an innkeeper, studied at University College, London, was licensed as an apothecary in 1837, entered upon the practice of medicine in London, and was graduated as doctor at the University of London in 1844. He devoted himself to hospital work, and on becoming a member of the Royal College of Physicians in 1848 withdrew from practice to take the Professorship of Pathological Anatomy in University College, and the post of assistant physician to the college hospital. He became a fellow of the Royal College of Physicians and Goulstonian professor in 1852; also physician to the children's hospital, and in the following year physician to the London Fever Hospital. In 1854 he was appointed physician to University College Hospital, and in 1857 Professor of Clinical Medicine. He was chosen physician extraordinary to the Queen in 1861, and in 1862 physician in ordinary and appointed also to the chair of the Practice of Medicine in University College. He became physician in ordinary to the Prince of Wales in 1864, and was created a baronet in 1868. From 1881 till 1888 he was President of the Royal College of Physicians. He retired from practice in 1889, but remained in the Queen's service till 1893. As a teacher and as a physician he was alike eminent. His greatest contribution to medical science was the discovery of the essential difference between typhoid and typhus fevers. His chief works were on the "Identity or Non-identity of Typhus and Typhoid Fevers," and on "Diseases commonly confounded under the Term

Continued Fevers." He also published lectures on emphysema, diphtheria, rickets, and tuberculosis.

Kaluoky, Count Gustav Siegmund, an Austrian statesman, born in Lettowitz, Moravia, Dec. 29, 1832; died in Brunn, Feb. 13, 1898. He belonged to a Hungarian family ennobled in the fourteenth century, entered the diplomatic service in 1854, was first attached to the legations at Munich and Berlin, went to London in 1859 as secretary of the embassy, and 1871 was sent to Rome as envoy extraordinary and minister plenipotentiary *ad interim*. He was appointed in 1874 minister to Copenhagen, where he remained until after the conclusion of the treaty between Austria and Prussia. He was sent later on a special mission to St. Petersburg, and in 1880 was appointed ambassador at the court of the Czar, where he remained until he was, on Nov. 20, 1881, made Austro-Hungarian Minister of Foreign Affairs and of the Imperial House. The alliance with Germany which Count Andrassy had arranged with Prince Bismarck was extended into the Triple Alliance, and this was renewed in 1891. Serious difficulties with Russia, arising out of the Bulgarian situation in 1887, after Alexander of Battenburg had been forced to abdicate, he succeeded in smoothing over. He reconciled the Hungarians to the measures necessary for the organization of Bosnia, but was finally compelled to resign in May, 1895, because he had failed to forward to the Vatican Baron Banffy's vigorous remonstrance against the assumption of influence and authority in Hungarian domestic politics by the papal nuncio, Monsignor Agliardi. He was always an advocate of cordial relations between Austria, Germany and Russia, and of the maintenance of the *status quo* in the Balkans, as the sole means of conciliating Russia.

Kanthack, Alfredo Antunes, a British pathologist, born in Brazil, March 4, 1863; died in Cambridge, England, Dec. 22, 1898. His father, a German, was British consul at Para. The son was educated in Germany and at Cambridge, becoming Professor of Pathology at Cambridge in 1897. He was eminent in his profession and his loss was much felt both in England and in Germany. With H. D. Rolleston he published "Leprosy in India" (1892); "Manual of Practical Morbid Anatomy" (1894); "Manual of Practical Bacteriology" (1895).

Kingsford, William, a Canadian historian, born in London, England, in 1819; died in Ottawa, Ontario, Sept. 29, 1898. He was an engineer, and his name is associated with public works in Canada, among them the Victoria Bridge at Montreal. He was the author of "The History, Structure, and Statistics of Plank Roads in the United States and Canada" (Philadelphia, 1851); "Impressions of the West and South during a Six Weeks' Holiday" (Toronto, 1858); "The Canadian Canals: Their History and Cost" (1865); "The History of Canada" (Montreal and London, 1887-'88), the last named a notably careful work.

Kung, Prince, a Chinese statesman, born in 1830; died in Peking, May 29, 1898. He was a younger brother of the Emperor Hsien-Fang, and when direct diplomatic relations with European nations were established as the result of the war of 1859 he was appointed president of the Tsung-li-Yamen, the newly constituted board of foreign relations. When Hsien-Fang died a few months later he concocted and carried to a successful issue the palace revolution by which the two Empresses came to be regents, and he continued to guide and direct the affairs of the court until the unfortunate issue of the conflict with France compelled him to retire in 1884. When the Japanese war broke out in 1894 the Empress Dowager called him from the privacy and seclusion in which he had passed his life in the

interim, devoting himself to charitable works. He was asked to resume his former offices in conjunction with Prince Ching. Years and sickness had impaired his energy, and repugnance to holding intercourse with barbarian diplomatists kept him away from the meetings of the Tsung-li-Yamen, as well as unwillingness to connect himself with disasters and defeat. He thereupon took no active part in the counsels of the Yamen or in the peace negotiations.

Lewis, Thomas Hayter, an English architect, born in London, July 9, 1818; died there, Dec. 10, 1898. He was articled to Joseph Parkinson, the architect, and was subsequently a pupil of Sir William Tite's. In 1841-'42 he traveled through France, Germany, Italy, Sicily, and Greece, and many of his architectural sketches made at this time were published in the "Dictionary of the Architectural Publication Society." The first building of importance designed by him was the Alhambra, intended for the use of a scientific institution, the Panopticon. In 1865 he became Professor of Architecture at University College, London, and in 1871 was made dean of the faculty of arts. On his resigning his professorship in 1881 he was made professor emeritus. The south wing of the university buildings was designed by him, but he was not responsible for the additions made in the present decade. He contributed the articles on ancient and modern architecture in the ninth edition of the "Encyclopædia Britannica" and published in 1888 a work on "The Holy Places of Jerusalem." In 1894 he contributed an appendix on Byzantine sculpture to Naville's "Anas el Medineh." His opinions on architectural matters were held in great esteem by his contemporaries.

Liddell, Henry George, an English educator, born in Durham in 1811; died in Ascot, Jan. 18, 1898. He was the son of a clergyman, was educated at Charterhouse School and Christ Church, Oxford, took a first class in 1833 in both classics and mathematics, was ordained priest in 1838, and remained in the university as tutor, proctor, select preacher, and examiner, working at the same time with Scott, of his own college and year, who became Dean of Rochester, at the Greek lexicon, which has since been the portal to the Greek classics of all English-speaking students. The first edition appeared in 1843, the seventh in 1883, and shortly before his death he saw the proofs of a new edition through the press. In 1846 he was appointed head master of Westminster School. He was one of the commissioners who revolutionized the studies at Oxford in 1852 in opposition to the university authorities. In 1855 he returned to Oxford as Dean of Christ Church. Under his firm rule this college continued for many years to be the largest of the Oxford schools, while ceasing gradually to be the exclusive resort of the wealthy and noble students. Dr. Liddell was Whitehall preacher and the Prince Consort's domestic chaplain. He published in 1855 a "History of Rome," covering the periods anterior to the Christian era.

Liezen-Mayer, Alexander von, a German painter, born in Raab, Hungary, in January, 1839; died in Munich, Feb. 19, 1898. He studied in the Academy of Vienna under Anschuetz, and at Munich under Hiltensperger, entered the school of Piloty in 1862, and in 1865 won the prize given by the Munich Academy. In the same year his famous painting representing the beatification of St. Elizabeth was completed. After leaving Piloty's school he painted numerous portraits and drew illustrations for books, and later many notable works representing scenes from history and from Shakespeare and "Faust." "Elizabeth Signing the Death Sentence of Mary, Queen of Scots," "Imogen and Iachimo," and a portrait of the Emperor Franz Josef are

among his most celebrated canvases. He became a director in the School of Art in 1880, a professor at the Munich Academy in 1883, and a member of the Vienna Academy in 1887.

Linton, Elizabeth Lynn, an English author, born in Crossthwaite, Feb. 10, 1822; died in London, July 14, 1898. Her father was the Rev. James Lynn. Going to London in 1845, she had the advice of Walter Savage Landor in her first literary efforts. The novel "Azeth, the Egyptian," was followed by "Amynone," and this by "Realities," after which she turned her attention to journalism, writing incisive and sprightly articles for the dailies and weekly reviews. In 1858 she married William James Linton, wood engraver and Chartist agitator, from whom she was separated in later years, he living in the United States and she in England. In 1865 she published "Grasp your Nettle," and shortly afterward "Ourselves: Essays on Women." She became a most vigorous opponent of the so-called movement for the emancipation of women. In 1872 she published anonymously a caustic satire on contemporary Christianity in the form of an allegorical novel, "The True History of Joshua Davidson," which was denounced as a subversive and blasphemous work. Her other books include "Patricia Kemball," "Lizzie Lorton," "Sowing the Wind," "Under which Lord?" "Leam Dundas," "My Love!" "The World Well Lost," "Ione Stewart," "Paston Carew," "Through the Long Night," "The One Too Many," "In Haste and at Leisure," "Dulcie Everton," "With a Silken Thread," and "The Mad Willoughbys." On the question of the "new woman" she wrote a series of satirical articles for the "Saturday Review," reprinted under the title of "The Girl of the Period," which created a great sensation.

Louise, Queen of Denmark, born in Cassel, Sept. 7, 1817; died in Copenhagen, Sept. 29, 1898. She was the third daughter of Wilhelm, Landgrave of Hesse-Cassel, by Princess Louise Charlotte, daughter of Frederick, Prince of Denmark. She was educated in Denmark, where her father served in the army, becoming proficient in languages and in music and painting. On May 26, 1842, she was married to Prince Christian of Holstein-Sonderburg-Glücksberg. Until her husband was declared heir apparent in 1882 they lived in somewhat straitened circumstances in Copenhagen. They kept away from the frivolous court of Frederick VII, and educated their children on enlightened principles, paying particular attention to riding and gymnastics. These children all made great marriages in time, Prince Christian to Princess Louise of Sweden, Princess Alexandra to the Prince of Wales, the King of the Hellenes to the Grand Duchess Olga, Princess Dagmar to the Czar Alexander III, Princess Thyra to the Duke of Cumberland, and Prince Waldemar to the Princess Marie of Orleans, daughter of the Duc de Chartres. Prince Christian became King of Denmark on Nov. 15, 1893. Queen Louise, by her attractive ways and unflinching tact, helped to gain the willing allegiance of the Danes for the "protocol prince" who had been imposed on them from outside. She was a model of all the domestic virtues, and retained through life her youthfulness of mind and appearance. She was credited with exercising considerable influence in political matters. In Germany she was supposed to have had a large share in bringing about the Franco-Russian alliance, and the avoidance of a rupture between England and Russia has been attributed by some to consideration for her feelings.

Lugard, Sir Edward, an English soldier, born in Chelsea in 1810; died Oct. 31, 1898. He was the son of a captain in the army, and was educated at Sandhurst, entering the service in 1828, and im-

mediately going out to India. He served as brigade major in the Afghan war of 1842, was assistant adjutant general through the Sikh war, was adjutant general of the British forces in the Punjab campaigns of 1848 and 1849, and in the Persian expedition of 1856 was chief of staff and obtained the honor of knighthood for his services. He was appointed adjutant general in India in 1857, commanded an infantry division at the siege of Lucknow and subsequent operations, and was rewarded for his services by promotion to major general in 1858. He became lieutenant general in 1865 while serving as permanent Under Secretary for War, which office he filled from 1861 till 1871. After that he was president of the Army Purchase Commission. In 1872 he became full general.

Mackay, George Eric, an English poet, born in London, Jan. 25, 1851; died June 2, 1898. He was a son of the late Charles Mackay, the well-known author, and wrote at first under the signature George Eric Lancaster. His later work appeared under his own name shortened to Eric Mackay. His most popular work, the sale of which reached 35,000 copies, is "The Love Letters of a Violinist" (London, 1886), written while he was walking in the country. His other works are "Songs of Love and Death" (1875); "Pygmalion in Cyprus and Other Poems" (1880); "Ad Reginam" (1881)—the third edition of this book appeared the same year with the addition of "Sonnet now First Published"; "Gladys the Singer and Other Poems" (1887); "A Lover's Litanies" (1888); "Nero and Actea" (1891); "The Lover's Missal"; "White Rose of the Crown" (1894); "A Song of the Sea, My Lady of Dreams, and Other Poems" (1895); "Arrows of Song" (1896); and "The Little Gods of Grub Street: A Satire" (1897).

Madrazo, Federico, a Spanish painter, born in Rome in 1815; died in Madrid in August, 1898. He studied in Paris in the *atelier* of Winterhalter, and in a short time reached such rank as a portrait painter that he was appointed court painter at Madrid. Subsequently he was made director of the Madrid Academy of Fine Arts and was nominated a Senator. His "Godfrey of Boulogne proclaimed King of Jerusalem" hangs in the Versailles gallery.

Malietoa Lanuapa, King of Samoa, died in Apia, Aug. 22, 1898. He succeeded Malietoa Talavau on Nov. 8, 1880. Tamasese, who contested the succession, was favored by the Germans, then desirous of establishing a protectorate over the Samoan Islands, and in 1887 Malietoa was seized by the German forces in Samoa and deported, first to Cameroons, and thence to Jaluit, one of the Marshall Islands. In response to the protests of Great Britain and the United States, especially the latter, which declared that the institution of a German protectorate would be regarded as an unfriendly act, the German Government brought back the exiled King, and on Nov. 9, 1889, he was formally restored by proclamation of the consuls of Germany, the United States, and Great Britain.

Mallarmé, Stéphane, a French poet, born in 1841; died in Paris, Sept. 11, 1898. He was well versed in the English language, which he taught in a college in Paris till 1893. He made a translation of the poems of Edgar A. Poe, and was the author of poetry that appealed to the votaries of the decadent school, of which he has been regarded as the chief master since Verlaine's death.

Marks, Stacy, an English painter, born in London in 1829; died there, Jan. 9, 1898. He was the son of a coach-builder, who brought him up in his business until this failed, leaving him free to follow his bent for art. He entered the school of the Royal Academy in 1851, studied also in Paris, and

in 1853 his picture representing "Dogberry" was accepted for the Academy exhibition. His first success was won by "Toothache in the Middle Ages," exhibited in 1856. He sold his pictures after this, and obtained profitable commissions for mural decoration. He was elected an associate of the Royal Academy in 1871 and a member in 1878. He painted many humorous pictures of bird life. One of his most successful paintings was "Science is Measurement," representing an ornithologist in his laboratory. He wrote his reminiscences.

Martineau, Russell, an English scholar, born in Dublin, Jan. 18, 1831; died in Sidmouth, Dec. 15, 1898. He was a son of the distinguished Unitarian theologian and philosopher, James Martineau, who at the time of his son's birth was pastor of a congregation in Dublin. The son received his education at the University of London, and in 1857 was appointed an assistant in the printed book department of the British Museum, remaining there until 1896. He was a Hebrew scholar of note, and was familiar with most of the languages of northern Europe. He catalogued the extensive collections of Luther's works in the British Museum, translated Gregorovius's work on Corsica, and edited the standard English version of Ewald's "History of the People of Israel" (1867-74), and also the Song of Solomon for the Polychrome Bible.

Moreau, Gustave, a French painter, born in Paris in 1836; died there, April 19, 1898. He was a pupil of Picot in the School of Fine Arts, and exhibited in 1852 a "Holy Family." From the beginning the idealism and poetry of his art aroused the admiration of the young and progressive and the condemnation of the conservative lovers of established methods. As early as 1853 he took his place with the masters by painting "Darius fleeing after the Battle of Arbela" and the "Song of Songs," the latter of which was purchased by the Government and hung in the museum at Dijon. In the Universal Exposition of 1855 he showed "Athenians delivered up to the Minotaur." For several years he exhibited nothing, only to come out in the Salon of 1864 with one of his most striking works "Edipus and the Sphinx," which gave rise to as violent polemics as ever were excited by a picture. His subsequent productions include "Jason"; "Death and the Man"; "Orpheus torn by Bacchantes," purchased by the Luxembourg gallery; "Diomedes devoured by her Horses"; "Prometheus"; "Jupiter and Europa"; "Hercules and the Lernean Hydra"; "Salome"; "St. Sebastian," painted in distemper with wax; "Jacob and the Angel"; "Moses cast upon the Nile"; "David"; and the "Sphinx Divined." These last were shown at the exposition of 1878, with six water colors as brilliant and vibrating in color as his works in oil. He won medals at the Salons of 1864, 1865, and 1878, received the Legion of Honor in 1875, and was nominated to the Academy of Fine Arts in 1888. Four years later he was elected professor at the École des Beaux-Arts.

Müller, George, a British philanthropist, born in Kroppenstadt, Prussia, Sept. 27, 1805; died in Bristol, March 10, 1898. He was sent to the Halberstadt Church School at the age of eleven and thence to the Nordhausen Gymnasium and entered the University of Halle as a divinity student. Although intended for the Christian ministry from the beginning, his life in school and at the university was given up in a great measure to idle pleasure, and his irregularities and shifts to obtain money got him into frequent trouble. During a walking tour in Switzerland he was suddenly overcome with religious emotion at a prayer meeting, and thenceforth he determined to be a missionary. His father was opposed to his adopting such a career, and withdrew

his allowance. He began preaching in August, 1826, and when he reached the end of his stock of money he wrote to a noble lady to solicit a loan. She did not reply, but some one, writing anonymously in a religious strain, sent him a parcel of silver money. In 1829 he went to London and worked as a missionary of the society for propagating the Gospel among the Jews until his health failed, after which he settled as a minister at Teignmouth and in 1830 at Bristol. He abolished pew rents, setting up a box for voluntary contributions. He was often reduced to the last few shillings of these contributions, but help always came in time, and he firmly believed that if he prayed his wants would be supplied. In 1834 he founded the Scriptural Knowledge Institution to supply Bibles and other things needed in Sunday schools and missions, resolving not to ask for worldly patronage nor to contract debt. In the following year he established in Bristol an orphan home, praying for a site, £1,000 to build with, and helpers to care for the children, all which came to him. The number of children supported in the home rose to 297 in 1856, when he said that £84,000 had been given him for the orphans as the result of prayer. The gifts still increased until in 1875 there were 2,000 children being cared for and he had received in donations £750,000 without ever having appealed personally to any one. He published statements and balance sheets, however. He addressed students in colleges and theological seminaries and other audiences whenever he had an opportunity, and between 1875 and 1883 he traveled through Europe, America, and Asia on evangelistic tours. In 1892 he made another missionary journey over the continent. Altogether he delivered 3,000 sermons in foreign lands, traveling 150,000 miles, and when at Bristol he preached twice every Sunday up to his ninetieth year, besides speaking frequently during the week.

Munk, William, an English physician, born in 1815; died in London, Dec. 20, 1898. He was educated at University College, London, and at the University of Leyden, graduating M. D. from the latter in 1837. In 1844 he was admitted member of the Royal College of Physicians, and fellow in 1854, and during his long life held several professorships. He was considered the leading authority on small-pox. His published works are: "Mémorial of J. A. Paris, M. D." (1857); "The Roll of the Royal College of Physicians of London" (1861-'78); "Euthanasia" (1887); "Life of Sir Henry Hallford" (1895).

Nicolas, Ernest (Signor NICOLINI), a French operatic tenor, born in Tours, France, Feb. 23, 1834; died in Paris, Jan. 17, 1898. He was the son of an innkeeper of Dinard. The singer was a pupil of the National Conservatory of Singing and Declamation, Paris, and was graduated by that institution in comic opera in 1855, with the honors of a second *accessit*. He was at once engaged at the Theatre de l'Opéra Comique in Paris, but, after essaying one or two rôles without marked success, he retired therefrom. In 1859 he went to Italy, where he continued his studies and entered the ranks of artists of grand opera. He was favorably received and sang with much success in Florence, Turin, and other cities. He visited Paris in 1862, and repeated his Italian successes at the Salle Ventadour. He appeared shortly afterward before an English audience in concerts given by Lucie and with others at St. James's Hall. An engagement at Covent Garden was secured for him, but resulted in failure. He then went again to the Continent and followed the fortunes of different operatic ventures until 1872, when, on his reappearance in London as Faust, he achieved a positive and enduring triumph. Backed by this success, he became a star, and as such visited the

principal cities of Europe for several years with his own company. He became associated with Adelina Patti, and, besides singing with her in all her engagements in Europe, visited the United States several times as her principal support and received much favor from American audiences. At length, after an association of many years, he and Patti were married at her home, Craig-y-nos Castle, Wales, June 10, 1888. Though he was not endowed with a voice of much power, his notes were sweet and pure, added to which his pleasing stage presence and marked ability as an actor endeared him greatly to his audiences. During the later years of his life he lost his voice through illness, and he had ceased to sing long before his death.

Orton, Arthur, an English impostor, born in London in 1835; died there, April 1, 1898. He was the son of a shipping butcher of Wapping, emigrated to Australia, and carried on the business of a slaughterman in Wagga Wagga, New South Wales. He went to England in 1866 to lay claim to the Tichborne baronetcy and estates, pretending to be Sir Roger Tichborne, who had been educated in France and had served in the army and had been on a vessel that sailed from Valparaiso and foundered at sea in 1854. Lady Tichborne believed her son to be still living, heard that he was in Australia, and when Orton appeared in answer to her advertisements and recalled to her mind many incidents of Roger Tichborne's childhood and youth, she was thoroughly convinced that he was the son, although he was very different in education and breeding and even in stature and appearance. A jury, after a trial in 1871, lasting one hundred and one days, was satisfied that he was not Sir Roger Tichborne. The Tichborne estate had spent £92,000 in defeating his claim. Orton was then arrested for perjury and forgery, and a trial that lasted one hundred and eighty-eight days resulted in his being found guilty in February, 1874, and sentenced to fourteen years' penal servitude. His counsel, Dr. Kenealy, by means of a virulent newspaper that he established, called the "Englishman," succeeded in turning the alleged wrongs of the "claimant" into a class question, almost into a question of national politics. The lawyer, disbarred for his denunciation of Chief-Justice Cockburn on the bench, founded the Magna Charta Association, delivered violent speeches throughout the country, and in 1875 was elected to Parliament for Stoke. When he moved for a parliamentary inquiry into the Tichborne case he got only two members to support his motion. Public interest in the claimant gradually died out until he was released on ticket of leave, after serving eleven years of his sentence. Orton lectured and showed himself at music halls, but was unable to reopen the question. In 1895 he published a "Full Confession," stating how he had picked the details of young Tichborne's life from persons who had known him, and in time had actually deluded himself with the belief that he was the person whose character he assumed. He had begun to impose on people in the hope of raising a little money to get away from Australia. Finding so many whom he could gull, he abandoned himself to luxury and ease, increasing in bulk from 150 to 350 pounds, and then during his imprisonment declining gradually to his former weight.

Payn, James, an English novelist, born at Rodney Lodge, Cheltenham, England, Feb. 28, 1830; died in London, March 25, 1898. His education was obtained at Eton, Woolwich Academy, and Cambridge, from which latter institution he was graduated in 1854. From 1858 he was editor of "Chambers's Journal," for which he wrote exclusively for several years, and in 1882 he succeeded

Leslie Stephen in the editorship of the "Cornhill Magazine." Besides contributing to various periodicals, he furnished from 1888 the page of "Weekly Notes" so long familiar to the readers of the "Illustrated London News." He was an extremely hard-working man, as the long list of his published works will testify, and after the issue of "Lost Sir Massingberd," in 1864, was very popular both in England and in the United States. He had a wide acquaintance with men of letters, and his cheery, generous nature made him everywhere beloved. It has been well said of him that "he inspired friendship, and he repaid it a hundredfold." He was wholly without professional jealousy, and many popular writers of to-day owe to him in his editorial capacity the earliest recognition of the merits of their work. In his later years he was confined to his home, but his long suffering was borne with quiet courage. "Stories from Boecaeio" (London, 1852) was his earliest work, and it was succeeded by a volume of "Poems" (1853). His subsequent works are: "Stories and Sketches" (1857); "The Foster Brothers" (1859); "Leaves from Lake-land"; "The Bateman Household" (1860); "Richard Arbour" (1861), his earliest distinct success, republished in 1869 as "The Family Scapegrace"; "Melibœus in London" (1862); "Furniss Abbey and Neighborhood" (1863); "Lost Sir Massingberd" (1864), perhaps his best-known novel; "Married Beneath Him" (1865); "People, Places, and Things" (1865); "The Clyffards of Clyffe" (1866); "Mirk Abbey" (1866); "Lights and Shadows of London Life" (1867); "The Lakes in Sunshine" (1867); "Carlyon's Year" (1868); "Blondel Parva" (1868); "Bentineck's Tutor" (1868), originally published as "One of the Family"; "Found Dead" (1869); "A County Family" (1869); "Maxims by a Man of the World" (1869); "A Perfect Treasure" (1869); "Gwendoline's Harvest" (1870); "Like Father, like Son" (1870); "Won—not Wooded" (1871); "Cecil's Tryst" (1872); "A Woman's Vengeance" (1872); "Murphy's Master" (1873); "The Best of Husbands" (1874); "At her Merey" (1874); "Walter's Word" (1875); "Halves" (1876); "Fallen Fortunes" (1876); "What he Cost her" (1877); "By Proxy" (1878); "Less Black than we're Painted" (1878); "High Spirits" (1879); "Two Hundred Pounds Reward" (1879); "Under One Roof" (1879); "A Marine Resident" (1879); "A Confidential Agent" (1880); "From Exile" (1881); "A Grape from a Thorn" (1881); "Some Private Views: A Collection of Essays" (1882); "For Cash Only" (1882); "Kit: A Memory" (1883); "Thicker than Water" (1883); "Some Literary Recollections" (1884); "The Canon's Ward" (1884); "In Peril and Privation" (1885); "The Talk of the Town" (1885); "The Luck of the Darrells" (1885); "The Heir of the Ages" (1886); "Glow-Worm Tales" (1887); "Holiday Tasks" (1887); "A Prince of the Blood" (1887); "The Eavesdropper" (1888); "The Mystery of Mirbridge" (1888); "The Burnt Million" (1890); "Notes from the News" (1890); "The Word and the Will" (1890); "Sunny Stories and Some Shady Ones" (1891); "A Stumble on the Threshold" (1892); "A Trying Patient" (1893); "Gleams of Memory" (1894); "In Market Overt" (1895); "The Disappearance of George Driffeld" (1896); "Another's Burdens" (1897).

Pitt, Henry Mader, actor, born in Albany, N. Y., Sept. 16, 1850, while his father and mother were acting in the United States; died in New York city, March 7, 1898. He was a son of the English actor Charles Diben Pitt, and first appeared upon the stage at his mother's theater, the Theater Royal, Sheffield, England, in a farce called "Under the Rose," in April, 1864. His father, who had been

manager of the theater, having died, young Pitt became his mother's assistant in the management, and on her relinquishment of the theater in 1868 he became stage manager in different theaters in succession, wrote successful plays, and introduced the Volkes family to the public in a pantomime framed by him on of the story "The Forty Thieves." In 1872 he was stage manager of the Queen's Theater, Manchester, and in 1873 he became a member of Robertson's company, playing "Caste." In association with James Albery he managed a company in the latter's plays, and in 1876 organized the Pitt and Hamilton company, which played successfully three years. In all these companies Mr. Pitt was leading actor as well as manager. On Sept. 29, 1880, he first appeared in the United States, playing Orlando in a revival of "As You Like It" at Wallack's Theater, New York city, as a leading member of the company. For the next two seasons he was a member of Augustin Daly's company, and in August, 1883, he assumed a similar place with the first Madison Square Theater company, playing the title rôle in "The Rajah." For two seasons Mr. Pitt played this part in the principal cities of the United States. A period of desultory playing followed, and in November, 1887, he originated the part of Louis Perceval in "Jim the Penman" at the Madison Square Theater, which part he played several hundred times successively. During following years he seldom appeared on the stage.

Plimssoll, Samuel, an English philanthropist, born in Bristol in 1824; died in Folkestone, June 3, 1898. He entered Parliament in 1868 after a prosperous career as a coal merchant, and took up the cause of the seamen. Before that he had published pamphlets on the coal trade and on the rights of labor, but had not identified himself in any way with the objects to which he devoted his public life. In 1870 he introduced in the House of Commons a resolution respecting loss of life and property at sea, in which he advocated a compulsory load line, and in 1871 he embodied this principle in a bill, which was withdrawn. In 1873, in "Our Seamen," he attacked the shipowners with such seathing invective that the public caught up the cry, and a royal commission was appointed. In 1874 he brought in another bill to establish a fixed load line, which was rejected by a majority of only three votes. When, in the following year, the Government withdrew its merchant shipping bill because it had been altered by amendments, transported with passion, he denounced shipowners as speculative soundrels who send people to their death, and charged those of them who were members of the House of Commons with conspiring to obstruct a bill that would check their murderous tendencies. This outbreak, for which he apologized when threatened with a reprimand, brought the question to an issue. The Government was compelled to introduce a bill embodying some of his demands, though not all, but especially the load line, "Plimssoll's line," which has since been marked on every British ship. He gave up his seat for Derby to Sir William Hareourt in 1880, and was unable afterward to get another. As the seaman's friend and champion he was chosen president of the National Amalgamated Sailors' and Firemen's Union, but was not responsible for the disputes in which it engaged.

Plötz, Berthold von, a German politician, born Aug. 9, 1844; died in Döllingen, July 25, 1898. He was educated in the military cadet school at Potsdam, served as an officer in the foot guards from 1862 to 1864, and as adjutant of a Landwehr battalion in the Austrian and French wars, retiring as captain, after which he devoted himself to agriculture on his estate at Döllingen. He was elected to the Prussian Chamber in 1892 and to the Reichstag

in 1893, and was one of the founders and the parliamentary leader of the Agrarian League, a faction started within the Conservative party to defend the interests of the landowning class, which promoted extreme protection and adopted Anti-Semitic principles and the theory of bimetalism. He was the author of the bourse law placing the produce exchanges under the control of Agrarians, which broke up the exchanges in most German cities.

Potter, Thomas Bayley, an English politician, born in Tadcaster in 1817; died in Midhurst, Nov. 6, 1898. He was the son of Sir Thomas Potter, member of a great commercial firm in Manchester that was influential in political and in philanthropic and social affairs. He was educated at Rugby and at London University, became head of the firm after his brother had broken with the Anti-Corn-Law League, healed the breach and became the fast friend of Cobden, took the leading part with his partner, Francis Taylor, in organizing in 1863 the Union and Emancipation Society which defended the cause of the North in the American war of secession, succeeded Cobden in 1865 as member of Parliament for Rochdale, and in 1866 founded the Cobden Club, which by its publications, its transactions and prize essays, and its anniversary dinners has kept the arguments for free trade before the public.

Price, Bartholomew, an English mathematician, born in Coln Saint Dennis, Gloucestershire, May 14, 1818; died Dec. 30, 1898. He was educated at Pembroke College, Oxford, and was graduated in 1840. In 1844 he became a fellow of Pembroke, and in 1853 was appointed Professor of Natural Philosophy at Oxford. He held honorable places connected with the university, was for many years secretary of the Clarendon Press, resigning that office in 1885, and from 1892 until his death was master of Pembroke College. He published "Treatise on the Differential Calculus" (1848); "Treatise on the Infinitesimal Calculus": Vol. I, "Differential Calculus" (1852); Vol. II, "Integral Calculus and Calculus of Variations" (1854); Vol. III, "Statics and Dynamics of a Particle" (1856); Vol. IV, "Dynamics of Material Systems" (1862; 2d ed., 1889).

Puis de Chavannes, Pierre, a French painter, born in Lyons, Dec. 4, 1824; died in Paris, Oct. 25, 1898. He studied with Henri Scheffer and Thomas Couture, painted in 1861 the mural decorations for the Amiens library, and produced many other series in subsequent years for Marseilles, Lyons, Poitiers, and other French cities, for the new Sorbonne and the Pantheon in Paris, and for the Boston public library. Among the most important are the "Life of Sainte Geneviève" in the Pantheon, the "Sacred Grove," and the "Vision of Antiquity" and "Christian Inspiration" at Lyons. Mystic figures, marked by repose, grace, and dignity, scattered at wide intervals on a background of cold, neutral color, are the chief characteristic of his work, which at first was regarded as from its novelty as eccentric and artificial, and in the end came to be looked upon as the acme of chaste and classic beauty in decorative art.

Quain, Sir Richard, a British physician, born in Mallow, near Cork, Oct. 30, 1816; died in London, March 13, 1898. He was graduated as doctor of medicine in the University of London in 1842, attained a large practice rapidly, was elected a fellow of the Royal College of Physicians in 1851, became physician to the Brompton Hospital for Chest Diseases in 1855, a member of the senate of the London University in 1860, and chairman of the Brown Institution. In 1865 he was appointed a member of the royal commission for the investigation of the cattle plague, and not only induced the commission to recommend strict quarantine against infected districts and the slaughter of all

animals attacked or exposed to infection, but by his articles in the "Times" and the "Saturday Review" prepared the public for the acceptance of these stringent measures. He was appointed a member of the General Medical Council in 1863, and became chairman of the Pharmacoepia Committee, and in 1891 president of the Council. He edited a "Dictionary of Medicine." His researches into the causes of fatty degeneration gave him a great reputation in the medical profession while he was still young. He was distinguished for his power of rapid and acute diagnosis. He lived on cordial terms with many famous authors and artists, and on account of his genial humor was a social favorite.

Rawlinson, Sir Robert, an English engineer, born in Bristol, Feb. 28, 1810; died in London, May 31, 1898. He was the son of a builder, began life as a stone mason, became an engineer under Robert Stephenson in the construction of railroads, and in 1840 assistant surveyor of Liverpool, in which post his attention was turned to sanitary engineering. He was appointed an inspector under the public health act of 1848, and exposed without fear or favor the overcrowding, want of proper sewerage or water supply, and general filthy condition of many towns. In 1855, after the mismanagement of the Crimean campaign had driven a Cabinet from office, he was sent as one of the sanitary commissioners who immediately checked the appalling mortality in the hospitals and camps from insanitary causes. In 1863 he recommended and planned sewerage, drainage, reservoirs, streets, parks, etc., costing £1,850,000, that gave employment to the starving cotton operatives of Lancashire. He was chairman of the royal commission appointed in 1866 to inquire into the pollution of rivers, one of the commissioners that investigated the sanitary condition of Dublin in 1879, and on the constitution of the Local Government Board he became chief engineering inspector. He was knighted in 1883. In 1894 he was elected president of the Institution of Civil Engineers.

Richebourg, Jules Emile, French dramatist, born in Neuilly, Haute Marne, France, April 23, 1833; died in Bougival, Jan. 26, 1898. He was, like Siderot, the son of a cutler, and was brought up to follow his father's business. At the age of seventeen he sought employment in commercial pursuits in Paris, but after a short experience in business and as a tutor he secured a place on the staff of "Figaro" as a writer. His first effort at novel writing was the "Contes Enfants" (1857). In 1862, after failing several times to obtain a favorable hearing, he produced a successful drama, "Les Nuits de la Place Royale," of which Leon Pournin was joint author. A comedy *vaudeville* called "Un Ménage à la Mode," which he gave to the public in 1863, firmly established him as a dramatist. But his greatest distinction was that he was a wonderfully prolific writer of popular fiction. His first greatly successful romance "Lucienne" appeared in 1858, and for forty years he turned out reams of melodramatic and blood-curdling tales and became very wealthy. He was a member of the Directory of the Société des Gens de Lettres and a Knight of the Legion of Honor. At the time of his death he was the literary and dramatic critic of "Le Petit Journal." His best-known books are "Contes Enfants" (Paris, 1858); "Homme aux Lunettes Noires" (1864); "Cœurs des Femmes" (1864); "Les Barbes Grises" (1867); "Recits devant l'Âtre" (1867); "Les Franc-tireurs de Paris" (1872); "La Comédie au Village" (1872); "Les Soirées Amusantes" (12 vols., 1874-'75); and "La Dame Voilée" (1875).

Rivier, Alphonse Pierre Octave, a Belgian legal writer, born in Lausanne, Switzerland, Nov. 9,

1835; died in Brussels, Belgium, July 21, 1898. He studied law at the University of Lausanne and in Berlin, and from 1863 to 1867 was a professor in the University of Berne. Since 1868 he had been professor at the University of Brussels. He was a high authority on matters of international law and was the editor-in-chief of the "*Revue de Droit International*" and of the first six volumes of the "*Annuaire de l'Institut de Droit International*." The most important of his original works are "Introduction Historique au Droit Romain" (1872); "*Traité Elementaire des Successions à Cause de Mort en Droit Romain*" (1878); "*Revue Littéraire et Historique des Systèmes et Théories du Droit des Gens Depuis Grotius*" (1885).

Rops, Félicien, a Belgian artist, born in Namur in 1833; died in Corbeil, France, Aug. 23, 1898. He was of Hungarian parentage. Having studied art in Belgium, he contributed greatly to the success of the humorous journal "*Ullenspiegel*" by fanciful sketches of his friends and contemporaries. He produced also caricatures of the art exhibitions in pen drawings and lithographs, the intense drollery of which reflected the soundest principles of art criticism. He was ambitious as a painter, but, except in some aquarelles, the pictures betrayed processes of his own branch by their dark, smoky coloring. When he took up the lithographer's crayon or the needle of the aquafortist he marked his slightest prints with an accent distinct and original. He was not a moralist, as innumerable erotic skits show, yet his "*Absinthe Drinker*," a marvel of observation and frank realism, was a sermon that many took to heart. As an illustrator also Rops was a master. He enriched with engravings as exquisite for their interpretation as for their drawing the works of the Belgian authors De Coster, Hannon, and De Molder, and, among French writers, those of Gautier, Baudelaire, Barbey, and Mendès. His later life was passed in France.

Rossi, Cesare, an Italian actor, born in Fano, in the Marches of Ancona, Italy, in 1828; died in Bari, Italy, Nov. 2, 1898. He was as celebrated and popular as a comedian in his own country as was his brother Ernesto Rossi as a tragedian. Against the wishes of his family he became an actor in his twentieth year and was continuously engaged therein for some time as a member of local stock companies, but for more than thirty years as the principal actor and director of his own company, traveling in Italy and Sicily. His work was confined to comic and eccentric rôles, and therein he was regarded as the best representative of the plays of Goldoni and other standard comedies of his country. As a member of his company the famous Eleanora Duse first obtained an opportunity to show her ability. The love and respect in which he was held by his comrades and the public is testified by the fact that tokens of condolence were sent on the occasion of his funeral from all parts of Italy, and a representative of the state attended his body to the grave.

Stansfeld, Sir James, an English statesman, born in Halifax, March 5, 1820; died in Rotherfield, Sussex, Feb. 17, 1898. He was graduated at London University in 1840, and called to the bar in 1849. Through his father-in-law, William Henry Ashurst, he became a friend of Mazzini and an ardent advocate of the liberation of Italy, as well as of the enfranchisement of women, the co-operative movement, the abolition of American slavery, and radical principles in British politics. He was elected to Parliament in 1859 and represented Halifax till 1895. He acted with the Nonconformist Radicals, and wrote and lectured in defense of the Italian national movement. In 1863 Lord Palmerston appointed him a Junior Lord of the Admiralty.

This office he resigned when attacked for allowing Italian conspirators to address Mazzini at his house, as appeared from evidence given in the French courts in relation to a conspiracy against the life of Napoleon III. In 1866 Lord John Russell made him Under Secretary for War, and in 1868 he was made a Lord of the Treasury in Mr. Gladstone's Cabinet. He was made a member of the Privy Council in 1869. In March, 1871, he entered the Cabinet as President of the Poor Law Board, and in August of that year, when his office was absorbed in the Local Government Board, he became its first president and displayed much ability in organizing the new department. After the retirement of the Liberal Cabinet in January, 1874, he risked his political future by taking the lead in the movement for the repeal of the contagious diseases acts. He was not included in the Gladstone Government of 1880. After many rebuffs, he ultimately witnessed the triumph of the cause he had fathered when in 1886 his motion for the repeal of the obnoxious acts was carried, and a bill framed on it was passed without serious opposition. He eagerly and heartily accepted the policy of home rule for Ireland, and when Joseph Chamberlain left the Cabinet in 1886 on the production of Mr. Gladstone's Irish bills, Stansfeld succeeded him as president of the Local Government Board. He was one of the most ardent Liberal Home Rulers during the six years' opposition, but was not included in Mr. Gladstone's Cabinet of 1892. He was knighted in 1895, when he had retired.

Stirling, Arthur, an English actor, born in London in 1827; died there, Dec. 3, 1898. He made his first appearance on the stage at Plymouth, England, in 1846, and after a short season of subordinate work became a member of the stock company of the Theater Royal, Edinburgh. He was very successful in Scotland, and in 1848-'49 was engaged as stage manager and heavy man for the Queen's Theater, Dublin, then managed by Henry Webb. While Stirling was at the Queen's Theater a strong and life-enduring friendship began between him and Charles Wyndham, who was at the same time a student of medicine in Trinity College, Dublin. Mr. Stirling soon left Dublin to become the principal actor of the Bristol Theater. He was associated there with Madge Robertson (Mrs. Kendal), Henrietta Hodson (Mrs. Labouchere), and George and William Rignold. On Nov. 10, 1852, he made his first appearance in London in a melodrama called "*The Surgeon of Paris*; or, *The Massacre of St. Bartholomew*," which was produced at Marylebone Theater. When his season at this theater was ended he became the principal actor in the support of William Creswick, the popular Shakespearean actor, at the Surrey Theater, Southwark. He was greatly liked by Mr. Creswick and by the audiences of the theater, and filled the arduous place of leading man in the legitimate drama at this theater with great distinction for many years. On Jan. 3, 1863, he entered upon his first engagement at a London west side theater, appearing at St. James's Theater as Philip Austin in "*The Dark Cloud*," in support of Miss Herbert. After that season he was stage manager for a time of the Adelphi Theater, London, which was then being managed by Benjamin Webster. He married about this time, and retired from the stage for several years. On the death of his wife he returned to the drama, and on May 29, 1865, appeared at the Adelphi as Dick Thornton in an adaptation by Wilkie Collins and Charles Fechter of "*Black and White*." He also played Robert Andley in the original production of the dramatization of Miss Braddon's novel "*Lady Audley's Secret*." On March 29, 1869, he married the widow of Charles

Vyner, an actor and manager of Melbourne, Australia. Mr. Stirling continued for many years to be associated with the Adelphi Theater and the numerous melodramatic productions at that playhouse. When "The Ticket-of-Leave Man" was revived at her Majesty's Theater, April 14, 1884, Stirling played the part of Hawkshaw for the run of the piece. He then became associated with Henry Irving and the Lyceum Theater. In Miss Mary Anderson's presentation of "Romeo and Juliet," at the Lyceum, Nov. 1, 1884, Stirling was Friar Laurence. Subsequently he played Colonel Damas in "The Lady of Lyons" and Master Walter in "The Hunchback," in support of Miss Anderson during the same engagement. On the opening of the Shaftesbury Theater, Oct. 16, 1888, by Miss Helen Wallis as Rosalind in "As You Like It," Mr. Stirling played Jaques. When Mrs. Langtry produced "Antony and Cleopatra" at the Princess's Theater with Charles Coghlan as Antony to her Cleopatra, Mr. Stirling was the principal actor in their support. Having a sufficient competence and a good home in London, and being a popular member of the Garrick and other clubs and a social favorite, Mr. Stirling did not care to leave London, and he therefore continued as a subordinate member of Sir Henry Irving's company at the Lyceum. His last appearance was in the part of Cranmer in the production of "Henry VIII" at that theater.

Taillade, Paul Felix (Tailliade), a French actor, born in Paris, Jan. 15, 1827; died in Brussels, Belgium, Jan. 26, 1898. He was a *protégé* of Mlle. Mars, through whose interest he was admitted to the Conservatoire in Paris in 1845. Previous to that Taillade had been a teacher in a private school. After studying fifteen months under Prevost he made his *début* at the Théâtre Français. For some unknown reason he was not able to keep himself in the ranks of those selected for the first theater of France, but in 1850 at the Gaieté he created the rôle of Bonaparte in "Les Premières Pages d'une Grande Histoire," a part which brought him into popular favor at once and established him in a very successful career as the best romantic and melodramatic actor of his time. He played a great number of parts and was associated with almost all the Parisian theaters except the Théâtre Français. In 1852 he was playing the leading rôles at the Ambigu, in 1853 again at the Gaieté, and then for many years at the Odeon and the Porte Saint-Martin, of which he was an associate manager. In 1863 he played Macbeth at the Odeon and created much admiration by his virile and intense rendition. In 1868 he repeated this effect in his performance of King Lear. In order to present more fully the English idea of these parts Taillade studied the English language and read Shakespeare in his own tongue. Taillade was the author of some indifferent plays and was the original representative of a great number of parts, among which was that of Pierre in "The Two Orphans." His death occurred suddenly while he was leaving the theater in Brussels after a performance.

Tai-Wen-Kun, ex-Regent of Korea, died in Seoul, Feb. 22, 1898. As the father of the present King he acted as regent from the time that he came to the throne in 1863 till he reached his majority in 1874. During this critical period, when forces were pressing from every side to open the Hermit Kingdom to foreign intercourse, the regent with an iron will preserved its isolation and independence. In spite of his cruel tyranny he enjoyed extraordinary prestige in Korea and several times after his downfall he partially regained his former power. When his son shook off his influence he intrigued against him and was the instigator of some of the sanguin-

ary crimes that have marked the recent history of Korea. Although he was the chief instigator of the anti-Japanese outbreak of 1882, he afterward joined hands with Japan. His share in the conspiracy of 1896 which resulted in the murder of the Queen has not been fully revealed.

Taschereau, Elziar Alexandre, a French prelate, born in Sainte-Marie-de-la-Beauce, Feb. 17, 1820; died in Quebec, April 12, 1898. He was the great-grandson of the first Seigneur de Sainte Marie, was educated in Quebec and in Rome, where he received the tonsure at the age of eighteen, was ordained priest in 1842, and was immediately appointed Professor of Moral Philosophy in the Seminary of Quebec, holding that post till 1854, when he was delegated to obtain the Pope's ratification for the decrees of the Provincial Council. While in Rome he received the degree of doctor of canon law, and on his return to Quebec in 1856 he was made director of the minor seminary, and in 1859 of the great seminary, becoming superior of the latter in 1860 and at the same time rector of Laval University. After a third visit to Rome in 1862, this time in company with the archbishop, he was made vicar general of the diocese. He took part in the Ecumenical Council at Rome in 1870, and on March 19, 1871, was consecrated Archbishop of Quebec, succeeding Monsignor Bailargeon. On July 21, 1886, he received a cardinal's hat, the first ever conferred upon a Canadian.

Tavaststjerna, Carl August, a Finnish poet and novelist, born in Annala, near St. Michel, Finland, May 13, 1860; died in March, 1898. He at first adopted architecture as his profession and went to Paris to continue his studies, but in the Scandinavian colony there he met Björnson and Lie, who persuaded him to devote himself to literature. In 1883 a selection from his juvenile poems was published, entitled "För Morgonbris," which brought him at once into notice by its originality as well as beauty. "Nya Vers," containing three long poems, appeared in 1885, and in 1886 "Barndomsvänner," a prose romance somewhat autobiographic. Among his subsequent works are "En Infödding," a novel (1887); "I Förbindelser," a collection of novelettes; "Dikter i Väntan"; and "Marin och Genre" (1890). He was as popular a dramatist as he was poet and novelist, "Affärer," the best of his plays, being very successfully produced at the theater in Helsingfors in 1890.

Tcherniaeff, Michael Gregorovich, a Russian soldier, born in 1828; died in Mohileff, Aug. 17, 1898. He was descended from an ancient noble family, and was educated for the army in the staff college at Nikolaieff. He served through the Crimean War, and afterward on the staff in Poland. In 1858 he was sent to Orenburg and was intrusted with the command of an expedition against the Kirghiz tribes on Lake Aral. He carried on continuous operations against the tribes of Tashkend and Khokand, and in 1864 accomplished a famous march across the steppes to join a Russian force from eastern Siberia, capturing with the combined forces the fortress of Tchenkend, held by Khokand tribesmen. After this he attacked Tashkend, and overcoming in the end the resistance of the tribes, extended Russian dominion over all this part of Asia. He was hailed as a conquering hero on his return to St. Petersburg. Retiring from active service in 1874, he became one of the most prominent leaders in the Pan Slavist movement, arousing by his journal, the "Russki," the sympathy of the Russian people for the Bosnian insurgents and the Servians and stirring up the agitation that led to the Russo-Turkish war. After obtaining by private subscription large quantities of arms and supplies for the Servians he entered their country in 1876 at the

head of a volunteer army, and was appointed general-in-chief of the Servian forces, which he organized in four corps. When war was declared on July 3, 1876, he advanced across the Turkish frontier. He received a check at Novi Bazar, and at Ak Palanka he was finally defeated and driven back over the border which he had crossed three weeks before. The campaign was continued in Servian territory with equally disastrous results. In the midst of his defeats Tcherniaeff, on Sept. 15, proclaimed Milan Obrenovich King of Servia, but on Oct. 30 the Turks broke through his last line of defense by the capture of Deligrad, and were able to march on Belgrade. When an armistice was concluded Gen. Tcherniaeff resigned his command. The Pan Slavist committees attributed the reverses to his incapacity, and in the Russo-Turkish war of 1877 he had no command, but notwithstanding their charges he continued to labor for the cause, endeavoring to foment an agitation among the Austrian slavs, for which he was expelled from Prague. He then took up his residence in Paris, and was implicated in anti-German demonstrations there. In 1879 he went to Roumelia to stir up a Bulgarian insurrection, but was arrested at Adrianople and sent back to Russia. He was then restored to favor, and in 1882 was nominated Governor General of Turkestan and commander of the military district of Tashkend. He instituted an aggressive policy in Asia, almost resulting in a war with Bokhara and causing tension in the relations between Russia and England. Hence he was recalled in 1884, and was appointed a member of the Council of War, but lost his seat two years later through his opposition to Gen. Annenkoff and the Transcaspian Railroad. Although disliked and neglected by Alexander III, he remained, next to Skobelev, the popular hero of the Pan Slavists.

Tchouhadjan, Dieran, an Armenian composer, died in Smyrna in April, 1898. Oriental music owes to him a great development and a large number of melodies that became popular even in Europe, where they were freely adapted without recognition of their author. He composed several operas, two of which, "Horhor" and "Zehmire," have been very successful in Eastern cities.

Tennyson, Frederick, an English poet, born in Louth, Lincolnshire, June 5, 1807; died in London, Feb. 26, 1898. He was the second son of the Rev. George Clayton Tennyson, rector of Somersby, Lincolnshire, and was educated at Eton and Trinity College, Cambridge, being graduated in 1832. In 1839 he married in Florence Maria Giuliotti, daughter of the chief magistrate of Siena, and he continued to make Florence his home until 1859, when he removed to St. Ewold's, in the island of Jersey. In 1896 he left St. Ewold's in order to live with his only son, Capt. Julius Tennyson, in whose house he died. His earliest writing consisted of four pieces contributed to the "Poems by Two Brothers," which his younger brothers, Charles and Alfred, published in 1826. His first volume of verse, "Days and Hours," was published in 1854 and attracted but little attention by reason, to some extent no doubt, of the overshadowing reputation of his brother Alfred. The circumstance seems to have kept him from attempting further till 1890, when he put forth "The Isles of Greece," an epic poem. "Daphne" appeared in 1891, and "Poems of the Day and Year," in which a portion of his earlier book, "Days and Hours," was included, was issued in 1895. He possessed lyric gifts of no mean order, as well as admirable technique, while all his work breathes an atmosphere of purity and refined feeling. But his poems have failed to touch the popular taste, and appeal to the few rather than to the many, although it is probable that but for be-

ing cast in the shade by his brother's fame he would have won a more general acceptance among cultivated readers, and would thus have been stimulated to greater effort and fuller achievement.

Topelius, Zachris, a Finnish poet and novelist, born in Kuddnäs, near Nykarleby, Finland, Jan. 14, 1818; died in Helsingfors, March 12, 1898. He was educated at the University of Helsingfors, where he obtained the master's degree in 1840. From 1841 to 1860 he edited the "Helsingfors Tidningar," in which many of his novels and poems made their first appearance. In 1854 he was appointed Professor Extraordinary of Finnish History at the University of Helsingfors, in 1863 Professor of the History of Finland and the Northern Regions, and in 1876 Professor of General History, which latter chair he held until 1878. His most important collections of verse are "Ljungblommor" ("Flowers of the Heath") (1845-'53); "Sånger" (1860); and "Nya Blad" ("New Leaves") (1870). As a poet he is at his best in his patriotic and religious lyrics. The best known of his dramatic works are "Titians första kärlek" ("Titian's First Love"); "Efter femtio år" ("After Fifty Years") (1851); "Regina von Emmertz" (1854); and "Princessen of Cypern" (1861). His "Fälskårs Berättelser" ("A Surgeon's Stories") (1853-'67) is a series of romantic sketches of the history of Finland and Sweden from the time of Gustavus Adolphus to that of Gustavus III, which has been very popular, and his "Läsning för Barn" ("Stories for Children") (1864-'84) has been many times translated.

Upington, Sir Thomas, a South-African statesman, born in the County Cork, Ireland, in 1844; died in Cape Town, Dec. 10, 1898. He was the son of a Roman Catholic country gentleman, and was admitted to the Irish bar in 1867, becoming soon afterward secretary to Lord O'Hagan, Lord Chancellor of Ireland. After he relinquished this office in 1874 he settled in Cape Colony, where he was elected a member of the Legislature in 1878, and was at once made Attorney General in Sir Bartle Fere's Administration. In 1881 he resigned that office and was elected leader of the Opposition in the Cape Parliament. When the Government was changed in 1884 he became Prime Minister. He held this office two years, and then resigned it to become Attorney General again, keeping that post till 1890. After taking a judgeship in 1892, he once more became Attorney General in 1896. He was knighted in 1887 while in England as a delegate to the Colonial Conference.

Vautier, Benjamin, a Swiss painter, born in Morges, Vaud, April 24, 1829; died in Düsseldorf, Germany, April 25, 1898. He studied art in Geneva, Düsseldorf, and Paris, and settled in Düsseldorf, becoming one of the ablest representatives of the methods developed there and a master of the story-telling style. His compositions were mostly drawn from peasant life in Switzerland, Alsace, and the Black Forest, portrayed with fidelity and humor and with finished execution, lacking somewhat in color. In the universal exposition of 1867 he obtained a medal, and in that of 1878 a first medal and the cross of the Legion of Honor. He illustrated Immermann's "Oberhoff," Auerbach's "Barfüßle," and Göthe's "Hermann und Dorothea."

Villiers, Charles Pelham, an English statesman, born on Jan. 3, 1802; died in London, Jan. 16, 1898. He was a brother of the Earl of Clarendon. After studying at Haileybury College for the Indian civil service, he concluded that he lacked the physical vigor for a life in India, and entered St. John's College, Cambridge, where he took his bachelor's degree in 1824. He then inscribed himself a student of Lincoln's Inn, and, having had for his masters and friends the most advanced social econo-

mists of the time, he announced himself a candidate for Parliament at Kingston-upon-Hull in 1826 with the cry of cheap bread. He was defeated then, and, after being called to the bar in 1827, he filled an office in the Court of Rolls and one under the poor law when the new Administration was organized in 1832. He was elected to Parliament as a Free Trade Liberal in one of the divisions of Wolverhampton in 1834, and represented the same constituency for sixty-three years. While Cobden and his Anti-Corn-Law Association were carrying on the agitation for the abolition of the corn laws, Mr. Villiers at the head of the 38 Free Traders in Parliament pressed in 1838 for a parliamentary inquiry and led the debates in favor of immediate repeal with terse and vigorous eloquence. He first moved the repeal of the corn laws in 1840, and continued to raise the question year after year until the repeal act was passed in 1846 and the last vestiges of the protectionist system were swept away in 1849. Richard Cobden, who entered Parliament in 1843, John Bright, and others active in the Anti-Corn-Law League took precedence of the pioneer of the cause in Parliament, but always acknowledged the magnitude of his services. He was transferred in 1852 from the office of examiner of witnesses in the Court of Chancery, which he had held for nearly twenty years, to that of judge advocate general. He brought forward in Parliament the question of postal reform. In 1853 he was elected chairman of the Committee on Public Houses and opposed the principle of vested rights in licenses. From 1859 till 1866 he was president of the Poor Law Board, and in 1865 carried through Parliament a bill making unions chargeable for all the poor within their districts and prohibiting parishes from driving out paupers who came originally from other places in the same union. In 1866 he separated himself from the Gladstonians and was returned as a Liberal Unionist. He declined a peerage in 1885, preferring to remain the "Father of the House of Commons." His "Free Trade Speeches" were published in 1884.

Walpole, Spencer, an English statesman, born in September, 1806; died in London, May 22, 1898. He was educated at Eton and Trinity College, Cambridge, was called to the bar in 1831, and obtained a successful Chancery practice, becoming a Queen's counsel in 1846. In the same year he was elected to Parliament from Midhurst as a Conservative, and made himself conspicuous as an opponent of the emancipation of the Roman Catholics and the Jews and as an advocate of religious education. He was appointed Home Secretary by Lord Derby in 1852. From 1856 till 1882 he represented Cambridge University in Parliament. He accepted the Home Office from Lord Derby again in 1858, but retired after a few months when the Cabinet decided to extend the county franchise. He was appointed Home Secretary in Lord Derby's third Administration, and was obliged to resign when the alternate bluster and weakness that he had shown in dealing with the Reform League in 1867 had resulted in the Hyde Park riot. He retained a seat in the Cabinet till the session of 1868, and from that time till he lost his seat in Parliament he scarcely ever raised his voice in the House.

White, Gleeson, an English *littérateur*, born in Christ Church, Hampshire, England, March 5, 1851; died in London, Oct. 19, 1898. He was widely known as one of the later school of art critics and exercised not a little influence for good upon his generation in matters of decoration and allied themes. For several years he was art editor for the London publishing house of George Bell & Son, and he was editor of the "Ex Libris Series" of books; of "Bell's Cathedral Series" (with E. F. Strange), and of

one or two other series as well. He was the first editor of "The Studio" (1893-'94), and was associate editor of "The Art Amateur" during his residence in New York city in 1891-'92. Among the various books edited by him are "Ballads and Rondeaux" (1887); "Garde Joyeuse," a collection of American verse (1890); and "Practical Designing" (1893). His original work comprises "Letters to Living Artists," "Letters by Eminent Hands," both of which appeared anonymously, the latter being a clever imitation of the styles of several contemporary novelists; "Salisbury Cathedral" (1896); "English Illustration in the Sixties" (1897); and "Master Painters of Great Britain," his most important work (1897-'98). Mr. White was very popular among London literary workers, none of whom possessed a more generous and kindly nature than he, and all his various undertakings were well and conscientiously performed. During his brief residence in New York he made many warm friends.

Willems, Pierre, a Belgian historian, died at Louvain in March, 1898. He entered the University of Louvain in 1865, lectured on Roman antiquities, on Latin literature and palaeography, and on philology, and published, besides numerous *brochures* and articles in French and Flemish, a book in 1870 treating of Roman antiquities from the point of view of political institutions, one in 1889 on Roman law before the period of Justinian, and in 1885 a learned history of the Roman Senate.

Winchelsea, Finch-Hatton, Earl of, an English politician, born in Kent in 1851; died near Sleaford, Sept. 7, 1898. He was educated at Eton and Balliol College, Oxford, took honors in modern history, and was elected a fellow of Hertford College. He tried to manage the family estate of Eastwell Park until the agricultural depression compelled him to part with it. After an unsuccessful candidacy in 1880 at Newark, he was elected to Parliament in 1884 as representative of an agricultural constituency of Lincolnshire, and sat in the House of Commons until after a long legal contest he established his right to a peerage in 1887 as successor to his half-brother, the eleventh earl. The interest that he had shown in agricultural affairs led him to organize in 1894 the National Agricultural Union, representing landlords, tenants, and laborers, which put forth a programme including the reduction of local taxation, the abolition of preferential railroad rates which operated in favor of foreign against British producers, the amendment of the adulteration act and of the agricultural holdings act, old age pensions for working men, and increased facilities for enabling working men to obtain small holdings. A majority of the members of Parliament, belonging to both parties, approved the aims of the association, most of whose demands have been conceded. The railroad companies were induced to revise their rates for carrying freight, to the advantage of the farmers, after Lord Winchelsea had organized a co-operative company for the direct sale of agricultural produce to the consumers in London and other large cities.

Xiqueña, José Alvarez de Toledo y Aenna, Conde de, a Spanish statesman, died in Madrid in August, 1898. After the restoration of the Spanish monarchy with Alfonso XII, he returned from Naples, where the Duke of Bivona, his father, had taken up his residence, and entered political life, becoming Deputy for Logrono, minister at Brussels, Senator from the Canaries, civil governor of Madrid, and twice Minister of Fomento. He was at first an adherent of Canovas, but parted from the Conservatives and became one of the leaders of the Liberal party of Sagasta. As an eloquent speaker and a clever man of action, he always enjoyed great popularity.

OHIO, a Central Western State, admitted to the Union in 1803; population, according to the last census (1890), 3,666,719, it being the fourth in rank of the States; area, according to the United States Geological Survey, 41,060 square miles, of which 40,760 is land surface and 300 water surface. Capital, Columbus.

Government.—The State officers during 1898 were: Governor, Asa S. Bushnell; Lieutenant Governor, Asahel W. Jones; Secretary of State, Charles Kinney; Auditor of State, Walter D. Guilbert; Treasurer of State, Samuel B. Campbell; Attorney-General, Frank S. Monnett; Judges of the Supreme Court, William T. Spear, Marshall J. Williams, Joseph P. Bradbury, John A. Shauck, Thad. A. Minshall, Jacob F. Burket; Clerk of the Supreme Court, Josiah B. Allen; Commissioner of Common Schools, Oscar T. Corson until July 11, after that date Lewis D. Borebrake; Dairy and Food Commissioner, Joseph E. Blackburn; Board of Public Works, Charles E. Grace until February 8, Edwin Lybarger, Frank A. Huffman, Charles A. Goddard from Feb. 8. All these officials were Republicans.

Finances.—The receipts for the fiscal year 1898, including balances from previous year, were: General revenue fund, \$5,624,746.87; sinking fund, \$690,365.57; common school fund, \$1,851,168.48; university fund, \$321,546.01; total, \$8,487,826.93. The total disbursements were \$7,658,852.98, leaving balance on hand, \$828,973.95.

The public funded debt of the State, Nov. 15, 1897, was \$1,291,665; at the close of the fiscal year 1898 the public funded debt was \$1,241,665, at 3 per cent. interest.

Valuation.—The property values returned for taxation by the assessors were: Lands, \$592,274.745; real estate in cities and villages, \$652,542,728; personal property, \$515,439,970; total, \$1,760,257,443.

Railroads.—State-Railway-Commissioner Kayler reports the railroads of the State at the close of the official year 1898 as in a much better condition, both physically and financially, than they were at the close of the preceding year. Five new State corporations were incorporated during the year. The mileage of all tracks representing capital stock was increased 167.96 miles, or 1.27 per cent. of an increase. An increased amount of \$258,437.53 was paid in dividends for the entire lines and an increased amount of \$71,951.08 in Ohio. An increased amount of \$1,605,979.70 was expended on road and equipment in Ohio over the preceding year; the average cost per mile of road shows a decrease of \$12,986.25 per mile. The total earnings of the entire lines shows an increase of \$19,402,929.98, or a gain of 11.226 per cent. over the preceding year. The increase in earnings in Ohio during the year was \$7,834,337.64, or a gain of 12.693 per cent. The fatal accidents to passengers were 5 as against 13 last year, 49 travelers on the highways were killed, which is 3 more than for the last year. Total number of employees killed in the State during the year was 135, against 96 last year, an increase of 39. The total number of trespassers killed was 256, against 239 last year, an increase of 17. Total number killed during the year, 445, against 394, an increase of 51. The total number of people injured during the year ending June 30, 1898, was 5,728, against 3,429 last year, an increase of 2,299. Nearly 19 per cent. of all the street and highway crossings are now protected. Taking the rolling stock, operated as a whole, within the State, 98 per cent. of the passenger locomotives are equipped with air brakes and 85 per cent. with automatic couplers; 90 per cent. of the freight and switching engines are equipped with air brakes and 32 per cent. with automatic couplers; 99 per cent. of the passenger

cars are equipped with air brakes and 98 per cent. with automatic couplers; 34 per cent. of the freight cars are equipped with air brakes and 65 per cent. with automatic couplers. The dividends paid from net income was \$337,608.44 greater than for the previous year, or a gain of 5.88 per cent. The net income for the year shows a net increase of 6.69 per cent.; the deficits were 4.84 per cent., showing a net increase of 1.85 per cent. over deficits.

Coal Mining.—The annual report of Chief-Mine-Inspector Haseltine, filed in September, shows that there were 1,228 mines in the State, 413 of which employed more than 10 men; 1,126 mines were in operation during the year, 37 of which are regarded as large mines. The number of active mines returned is 30 in excess of the number reported during any year of which the department has a record. The average time worked is given at one hundred and fifty and one half days, the same as during the year 1896. The number of miners employed amounted to 22,131, a loss of 14 when compared with the past year. There were 6,654 day hands, a gain of 353 as compared with 1896. The year's production of coal is given at 12,448,822 tons, a decrease of 463,786 tons as compared with the previous year. Of this total amount 4,106,124 tons were mined by machinery, which is an increase of 737,775 tons over the preceding year. Machine mining had extended to 12 counties, against 7 two years before. At the close of the year there were 166 electric machines and 67 which used compressed air distributed throughout the mines of the State. Deducting from the total output of the State the amount of machine-mined coal, it is found that 8,342,698 tons were produced by pick mining, a decrease of 1,201,561 tons compared with the former year. This makes an average yearly production to each miner of 45 tons, 1,537 pounds of run of the mine coal. During the year 89 new mines were opened, 102 remained suspended, and 97 were either exhausted or abandoned.

Military.—Nine regiments and one battalion of infantry, eight troops of cavalry, and one battalion of artillery comprised the Ohio volunteers in the war with Spain. The total number of Ohio volunteers, including those enlisted in United States volunteer regiments, was 15,300.

Supreme Court Decisions.—The Supreme Court sustained the constitutionality of the law for the purity of elections, known as the Garfield corrupt practices act.

It also sustained the constitutionality of the Pugh election law, which requires that a party must have cast at the polls at the next preceding election at least 1 per cent. of the total vote before it can formally nominate a ticket, and the signers of nominating petitions under the law must pledge themselves to vote the ticket for which they ask a place on the ballot.

Legislative Session.—The seventy-third General Assembly organized Jan. 3, and adjourned *sine die* April 26. The proceedings of the first few days of the session were attended with considerable excitement, owing to the peculiar action in the organization and the contest in the election of United States Senator.

At the formation of President McKinley's Cabinet, in 1897, the Hon. John Sherman resigned his seat in the Senate to become United States Secretary of State, and Gov. Bushnell appointed Marcus A. Hanna to the vacant seat in the Senate until the Legislature met in January, 1898. The senatorial question entered largely into the election of the Legislature in November, 1897, there being an election of Senator for the unexpired term ending March 3, 1899, and also for the full term of six years, beginning March 4, 1899.

In the Senate as elected there were 18 Democrats, 17 Republicans, and 1 Independent Republican. In the House there were 62 Republicans and 47 Democrats. On joint ballot the parties stood 79 Republicans, 1 Independent Republican, and 65 Democrats.

Several Republicans opposed to the election of Mr. Hanna to the United States Senate formed a combination with the Democrats for the organization of both branches of the Legislature and the defeat of Mr. Hanna. The combination was engineered by Charles L. Kurtz, who led the anti-Hanna Republican forces in the State election. At the organization of the Senate an anti-Hanna Republican kept away from Columbus. The Independent Republican voted with the Republicans. With but 35 Senators present, the Democrats had a majority of 1, and elected Thaddens E. Cromley, Democrat, president *pro tem.*, the Republicans voting for J. Park Alexander. In the House 9 anti-Hanna Republicans, who had refused to go into the Republican caucus, joined the Democrats in voting for Harry C. Mason, anti-Hanna Republican, for Speaker, the vote for Mason being 56 against 53 for Alexander Boxwell, the Republican caucus candidate. The other offices in the Senate and the House were divided between the friends of the combine.

The combined vote of the two Houses indicated a Hanna shortage of at least 3 votes. In the intervening time before the voting for Senator the excitement ran high. The Democrats and anti-Hanna Republicans at the last moment agreed to vote for Robert E. McKisson, Mayor of Cleveland, anti-Hanna Republican. In the Senate McKisson's vote was 19, being the full Democratic vote with 1 Republican, while Hanna had 17, including the Independent Republican. In the House 43 Democrats and 6 Republicans voted for McKisson, 56 Republicans for Hanna, 3 Democrats scattered their votes, and 1 Democrat was absent, sick. In joint Assembly, next day, Hanna received 73 votes, the exact number required to elect, McKisson 70, and 1 Democrat was absent. The vote for the full term followed with the same result.

A charge of bribery was immediately made against the Hanna party, and the Senate adopted a resolution to investigate. The House also adopted a resolution to investigate, the Republicans mostly refusing to vote. In March the House took up another charge of bribery in connection with a two-cent-fare fare bill, and appointed a committee to investigate. Both investigations were carried on for some time, but without specific result, beyond forwarding to the United States Senate a record of the proceedings of the investigating committee in the senatorial election case.

A large number of bills became laws. Among the more important of those of a general nature were the following:

Repealing the act of the last preceding Legislature permitting city councils to grant street railway franchises for a term of fifty years.

Repealing the law for the registration of land titles, passed in 1896 (Torrens system), which the Supreme Court in 1897 decided unconstitutional.

Providing penalties for cruelty to animals in transportation.

Compelling railroads to carry bicycles with passengers as baggage.

Providing for more thorough inspection of shops and factories.

Making it unlawful to screen coal at the mines before weighing.

For the regulation of exits from theaters, public halls, etc.

Guarding the health of female employees in shops and factories.

Regulating nominations to office by examination petitions (known as the Pugh law).

Amending the game laws.

Providing penalties for abandonment of destitute, infirm, or aged parents.

Providing penalties for the unlawful employment of minors.

Compelling proper drainage, plumbing, and ventilation of bakeries.

Amending the act of 1890 for the suppression of mobs and lynching, and making the county in which the offense is committed pecuniarily liable to the victim or to his legal representative.

Amending the laws regulating marriages so as to require that every person applying for a marriage license shall state upon oath the name, age, residence, place of birth, occupation, father's name, if known, and the mother's maiden name, of each of the parties to such contemplated marriage, and shall also state the number of times either party has been previously married, and in case the bride is a widow, or a divorced woman, her married name shall also be stated, and in addition the name of the person who is expected to solemnize the marriage shall be stated.

Political.—The Prohibition State Convention was held at Columbus, May 18. A proposition to unite with the other minor parties that had placed independent tickets in the field in 1897 was rejected, and the decision was made to maintain their organization as heretofore. A full ticket was nominated, as follows: For Secretary of State, Thomas Brown; Judge of Supreme Court, M. Rouch; Clerk of Supreme Court, J. D. Swan; Dairy and Food Commissioner, W. M. Hills; Member of Board of Public Works, Robert Candy. The following platform was adopted.

"Resolved, that the manufacture, sale, importation, exportation, and interstate transportation of all alcoholic liquors for beverage purposes shall be forever suppressed, to which we as a political party pledge ourselves when in power.

"That no citizen should be denied the right of full suffrage on account of sex.

"That all men are entitled to one day of rest in seven."

An additional resolution was unanimously and enthusiastically adopted, as follows:

"That while we hold that the policy of arbitration ought in general to prevail in cases of dispute between nations; yet, we hereby express to the President of the United States and the authorities of the nation at Washington our loyal sympathy and support in the humanitarian war that is now being waged by our country in behalf of the oppressed people of Cuba, and of the cause of popular freedom."

Representatives of the Silver Republican, Negro Protective, Liberty, and Populist parties met at Columbus, May 25, and organized the Union Reform party, placing in nomination a State ticket made up from those parties. Some of the persons nominated declined, and their places were filled by others. As finally agreed upon the ticket was as follows: For Secretary of State, James A. Graft; Member of Board of Public Works, John A. Sheffield; Judge of Supreme Court, Arthur A. Brown; Clerk of Supreme Court, Martin Krumm; Dairy and Food Commissioner, Seth H. Ellis. The platform, after a long preamble, declared:

1. For direct legislation under the system known as the initiative and referendum. Under the "initiative," the people can require that any desired law shall be submitted to them for a vote, when, if it receives a majority of the votes cast, it will be thereby enacted. Under the "referendum," the people can require that any law which has been

adopted by a legislature shall, before becoming operative, be submitted to a vote of the people for their approval or rejection, when, if such law fail to secure a majority of the votes cast, it will be thereby rejected.

2. For the honest and effective enforcement of all laws, so that the will of the people, as expressed in the statutes, shall not be nullified by indifference or opposition on the part of public servants.

3. For the honest and economical administration of the Government, to the end that the people be not burdened with unnecessary taxes.

The Socialist-Labor Convention was held in Columbus, May 30, and the following ticket was nominated: For Secretary of State, John Flynn; Judge of the Supreme Court, Dan W. Wallace; Clerk of Supreme Court, Fred Pandorf; Dairy and Food Commissioner, E. Applegarth; Member of Board of Public Works, Thomas F. Smith. The platform presented a long preamble and a set of resolutions embodying these declarations:

"National ownership of mines, railroads, canals, telegraph, telephones, etc.; the employees to operate the same co-operatively and to elect their own superior officers.

"Municipal ownership of local railroads, ferries, waterworks and all industries requiring municipal franchises.

"Public lands to be declared inalienable.

"The United States to have exclusive right to issue money.

"Progressive income tax and tax on inheritances; small incomes to be exempt.

"Free education. Public assistance when necessary.

"Abolition of convict labor laws.

"Employment of unemployed by public authorities.

"Laws for protection of life and limb in all occupations.

"The right of the people to oppose laws and to vote upon all measures of importance.

"Abolition of executive veto power.

"Abolition of United States Senate and all upper legislative chambers.

"Municipal self-government.

"Direct vote and secret ballot in all elections. Universal suffrage.

"All public officers to be subject to recall by their constituencies.

"Uniform criminal and civil laws. Abolition of capital punishment."

The Republican State Convention was held at Columbus, June 22, and the following ticket was nominated: For Secretary of State, Charles Kinney; Supreme Court Judge, William T. Spear; Clerk of Supreme Court, Josiah B. Allen; Dairy and Food Commissioner, Joseph E. Blackburn; Member of Board of Public Works, W. G. Johnson. All but the last named were renominations. The significant parts of the platform were the following:

"We reaffirm the declaration of fact and principles adopted by the eleventh National Republican Convention at St. Louis, June 17, 1896.

"We congratulate the country upon the fact that in response to the demand of the St. Louis platform and the will of the people expressed at the polls in November, 1896, protection and reciprocity, twin measures of Republican policy, have been re-established, and have been embodied into public law by the enactment of the Dingley bill.

"We favor all measures which will promote the restoration and growth of our merchant marine.

"Increasing trade with our neighboring republics on the west coast of South America and our recent victory in the Philippine Islands, with all the responsibilities attached thereto, remind us that it is

essential to our prosperity and safety that our Atlantic and Pacific borders be joined by the nearest practicable water way; we therefore favor the construction by the United States of the Nicaraguan Canal to the end that our commerce may be extended in time of peace and our coasts protected in time of war.

"We ask the Congress of the United States to enlarge and make more effective our navy, so that our country may take and occupy her proper place among the nations of the earth. It must be adequate at all times for defense against foreign foes, to secure the just rights of American capital, enterprise, and commerce in all parts of the world, and to command respect for our flag everywhere.

"We most heartily approve of the steps now being taken by Congress and the President, providing for the annexation of the Hawaiian Islands as a part of the United States, and hereby express the urgent wish that the same be fully accomplished at the earliest practicable date by the passage by the Senate of the joint resolution which has already met with the approval of the House of Representatives.

"Knowing that justice and humanity alike made it our duty to put an end to the hopeless and barbarous warfare waged by Spain against Cuba, and secure for that unhappy island a free and stable Government, we most heartily approve of the declaration of war made by the United States against Spain and pledge our lives and fortunes for the purpose of bringing it to a quick and successful termination.

"We indorse and approve the patriotic American Administration of William McKinley. We commend the great statesmanship displayed by him in his tireless endeavors to secure an honorable settlement of the Cuban question by diplomatic methods, and his fearless refusal to be driven into war until all hopes of a peaceful settlement had failed, and wise and needful steps had been taken to prepare for hostilities. We heartily indorse the conduct of the war by the Administration, and feel confident that time will continue more and more to demonstrate the great wisdom and matchless leadership of President McKinley, so far remarkably displayed in his management of the war and its conduct, and we rejoice with him that in the present crisis the American people are united in sustaining him, and that patriotism has completely obliterated the last vestige of sectional feeling.

"Since the war with Spain could not be avoided, we approve all that Congress has done to provide for the vigorous and successful prosecution thereof, and gratefully thank all members of that body who have patriotically voted the revenues necessary for its conduct. We also commend the action of Congress in providing for raising necessary funds to carry on the war by popular loan, thus affording an opportunity to citizens of moderate means to invest in the bonds of the Government.

"We commend the wise administration of the executive affairs of the State by the heads of the various departments placed in authority by the Republican party."

The Democratic State Convention was held at Dayton, Aug. 24, and the following ticket nominated: For Secretary of State, Upton K. Guthery; Judge of Supreme Court, Hugh L. Nichols; Clerk of Supreme Court, David S. Fisher; Food and Dairy Commissioner, John Baker; Member of the Board of Public Works, T. D. Paul. The following is the significant portion of the platform:

"1. The Democracy of Ohio, in convention assembled, reaffirm the platform of principles adopted at Chicago by the Democrats at their convention in July, 1896. And we particularly reaffirm and indorse the financial plank therein, declaring for

the free and unlimited coinage of silver and gold at the ratio of 16 to 1 independent of any and all other nations.

"2. We are proud of the patriotic conduct in peace and war of that brave leader of Democracy, William J. Bryan, and we favor his renomination as the Democratic candidate of the people for President of the United States in 1900.

"3. The Democratic, Populist, and Silver Republican Senators and Representatives in Congress deserve the thanks of the country for their vigorous and united efforts to secure a just distribution of the burdens of the war taxation equally upon the wealth and corporations of the country as well as upon its labor.

"4. We are in favor of an income tax so that the burden of taxation be equally and impartially laid to the end that wealth may bear its due proportion of the expenses of the Government; and in view of the recent decision of the Supreme Court of the United States declaring an income tax law passed by Congress unconstitutional, we are in favor of an amendment to the Constitution making a reasonable and just tax constitutional.

"5. We recognize the eternal truth that life, liberty, and the pursuit of happiness is the natural and inalienable heritage of all mankind, and since the hand of despotism has been lifted from the island of Cuba, dominated by Spain, we should afford its inhabitants an untrammelled opportunity to establish a free and independent constitutional government deriving its powers from the consent of the governed; and we remind the country that Congress in the resolutions which declared war resolved 'that the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island, except for the pacification thereof, and asserts its determination when that is accomplished to leave the government and control of the island to its people,' and we believe that until the people of the islands of Cuba and the Philippines, redeemed from Spanish domination, declare otherwise, we should keep the faith upon which the war was begun and prosecuted.

"6. We are in favor of the United States building, owning, and controlling the Nicaragua Canal.

"7. As citizens of Ohio we point with shame to Marcus A. Hanna occupying a seat in the United States Senate as a Senator from Ohio, when he has been accused by the Senate of his own State in a memorial to the Senate of the United States of the base crime of securing the office by bold and shameless bribery; and we demand that the Senator from Ohio whose right to his seat is not questioned, Joseph B. Foraker, obey the will of the people of Ohio and protect the dignity of the United States Senate by insisting on a prompt, thorough, and fearless investigation of these criminal charges; and we denounce the shameful conduct of the Republican congressmen who abandoned their duties in Washington to come to Ohio as petty bosses and subservient tools of Marcus A. Hanna, to threaten, browbeat, and intimidate members of the Ohio Legislature into voting for Marcus A. Hanna for United States Senator.

"8. As this is a Government of the people, by the people, and for the people, we favor a reference of all laws to the people themselves, so far as practicable, under the mode first devised and successfully practiced by the enlightened Republic of Switzerland, known as the initiative and referendum."

The election was held Nov. 8 and resulted in the success of the entire Republican ticket. The votes on Secretary of State were as follows: Charles Kinney (Republican), 408,213; Upton K. Gentry (Democrat), 347,074; Thomas Brown (Prohibition), 7,689; James A. Graft (Union Reform), 10,911; James B.

Flynn (Socialist-Labor), 5,874. Kinney's plurality, 61,139. The pluralities for the other Republican candidates were as follows: Judge of Supreme Court, William T. Spear, 63,026; Clerk of Supreme Court, Josiah B. Allen, 61,441; Dairy and Food Commissioner, Joseph E. Blackburn, 26,411; Member of the Board of Public Works, Washington G. Johnson, 61,866.

Elections for Representatives in Congress resulted in the election of 15 Republicans and 6 Democrats.

OKLAHOMA, a Territory of the United States, organized in 1890; area, about 40,000 square miles. The population by the census of 1890 was 61,834; by the Auditor's census of 1894 it was 212,635; the Governor's report gave it as 275,587 in 1896, and 311,400 in 1898. The number of Indians is 13,033.

Government.—The following were the Territorial officers in 1898: Governor, Cassius M. Barnes, Republican; Secretary of the Territory and *ex officio* Lieutenant Governor, W. M. Jenkins; Attorney-General, Harper S. Cunningham; Treasurer, Frank M. Thompson; Superintendent of Public Instruction and *ex officio* Auditor, S. N. Hopkins; Secretary School Land Department and *ex officio* School Land Commissioner, Charles H. Filson; Oil Inspector, Amos A. Ewing; Bank Examiner, John M. Pugh; Librarian, George H. Dodson; Adjutant General, Philip C. Rosenbaum, resigned and succeeded by Bert C. Orner, acting; Superintendent of Public Health, L. H. Buxton; Chief Justice of the Supreme Court, J. H. Burford; Associate Justices, J. C. Tarney, B. F. Burwell, B. T. Hainer, and John L. McAtee; Clerk, B. F. Hegler.

Finances.—The expenses of the Territorial government have been greater every year than the revenue; the warrant indebtedness of the general fund now amounts to \$253,752.74. The deficits in the Library, Normal School, and Deaf-Mute School funds and interest bring the amount to about \$348,501; there is also due contractors for building the Northwestern Normal School at Alva \$85,000, making a total Territorial indebtedness of \$435,501. The bonded debt, 6-per-cent. school bonds, is \$48,000, which is included in the above amount.

The property valuation of the Territory is \$38,213,784, as equalized by the Territorial board, exclusive of railroad property, which is valued at \$2,677,163. This is an increase in a year of over \$8,000,000.

The tax rate is 4 $\frac{3}{4}$ mills for all Territorial purposes, of which 3 mills is for the general fund.

Education.—The school population is 101,417. In 1897 an apportionment of \$118,177.55 was distributed to the counties, and in 1898 one of \$108,052. There are 1,879 districts, and the value of school property is \$457,575.

The School Land Board has control of about 10,800 quarter sections, of which about 8,500 are leased. The records show names of about 6,000 lessees; the office has 11,086 notes for deferred payments. The cash receipts of the office for the fiscal year were \$186,789.49.

CASSIUS M. BARNES,
GOVERNOR OF OKLAHOMA.

The percentage of illiterates in the entire population is 5.4; in the white population, 3.5.

There were 203 students in the university at the close of 1898. The library contains more than 5,000 bound and 2,000 unbound books. More than 40,000 trees have been planted on the campus, and more are to be added soon. The expenses for the two years ending June 30, 1898, were \$27,305.84.

At the Agricultural and Mechanical College, at Stillwater, 150 students were enrolled during the fall term, of whom 70 were in the regular course and the others in special or preparatory courses. Short courses are to be given during the winter for instruction in agriculture, including live stock, dairying, veterinary science, and horticulture, mechanical engineering, and review of common-school studies. A new building for the department of mechanic arts has been added at a cost of about \$3,500. More than 400 shade trees have been added to those on the campus.

The Normal School at Edmond had an enrollment of 251 names in 1897-'98; the average attendance during the fall term was about 160. The attendance at the Northwestern Normal School at Alva also is large. A new building has been nearly completed at a cost of \$85,000.

The Langston Agricultural and Normal University, authorized by an act of 1897, is in successful operation. This is for colored youth and is in a town inhabited exclusively by negroes. It receives a part of the Federal appropriation for agricultural colleges.

There are several Indian schools in the Territory, the largest of which is the Chillico school in Kay County, with more than 500 pupils. The Osage tribe have a well-equipped building at Pawhuska, and the Cheyennes and Arapahoes one at Darlington; and there are also large Indian schools at White Eagle, Sac and Fox, Shawneetown, Seger, Anadarko, Rainy Mountain, and other places.

Charities and Corrections.—The total number in the asylum for the insane the past two years was 401, of whom 120 were discharged, 56 died, and 5 escaped, leaving 220 at the close of 1898. Contract was made with the Oklahoma Sanitarium Company to care for the patients at \$200 a year each, beginning June 15, 1898. The contract calls for good sanitary conditions and medical care, and everything necessary for the well-being of the patients; and the Superintendent of Public Health is required to visit the institution at least twice a year, and oftener if the Governor directs, to see that the provisions of the contract are carried out.

The Deaf-Mute School has 25 inmates, and 36 others are registered to enter when accommodations are provided. It is estimated that there are nearly 100 in the Territory, and about 75 blind persons. A school for the blind has been established recently.

There were 126 Oklahoma prisoners in the Kansas Penitentiary, Jan. 1, 1897. Up to Dec. 22, 1898, 187 more had been received; 97 had been discharged by expiration of sentence, 60 by pardon, 8 were remanded for new trials, 1 was killed while trying to escape, 3 others died, and 3 escaped, leaving 141 present at the close of 1898. The expense of care of the prisoners for the two years ending June 30 was \$27,748 and of transportation \$6,976.53. The charge has been raised from 25 to 35 cents a day. Each prisoner receives a \$15 suit of clothes and \$5 in cash when he is discharged.

The Governor was authorized to contract with suitable institutions for the care of youthful offenders; but the regulations of most of the neighboring States forbid such contracts, so that none has yet been made, and many quite young boys have been sent to the Penitentiary and the jails.

Banks.—There are 6 national and 49 Territorial banks, with an aggregate paid-up capital of \$789,986.69. During the fiscal year 6 new Territorial banks have been started, 2 were consolidated, and 1 failed. One national bank went into voluntary liquidation and 2 new ones were established.

A statement in regard to the Guthrie banks shows \$374,816 on deposit in the Guthrie National, \$100,000 more than ever before. In the other Guthrie banks are deposits amounting to about \$225,000. The average loans and discounts are but one third of the capital and deposits.

Loan Associations.—There are 4 of these, paying dividends averaging 12 to 18 per cent.

Insurance.—The life insurance in force, Jan. 1, 1898, amounted to \$2,212,142, the losses paid in 1897 to \$8,363.40.

The fire insurance written in 1897 amounted to \$5,567,211 and the losses paid to \$28,656.

Other companies—casualty, etc.—wrote \$449,221 and paid \$261.

Railroads.—Several roads have extended their lines in the Territory this year, and surveys have been made for others. The Hutchinson and Southern had trains running March 1 on an extension of 26 miles. The Choctaw began running to Geary on an extension of their line July 1. The St. Louis and Oklahoma have built to Oklahoma City 103 miles, and will extend farther to the southwest. The Atchison, Topeka and Santa Fé laid 62 miles of heavy steel and ballasted 40 miles of track in the Territory with cracked rock; placed a large number of ties, replaced several wooden bridges with steel ones, making a total of 740 feet of steel bridges put in; rebuilt half a dozen old bridges, and are building many brick and stone arches. They have also completed a new depot at Seward; new depot, reading room, bathrooms, and eating house at Purcell; and a new eating house and reading room at Woodward; have put in 4 additional 2,000-foot passing tracks and 8,500 feet of side track to accommodate new elevators, grain bins, coal bins, lumber yards, and other local industries at different points between Arkansas City and Purcell.

Military.—In response to the first call for troops for the war, Oklahoma sent a company of cavalry composed of expert marksmen, accustomed to the care and management of horses. They became a part of the Rough Riders and participated in the fighting at San Juan hill, where one was killed and several were wounded.

Under the second call the Territory furnished a battalion of four companies of infantry, which was made a part of the first regiment of Territorial volunteer infantry, and has been assigned to take second division of the First Army Corps. At the close of the year these companies were in camp at Albany, Ga.

The militia of the Territory was somewhat disorganized early in the year, and so many of the men entered service for the war that a reorganization has not yet been effected.

Exposition Exhibit.—Though the Legislature made no provision for a territorial exhibit at the Trans-Mississippi Exposition, funds were advanced by counties, corporations, and individuals, and about \$7,000 was expended.

Mob Law.—Two Seminole Indians charged with assault and murder were burned at the stake, in January, by a mob. Their victim was a farmer's wife, and the crime was most atrocious. The Indians lived in Indian Territory and were brought back to Oklahoma and burned near the scene of their crime. The Governor offered a reward of \$1,000 for the arrest and conviction of members of the mob. A dispatch of May 30 said: "The United

States marshal has under arrest a young Seminole Indian named Hargo, who confessed to being the murderer of Mrs. Laird, for whose death young Sampson and McGeisy were burned to death by a white mob near Newark, I. T., last January. The Government has maintained that the two Indians burned to death were innocent, and will now prove it. Hargo was captured in the Chickasaw nation after an exciting chase of twenty-two days. Nearly 200 men are under indictment for participating in the burning of Sampson and McGeisy." Five men are now under arrest, charged with complicity in the crime.

Political.—Conventions for nominating candidates for the office of Delegate to Congress were called by the Democratic, Silver Republican, and Populist parties, to meet at Oklahoma City, July 13. The resolutions adopted by the Populists called for union of the free-silver forces, the initiative and referendum, the imperative mandate, and Statehood for the Territory; approved the war, denounced the bond issue, and said further:

"Resolved, That we extend to the Guthrie Typographical Union and all other labor unions our hearty sympathy in their contest with organized and avaricious capital.

"That we condemn the action of Dennis Flynn, Gov. Barnes, and other Republican leaders of Oklahoma, for deserting the claimholders in their efforts to secure free homes, simply because the people would not elect a Republican to Congress; and we commend the people of Oklahoma for refusing to stultify their manhood by yielding their political views to secure the support of the Republicans to the free-homes bill.

"That we appreciate and commend the Hon. J. Y. Callahan for his honest and untiring efforts in the interest of free homes, and although they failed in the attainment of their object, they are none the less worthy; and we demand that the nominee of this convention shall put forth every effort to obtain the passage of a free-homes bill."

A committee appointed to confer with one from the Democratic Convention reported that the Democrats wanted them to accept their nominee for Congress. The Populist Convention declined the proposition and proposed that the Populist, Democratic, and Free-Silver men hold a joint convention to nominate a delegate to Congress, and that a two-thirds vote be required to secure such nominee. The report of this committee was adopted by a vote of 93 to 58.

The Democratic Convention adopted resolutions congratulating fellow-citizens of all parties on the fact that liberty-loving Democrats in Congress, by their persistent efforts, had inaugurated the war, and greeted the soldiers from the Territory; deprecated "the existence of the Territorial law under which equalization has been sustained by the Supreme Court of this Territory," and demanded its repeal; favored election of Territorial officers by the people; denounced "the cowardice and perfidy of the Republican leaders for secretly knifing the free-homes measure which they ostensibly pretended to support"; favored union of all parties opposed to the Republican; and "such legislation as will result in the reduction of railroad fares and the abolishment of the entire free-pass system."

The proposition of the Populists was accepted by a vote of 89 to 71.

A joint convention was held on the 14th and reached a nomination on the 15th, after 74 ballots. J. R. Keaton, a Democrat, was made the candidate. A fusion platform was adopted, which was substantially the same as that of the Democratic Convention.

The Middle-of-the-Road Populists, being opposed

to fusion, held a convention in Guthrie, Sept. 1, and nominated A. S. Hankins for Delegate to Congress.

They adopted the name "Free-Silver party," as they could not get a place on the official ballot under the old name on account of the fusion by the regular convention of the party.

The resolutions showed more originality than is usually found in party platforms. They declared the "shortening of the distance between the voters and the legislators by means of the initiative and referendum" to be the great issue of the age; demanded the remonetization of silver, in regard to which they said: "We can not look to the Democratic party for relief, because in the past twenty years their representatives in Congress have killed 15 bills for the repeal of that act of 1873. The Eastern end of the Democratic party is for gold; the Western end for silver; and no man can tell which will be uppermost in the convention of 1900. We can not afford to scuttle our own ship when it is uncertain whether the other vessel is a friend or a pirate. The continued existence of the People's party is to-day the first necessity of a continued civilization. The whole destiny of mankind is wrapped up in its fate. To abandon it for a few petty offices would be a crime against the human family. We have no hostility toward the Democrats or Free-Silver Republicans, individually; many of them are our best citizens, and we earnestly and cordially invite them, in the name of God and the suffering world, to come in and help us right the wrongs of mankind." They declared the greenbacks to be the best currency the country ever had; demanded postal savings banks; favored free homes and Statehood; called for Government control of railroads, and telegraphs, declaring that in respect to the power of corporations this Government is "worse than that of Russia or Timbuctoo." In reference to the war they said: "We approve of the war for the liberation of Cuba, and demand that bloody and brutal Spain be driven completely and forever from the American continent. We will stand by our soldiers and sailors to the last gasp; but we are not willing that, under cover of their banners, the bonded debt of this country shall be vastly increased, at the expense of the business and industry of this country. We do not believe in enslaving Americans to liberate Cubans."

A Free-Silver State Convention was held at Guthrie in September, which approved the nomination of J. R. Keaton and adopted resolutions declaring Populist principles, and said on Territorial affairs: "We condemn the present Territorial administration for increasing the salary of the School Land Commissioner from \$1,800 to \$2,500 per annum, and allowing the Attorney-General, in addition to his salary, the sum of \$3,491.90 for collecting school land notes."

The Republican Territorial Convention met at El Reno, Aug. 24, and nominated Dennis T. Flynn for Delegate to Congress, on the third ballot.

The resolutions praised the national Administration and the conduct of the war enthusiastically, and on Territorial interests said, in part:

"We demand the enactment of a law providing for such penalties as will enforce a uniform assessment of all property at its actual cash value, and providing that the equalization of assessments shall not increase or diminish the aggregate of the assessed valuation of the taxable property of the Territory.

"We condemn the last fusion Legislature for its unparalleled extravagance in the employment of useless clerks and *attachés* and for public printing and for extravagant appropriations of all kinds.

"We heartily indorse the course of the last Re-

publican Delegate in Congress and his masterful fight for free homes, and we hereby declare that had he been returned to Congress the free-homes measure would have been now enacted into law. We hereby charge that the failure of said measure is due to the incompetency of the Populist-Democratic Delegate in Congress, and to the fact that his election was taken as a declaration of the people of Oklahoma against the measure.

"We demand the opening at the earliest date possible, of the Wichita, Kiowa, and Comanche reservations.

"We present to Congress, in Oklahoma, 300,000 intelligent and patriotic citizens, and in the Indian Territory as many more. We insist that we are entitled to Statehood, either with or without the Indian Territory, and we favor immediate Statehood with such boundaries as Congress in its wisdom may provide.

"The principles of the Republican party are against trusts and combines of every character detrimental to the best interests of the people. We therefore condemn the trust existing in this Territory known as the Wheat Buyers' Association as being contrary to the fundamental principles of the Republican party, in so far as said association interferes with the freest competition in the purchase or sale of grain.

"We demand the vigorous enforcement of the criminal laws, with equal and just legal rights to all, that lynchings and like outrages may be suppressed.

"We recognize the disadvantages to the people of the Indian reservations where a court has been established by a recent act of Congress, arising from the fact that the juries for said court have to be drawn from adjoining counties. We respectfully urge upon Congress that the law establishing such court be amended so as to provide for the drawing of juries within the boundaries of the reservation, for the trial of such cases as are within the jurisdiction of said court."

The Republican candidate was elected, the vote standing: Flynn, Republican, 28,456; Keaton, Fusion, 19,088; Hawkins, Populist 1,269.

The Territorial Legislature will stand: Republicans in Council 8, in House 17; Democrats in Council 2, in House 3; Fusionists in Council 3, in House 3; Populists in House 3.

ONTARIO, a province of the Dominion of Canada; area, 220,000 square miles; population in 1891, 2,114,321. Capital, Toronto.

Government and Politics.—The Hon. A. S. Hardy, who in 1897 had succeeded Sir Oliver Mowat as Premier and Attorney-General, had to appeal to the people for the first time, and opposed to him was also a new leader of the Conservative party, Mr. J. P. Whitney. The elections took place on March 1, and it would be difficult to define in a few words the opposing policies. They may perhaps be summed up in the contention on one side that the new Premier should be given a chance; that the Government of which this was a continuation had been great and good; and that Liberalism was now triumphant everywhere and thoroughly loyal to the empire. The Opposition claimed that many years of office generated corruption, carelessness, and maladministration; that it was time for a change; and that things should be swept as only a new broom could sweep them. The result was the election of 48 Liberals and 46 Conservatives. Two ministers, Messrs. Gibson and Dryden, were beaten, but were afterward re-elected for other constituencies. The new house included 29 farmers, 14 lawyers, 6 doctors, 5 journalists, and 6 mill owners. A large number of election protests were at once filed on either side, and a miniature election took place

in subsequent months, in which the party in power naturally had an advantage and gained somewhat. During the following June while several election petitions were before the courts, the Opposition discovered that there was some question as to the right of poll constables to vote. They had done so unchallenged for twenty years, but if their votes could be thrown out it would unsettle a large number of Liberal members and leave the Government in a minority when the new House met. Without awaiting this result, however, Mr. Hardy had the Legislature summoned in special session, after publishing a long personal memorandum addressed to the public and explaining his own position.

On Aug. 3 Sir Oliver Mowat, the Lieutenant Governor, opened the House with a speech from the throne, in the course of which he said:

"I rejoice on being able to congratulate you that the province is being favored with another abundant harvest, and that the prices of almost all the products of the farm have been satisfactory to the agriculturist. There has been no abatement in the efforts of the Department of Agriculture to promote the welfare of the husbandmen through the operations of the numerous agencies and organizations under its direction, and by the preparation and wide circulation of bulletins and reports. The practical and experimental work in connection with the Agricultural College continues to afford much valuable instruction and encouragement to those who can personally investigate it, as is evidenced by the constantly increasing number of farmers who continue to visit and inspect its operations, not less than 30,000 having visited the college and farm during the month of June last. It is gratifying to learn that the work of the department in enforcing the provisions of the act of last session with respect to the spread of the San José scale, and in protecting the orchards of the province from the destructive ravages of the pest, has been actively pursued, and with good results.

"It is also a subject for congratulation that the trade and commerce of the province are constantly increasing, and that agricultural, manufacturing, and commercial enterprises are alike prosperous and successful. Great activity still prevails in the mining districts, and there is abundant evidence that the mineral wealth of northern Ontario is being steadily developed.

"It is gratifying to record the increasing interest which is being taken in road and street improvements throughout the province. Successful efforts to bring about reform are apparent in many districts. The fullest information appears to be desired by both urban and rural municipalities regarding this branch of public work, the importance of which can not be overestimated.

"Owing, I believe to the unsettled condition of certain branches of trade in the adjoining republic, arising out of the war with Spain, and to the duty imposed by the tariff of that nation on lumber when imported, the lumber market has not been as active as in former years. I am pleased to be able to state that shipments to the British markets have greatly increased, and that satisfactory prices have been obtained.

"The work of the commission appointed last year to inquire into the practicability of preserving and restoring the white pine upon lands in the province not adapted for agricultural purposes or for settlement, and whose preliminary report with recommendations was presented last session, has been continued during the year. The final report of the commission has been prepared for distribution during the session; in that case a measure supplementary of the forest reserves act of last session may be submitted to your consideration.

"In view of the great number of election petitions awaiting trial, it is desirable to facilitate their disposal by the courts and to lessen the expense and labor of the trials as far as may be practicable, and so that they may, if possible, be disposed of by the time this Assembly may again meet in the early part of the coming year. To this end a bill will be submitted for your consideration making provision for the speedy determination of the question of the right of electors to vote who have been called upon or appointed by the returning officers, or deputy returning officers, under the election act, to act as constables or special constables on election or polling day, or to perform other work or public duties connected with the election and for other purposes.

"The long-contested question between the Government of Canada and the provinces relating to the rights in and over provincial fisheries has at length been finally decided by the Privy Council. Leases of fishing rights in provincial waters, and licenses and permits to fish in provincial waters, have heretofore been granted by the Department of Marine and Fisheries under the laws and regulations of the Dominion. The judgment of the Privy Council has determined that the right to the fish in provincial waters, including the waters of the Great Lakes and international and interprovincial rivers, can be granted only by the provinces, and that the revenues derivable therefrom are payable to the provincial governments. The regulations as to the time and manner in which fish may be taken, the instruments of capture which may be employed, the fixing of close seasons, and some other minor matters of regulation, are by the judgment declared to be subject wholly to Dominion legislation, and the Government of the Dominion is held entitled to impose a tax for revenue purposes as a consideration of right to fish.

"The proposed legislation in respect to the two last-mentioned questions is among the reasons for your being called together at this somewhat unusual season of the year, and I trust that you will deem them of sufficiently pressing importance to secure your approval of the course which has been taken. It is presumed that when you have disposed of matters which are immediately urgent, you will prefer postponing the consideration of other and general business until the early part of the next year."

Mr. F. E. A. Evanturel was re-elected speaker. A stirring debate ensued upon the formal address in reply to the speech from the throne, and Messrs. Hardy and Whitney covered the whole political ground in able speeches. Immediately following, a bill was introduced to bring before the Court of Appeal the question whether constables had the right to vote and declaring that, should the decision be in the negative, any member unseated by the striking out of these votes should be entitled to appeal to his constituency again under a change of law by which the constable should be given the clear right to vote. This was a different policy from that proposed in Mr. Hardy's memorandum, in which he had favored retrospective legislation legalizing the votes in all past as well as future cases. But the public opposition was so strong to a proposal which involved the possible seating of members by legislation and their own votes in the Assembly, that it was abandoned. After a warm debate the bill passed by 6 majority on Aug. 19. Eventually the Court of Appeal decided that the constables were not disqualified by law, and the whole question was settled. On Aug. 24 the brief special session was adjourned.

Agriculture.—The crops in Ontario were very good during the season of 1898, the following being

the acreage sown: Hay, 2,453,503; oats, 2,376,360; winter wheat, 1,048,182; peas, 865,951; corn, 520,696; barley, 438,784; spring wheat, 389,205; potatoes, 169,946; rye, 165,089; turnips, 151,601; buckwheat, 150,394; mangels, 47,923; beans, 45,220; carrots, 12,418.

The total yield of fall wheat was 25,305,890 bushels, and of spring wheat 6,714,516 bushels. Oats were 82,132,026 bushels, and hay 4,399,063 tons.

The live stock in the province in 1898 was as follows: Horses, 611,241; cattle, 2,215,943; sheep, 1,677,014; hogs, 1,642,787; poultry, 9,084,473. The number of live stock sold or slaughtered during the year was 44,404 horses, 552,485 cattle, 664,329 sheep, 1,529,697 hogs, and 3,072,767 poultry—an increase in each case.

The Lumber Question.—The protection of Ontario timber limits for Ontario mills and workmen was an important question at the close of the session of the Legislature in December, 1897. It had long been the custom of American mill owners and manufacturers to cut their timber on the Canadian side with American workmen, and float it over and manufacture it in the United States with American labor. This, naturally, was not liked, and the Hardy Government was at last impelled to the following legislation: The Government proposed that licenses issued after April 30, 1898, shall contain a condition that pine timber shall be manufactured in Canada. This restriction does not affect existing licenses. All future sales of timber limits shall be subject to the manufacturing condition. The new regulation which the Legislature was asked to approve read: "Every license or permit to cut pine timber on the ungranted lands of the Crown, or to cut pine timber reserved to the Crown on lands located, sold, granted, patented, or leased by the Crown, which shall be issued on or after April 30, 1898, shall contain and be subject to the condition that all pine which may be cut into logs or otherwise under the authority or permission of such license or permit shall, except as hereinafter provided, be manufactured into sawn lumber in Canada, that is to say, into boards, deals, joists, lath, shingles, or other sawn lumber, or into board or square or other timber in Canada, and such condition shall be kept and observed by the holder or holders of any such license or permit who shall cut or cause to be cut pine trees or timber under the authority thereof, and by any other person or persons who shall cut or cause to be cut any of such pine trees or timber under the authority thereof; and all pine so cut into logs or otherwise shall be manufactured in Canada as aforesaid." Should any holder of a timber license violate the condition, the license will be suspended, and shall not be reissued until the Lieutenant Governor directs. In order to prevent a breach of the regulation, the Commissioner of Crown Lands is authorized to seize logs illegally cut, and he shall hold them until security is given by the owner that they shall be cut in Canada. In the event of the refusal of the owner to give such security within four weeks after the seizure, the commissioner may sell the logs by auction to some person who will undertake to manufacture in Canada. The proceeds of this sale, after all expenses and debts are deducted, shall be paid to the owner of the limit or the holder of the permit. There is one exception to the general policy which has been proposed, made necessary by the fact that the purchasers of limits in 1890 under a manufacturing obligation paid a sum of money to be released from the necessity of sawing in Canada. The limits sold in 1890 are composed of the last half of the township of Awares, in Algoma, containing 18½ square miles, and 22 square miles in the district of Thunder Bay, berths 2, 3, and 4. It is made clear that the regula-

lation shall not apply to "logs or timber cut and in use in Canada for any purpose for which logs or timber in the unmanufactured state are or may be used." The Lieutenant Governor in Council is authorized to make any further or additional regulations necessary to enable the Commissioner of Crown Lands to carry into effect the object and intent of the regulations.

This was strongly objected to by the Michigan lumbermen and by all Americans holding Canadian timber limits. What followed was described by Mr. Hardy in the House on Aug. 23, 1898:

"1. The Government has received intimation that American lumbermen holding timber limits in Ontario have presented to the Government of the United States objections to the act of last session respecting the manufacture of pine cut on the Crown domain. 2. That these representations have been forwarded to the Imperial Government, and through the proper channels to the Government of Canada. 3. The correspondence has been transmitted to the Government of the province by the Federal Government for an answer, but not for publicity until further consideration by all parties concerned. 4. Dispatches answering the complaints have been forwarded to the Federal Government on behalf of the province, in which the contention of the American lumbermen is opposed throughout. 5. Had the correspondence been public, it would have been laid upon the table of the House. 6. I have reason to believe that the dispatches of this Government in reply to the American claim, or some of them, have been forwarded to the Government of the United States by the Government of Canada, but I am not aware whether any reply has been received. 7. The Government understands that counsel have been retained by the American lumbermen."

The matter has since come before the International Conference at Quebec and Washington. Between 1892 and 1896 the Canadian export of pine alone to the States increased from 32,000,000 feet, valued at \$261,479, to 211,000,000 feet, valued at \$1,859,369.

Mines and Minerals.—Ontario mineral production made great progress in 1898, and at the close of the year it was announced that the famous Sultana mine in the north of the province had been sold for \$2,000,000 cash. The following table from the "Annual Report of the Bureau of Mines" speaks for itself:

ITEMS.	1897.	1898.
<i>Gold.</i>	12 months.	6 months.
Ore treated (net tons).....	27,589	24,779½
Value of gold.....	\$190,244	\$133,744
<i>Silver</i>		
Ore treated (net tons).....		73
Value of silver.....		\$10,632
<i>Nickel and Copper.</i>		
Ore smelted (net tons).....	96,004	55,871
Value of nickel.....	\$359,651	\$225,763
Value of copper.....	\$200,067	\$141,744
<i>Iron.</i>		
Iron ore (net tons).....	2,763	13,032½
Value of mines.....	\$4,689	\$23,845
<i>Pig Iron.</i>		
Ontario ores (net tons).....	2,770	9,215
Foreign ores.....	34,722	29,565
Pig-iron product.....	24,011	25,423
Value of pig iron.....	\$288,128	\$305,083

The total value of the metal product for the six months of 1898 was \$840,811, against \$1,042,779 for the whole of 1897.

During the year practical surveys were made of a great thirty-mile belt of corundum which had been discovered in Renfrew County. This valuable mineral was found to exist in immense quantities and regulations were duly made for its development.

OREGON, a Pacific coast State, admitted to the Union Feb. 14, 1859; area, 96,030 square miles. The population was 13,294 in 1850; 52,465 in 1860; 90,923 in 1870; 174,768 in 1880; 313,767 in 1890. By the State census of 1895 it was 362,762. Capital, Salem.

Government.—The following were the State officers during the year: Governor, William P. Lord; Secretary of State and Auditor, Harrison R. Kincaid; Treasurer, Philip Metschan; Attorney-General, C. M. Idleman; Superintendent of Instruction, George M. Irwin; Adjutant General, B. B. Tuttle—all Republicans; Fish and Game Protector, Hollister D. McGuire; Food and Dairy Commissioner, W. W. Baker; Railroad Commissioners, I. A. Marum, J. B. Eddy, and A. I. Wagner; Chief Justice of the Supreme Court, Frank A. Moore; Associate Justices, Robert S. Bean and Charles E. Wolverton; Clerk, J. J. Murphy—all Republicans.

THEODORE THURSTON GEER,
GOVERNOR OF OREGON.

Finances.—The receipts into the State treasury during the biennial term ending Dec. 31, 1898, including the balance on hand, were \$2,777,031.50; the disbursements from the several funds were \$2,013,322.27; leaving a balance of \$763,699.23. Oregon has no State debt. The principal of the common-school fund, which was \$150,398.28 at the close of 1896, is now nearly three times as much. The tax levy for 1899 is greatly increased, on account of appropriations made by the special session, for objects not anticipated or contemplated by the board when the tax levy was made, to wit: \$33,000 for the eastern Oregon Asylum lands, \$41,000 for the unorganized Legislature of 1897, \$15,000 for the Omaha Exposition, \$25,000 for an agricultural college building, and others, making in all about \$200,000 in excess of the amount levied by the board, or one fourth of the entire tax levy. The rate for 1898 was 3¼ mills, for 1899 it is fixed at 5½ mills.

Education.—The State Superintendent recommends in his report that third-grade certificates be abolished; that the course of study to be pursued by students in private schools who desire to obtain State diplomas be made uniform; that the law making county superintendents *ex officio* members of the State Board of Examiners be amended so that all examination papers of candidates for State or life diplomas must be passed upon by members of the State Board of Examiners under supervision of the State Superintendent; that the number of subjects upon which applicants for State and life diplomas must be examined be increased; that only normal schools established by the State be permitted to grant teachers' diplomas, and that the number of such schools be limited to three—one each at Monmouth, Ashland, and Weston.

The Portland schools had 11,345 pupils and 278 teachers during the year ending in June. The school population of the State is 129,956.

The State University at Eugene has more than 500 students.

Under the present system the State has a loan

agent in each of the 32 counties. Applications for loans are made to the local agents, and are by them granted or rejected. It is found that many injudicious loans have been made. The school fund has been "worked" by securing loans in excess of the value of the land which is mortgaged as security. The State has been put to the extremity and expense of many foreclosures.

There were 336 students enrolled at the Agricultural College in 1898, of whom 15 were graduates and 24 special students, the remainder in the four regular classes. The Mechanical Hall was destroyed by fire, Sept. 28. An appropriation of \$25,000 from the Legislature and \$16,000 insurance enabled the regents to rebuild satisfactorily.

It was thought best to consolidate the Puget Sound University and the Portland University into one institution, both being under the care of the Methodist denomination. Tacoma and Portland were named as its location, and Portland was chosen, with the condition that a certain amount of funds should be raised. The trustees of Puget Sound University, however, seem to have decided not to be bound by the arrangement, and to intend continuing their own institution.

Charities and Corrections.—There were 322 convicts in the Penitentiary at the close of the year. The amount paid out of the Penitentiary fund during the biennial term was \$5,613.56.

The Reform School had 99 inmates at the close of the year.

The total enrollment at the School for the Blind was 36 in the two years, and the cost was \$15,985.27. Four teachers are employed.

The Deaf-Mute School had an attendance of 69, with 4 teachers. The expenditures for two years were \$24,381.58.

The Orphans' Home at Salem has been offered to the State by the Children's Aid Society. There are 20 inmates, and the property consists of 15 acres of land with good buildings.

The Asylum for the Insane had 1,150 patients in October, of whom 372 were women. The cost *per capita* for the month was \$9.57.

Banks.—The 29 national banks have an aggregate capital of \$2,520,000; surplus, \$479,242; undivided profits, \$831,280; individual profits, \$9,524,099; loans and discounts, \$6,029,243.

Railroads.—The State has about 1,500 miles of railroad. The completion and opening of the Portland and Astoria road in 1898 gave the western section, with two exceptions, all the railroad lines it will require for some time. These exceptions are roads affording outlets to the valley for the products of Coos, Curry, and Tillamook Counties.

As far south as Corvallis the Willamette river is navigable for boats of light draught, and much of the freight of the valley towns is handled in that way. Southern Oregon is dependent upon the Southern Pacific for its transportation facilities.

The assessed valuations of railroads as returned by county assessors show a total of \$5,197,340. The average per mile varies from \$600 in Klamath County, on a lagging road, to \$9,184 in Jackson County.

Military.—Oregon was required to furnish a regiment for the Spanish war, and the Second Regiment was recruited readily and sent. The regiment was kept for some time at San Francisco, after which it was sent to Manila and it was there at the close of the year, having lost 26 men by disease.

At a quarterly meeting, held in October, the State Military Board decided at once to take steps to reorganize the National Guard. A small amount of money is left from the old appropriation, enough to make a start in uniforming the new soldiery, and a further appropriation is expected from the Legislature that will enable the board to proceed

with the work of reorganization. The plan is to form 3 battalions, 1 in Portland, 1 in eastern Oregon, and 1 in southern Oregon. To this will be added Battery A, as soon as it is mustered out, and 2 separate companies.

The Grand Army has 59 posts in the State, with 1,861 members.

Products.—The estimate of the fruit product of the State in 1898 gives the following figures: Cured prunes, 700 car loads of 24,000 pounds, 16,800,000 pounds; evaporated apples, 6 cars, 150,000 pounds; fresh or green apples, 500 car loads, 11,250,000 pounds; fresh or green prunes, 150 car loads, 3,750,000 pounds; fresh pears, 100 car loads, 2,500,000 pounds; fresh plums, 75 car loads, 1,875,000 pounds; strawberries, 76 car loads. The total is 1,606 car loads of green and dried fruits. The cured-prune crop alone at 3½ cents a pound amounts to \$525,000, and the dried apples at 5½ cents to \$82,500. As a by-product of the latter, 20 tons of apple peelings, heretofore thrown away, were used in making jelly, and, in addition, small apples were utilized as "chops" and exported.

The grain product is given as 22,000,000 bushels of wheat, 1,800,000 of barley and rye, nearly 400,000 of corn, and 7,000,000 of oats. The potato crop was 5,000,000 bushels; the hay, 1,500,000 tons; and there were 600,000,000 feet of lumber.

The value of dairies and dairy products is about \$6,959,895. The amount of butter produced during the year is estimated at 8,798,571 pounds.

The gold product of 1898 is estimated at \$4,878,530. Of this, \$2,500,000 came from Baker County and \$1,200,000 from Union. Other estimates place the product much lower.

The silver product is small, averaging about \$50,000 a year.

A canvass of the State made by county judges and assessors shows the following number and valuation of the stock: Horses, 217,535, value \$4,063,373; cattle, 459,034, value \$8,030,080; sheep, 1,807,928, value \$3,867,488; swine, 87,532, value \$261,765; total, 2,572,029, value \$16,222,712. The valuation for assessment is not the full market value; the estimates of real value aggregate \$20,986,716.

The estimate of the wool clip of 1898 gives a total of 21,291,812 pounds for Oregon, larger than that credited to any other State.

A statement on the salmon industry of Columbia river gives the gross weight of salmon utilized in 1898 as 832,600,211 pounds, the number of cases packed, 12,711,626 and the value \$71,628,165.63.

Public Lands.—According to the report of the Commissioner of the General Land Office, the total area of land surface in Oregon is 61,626,218 acres, of which 35,897,869 are unappropriated and unsurveyed, 24,095,763 acres being surveyed and 11,802,106 unsurveyed. The area reserved is 5,467,702; appropriated, 20,260,647. Of the 35,897,869 acres of unsurveyed and unappropriated lands, 17,067,000 acres are desert and grazing lands, and 18,830,869 woodland and forest. None of it is mentioned as barren, irreclaimable wastes. The estimated water supply of the State is 3,000,000 acres.

In this year 18 mineral and mill site patents for lands in Oregon were issued, and 57,883.59 acres were certified or patented on account of railroad grants. The swamp-land selections approved aggregated 1,791.71 acres, and those patented, 2,190.21. Since the date of the grants 222,567.93 acres have been patented. The selection of 73,695.15 acres of school land, indemnity lands by the State, was approved.

The estimated area of forest reservations in Oregon are as follows: Bull Run, 142,080 acres; Cascade, 4,492,800 acres; Ashland, 18,560 acres.

Portland.—From a special edition of the "Oregonian" it is learned that the death rate in Portland in 1898 was but 8.66 in 1,000. In 1893 the rate was 13; it steadily decreased until 1897, when it was 8.05. The improvement of water and sewer conditions have contributed to lower the rate. City garbage is disposed of by means of a crematory in the extreme northern part of the town, which is operated at a cost of \$450 a month.

The city stood fourth among the cities of the Union in its shipments of wheat in October, the figures being 1,370,524, and took the same rank for the ten months ending Nov. 1. For the whole year the shipments amounted to 14,363,865 bushels.

The list of exports and imports for the year show a large balance of trade in favor of Portland, the exports amounting to \$12,796,666 and the imports to \$1,538,887. Receipts from customs were \$421,046.66, as against \$269,922.80 in 1897.

There are in the city 1,079 firms representing financial strength aggregating \$21,233,500.

Legislative Session.—The Governor called the Legislature to meet in special session, Sept. 26, not naming the subjects for its consideration, but giving as a reason that matters of vital importance to the people of the State seemed to require it. The failure of the last Legislature to organize not only left vacant one of Oregon's seats in the United States Senate, but left the business affairs of the State unsettled for want of appropriations. Warrants were out for more than \$800,000, and more than \$1,360,000 was in the treasury with no authority for payment.

The Legislature, which was elected in June, stood politically: Republicans in Senate 24, in House 42; Democrats in Senate 3, in House 6; Populists in Senate 3, in House 2; Silver Republicans and Union 4 each in House; Fusion, 1 in House.

The Senate elected Joseph Simon President, and E. V. Carter was chosen Speaker of the House.

The Governor's message set forth the importance of the questions to come before the United States Senate, and the desirability of the State's being fully represented during the whole session, as it could not be if no Senator were elected till the regular term of the Legislature in 1899. He also advised the passing of an appropriation bill to clear up the business of the existing administration before the new one should come in, leaving to the regular session only the appropriations that properly belong to it. The business of the Supreme Court being two years behind, the Governor suggested two methods of relief: one, the enacting of a law to limit appeals to the Supreme Court, in civil cases, to those involving title to real estate, or matters affecting the public revenue, the construction of the Constitution of the State or the United States, or where questions of franchise are raised, or where the amount of the judgment exceeds \$300; the other, the enactment of a law authorizing the Supreme Court to appoint three commissioners, for a term of four years, to assist the court in hearing and deciding cases. He favored the second method. Other subjects mentioned were: A State exhibit at the Paris Exposition, and settlement with a manufacturer who had taken the contract for the labor of the penitentiary convicts. After the fire at the Agricultural College the Governor sent a special message, recommending an appropriation for rebuilding; and \$25,000 was accordingly voted for the purpose.

Henry W. Corbett was nominated by the regular Republican caucus for United States Senator, to fill the vacancy left by the failure to elect a successor to J. H. Mitchell in 1897. But there was a faction of the party which was united in opposition to him, and it was strong enough to prevent his election. State Senator Joseph Simon was therefore made the

candidate of the Republican caucus, and was elected by 64 votes against 23 for Harrison R. Kincaid, candidate of the Silver parties.

The general appropriation bill carried amounts aggregating about \$1,220,000.

The Railroad Commission and the State Board of Equalization were abolished.

A new fishery law was passed, providing an elaborate system of licenses, these to go into a fund for the artificial propagation of fish. No one can take salmon or sturgeon except with hook and line, without a license, or engage in the business of packing or dealing in fish; and only citizens of the United States or those that have declared their intention to become such one year previously, and have been residents of Oregon for six months, may fish for salmon or sturgeon, unless they hold licenses from the State of Washington, which has concurrent jurisdiction over the Columbia river to fish therein. Cannerymen and dealers are classified according to the extent of their business, and the costs of licenses are graduated in proportion. Heavy fines are imposed on those found operating without license. The act extends the close season fifteen days in the spring, in order to allow the early run of salmon to get up to the spawning streams. Fishing is prohibited on those streams at all times, and very stringent provision is made in regard to structures or dams, which require their owners or operators to provide suitable fishways or passageways to be built through those obstructions to the satisfaction of the Fish Commissioner. To make the law fully effective it is necessary that the same provisions be made by Washington, which already has the license system.

A new school election law provides that any citizen, male or female, may vote at any school meeting or school election, in any district in this State, who is twenty-one years of age, has resided in the district thirty days, and has property in the district of the value of \$100, as shown by the last preceding county assessment, on which he or she pays a tax; and further, in districts of fewer than 1,000 inhabitants, fathers of school children or widows who have children of school age may vote for school directors and clerks without the property qualification.

A joint committee was appointed to revise the school laws, and report at the regular session.

Portland received a new charter, and there were other municipal charter acts.

Other measures passed were:

Providing that building and loan associations shall not issue non-contributing stock.

Providing for the punishment of any person injuring bridges, etc.

Making the earnings of a judgment debtor for thirty days prior to service of attachment exempt therefrom.

Providing for the protection of elk, grouse, and prairie chickens.

Fixing the legal rate of interest on judgments, etc., at 6 instead of 8 per cent.

Making proof of policy in force evidence of insurance in criminal cases.

Providing for the payment of the rejected volunteers.

To permit express companies to bring as many as four sheep at one time into the State without official inspection.

A joint memorial urging pension claims of Indian war veterans was passed, and seven joint resolutions, the subjects of which were: For committee to celebrate a semicentennial anniversary of acquisition of Oregon Territory by the United States; for appropriation by Congress for Cascade locks; urging Congress to open the Columbia river at the Dalles; urging retention of Battery B in United States service; favoring retention of Philippine Islands; to

distribute copies of Indian war history among Indian war veterans; and for printing the biennial report of the Secretary of State.

The session ended Oct. 15. T. C. Taylor was elected to succeed Joseph Simon, United States Senator-elect, as President of the Senate.

Political.—An election of State officers was held June 6. There were four tickets—Republican, Fusion, Populist, and Prohibition.

The paramount issue was the money question, and upon it the Republicans won by a large majority. Following is the declaration of their platform on this issue:

"We are in favor of the maintenance of the present gold standard. We are unqualifiedly opposed to the free coinage of silver and to all other schemes looking to the debasement of the currency and the repudiation of debts. We believe that the best money in the world is none too good to be assured by the Government to the laborer as the fruit of his toil and to the farmer as the price of his crop. We condemn the continued agitation for free silver as calculated to jeopardize the prosperity of the country and to shake the confidence of the people in the maintenance of a wise financial policy. We particularly condemn as unpatriotic the efforts of the free-silver agitators to array class against class and section against section. We declare that the interests of all classes and all sections of our country alike demand a sound and stable financial system."

Following is the ticket: For Governor, Theodore T. Geer; Secretary of State, Frank I. Dunbar; State Treasurer, Charles S. Moore; Snpreme Judge, Frank A. Moore; Attorney-General, R. D. N. Blackburn; State School Superintendent, J. H. Ackerman; State Printer, W. H. Leeds; Congressmen, First District, Thomas H. Tongue, Second District, Malcolm A. Moody.

The State conventions of the Democratic, People's, and Silver Republican parties met at Portland, March 25. A fusion committee of nine from each convention held a conference and agreed upon the following distribution of offices: To the Populists, Governor, Attorney-General, State Printer, and Superintendent of Instruction; to the Democrats, Treasurer, Justice of the Supreme Court, and Congressman from the First District; to the Silver Republicans, Secretary of State and Congressman, Second District. The platform demanded—

"The free and unrestricted coinage of silver and gold at the present legal ratio of 16 to 1, without waiting for the consent of foreign nations; national money, safe and sound, issued by the General Government only, without the intervention of banks of issue, to be legal tender for all debts, public and private; also a just, equitable, and efficient means of distributing direct to the people through the lawful disbursements of the Government. It demanded that the volume of circulating medium be speedily increased to an amount sufficient to meet the demands of the business and population of this country and to restore the just level of prices of labor and production."

The ticket as completed stood: For Governor, William R. King; Secretary of State, H. R. Kincaid; Treasurer, J. O. Booth; Justice of the Supreme Court, W. A. Ramsay; Attorney-General, J. L. Storey; Superintendent of Instruction, H. S. Lyman; State Printer, Charles A. Fitch; Members of Congress, R. M. Veatch and C. M. Donaldson.

The Populists opposed to fusion bolted and chose the following candidates: For Governor, J. C. Luce; Secretary of State, Ira Wakefield; State Treasurer, J. K. Sears; Superintendent of Public Instruction, J. E. Hosmer; State Printer, D. L. Grace; Congressman, First District, J. L. Hill. Nominations

for Snpreme Judge, Attorney-General, and Congressman from the Second District were left to be filled by the State Central Committee.

The returns of the election showed the following vote for Governor: Geer, Republican, 45,104; King, Fusion, 34,330; Luce, Populist, 2,866; Clinton, Prohibitionist, 2,213.

The Republicans elected both their congressional candidates and 66 of the 90 members of the Legislature.

OTIS, ELWELL STEPHEN, an American soldier, born in Frederick City, Md., March 25, 1838. While he was still a boy his parents removed to Rochester, N. Y., and purchased a large farm on the western border of the city. Elwell was graduated at the University of Rochester in 1858, standing high in his class. In his senior year he was president of one of the two literary societies. Among his classmates were Cephas B. Crane, the eminent Baptist clergyman, William Harkness, director of the Naval Observatory at Washington, Lemnel

ELWELL STEPHEN OTIS.

Moss, formerly president of Indiana State University, and William O. Stoddard, the author. Otis was admitted to the bar in Rochester in 1859, and was graduated at Harvard law school in 1861.

In the summer of 1862 he raised in Rochester a company of the One Hundred and Fortieth New York Regiment of Infantry. At the meetings which were held for the purpose of kindling enthusiasm and procuring enlistments he was solicited to speak, but declined to make any speech but this: "I do not say to you Go; I say Come." The One Hundred and Fortieth proved to be one of the finest organizations in the service, and is included in Col. William Fox's account of the fighting regiments. It was commanded, at first, by Col. Patrick H. O'Rorke, another Rochester boy, who was graduated at West Point in June, 1861, standing at the head of his class, of which George A. Custer was at the foot, with Alonzo H. Cushing, Charles C. Parsons, and Joseph C. Audenried between. O'Rorke had had more than a year of active service in the field, and his regiment was soon one of the most thoroughly drilled in the Army of the Potomac.

With this regiment Otis served during his whole career in the civil war. His promotion from the rank of captain to that of lieutenant colonel of the regiment (he was never a major) was received Oct. 24, 1863.

Gen. G. K. Warren had been O'Rorke's preceptor at the Military Academy, and when his quick military perception showed him that the unoccupied Little Round Top was the key to Meade's position on the left, he turned to O'Rorke to assist him in securing it. The regiment had been ordered to Sickles's advanced position, and was proceeding thither, when Warren ordered it to turn to the left and occupy Little Round Top. The regiment promptly ascended the hill, helping to drag and lift part of Hazlett's battery up the rocky acclivity, and got there, while Hood's Texans were rushing up the southwestern slope. "O'Rorke's soldiers," says the Comte de Paris in his "History of the Civil War," "by a really providential coincidence, reach at full run this summit, which Warren points out to them as the citadel to be preserved at any cost. At their feet lies the vast battlefield, whence are heard vague noises and savage cries, the rattling of musketry, the cannon's roar, and where all the incidents of the combat are seen through a cloud of smoke; but they have no leisure to contemplate this spectacle, for they find themselves face to face with Lee's soldiers, who are climbing the hill on the opposite side. A few minutes' delay among the Federals would have sufficed to put the Confederates in possession of the summit. Never perhaps was seen the winner of a race secure such a prize at so little cost." But to that regiment the cost was not little. They left more than 133 of their comrades, including many officers, among the dead and wounded on those heights, and among the dead was O'Rorke, who had been killed by a sharpshooter as he stood on a rock, leading his men. He had had a presentiment that he would fall at Gettysburg, and Otis, to whom he made it known, could not reason him out of it.

At the battle of the Wilderness the One Hundred and Fortieth Regiment saw some of the hottest fighting, losing 255 men. Otis, who had risen to the rank of lieutenant colonel, commanded the picket line of the Fifth Corps. The regiment was soon under a fire before which it melted like snow. Eleven of its commissioned officers were killed or wounded, not one of the non-commissioned staff remained, and of the captains only three were left. Three days later Col. Ryan was killed at Spottsylvania, and Otis succeeded to the command of the regiment as lieutenant colonel.

From the Rapidan to the James the regiment, led by Otis, was constantly under fire, and it stands conspicuous among those losing the largest number during the civil war, leaving 149 men dead on the field. The various casualties finally left Otis in command of the regular brigade; but his turn came at last, for he was wounded in the battle of Chapel House, near Petersburg, Va., Oct. 1, 1864. His wound was so severe that he was not subsequently returned to duty, and he was honorably discharged from the volunteer service Jan. 24, 1865, bearing the brevets of colonel and brigadier general for gallant and meritorious service at Spottsylvania and Chapel House, Va.

On the organization of the Twenty-second Regiment of Infantry of the regular army from a battalion of the Thirteenth, Otis was appointed lieutenant colonel of the new regiment, his commission dating July 28, 1866. On March 2, 1867, he received the brevet of colonel in the regular army for gallant services at Spottsylvania. On the death of Col. George Sykes of the Twentieth Infantry, at Fort Brown, Texas, Otis was appointed colonel, and he assumed command of that regiment at Fort Brown, March 31, 1880. From 1867 to 1881 he served against the Indians.

At the time of the Custer massacre, in June, 1876, Otis, who was lieutenant colonel of the Twenty-second,

on duty at the lake posts on our northern frontier, was ordered to the front in command of six companies of the regiment. While passing down the Yellowstone his command was attacked by Indians near the mouth of Powder river. The troops were landed, and the enemy were driven into the hills, their camp being burned. On Aug. 7, 1876, Col. Otis joined Gen. Terry and marched with him up the Rosebud to re-enforce the column of Gen. Crook, finally taking post at Glendive, Mont. A wagon train sent from that post, under an escort of four companies of infantry, Oct. 10, 1876, was attacked by a heavy force of Indians and compelled to return to Glendive. Here Col. Otis reorganized it, and with the addition of another company to the escort set out in command to Tongue river. Fifteen miles from the post a force of 1,000 Indians attacked the little column of fewer than 300 men, and a running fight ensued, lasting all day. The Indians tried every artifice of which they were masters to break up the column encumbered with its wagon trains, including setting fire to the grass, but with no effect. The next morning the Sioux could be seen gathered in large numbers on the left flank of the column, and a runner was observed leaving a communication on a hill to the front, whence it was brought in by a scout. This was the letter:

"YELLOWSTONE.

"I want to know what you are doing traveling on this road. You scare all the buffalo away. I want to hunt in the place. I want you to turn back from here. If you don't, I'll fight you again. I want you to leave what you have here and turn back from here. I am your friend,

"SITTING BULL.

"I mean all the rations you have got and some powder. Wish you would write as soon as you can."

Col. Otis wrote to the effect that he had no intention of turning back, and if the Indians wanted another fight he was there to accommodate them. The Indians gathered as for a fight, but thought better of it and sent in a party under a flag of truce, who, after some talk, decided that they had had enough of Otis and preferred to surrender, which they did.

When, in 1881, it was decided to establish a school of infantry and cavalry at Fort Leavenworth, Kansas, Col. Otis was chosen to organize it, and he remained in command of the school and the post of Fort Leavenworth until 1885. The general is justly proud of the work he did in establishing upon a secure foundation this post-graduate school for army officers. When relieved from the command of the Leavenworth school he returned to the command of his regiment, the Twentieth Infantry, at Fort Assiniboine, Montana. He also had command of the post, one of the largest in the army, including several companies of cavalry. On Oct. 1, 1890, he was detailed for duty as superintendent of the recruiting service, and on Nov. 28, 1893, was promoted to the rank of brigadier general, passing over the heads of officers of longer service. On Dec. 1 following Gen. Otis was ordered to duty in command of the Department of the Columbia, with headquarters at Vancouver, Wash. In taking leave of his regiment he called attention to the fact that during the fourteen years of his command he had never found occasion to charge one of its officers with dereliction of duty, a fact which testifies to the character of the colonel as well as to that of the men he commanded.

When, in 1896, the Secretary of War required the assistance of an army officer for the important work of revising the "Army Regulations," Gen. Otis was ordered to Washington, and he spent several months

at the War Department engaged in that work. In April, 1897, he was transferred to the command of the Department of Colorado. The routine duties of a department commander in time of peace impose no great tax upon a man's ability, but whatever work was given to Gen. Otis was done to the thorough satisfaction of his superiors. In December, 1897, he was ordered to duty as president of an important court-martial at Savannah, Ga., and he had just completed that work when the war with Spain began.

On May 28, 1898, he was appointed major general of volunteers and assigned to duty in command of the Department of the Pacific and Military Governor of the Philippines. Gen. Otis was chosen

to command the troops sent to the Philippine Islands because of his reputation as a thorough and reliable soldier. His conduct of the campaign which resulted in the discomfiture of Aguinaldo excited the admiration of foreign military observers. With the help of the trained and experienced officers under his command—Major-Gens. Thomas M. Anderson and Arthur MacArthur, Brig.-Gens. M. P. Miller, Harrison Gray Otis, Samuel Ovenshine, Irving Hale, Charles King, and others—Gen. Otis has fashioned into an army the inexperienced volunteers who form the chief part of his force, and made the most effective use of their admirable fighting qualities. Gen. Otis is author of a book entitled "The Indian Question" (New York, 1878).

P

PARAGUAY, a republic in South America. The legislative power is vested in a Congress consisting of a Senate of 13 and a Chamber of 26 members elected by universal male suffrage. Gen. Juan B. Eguisquiza was elected President of the Republic in 1894 for the term ending Nov. 25, 1898. The Cabinet at the beginning of 1898 was composed as follows: Minister of the Interior, A. M. Martinez; Minister of Foreign Affairs and Colonization, J. S. Decoud; Minister of Finance, A. Cañete; Minister of Justice, Worship, and Public Instruction, R. Mazó; Minister of War, E. Aceval.

Area and Population.—The area is 97,707 square miles, with a population estimated in 1897 at 600,000, not including 60,000 civilized and 70,000 uncivilized Indians. The Government, which formerly owned 75 per cent. of the land, has disposed of a great part of the public domain to foreign settlers, much of it in large blocks. The number of immigrants in 1895 was 243, of whom 73 were Germans, 34 Swiss, 29 French, 26 Italians, and 81 of other nationalities.

Finances.—The revised estimates for 1897 made the total receipts \$5,462,475, of which \$1,900,915 were hypothecated revenues, leaving \$3,562,560 for the expenses of the Government.

The foreign debt, which was scaled down for the second time by an arrangement made with the bondholders in 1895 for the assignment of public revenues to the service of the debt and the reduction of interest and funding of arrears of interest, amounted in 1897 to £994,600 sterling. The Government is responsible, moreover, for £374,871 of bonds of the Paraguay Central Railroad, and owes old indemnity debts to Brazil and the Argentine Republic amounting respectively to \$9,876,500 and \$12,393,600.

Commerce and Production.—The chief industry is the cultivation of *yerba maté*, or Paraguay tea. The lands on which the plant is grown have been sold by the state to private companies and individuals. The quantity exported in 1896 was 9,024 tons. There are vast forests containing valuable timber, which is now exported to European and South American countries. There were 2,102,680 cattle in 1896, and nearly 100,000 hides are exported annually. Tobacco is grown for export. During 1896 there were 666 vessels in the foreign trade, of 176,638 tons, entered, and 613, of 147,640 tons, cleared at the port of Asuncion.

Communications.—The railroad from Asuncion to Pirapó has a length of 155 miles. The number of letters, etc., that passed through the post office in 1896 was 777,617.

PENNSYLVANIA, a Middle State, one of the original thirteen, ratified the Constitution Dec. 12,

1787; area, 45,215 square miles. The population according to each decennial census, was 434,373 in 1790; 602,365 in 1800; 810,091 in 1810; 1,047,507 in 1820; 1,348,233 in 1830; 1,724,033 in 1840; 2,311,786 in 1850; 2,906,215 in 1860; 3,521,951 in 1870; 4,282,891 in 1880; and 5,258,014 in 1890. Capital, Harrisburg.

Government.—The State officers for the year were: Governor, Daniel H. Hastings; Lieutenant

Governor, Walter Lyon; Secretary of the Commonwealth, David Martin; Secretary of Internal Affairs, James W. Latta; Treasurer, Benjamin J. Haywood, succeeded May 1 by James S. Beacom; Auditor, Amos H. Mylin, succeeded May 1 by L. G. McCauley; Attorney-General, Henry C. McCormick; Adjutant General, Thomas J. Stewart; Superintendent of Public Instruction, Nathan C. Schaeffer; Insurance Commissioner, James H. Lambert; Commissioner of Banking, B. F. Gilkeson; Secretary of Agriculture, Thomas J. Edge; Superintendent of Public Buildings, J. C. Delaney; State Librarian, W. H. Egle; Dairy and Food Commissioner, Levi S. Wells; Forestry Commissioner, J. H. Rothrock; Factory Inspector, James Campbell; State Veterinarian, Leonard Pearson; Economic Zoölogist, B. H. Warren; Chief Justice of the Supreme Court, James P. Sterrett; Associate Justices, Henry Green, Henry W. Williams, James T. Mitchell, J. B. McCollum, John Dean, and D. Newlin Fell; Justices of the Superior Court, E. N. Willard, C. E. Rice, J. A. Beaver, J. J. Wickham, H. J. Reeder, George B. Orady, and P. P. Smith. All the above named are Republicans, except N. C. Schaeffer, and Justices McCollum and Smith, who are Democrats.

Finances.—The Treasurer's report says: "The estimate of the Auditor General and State Treasurer for the year was \$11,561,000. The receipts are about \$1,000,000 short of this amount. This is due principally to two facts: First, on account of pending litigation over the construction of the act of Assembly under which the capital stock of corporations is appraised for taxation. A large per-

WILLIAM A. STONE,
GOVERNOR OF PENNSYLVANIA.

centage of this tax for 1897 has not been paid, and the receipts are almost \$500,000 below the estimate. Second, there should have been deducted from the estimate the sum of \$369,371.50, which sum is transferred annually to the sinking fund."

The capital stock cases have been decided, and the report says that sufficient time has not elapsed to estimate the effect of the ruling on the decision. The accounting officers have placed this item at \$4,000,000, which is about \$700,000 more than was received from this source during the last year.

The operation of the act of Assembly, providing for the payment of interest by banks in which the funds of the State are deposited, has proved quite satisfactory. The interest received by the State for the six months ending Nov. 1, 1898, amounted to \$45,838.09. Of this sum \$14,016.16 was paid into the sinking fund, and \$31,821.93 into the general fund. The sinking fund is increasing.

The payments during the last year exceeded the receipts by more than \$1,000,000, and the balance available for the payment of appropriations is \$1,027,194.23 less on Nov. 30, 1898, than it was on the same date the year previous. The balance available for the payment of appropriations on Nov. 30, 1898, was \$2,929,617.10, and the obligations due on the same date amounted to about \$5,500,000.

The public debt, according to the report, amounts to \$6,815,150, none of which is payable until 1912. The assets of the sinking fund to meet the debt are \$5,789,317.09, leaving a net debt of \$1,025,981.91.

From the report of the Superintendent of Public Printing, Thomas M. Jones, it appears that the printing forms a very large item of State expense. The bill of the present printer, Mr. Ray, for the year ending June 30 was \$67,056.89, but Mr. Busch, the former printer, had work ordered before his contract ended, which he delivered this year, amounting to \$173,373.28. Among the bills held up is one of \$57,862 for printing a book by Mr. Warren, former State Zoölogist, containing many costly colored prints of birds. It seems that for many years expensive pamphlets have been turned out by the State printer on the written order of minor officials, and the bills have been approved by the Superintendent of Printing and paid by the Auditor General without question. Instances are given of a highly illustrated report of the Fish Commission, which cost \$26,000, and a report of the State Board of Health republishing the entire proceedings of the National Sanitary Commission.

In regard to the methods employed in the conduct of the State treasury, Gov. Hastings says in his message:

"The operation of the act providing for the payment of interest by banks in which the State funds are deposited shows that the interest paid into the sinking fund for the six months ending Nov. 1, 1898, amounted to \$14,016.16, and into the general fund from the same source \$31,821.93. While this interest law is an improvement, and indicates the enormous sums which the State might have received during past years, yet, in my judgment, it does not correct the evil which it was intended to correct. The management of the State treasury has, for many years, been the subject of public criticism. While it may be true the State has lost no moneys deposited in the various banks throughout the Commonwealth, it can not be questioned that in the past the public funds have been used for political purposes by depositing them in favorite banks, where such deposits were expected to yield returns in the shape of political influence. This system can not be defended. It should not be in the power of any man to say what banks shall handle the millions of dollars that are annually paid into the State treasury. It would be far better for the State to

receive no interest upon deposits, rather than to suffer a system to continue which can be used for political purposes, and it is submitted that the evil will never be corrected until the State keeps its own money in its own vaults, as do many of the States, and is done by the United States."

Education.—The following items are taken from the report of the Superintendent of Public Instruction: Number of school districts in the State, 2,490; number of schools, 27,347; number of graded schools, 16,842; number of superintendents, 140; number of male teachers, 9,348; number of female teachers, 18,732; average salaries of male teachers per month, \$42.69; average salaries of female teachers per month, \$38.45; average length of school term in months, 7.97; whole number of pupils, 1,143,100; average number of pupils in daily attendance, 864,626; cost of schoolhouses—purchasing, building, renting, etc.—\$3,484,028.61; teachers' wages, \$10,332,759.97; cost of school textbooks, \$699,246.18; cost of school supplies other than text-books, including maps, globes, etc., \$433,106.68; fuel, contingencies, fees of collectors, and other expenses, \$4,695,259.87; total expenditures, \$19,644,401.31; State appropriation for the school year, \$5,500,000.

The State appropriation this year was on a new basis established by the last Legislature. Heretofore the millions granted to the schools have been distributed on the basis of the taxables. Under the new act of Assembly the money will be distributed one third on the number of schools, one third on the number of children between the ages of six and sixteen, and one third on the taxables. The provisions of the new law, which sets apart one third on the basis of the school children between the ages of six and sixteen, will be favorable, it is thought, to the populous centers and draw from the sparsely settled districts.

An official statement from the University of Pennsylvania says it is the purpose to establish a separate college for women, modeled on either Radcliffe or Barnard.

The Carlisle Indian School, at the close of its eighteenth year, had 762 pupils, of whom 337 were girls.

The Insane.—The Governor's message says: "The State hospitals contained at the close of 1897 over 1,500 patients in excess of their capacity, and 240 more than during the previous year. The annual increase in the number of indigent insane in all the institutions in the State is about 550. A large proportion of the overcrowding element in the State hospitals belongs to the class of quiet, chronic insane, which might be suitably provided for in county institutions at a greatly reduced cost. The present average *per capita* cost for maintenance in the State hospitals ranges but little less than the \$3.75 fixed by law. There are about 200 insane convicts in the State institutions, of whom 125 are in the State hospitals, to whom they were committed, by orders of court, generally from the penitentiaries and county jails. There are now 35 in the penitentiaries and jails and the remainder in certain county almshouses, having departments in which insane patients are received and treated."

Military.—The Adjutant General's report in March showed 878,394 men subject to military duty and a National Guard of 689 commissioned officers and 8,066 men.

Under the first call of the Secretary of War, in April, the quota of the State was 10 regiments of infantry and 4 batteries of artillery. Under the second call, in June, 18 separate companies of infantry were to be raised and added to organizations already in service.

Industries and Products.—The ninth annual report of the factory inspector's department for the

year ending Oct. 30, 1898, shows a marked increase in the work. Eighteen thousand two hundred and twenty-eight inspections were made, an increase of 8,315 over the number in 1897. Four thousand official visits were also made. Fourteen thousand three hundred and eighty-three orders were issued, an increase of 6,184 over 1897, with 13,183 compliances reported at this time.

Some of the statistics given by the report are: Employees in mills, factories, etc., 408,979, of whom 45,086 are aliens, the remainder native born or naturalized. Of 12,924 employed in sweatshops, 8,761 were aliens. In the bakeries 6,477 were employed, of whom 1,164 were aliens. Of 2,566 family workers, 1,667 were aliens.

There were 1,754 accidents, of which 73 were fatal. The preceding year but 940 were reported. The increase is due to the fact that a number of foundries, machine shops, iron and steel works were not amenable to the factory laws prior to this year. Several prosecutions were instituted against those who persisted in working minors and women over the lawful time. They were settled upon agreements that such violation should not be repeated, and all costs in the cases were paid by the defendants.

"The law regulating the manufacture of clothing, etc., enacted by the last General Assembly, would be an ideal one if the department had the power to confiscate goods made in unlawful and unhealthy places, and dispose of them in such a manner as would best protect the public health. The large contracts for soldiers' clothing, requiring prompt and quick delivery, were an incentive to those contracting for the work to be careless as to where the goods were made. In 9 places where clothing was being manufactured diphtheria prevailed in its worst form."

James M. Clark, chief of the Bureau of Industrial Statistics, has prepared an elaborate report on Pennsylvania's production for 1897 of pig iron, steel ingots, and tin plate. The total production of open-hearth steel for the year was 1,421,373 gross tons; Bessemer, 2,586,278 gross tons; crucible, 9,245 gross tons; combined production, 4,056,896 gross tons, an increase of 71,367 gross tons over the previous year. The total production of pig iron was 4,617,634 gross tons, an increase of 591,284 tons over the previous year. The average value was \$48,884,854, an increase of \$3,712,815. The average value per ton shows a decrease of 63 cents, the average value for 1896 having been \$11.21 against \$10.58 last year.

The aggregate cost of basic material out of which this production of pig iron was made, which means only the iron ore and scrap or cinder, if any were used, was \$9,962,533, an increase of \$3,711,113 over 1896. Neither fuel, limestone, nor any other item of cost is included as basic material with the iron-producing materials here named. The cost per ton of this basic material was \$6.48, a decrease of 4 cents per ton from 1896. The number of working people employed was 11,272, a decrease of 308 compared with 1896.

The aggregate amount of wages paid was \$4,676,970, an increase of \$87,805. The average yearly earnings were \$414.92. The capital invested in the active pig-iron furnaces in Pennsylvania for 1897 is estimated at \$41,000,000.

There were 15 black-plate works in operation in the State in the manufacture of tin plate. The capital invested was \$5,017,127, an increase of \$1,389,852 over the previous year. The entire production of black plate, tinned and untinned, was 254,157,601 pounds, an increase of 95,851,111 pounds over 1896.

The production of black plate which was not

tinned was 74,451,833 pounds, an increase of 23.1 per cent. over 1896. The value of this tinned product was \$5,180,624, an increase of \$2,022,925. The value of the black plate not tinned was \$1,657,297, an increase of 12 per cent.

In addition to these 15 tin-plate works manufacturing their own black plate and making tin plate from the billet or bar, 11 dipping works were in operation with a product of 45,926,000 pounds of tin andterne plate and a corresponding value of \$1,816,417. Eliminating the black plate made and not tinned, the entire production of tin andterne plate in Pennsylvania for 1897 was 225,631,766 pounds, an increase of 61.6 per cent. over the previous year. The corresponding value was \$6,997,041, an increase of \$1,951,944.

The combined product of the anthracite and bituminous coals from the State amounted to 106,000,000 short tons.

The wool clip of 1898 is given as 4,392,937 pounds.

Insurance.—The expenses of the State Insurance Department amount to about \$16,000 a year; the receipts from fees have gone as high as \$70,000. In 1898 about \$55,000 was turned into the treasury from this source; in 1895 the amount was \$37,279.76.

The commissioner says that soon after he assumed the duties of the office he gave attention to certain mutual fire insurance companies which had sprung up within a short time and had branched out extensively in underwriting not warranted in companies doing business on the mutual plan. The annual amount of money from these companies showed that an enormous amount was absorbed by salaries and expenses, while the fire losses paid were disproportionate to the amount of losses reported. An examination disclosed the fact that these companies had been started by a brood of promoters, who organized the companies solely for the purpose of extracting money from the gullible portion of the public. To obtain charters, both fraud and perjury were resorted to.

"A strict investigation was set on foot, with the result that two of the more prominent promoters were convicted and sent to jail for perjury. Since that time no companies of this character have presented themselves to the department for charters, and the companies in question, to the number of 33, have been forced out of existence. During the few years they flourished the promoters and managers drew several million dollars from the confiding public."

As a result of the supervision of the department there has been a large falling off during the last four years of the business done by worthless companies from other States.

The department discovered some time ago that several life insurance companies doing business in the State were really not what they claimed to be, but were liable to taxation, the result being that several thousand dollars of bank taxes were collected and taxes on their premiums will be collected in the future. Another source of revenue has been found in giving vitality to an act not previously enforced requiring agents of assessment life companies to have certificates of authority.

The Capitol.—After the passage of the act providing for a new Capitol eight plans were selected by experts and submitted to the commission. The following statement of the proceedings is taken from the Governor's message:

"At this point four of the five members of the commission declined to make a selection, and by resolution set aside and ignored the competition and all the plans presented. The only reason made public by them for taking such action was that the build-

ing, if erected under any of the plans, would exceed the limit of the appropriation and would require modification to come within the \$550,000. There was no evidence that the architects, or the experts passing upon the plans, had made any inquiry into cost of material or price of labor in Harrisburg or its vicinity.

"The four commissioners caused new plans and specifications to be made by an architect of their selection, and on Jan. 20, 1898, advertised for sealed proposals for the erection of a building according to his plans and specifications. An examination of these disclosed the fact that the commissioners proposed to let a contract for the erection, not of one building as required by the act of Assembly, but of an incomplete part of a larger structure intended ultimately for the accommodation of all the departments of the State government. The specifications called for 'temporary' work, particularly in the interior, and provided for the erection of a building in no sense fireproof, notwithstanding the act required the building should be as nearly fireproof as possible. Further requirements of the act were that it 'should be complete' and 'ready for occupancy and furnishing not later than Nov. 15, 1898.'

"Believing the proposed action of the commissioners to be in violation of the law, and that if permitted would commit the Commonwealth to the expenditure of large sums of money, not contemplated in the act, the Attorney-General on Feb. 4, 1898, filed a bill in equity to restrain them."

The court decided for the commissioners, upon their statement that the building would be complete in the time specified and fitted for occupancy within the amount of the appropriation. The Governor says further:

"I now aver that the four members of the commission have utterly failed to carry out their sworn promise to the court, and that they have acted in flagrant disregard of the act of Assembly. The structure in which you are assembling to-day is unworthy of your honorable bodies and is a disgrace to the Commonwealth. In its present condition it is hardly fit for human habitation, much less the official abode of the representatives of the great Commonwealth. Although the act of Assembly requires that the building shall be 'made as nearly fireproof as possible,' the roof and most of the interior fittings are as combustible as possible."

Peace Jubilee.—Oct. 25-28 a peace jubilee was held in Philadelphia, including a naval review, a procession of vessels around the anchored ships of war, the "Columbia," the "Texas," the "Gloucester," and the "Winslow," an army review and a civic parade in which 25,000 men marched, a dinner and a reception. The President and many of the Cabinet officers and army officers were present. On Oct. 28 the old Independence Hall was rededicated.

Bank Failures.—Several disastrous bank failures took place during the year. The People's Bank of Philadelphia closed its doors March 25. The Guarantors' Finance Company made an assignment about the same time, and the cashier of the People's Bank, John S. Hopkins, committed suicide March 24. The connection of the three events was shown when an examination revealed the fact that the cashier had loaned to the manager of the Finance Company sums still unpaid, aggregating, it was said, \$600,000, without the knowledge of the other officers and the directors of the bank, and that the securities for the loan were practically worthless.

Richard F. Loper, vice-president and general manager of the Guarantors' Finance Company, was placed under arrest March 28, charged with conspiracy to cheat and defraud the People's Bank.

The People's Bank was a depositary for State and

city funds, and at the time of its failure had more than \$500,000 belonging to the State and more than \$50,000 of city funds. The liabilities of the bank were placed at \$1,559,843, and the assets \$529,803. The president, Mr. McManes, promised to make good the losses. In connection with the failure, United States Senator Matthew S. Quay, his son, Richard R. Quay, and Benjamin J. Haywood, ex-State Treasurer, were indicted, charged with conspiracy with John S. Hopkins to use unlawfully the money of the State on deposit in the People's Bank.

The Supreme Court near the close of the year granted a stay of proceedings, which had been denied in a lower court by Judge Finletter, who overruled the demurrers to the indictments. The Chief Justice refused a petition to have the trial removed from the Philadelphia courts.

The German National Bank of Pittsburg went into voluntary liquidation Oct. 19. It held a large amount of stock of the Pittsburg Pure Beer Brewing Company, as it seems, which received a charter Aug. 31, 1897, with a capital stock of \$1,000; but the next day the stockholders increased the capital stock to \$1,000,000. It was alleged that this stock was loaned illegally, before the State department was notified and the papers approved by the Secretary or his deputy.

Gideon W. Marsh, president of the Keystone National Bank, which failed in March, 1891, returned to the city Nov. 3, after being a fugitive seven years, and gave himself up. William H. Wanamaker, who had given bonds for \$20,000 for Marsh's appearance in court, was obliged to forfeit the bail. He pleaded guilty to the indictments against him. He informed the court that his predecessor had left a deficiency of more than \$1,000,000; that he had erred in covering this, but that he never had profited one dollar through the bank's losses. He was sentenced to imprisonment twelve years and three months and to pay a fine of \$500.

William Steele, formerly cashier of the Chestnut Street National Bank, which failed in 1897 (see "Annual Cyclopædia" for 1897, page 661), was convicted in December on a charge of making false reports of the condition of the bank and aiding its president in misapplying its funds with intent to injure and defraud. The president, William M. Singerly, died suddenly Feb. 27, 1898, not long after the failure. The evidence in the trial of this case showed that Mr. Singerly, as president of the bank, without the knowledge of the directors, applied \$800,000 of the bank's money to his own use—\$300,000 more than the entire capital—and that he was enabled to do so by the assistance of the cashier, who issued false reports to cover the transactions.

State Laws in Court.—The law taxing alien labor, passed in 1897, providing that employers shall pay three cents a day to the State from the wages of aliens, was declared unconstitutional by the Supreme Court, because opposed to the provision of the national Constitution declaring that no State shall deny the equal protection of the laws to all within its jurisdiction.

The law prohibiting the manufacture and sale of oleomargarine and other imitations of dairy products was declared void by the United States Supreme Court, in so far as it interferes with the sale of original packages, which comes under the interstate commerce law. The Pure-Food Department has gone on with prosecutions in cases not coming under the Federal law.

In a case in Philadelphia in which the ground was taken that the liquor license law was unconstitutional, the Superior Court affirmed the validity of the law.

Political.—State officers were chosen Nov. 8; also members of Congress and a State Legislature (with the exception of half the Senate), which will have the choice of a United States Senator to succeed Matthew S. Quay.

The People's party held its convention at Williamsport, April 27, and made the following nominations: For Governor, Dr. Silas C. Swallow; Secretary of Internal Affairs, T. P. Rynder; Member of Congress, William H. Berry.

Dr. Swallow, who as Prohibition candidate for the office of State Treasurer in 1897 received nearly 119,000 votes, was afterward made the candidate for the Governorship by the Prohibition, Liberty, and Honest Government parties.

The Republican State Convention met in Harrisburg, June 2. There was a bitter contest between the Quay and the anti-Quay forces, the latter led by John Wanamaker, who had been a candidate for the nomination for Governor, but withdrew his name, leaving the contest between W. A. Stone, of Allegheny, the Quay candidate, and C. W. Stone, of Warren, anti-Quay. W. A. Stone won by a vote of 198 to 164. A proposition to make the nomination unanimous was voted down. The resolutions were mainly upon national affairs. Demand was made that Congress "make adequate provision for the construction of a water way between the slack-water navigation of the Ohio and its tributaries and the Great Lakes" and "continue the appropriation for the improvement of Delaware river until this channel shall be of sufficient depth and width to receive the largest battle ships and the biggest vessels of our merchant marine into the port of Philadelphia."

Gratitude was expressed to the representatives of the State in Congress for their efforts in securing such appropriations from the National Government as will insure the final completion of the improvements upon the Ohio, the Allegheny, and the Monongahela rivers, so that free slack-water navigation will be secured to the people of that great manufacturing and industrial region.

The State administration was approved, and good-road legislation recommended.

The ticket was: For Governor, W. A. Stone; Lieutenant Governor, J. P. S. Gobin; Secretary of Internal Affairs, James W. Latta; Congress at Large, Galusha A. Grow and Samuel A. Davenport; Superior Court Judge, William Porter.

The Democratic Convention met in Altoona, June 29. A strong effort was made to unite the party upon Judge James G. Gordon, a gold-standard Democrat, as the candidate for Governor. James M. Guffey was also mentioned as a candidate. He had been appointed early in the year to succeed W. F. Harrity as the representative of the State on the National Democratic Committee, the charge having been made that Mr. Harrity was no longer in accord with his party. Mr. Guffey before the convention threw his strength to George A. Jenks. He led the free-silver forces in the convention, which proved to be dominant. Notwithstanding this fact, an effort to insert a plank reaffirming the Chicago platform was defeated, the controlling influence in the convention preferring that the platform should relate entirely to State issues.

The platform said, regarding the Republican party:

"It promised, in most solemn declaration, reform in legislation and the betterment of municipal government, and it has not only violated these promises, but it endeavored to perpetuate by most obnoxious statutes the power of municipal rings and combinations of corrupt politicians to pass laws for the enrichment of special interests, and it has, through the system of bossism, to which it has complacently sub-

mitted in the past, elevated these self-constituted leaders to the highest positions of political honor and public trust within its power to confer.

"It has not only needlessly multiplied offices to make place for party hacks and the subservient tools of party leaders, thereby greatly enlarging the public expenditures and made increased taxation necessary to pay new salaries, but has without just cause recklessly increased the salaries of public officials in all departments of the State government, and so depleted the public funds that the public charities of the State have been robbed of their necessary appropriations.

"It has not only tolerated the unjust withholding of the public moneys appropriated to the common school and public charities, that favorites of the treasury might be enriched and the funds for corrupting the elections might be enlarged, but its recognized leaders have endeavored to thwart and defeat all legislation and every movement looking to a correction of these abuses.

"For the purpose of maintaining large balances in the State treasury and to use them for corrupt political purposes it has withheld millions of dollars of personal property tax from the counties which were entitled to the prompt return of it.

"It has created a building commission for the erection of a State Capitol whose manifest purpose is to disregard the plain mandate creating it, to perpetuate for an unnecessary length of time its unfortunate existence, to benefit the favorite contractors of some political boss, the fruit of whose actions will be a large increase of the State indebtedness."

Further, the resolutions declared that the Democratic party, if intrusted with the administration of the affairs of the State, would abolish needless offices, and reduce excessive salaries, simplify the ballot law, and pass laws prohibiting trusts and combinations inimical to free competition and individual enterprise; and that the statute regulating the administration of the State treasury should be fearlessly and faithfully enforced, the moneys appropriated to public schools and public charities should not be withheld, and those due the counties should be properly paid to them; "equal and exact justice should be meted out to citizens, with favoritism for no persons or interests; and no laws prejudicial to the interest of the States, cities, and municipalities" should be passed.

The ticket follows: For Governor, George A. Jenks; Lieutenant Governor, William H. Sowden; Secretary of Internal Affairs, P. C. Delacey; Congress at Large, Jere N. Weiler, F. P. Iams; Superior Court Judges, William Trickett and C. M. Bower. The vote on the nomination for Governor stood: Jenks, 305; Gordon, 116; A. H. Coffroth, 2; J. Henry Cochran, 1.

The canvass was very animated, and serious charges of bribery, "selling out," and secret deals were made, besides charges of misappropriation of public funds against past State administrations. Mr. Wanamaker, Mr. Jenks, and Dr. Swallow made speeches arraigning officials for their conduct of State affairs. The Republican candidate for the office of Governor declined a challenge from Dr. Swallow to a joint discussion of the issues of the campaign. Single-Plank Clubs were organized in the various counties by the Honest Government managers, having for their motto, "Thou shalt not steal."

The election resulted in the victory of the Republican ticket. The vote for Governor stood: Stone, Republican, 476,206; Jenks, Democrat, 358,300; Swallow, Honest Government, etc., 132,931; Barnes, Socialist-Labor, 4,278.

The Legislature for 1899 will have on joint ballot 164 Republicans, 84 Democrats, and 6 Fusionists.

After the election Mr. Quay offered a reward of \$10,000 for information leading to the conviction of any one bribing, or attempting to bribe, a member of the Legislature during the senatorial contest; and Mr. Wanamaker offered \$20,000 for information securing the conviction of any one giving, offering, or taking bribes.

PERSIA, an absolute monarchy in Asia. Muzaffereddin, born March 25, 1853, succeeded his father, Nasreddin, as Shah in Shah, or Emperor, on May 1, 1896. The Valiahd, or heir apparent, is Mohammed Ali Mirza, born in 1872.

Area and Population.—The area is about 628,000 square miles, with a population estimated at 8,904,000, of whom 8,000,000 are Shiites, 800,000 Sunnites, 45,000 Armenian and 25,000 Nestorian Christians, 25,000 Jews, and 9,000 Guebres. The European residents do not exceed 800.

Finances.—Every village and district is required to pay in kind or cash a collective tax, the amount of which is fixed by the assessor from time to time. In this way about 82 per cent. of the revenue is raised, the burden falling upon the laboring classes. Customs supply 15 per cent., and the post office and mining and other concessions 3 per cent. A foreign loan of £500,000 was raised in 1892 to indemnify the tobacco company for a canceled concession. The expenditures are chiefly for the army, pensions, the court, allowances to princes, general and local administration, and education. The total revenue was estimated for 1898 at £1,470,000. The army numbers 24,500 men, while 53,520 trained and untrained men are liable to be called into the service. There are three armed steamers.

Commerce and Production.—The staple agricultural products are wheat, barley, and rice. About 606,100 pounds of silk are produced annually in northern Persia, two thirds of which is exported. The export of opium is estimated at 13,000 cases, and the production is increasing, the Persian drug being in demand both for medicinal purposes in Europe and for smoking in China. The annual export of tobacco is over 12,000,000 pounds; of cotton, 9,934,400 pounds; of wool, 7,714,000 pounds. The carpets exported each year are worth over \$700,000. Dates are grown in the valleys, and plains from 50 to 150 miles inland from the Persian Gulf. The production is 500,000 hundredweight a year, half of which is exported to India, Europe, America, and Africa. The dates consumed in Persia are not all used as food. Large quantities are manufactured into syrups, spirits, and vinegar. Other exports are pearls, turquoises, shells, and woven stuffs. The total value of the foreign trade was estimated for 1897 at \$37,500,000.

The Political Situation.—Political and economic conditions have grown worse since the death of Nasreddin. In March, 1898, the province of Kirman was in rebellion. The people of southern Persia have for a long time been smuggling in Martini rifles and ammunition. In February, Abdul Kasim Khan, a friend of the English, was made Minister of Finance, but in June the Grand Vizier, Amin ed Dauleh, resigned, and the Minister of Foreign Affairs, Mushir ed Dauleh, organized a new administration. Bread riots occurred at Tabriz and other places in the summer. Officials and merchants who had bought up the grain had their houses destroyed and their granaries plundered. Feuds occurred between the followers of rival priests. The British sought in the anarchical state of the country to strengthen their political position in southern Persia. In connection with a frontier survey a military force was massed on the borders of British Baluchistan and the tribes were brought into subjection. In some places the British troops crossed over into Persian territory. The British

Government had promoted the negotiation of a loan of £1,250,000 which a number of English banks contracted to make to the government of the Shah on the security of the customs revenue of southern Persia. The Russian Government forbade the Persian Government to conclude the loan, offering to advance a larger sum on the security of the customs of the whole of Persia.

PERU, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 48 members, elected by departments, and a House of Representatives containing 108 members, elected by provinces, members of both houses for the term of six years, a third being renewed every two years. The President is elected for four years. Nicolas de Pierola was elected President in 1895 for the term ending Sept. 10, 1899. The Council of Ministers in the beginning of 1898 was composed as follows: President of the Council and Minister of Justice, Worship, Public Instruction, and Public Charity, Dr. Manuel P. Olaechea; Minister of Foreign Affairs, E. de la Riva Agüero; Minister of the Interior, Lorenzo Arrieta; Minister of Finance and Commerce, S. Rey; Minister of War and Marine, Col. J. R. de La Puente; Minister of Fomento, M. I. Cuadross.

Area and Population.—The area of Peru is 463,747 square miles, not including the province of Tacna, area 8,685 square miles, occupied by Chili for twelve years under an agreement that the population should decide in 1894 whether they should continue to live under the Chilean flag or return to Peru. The population of Peru is estimated at 2,980,000, of whom 462,000 are of pure Spanish descent, 600,000 of mixed race, 1,500,000 civilized Indians, 350,000 uncivilized Indians, 18,000 European settlers, and 50,000 Chinese and other Asiatics.

Commerce and Production.—The exports of cotton in 1895 were about 12,000,000 pounds. Of coffee 2,300,000 pounds are exported annually. The Peruvian Corporation, having obtained a concession of 5,000,000 acres in central Peru, is establishing communications by way of the Amazon and the Ucayali with the coffee district of Chanchamayo and the valley of the Perené. The sugar production of 1897 was 65,000 tons. Other cultivated products are cacao, rice, tobacco, corn, wine, and spirits. The hair of the alpaca and vicuña is exported. India rubber, cinchona and other medicinal plants, and dyes are obtained from the forests. The export of coca leaves is important, amounting to 380,000 kilogrammes a year, besides which 3,407 kilogrammes of cocaine were exported in 1895. The mineral claims recorded in 1897 reached 3,475, including silver, gold, lead, zinc, quicksilver, coal, salt, sulphur, and petroleum. The silver production in 1896 was 3,300,000 ounces. The oil fields are extensive, but, owing to the fitful flow and inferior quality, the wells have not proved profitable.

Navigation.—During 1896 there were entered at the port of Callao 525 vessels above 50 tons, of 592,783 tons, and at Trujillo 284 vessels, of 446,520 tons.

The merchant marine in 1896 numbered 36 vessels above 50 tons, having an aggregate tonnage of 9,953, and 96 smaller vessels, of 1,246 tons.

Communications.—Of 924 miles of railroads 800 belong to the state. The total cost of construction has been £36,000,000 sterling.

The Government telegraph lines had a total length of 1,491 miles in 1896, during which year 88,326 messages were transmitted.

Politics.—Owing to dissensions among its members, the Cabinet was reorganized on May 17, 1898, as follows: Prime Minister and Minister of Justice, Señor Loayza; Minister of War, M. I. Cuadros; Minister of Foreign Affairs, Señor Porras; Minister

of the Interior, J. R. de la Puente; Minister of Finance and Commerce, I. Rey; Minister of Public Works, Señor Butler. A Government commission, appointed in January to discuss the basis of an arrangement of outstanding differences with the Peruvian Corporation, consisting of Señor Candamo, Dr. Arenas, and Carlos Pierola, could come to no agreement with that company, which had a concession of all the railroads, guano deposits, lands, and mines for sixty-six years. After the opening of the regular session of Congress on July 28, President Pierola proposed a liquidation of accounts between the Government and the British company. The proceeds of the salt monopoly, amounting to 734,000 soles, enabled the Government to pay the first installment of 1,000,000 soles for the ransom of the provinces of Tacna and Arica, which Chili had agreed to restore to Peru. A law was enacted providing for the establishment of a gold basis and the coinage of Peruvian sovereigns. The importation of silver coins has been prohibited since May 10, 1897.

PHILIPPINE ISLANDS, an archipelago in the western Pacific Ocean, formerly a colony of Spain; occupied by the naval and military forces of the United States in June and July, 1898, and ceded to the United States by the treaty of peace concluded with Spain.

Area and Population.—The islands extend from 5° 24' of north latitude up to 19° 38' and from 117° 21' to 126° 8' of east longitude. There are more than 1,400 islands, but all except a few are barren volcanic rocks. The total area is estimated at 115,528 square miles, and the population is variously estimated at 8,000,000. Of the main islands the most important is Luzon, with an area of 57,505 square miles and nearly 5,000,000 inhabitants. Panay, with 4,742 square miles, has about 1,000,000 inhabitants. Mindanao, which is 38,000 square miles in extent, has scarcely 200,000. Another of the larger islands is Palawan. Of less extent, but more populous, are Leyte, Mindoro, Samar, Negros, Cebu, Masbate, and Bohol. Of the Negritos, or Papous, the original inhabitants of the islands, only a few thousands remain, scattered in bands through the mountains and forests. The Malays, who conquered them, form the bulk of the population, mingled with Chinese, who settled on the islands for trading and industrial purposes even before the Spanish conquest in the sixteenth century, and with the Spanish immigrants. The Spanish residents, exclusive of the military, do not exceed 8,000. Including the Chinese, there are not more than 80,000 people of unmixed foreign blood in all the islands. The Malay Indians are divided into three main branches, the Bisayans, the Itocans, and the Tagals. In some of the numerous tribes into which they are subdivided is a large infusion of Japanese and Chinese blood, in others Papuan and Polynesian. The Manthras are a cross between the Malays and the Negritos. There are over 200 different tribes living alongside each other, severed only by race distinctions and customs. The people are industrious agriculturists and skillful sailors. The Chinese mestizos, sprung from the intermarriage of Chinese with the native women, number several hundred thousand in the island of Luzon, and these were the most active element in the rebellion against Spanish rule. The Spanish mestizos are less numerous. Before the Spanish conquest the Malays were Mohammedans. Forceful conversion to Christianity has left not more than 500,000 adherents of the ancient faith.

Manila, the capital, has about 250,000 inhabitants. Other cities are Laoag with 30,642, Lipa with 43,408, Banang with 35,598, Batangas with 35,587, Leyte, and Cavité. The Augustinian, Franciscan, and Dominican orders furnish the priests, who

were the real rulers of the country until the natives rebelled against their authority. Their foundations comprise nearly a third of the cultivated land in the Philippines. Missionary priests of the Jesuit order, not powerful and wealthy like the others, living among the remote and savage tribes and devoting themselves to Christianizing and civilizing these, never have provoked the hostility of the natives.

Finance.—The Spaniards have collected a revenue of \$8,000,000 a year. In addition to customs duties, which almost shut out all manufactures and other imports except those of Spain, the people were taxed in every possible way. On cotton goods and on petroleum the duty was equal to 100 per cent. There were taxes on stores and shops, on factories and professions, on horses and carriages, on houses, on every animal slaughtered, and each person according to his wealth and station had to pay a personal tax, ranging up to \$25 a year. The Chinese paid a special tax. Even from cockfights a considerable revenue was obtained. Tobacco, hemp, and other products were made to pay duties on exportation. With a revenue of £2,715,980 in 1895, the estimated expenditure was £2,656,026 sterling.

There are 720 miles of telegraph in the islands and 70 miles of railroad.

Commerce and Industry.—Besides agriculture and fishing, the native Indians practice some fine branches of industry, such as the manufacture of ornamental mats and the weaving of fabrics from cotton, pure or mixed, pineapple fiber, abaca filaments, and other materials, the making of cigar cases, etc. The cloths called pinas are woven from the fibers of the pineapple leaf and exquisitely embroidered. The industries are mostly in the hands of the Chinese. In dyeing and in basket and metal work the natives are skillful. Great numbers are employed on an industrial scale in the Government cigar factories, in the making of cordage from abaca fiber, and in the preparation of hemp and the manufacture of sugar and copra. Sugar, hemp, tobacco, and copra are the chief exports, and rice, flour, wine, cotton cloth, clothing, coal, and petroleum the largest imports. Other articles are linens, iron, machinery, hardware, woolens, earthenware, and umbrellas. Rice is grown on the islands, and the cultivation can be indefinitely increased. Millet, maize, and sago are other food products, besides fruit in unequalled abundance and variety. Indigo and coffee are successfully cultivated. Dyewoods and gums abound on all the islands. The carabao, or water buffalo, is domesticated for husbandry, and hardy and active horses of a small breed are common. Pigs, sheep, goats, and poultry are reared. Edible swallows' nests are gathered in the chalk cliffs. The rivers and lagoons abound in fish. The soil is wonderfully fertile. A vast supply of lignite underlies some of the islands, but is as yet untouched. Other minerals are gold, copper, iron, quicksilver, lead, sulphur, and saltpetre. From the sea are obtained mother-of-pearl, coral, tortoise shell, and amber. The woods found in the forests include ebony, logwood, ironwood, sapanwood, and cedar. The orange, mango, tamarind, guava, and cocoanut palm grow everywhere. Some of the minor cultivated products are cotton, vanilla, cassia, ginger, pepper, cacao, pineapples, wheat, maize, cinnamon, and betel.

The small commerce is carried on by Chinese, while the export and import trade is in the hands of English, Germans, and Americans. The port of Manila has a trade of \$36,000,000 a year. Its exports include \$8,000,000 of hemp, \$6,000,000 of sugar, \$2,000,000 of tobacco, \$2,500,000 of gold, and \$1,250,000 of coffee. Besides these staples the

MOUNT MAYON, PHILIPPINE ISLANDS.

islands export copra, indigo, gold dust, birds' nests, coffee, sapanwood, mats, hats, hides, trepang, gum, alnaciga, mother-of-pearl, tortoise shell, cigars, and cotton. In spite of the high protective duties about 34 per cent. of the imports of late years have come from Great Britain, 21 per cent. from China and Hong-Kong, and only 13 per cent. from Spain. Of the exports, tobacco and cigars go to Europe and Asia while most of the hemp has been taken by the United States. The Manila hemp is superior to that grown in any other part of the world. The sugar, which is of the lowest quality, also finds its way to the United States, as well as some of the other products, but little has been imported hitherto from America except kerosene oil. Before the American tariff was placed upon raw sugar nearly all the sugar went to San Francisco. In 1897 Great Britain took more sugar and Japan nearly as much as the United States. Of the hemp Great Britain took four sevenths and the United States nearly all the rest. Of the tobacco 75 per cent. went to Spain, 20 per cent. to Great Britain. France received nine tenths of the copra product and Great Britain the remainder.

The following table gives the trade of the Philippine Islands with different countries according to the latest reports, namely, for 1895 in the case of Spain; 1896 for France, Germany, Belgium, the Straits Settlements, and Victoria; and 1897 for the others:

COUNTRIES.	Imports.	Exports.
Great Britain.....	\$2,063,598	\$6,223,426
France.....	359,796	1,990,297
Germany.....	774,928	223,720
Belgium.....	45,660	272,240
Spain.....	4,973,589	4,819,344
Japan.....	92,823	1,332,300
China.....	97,717	56,137
India.....	80,156	7,755
Straits Settlements.....	236,001	274,130
New South Wales.....	176,858	119,550
Victoria.....	178,370	180
United States.....	94,597	4,383,740
Total.....	\$9,174,093	\$19,702,819

The trade in these years was much smaller than the average, owing to the internal disturbances. From Great Britain in 1893 the imports amounted to \$3,500,000 and the exports of Philippine produce to Great Britain were \$10,607,000 in value; from France the imports have fallen from \$2,000,000, while the exports to France have trebled. Chinese imports have also declined, but the exports to China are twice as much as in 1893.

Conflict between the Americans and the Filipinos.—Emilio Aguinaldo, the young leader of the Philippine insurgents, having proclaimed himself first Dictator and then President of the Philippine Republic, sought on every occasion to obtain from the American commanders an assurance that the United States forces would evacuate the islands after having expelled the Spaniards. (See UNITED STATES.) Gen. Anderson, in reply to his inquiry as to what the Americans intended to do, told him that the United States had never been a colonizing power. Gen. Merritt he could not draw into a discussion of the intentions of the United States, nor extract from him any recognition of his provisional Government. From the first arrival of the American troops he prevented their getting transportation or labor from the natives, because of his failure to obtain official recognition; and hence friction arose from the beginning. Aguinaldo proclaimed a provisional Government of the Philippine Republic at Bacoor in June. The people in the provinces north of Manila rallied in rebellion against the Spaniards, and Aguinaldo entrenched his forces in a circle around the outskirts

of Manila. One of the first points seized was the waterworks near San Juan del Monte. When the first American troops arrived, they encamped in the rear of the Philippine line on the shore of the bay. The Philippine commander was induced after some negotiation to withdraw his forces at this point and allow the Americans to occupy the trenches. Aguinaldo—already jealous of the American occupation before Manila was captured without his co-operation and protected by the American troops from the Filipinos—had removed his Government to Malolos, commanding the railroad to Dagupan. After the surrender of the Spaniards in August he turned the water off, but was induced to let it on again, without compliance being given to his demands. Gen. Merritt held no official intercourse with the insurgent Government. When there was danger of the sacking of Manila by the impatient Filipinos, or a collision with the American troops, who still surrounded the city, Gen. Otis in September insisted upon their evacuating the suburbs. Reluctantly and surlily they complied with his demands, taking up positions farther back and occupying some of the Spanish blockhouses. They were massed, especially, near Caloccan and the reservoir at Santa Mesa and San Juan. To avert complications, the United States forces took up positions on an interior line facing the Filipinos. The waterworks were strongly guarded, and there the first collision between the Americans and Aguinaldo's troops took place. The forces of Aguinaldo, which grew to an army of 25,000 or more, were drawn from the five or six provinces north of Manila, but the northern provinces of Luzon were under the control of another leader, whose party was not hostile to the Church and did not plunder monasteries, like the followers of Aguinaldo. In the island of Panay the emissaries of the latter organized an insurrection before the arrival of the United States expedition, and the insurgents occupied Iloilo and held it in defiance of the American troops until they were expelled in February.

Major-Gen. Otis, who was appointed to the command of the military forces of the United States, after the signature of the treaty of peace with Spain, issued a proclamation under the President's instructions announcing the cession of the islands to the United States, and the extension of the military Government established in Manila to the whole of the ceded territory. The Americans came, not as invaders or conquerors but as friends, to protect the natives in their homes and employments, in their personal and religious rights; and all persons who by active aid or honest submission co-operated with the Government of the United States to give effect to these beneficent purposes were promised the reward of its support and protection; all others would be brought within its lawful rule, with firmness but without severity. The paramount aim of the military Administration was to win the confidence, respect, and affection of the inhabitants by proving that the mission of the United States was one of benevolent assimilation, substituting the mild sway of justice and right for arbitrary rule. Aguinaldo reconstructed his Cabinet, selecting men determined on resistance to American dominion—Mabini as Minister of Foreign Affairs and Premier, Teodoro Sandica as Minister of the Interior, and Gregorio Gonzaga as Minister of Public Works, while Gen. Baldomero Aguinaldo remained Minister of War, and Gen. Trias Minister of Finance. Gen. Rios, late Spanish commandant at Iloilo, endeavored to obtain the release of 11,000 Spanish troops held as prisoners by the insurgents, and 1,900 civilians, including provincial governors and other officials, besides priests and monks and many women. His mission proving fruitless, Gen.

Otis made a demand for their surrender, but with no better success. Before the ratification of the treaty of peace by the United States Senate, Agoncillo, late Vice-President in the provisional Government, went to Washington to endeavor to plead the cause of Philippine independence. President McKinley declined to give him an audience as the representative of a Philippine national Government. He sent home dispatches urging resistance, and when they were made public he fled to Canada. A commission appointed by President McKinley to go to the Philippines, study the situation, and advise him what should be the policy of the United States regarding the islands, consisted of Rear-Admiral George Dewey, Major-Gen. Elwell S. Otis, Prof. J. G. Schurman, Col. Charles Denby, and Brig.-Gen. Charles B. Whittier.

their own loss being 48 killed and 118 injured. Col. Duboce and his regiment of Californians distinguished themselves by their attack on the stronghold at Paco; and Idaho, Wyoming, Tennessee, and Washington, as well as California volunteers, by charging across the rice fields in the face of a hot fusillade. The Filipinos who confronted Gen. Anderson's division fought more stubbornly than those who attacked Gen. MacArthur's command in the north. The Fourteenth Regulars fought brilliantly against great odds, until Col. Duboce brought the reserves to their relief. On Feb. 6 the Americans resumed their advance in order to gain possession of the waterworks. A native uprising in Manila was attempted in the evening, but was quickly checked by the watchful authorities. The Colorado, South Dakota, and Nebraska men charged the

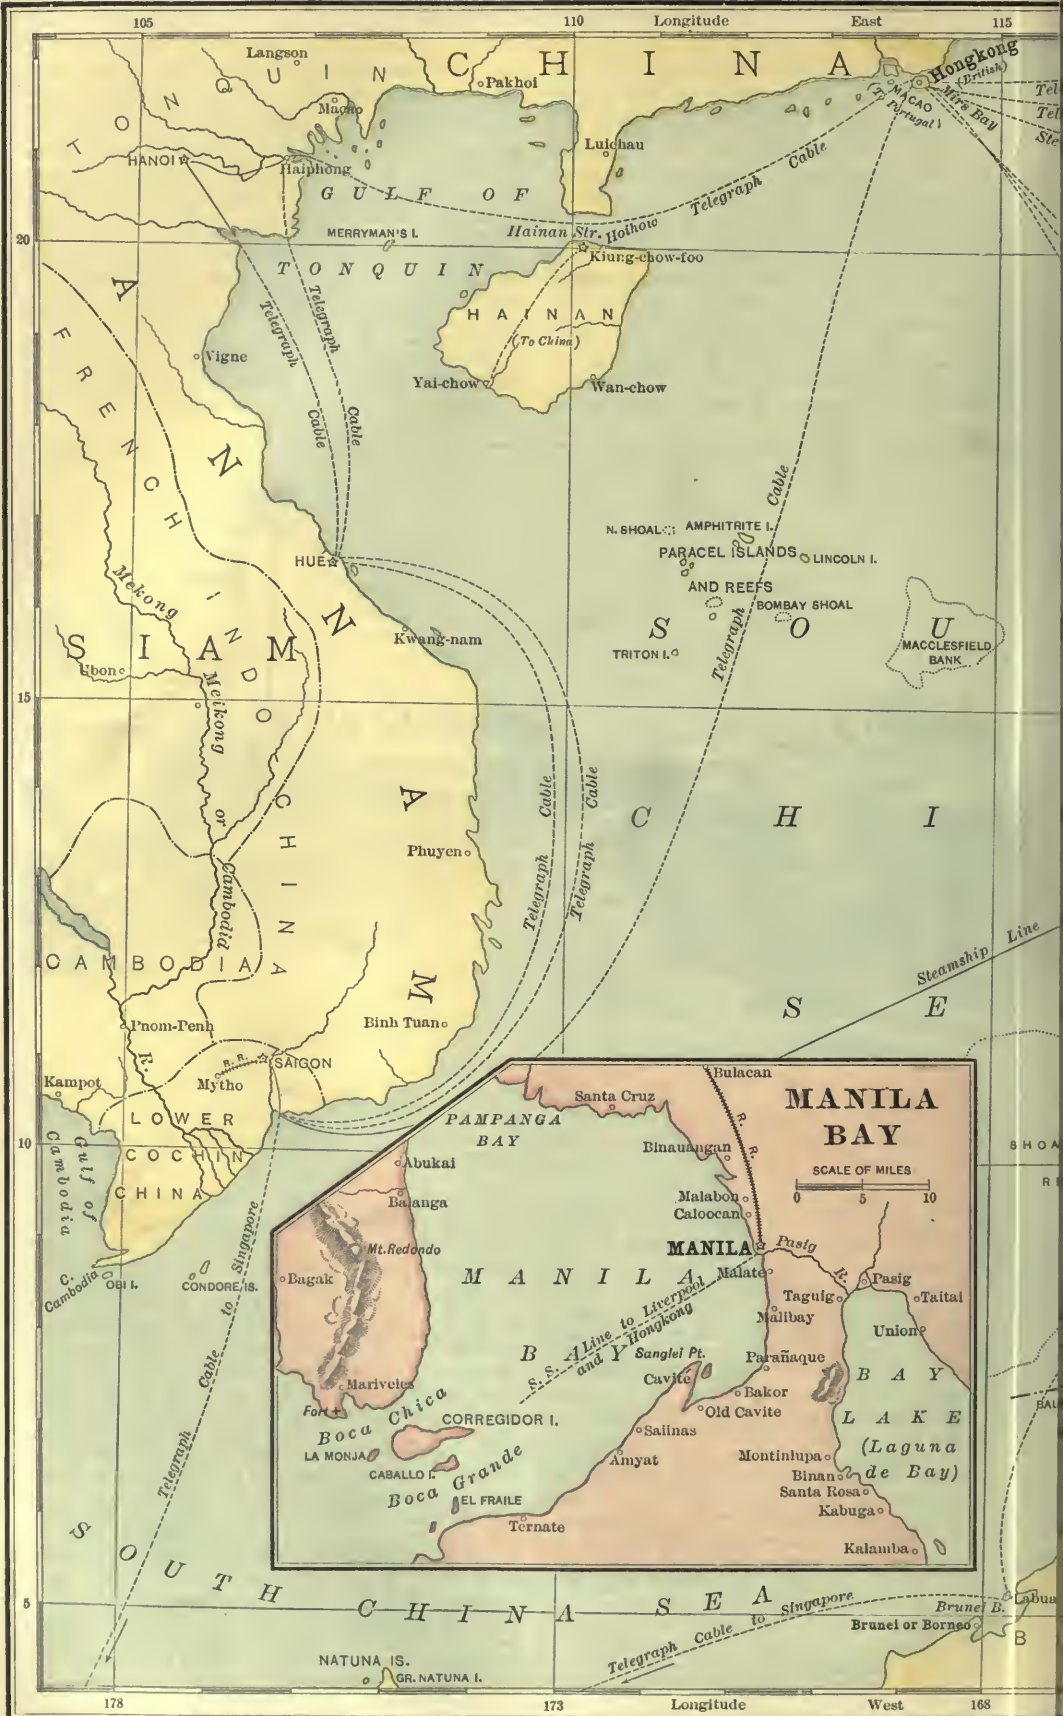

A STREET IN ILOILO.

Hostilities between Aguinaldo's army and the American forces began with an attack on the outposts around Manila on Feb. 4. The entire Filipino line north of the Pasig advanced to the attack, but was held in check until re-enforcements arrived. The battle began near Santa Mesa where the Nebraska troops fired on a body of Filipinos as it advanced into the neutral zone. The Nebraska, Colorado, and Tennessee volunteers on one flank, supported by the Utah and 30 United States batteries, and on the other the Montana, South Dakota, and Pennsylvania regiments, charged up the steep San Juan hill in the face of a terrific fire. The assault was renewed in the night, and as soon as the morning broke the Americans advanced, while the "Charleston" and "Concord" shelled the Filipino trenches at Caloocan, and the "Monadnock" the positions at Paco, Santa Mesa, Pandacan, and Santa Ana. Both sides fought vigorously at first; then the Filipinos gave way, and before the morning passed the Americans were in possession of all these villages; having driven the enemy back 10 miles and inflicted a loss of 1,900 killed and wounded,

blockhouses with a rush almost too daring and reckless to be soldierlike. The Filipinos made a stand behind intrenchments near Caloocan until they were routed by a gallant charge of the Kansas volunteers led by Col. Funston. The troops were so eager for the conflict that the sick left the hospitals to run to the front, and men from other regiments joined those on the firing line. The fighting was continued on Feb. 7 until the Filipinos were cleared from every point on the Pasig river. Aguinaldo, who had issued a proclamation on Feb. 4 declaring war, now asked Gen. Otis for a cessation of hostilities and a conference, but received no reply. The American line was stretched in a complete cordon for 22 miles round Manila. In so extended a position the army was not strong enough for aggressive tactics until re-enforcements arrived on transports. Nevertheless when Aguinaldo collected an army of 30,000 men in the neighborhood of Polo, and two of his commanders advanced down the river into the Tondo district, threatening the rear of Gen. MacArthur's division, Gen. Otis ordered on Feb. 10 an attack upon Caloocan, where 6,000 Fili-

pinos opposed Gen. Anderson's division. After a bombardment by the artillery and the "Monadnock" and "Charleston," the Kansas and Montana troops and the Third Artillery advanced swiftly, driving the insurgents from the woods and the strong earthworks, and carried the trenches at the point of the bayonet. The Filipinos, setting fire to the town, retreated in disorder. Half of these, posted in front of the American position, were put to flight, leaving 427 dead on the field.

Gen. Marcus P. Miller commanded the expedition that was sent to occupy Iloilo. This movement was made the ground of the original attack on the American lines by Aguinaldo, who in an interview with Gen. Otis warned him that if re-enforcements were sent to the Philippines or if the Americans attempted to seize Iloilo or any other posts or places he would begin hostilities. When Gen. Miller arrived at Iloilo he found the place in the possession of the insurgents, to whom the Spanish general had abandoned it. An army of 10,000 natives quickly gathered to defend the town. When he demanded the surrender of the port on Feb. 11 the natives began the attack, but soon desisted when the "Baltimore" and the gunboat "Petrel" began to bombard the town; and evacuated the place, burning the native quarter as they went away. The American force then landed and extinguished the flames. On Feb. 12 the troops occupied Jaro after breaking down the resistance of the native soldiery, which met them with a well-sustained fire of musketry. In Luzon the Americans repaired the Manila and Dagupan Railroad and used it for transport as far as Calococan; also the railroad leading to Malabon, which was now the advanced post of the Filipinos. These, after their wont, dug trenches opposite the American positions and fired upon the outposts nightly. The numbers fluctuated from day to day, many returning to their villages after a few days of active service, others continually resuming their places in the trenches. There were always enough to use all the rifles that Aguinaldo had supplied, and some even carried wooden guns to give a false idea of their strength. The American fleet could not prevent fresh arms and ammunition from being landed at different points on the coast. On Feb. 15 the California regiment, with some of the troops from Idaho and Washington and a battery of the Sixth Artillery, drove the Filipinos in the direction of Laguna de Bay, destroying the villages from which the natives had fired upon the outposts after raising a flag of truce. On Feb. 22 the adherents of Aguinaldo in Manila set fire to the city in many places, and shot at the firemen while they were extinguishing the flames. The native suburb of Tondo and the business district of Binondo were devastated. The intended uprising was frustrated by the prompt action of the military. After this the provost marshal carried on a strict search for arms, arrested knots of rebels when caught in secret meetings and prohibited natives from walking in the streets at night; and after the troops checked two or three attempts to attack the city and destroy property, from which the Filipinos themselves were the worst sufferers, a rising in Manila was no longer to be feared. Major-Gen. Henry W. Lawton arrived with the Fourth Infantry and a battalion of the Seventeenth on the transport "Grant," on March 10. On March 13 Gen. Wheaton's brigade, consisting of the Twentieth and Twenty-second Infantry, Washington and Oregon volunteers, a detachment of the Fourth Cavalry, and a battery of the Sixth Artillery, advanced from San Pedro and captured Guadeloupe with the assistance of a gunboat, which shelled the rebel positions on the Pasig river. A further advance to Pasig, Pateros, and Taguig, feebly resisted by the forces of Pio del

Pilar, cut the line of communication between the southern insurgents and Aguinaldo's forces in the north. Gunboats were improvised on the lake and small vessels of light draught were added to Admiral Dewey's fleet for the purpose of co-operating with the army in attacks upon rebel positions on the bay and the Marilao river.

The Visayan islands of Zebu, Negros, Mindoro, and Leyte had been seized, as well as Panay, by Tagal soldiers from Manila, well armed and trained, who came in the name of Aguinaldo and imposed an oppressive and extortionate government of force upon the peoples, incapable of resistance. When the "Boston" was sent from Iloilo to introduce American rule in Negros and Zebu, the change was gladly accepted by the population.

The battle ship "Oregon" arrived on March 18. The transport "Sherman" arrived on March 22. The re-enforcements from home brought Gen. Otis's total force up to 29,500 troops, of whom 24,000 were available for operations at Manila, the rest having been sent to garrison Iloilo, Zebu, and Negros. On March 25 Gen. MacArthur's division advanced upon Polo and Novaliches on the left and San Francisco del Monte and Mariquina on the right, clearing the insurgent trenches in front of the line north from the river to Calococan. The railroad was also secured, and Aguinaldo's picked troops were supposed to be hemmed in at Malabon and in the foot hills at Singalon. The natives held their trenches until the Americans charged on the double quick; then they broke and ran for the woods, losing more heavily than in any previous engagement. They adopted the American tactics of reserving their fire until the attacking force came within close range, and also fired lower than usual. Throughout the conflict they showed remarkable aptitude in observing and adopting the drill and tactics of the Americans. At the beginning of the engagement the brigades of Gen. Harrison Gray Otis and Gen. Hale advanced straight through the insurgent lines, cutting the enemy's forces in two. Then Gen. MacArthur's division was swung around to the left, driving the natives away on all sides. The intention was to close in on Polo from the north as well as the south. The brigade of Gen. Otis advanced on Novaliches and Polo from Laloma, while Gen. Hall cleared the country to the waterworks and Singalon, capturing San Francisco del Monte and Mariquina. The Montana regiment and the Third Artillery crossed the Taligahan river to attack Polo from the southeast, while Gen. MacArthur moved along south of the river. Gen. Hall's brigade moved to Banlae, protecting Gen. Hale's right; and the Oregon regiment, with a part of the Utah battery, held the extreme left. Gen. Wheaton's brigade advanced late in the day, developing a strong opposition between Malabon and the Tuliahan river. The intrenchments nearest to Malabon were attacked fiercely by the insurgents and suffered from a cross fire. The Oregon regiment advanced almost to the confines of the town, and withstood the charges of the natives and their constant volleying until the Third Infantry came up, after which the enemy was compelled to yield and to retreat precipitately into Malabon. The attempt to surround the rebels massed at Polo failed, the latter withdrawing to Malolos after another fight on March 26. On March 27 their rear guard, pursued by Gen. Harrison Gray Otis, made a stand in strong intrenchments at Marilao, but fled in panic when the artillery drew into close range. When Polo was captured, with the rolling stock found there, the Americans were able to advance rapidly along the line of the railroad, and the Filipinos abandoned Malinta, Gycanyan, and Mayeauayan. The barri-

acades erected along the railroad were admirably constructed, consisting of double rows of trenches running diagonally on both sides of the track, protected by thick earthworks topped with stones, provided with loopholes, and in some instances having sheet-iron roofs. These intrenchments were stoutly defended from front attacks, and were only taken by being successively enfiladed, whereupon the defenders disappeared into the woods, only to make a stand at the next line. South of Manila, the "Monadnock" bombarded Paranaque. The gunboats of light draught got near enough to shell Malabon, which was thereupon hastily evacuated. The town was left in ruins, and was not occupied by the Americans, who pushed on toward Malolos. Beyond Marilao Gen. MacArthur's troops, on March 27, encountered a body of Aguinaldo's choicest soldiers, who were sent down from Malolos to contest the advance of the Americans upon the rebel capital. There was a stubborn fight which was ended by a brilliant charge of the South Dakota regiment, putting the enemy to flight. The railroads were damaged as much as possible by the natives when they evacuated the country; not so much, however, that they could not be quickly repaired. Already supply trains were running to Marilao. The bridges over the rivers took a longer time to restore, but in a few days they were replaced. The gunboats entered the Bulacan river and did great execution in the battle near Marilao. The Filipinos left nothing but charred ruins in the towns that they abandoned. Such were the orders of Gen. Luna, their commander in chief. On March 28 Gen. MacArthur attacked Bulacan, which was defended by fresh troops from Malolos. While Gen. Otis's brigade captured this city, Gen. Hale on the right took Guirguintc. In three days the American army lay before Malolos. After a short bombardment of the trenches, the infantry advanced, the Nebraska and South Dakota troops flanking the position on the right, the Tenth Pennsylvania in the center, and the Twentieth Kansas and First Montana Infantry and the Third Artillery on the left. The enemy vacated the trenches after offering a slight resistance. It was found that the main Filipino army had retreated to Calumpit two days before, leaving a small rear guard to make a feint of opposition and to set fire to the town when the Americans made their appearance. The American army rested in the deserted Filipino capital before making any further advance. When a reconnoitering party appeared at Calumpit Aguinaldo retreated to Balingag. The total number of casualties in the encounters with the Filipinos from Feb. 4 to April 4 were 184 officers and men killed and 976 wounded.

PHYSICS, PROGRESS OF, IN 1898. Gravitation.—Richarz and Krigar-Menzel (Wiedemann's "Annalen," LXVI, 177) have finished their determination of the gravitation constant by means of the balance, on which they have been working since 1889. They find the constant to be

$$(6.685 \pm 0.011) \cdot 10^{-8} \frac{\text{cm.}^2}{\text{g. sec}^2}.$$

This result lies between these of Poynting and Boys, and is probably the best yet obtained.

The Ether.—Wien (*ibid.* July) notes that if the ether is immovable a thin plate possessing different radiating powers for heat rays on its two faces could put itself into motion by virtue of the difference of pressure on the two faces. It is possible, he thinks, that the ether is carried along by the earth, but not by bodies of small mass. (See also "Compressibility," under "Mechanics," below.)

Mechanics. Strength of Materials.—Faurie (Paris Academy of Sciences, Jan. 31) finds that stress pieces of metal subjected to longitudinal stress un-

der certain conditions develop nodal points at equal distances apart. The effects are not produced by bending or torsion.

Compressibility.—Barus ("American Journal of Science," October), in experiments on the compressibility of colloids, finds that an aqueous solution of gelatin or albumen has a low compressibility, and that India rubber dissolved in ether has a high one. When the colloid was compressed by mercury the meniscus would occasionally give way and a small drop would be projected through the substance, the colloid probably liquefying in front and being solidified behind the moving drop. Prof. Barus applies this phenomenon to the problem of the motion of material bodies through a solid ether.

Deformation.—Charpy (Société Française de Physique) finds that the deformation produced in a metal by a given force depends on the time during which the force acts. This is most noticeable with lead and is still true of copper, though not in the ordinary conditions of experiment. In the use of copper cylinders to measure the force of a confined explosive by their deformation, however, this fact may interfere with the results. M. Charpy's experiments show that the deformation produced by a given charge is smaller the less the time of action. The results of measurements with such cylinders are thus too small and should be multiplied by a coefficient somewhere between 1.1 and 1.2.

Elasticity.—Thurston ("Science," April 15), in an investigation of the relations of stress to strain in the case of India rubber, finds that in the early part of the strain it behaves precisely like other elastic substances; then a reversed curve is described and the rubber stiffens greatly, offering constantly increasing resistance until at last rupture takes place without yielding by inelastic deformation at any point of its course. The fracture is sharp and sudden and the break is smooth and at right angles to the line of pull. The highest load measured was 810 pounds per square inch. The author notes that Prof. R. A. Fessenden's experiments on rubber and other highly elastic substances indicate the existence in them of two components, a hornlike substance and a jellylike matter, in its pores.

Torsion.—Peddie (Edinburgh Royal Society, June 20) finds that calling the range of oscillation of a twisted wire y and the number of oscillations x , these are related in a manner shown by the equation $y^n (x + a) = b$, where n , a , b are constant for any one experiment. He finds (1) that when the wire is greatly fatigued n and b are independent of the initial range, n becoming unity when the fatigue is very great; (2) that when n is unity b is absolutely constant; (3) that the period of oscillation does not affect the results; and (4) that the time of inward oscillation over a given range exceeds that of outward oscillation. He adopts a simple molecular explanation of these facts.

Oscillation.—Schlichter ("Nature," Feb. 3) compounds pendulum vibrations in three directions at right angles by attaching a tiny electric lamp to the bob of a Blackburn pendulum that vibrates in a horizontal plane and photographing its path by a stereoscopic camera attached to a pendulum that swings about a horizontal axis. The result is viewed through a stereoscope.

Liquids. Hydraulics.—Knibbs (New South Wales Royal Society, XXXI) has investigated the flow of water in uniform pipes and channels and finds that the formulae used generally by engineers are defective. In a mathematical investigation he finds that the slightest roughness on the inside of a pipe leads to unstable states of fluid motion resulting in the formation of eddies. It is probable that the flow of water in anything but a mathematically smooth pipe thus can not be rigorously treated by

any of the methods of rational mechanics, for the very troublesome characteristic of all unstable states of a system is that subsequent aspects of the system are influenced to a finite extent by infinitesimal initial causes. He concludes that the law of velocity as related to temperature with at least two pipes of different roughness, as well as that connecting velocity with radius, needs further experimental investigation. Hele-Shaw (Institution of [British] Naval Architects, July, 1897, and April, 1898) shows that the flow of water in two dimensions past various cylindrical and prismatic obstacles can be investigated experimentally by using water containing air flowing between parallel glass plates. The air makes the water turbulent where the flow is most rapid. His photographs show in every case a clear line around the boundary, indicating that a thin film there remains comparatively calm, while shearing motion takes place in it. They also show "dead water" behind blunt edges, confirming the view that to minimize resistance a solid must taper at the stern rather than at the bow. The stream lines shown in the experiments coincide with those calculated mathematically for a perfect liquid, notwithstanding the difference in conditions. Prof. Shaw's work has been praised by some as the first to make hydrodynamics an experimental science. Others criticise it as dealing with a mixture of water and air instead of with pure water.

Diffusion.—Griffiths (London Physical Society, June 10), in experiments on diffusive convection or currents in a liquid caused by variations in the quantity of dissolved substance, finds that when two tubes of slightly different lengths unite an upper compartment filled with water to a lower one filled with a solution of copper sulphate, this kind of convection occurs up the longer tube and down the shorter, while diffusion takes place up both.

Absorption.—Vignon (Paris Academy of Sciences, July 4) finds that textile fabrics have specific absorptive powers for each liquid. Silk has the highest, wool is nearly equal to it, and cotton falls considerably below. Physically, textiles should be regarded as porous bodies; their absorptive power for water is about equal to that of a large sponge.

Condensation.—Wilson (Cambridge [England] Philosophical Society, Jan. 24) finds that ultra-violet light focused in moist dust-free air determines condensation as a bluish fog. If substances opaque to the rays are interposed there is no condensation. It is possible that the small particles to which the blue of the sky is due result from this action.

Solution.—Van der Lee (Amsterdam Academy of Sciences, Oct. 29) finds that the critical temperature of solution of a mixture of phenol and water appears to rise with increased pressure. Experiment confirms the theoretical indication of a maximum in the line that shows the pressure of the vapor in contact with the liquid as a function of the composition. Lehfeldt (London Physical Society, Nov. 25) finds that the same pair of liquids is completely miscible above 68° C., and incompletely below that temperature. At temperatures not too close to the critical point the vapor pressure of a saturated mixture is approximately the sum of the partial pressures calculated for the two saturated solutions. The author states that normal organic liquids always mix completely, but according to Prof. S. Young (*ibid.*) there are pairs of such liquids that approximate closely to partially miscible liquids, as benzene and normal hexane. Traube (Berlin Chemical Society, February) concludes that the contraction that takes place on the solution of a substance in water is proportional to the concentration of the solution and almost independent of the nature of the dissolved substance. In aqueous solutions he believes it due to the attraction between the solvent and the

dissolved substance. The number of water particles with which a given molecule of a substance in dilute solution combines is equal for all non-electrolytes, and for electrolytes increases proportionally to the number of ions. Van't Hoff's law of osmotic pressure may be deduced from this if we suppose that a molecule of any non-electrolyte in any dilute solution is at any moment united with only one particle of the solvent.

Hydrometry.—O'Toole (Dublin Royal Society) has devised a new form of hydrometer in which between the floating bulb and the weight pan there is what he calls a "standard bulb." The weights required to alter the immersion of the instrument from a point below to a point above this bulb equal the weight of its volume of the liquid.

Sedimentation.—Spring (Belgian Royal Academy) finds that pure water holding in suspension finely divided silica, or other non-electrolytic matter, begins to clear gradually when two platinum electrodes are plunged into it and a current is passed through them. He asserts that the turbulent state is due to a modification of the electric state of the particles caused by the change in the energy of attraction of the matter forming them, consequent on disintegration.

Crystallization.—Friedländer and Tammann ("Zeitschrift für physikalische Chemie") find that the speed of solidification (the speed of propagation of the separating layer between liquid and solid when a liquid is in a state of superfusion), while it increases at first proportionally to the degree of superfusion, as shown by Gernez, afterward attains a value which it maintains for a long time and finally decreases again with further increase of the superfusion. Every substance has its own curve denoting its behavior under these circumstances.

Gases. Waves of Explosion.—Vielle (Paris Academy of Sciences, Jan. 3), in experiments on the velocity of the wave produced by exploding powder and mercury fulminate in a steel tube, finds that as initial condensation increases the mean velocity of propagation also increases from that of sound up to about four times that speed. Jones and Bower (Manchester Literary and Philosophical Society, Jan. 25), from investigations on the collision of two explosion waves, believe they have proved that there is an increase of pressure at the point of collision. This is established by hydraulic tests, by photographs, and by the increase of luminosity at the point of collision, as well as the fact that the speed of the reflected wave is greater than if it had been reflected from a hard surface.

Mixtures.—Leduc (Paris Academy of Sciences, Jan. 17) proposes to replace Dalton's law (that the pressure of a mixture of gases is the sum of the pressure due to each) by another to the effect that the volume occupied by such a mixture equals the sum of the volumes that the components would occupy at the same temperature and pressure. These two laws are equivalent only when Boyle's law holds exactly.

Expansion.—Teudt ("Zeitschrift für physikalische Chemie," XXVI, 113) has studied a curious deviation of atmospheric air from Gay-Lussac's law, the expansion above 350° C. being excessive. The deviation from the law is 2 per cent. at 400° and 3 per cent. at 450°, and is due to nitrogen alone. The author suggests that this gas exists in the atmosphere in an allotropic form, which is changed to the ordinary form at high temperatures.

Acoustics. Velocity.—Leduc has objected to the common method of measuring the velocity of sound in air, owing to the presence of moisture, but Vielle (Paris Academy of Sciences, Dec. 5) shows that the correction due to this is smaller than the experimental error of the measurements.

Intensity.—Reed (American Association) describes an instrument for measuring the intensity of sound by observing the amplitude of vibration of a diaphragm with a micrometer microscope focused on the tip of a stylus attached to the diaphragm. Webster (*ibid.*) measures the amplitude of a thin glass diaphragm by the interferometer, the fringes being photographed on a moving plate.

Interference.—Crémieu (Société Française de Physique) has produced elliptical sound vibrations in air by the interference of the longitudinal vibrations of two organ pipes at right angles. By providing for the proper difference of phases an elliptic motion, whose presence was proved by delicate quartz fibers, was set up at their intersection.

Heat. Thermometry.—Harker (London Royal Society) has devised a new method for the exact determination of the zero point in thermometers. Distilled water is cooled below zero (centigrade) in a vessel protected from radiation; then the thermometer is introduced and freezing is induced by dropping in an ice crystal. The thermometer rises and finally attains almost exactly the true zero. Measurements made with an electrical-resistance thermometer show that the temperature of the mixture into which the bulb is plunged varies not more than $\frac{1}{10000}$ to $\frac{1}{10000}$ of a degree for a variation of 2° to 3° in the liquid that circulates in the apparatus. Watson ("Philosophical Magazine") describes an apparatus to facilitate the comparison of thermometers of very different dimensions. The two instruments are inclosed in a glass tube and their reservoirs are plunged into mercury. The tube is surrounded by a larger tube, and in the included space a liquid such as carbon disulphide, ethyl alcohol, or chlorobenzene is boiled under any desired pressure. Water can not be used because it condenses on the glass and makes reading difficult. The liquid is boiled by electrically heating a platinum coil. With this device a temperature constant to $\frac{1}{100}$ of 1° can be maintained for three or four hours. Half an hour is necessary for the establishment of thermal equilibrium corresponding to a given pressure. Richards ("American Journal of Science," September) proposes to make use in thermometry of the transition temperature or "melting point" of sodium sulphate ($\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$), which is almost exactly 32.48° . This point is easily obtained and very constant. Uehling and Steinbart ("Revue Universelle des Mines," July) have devised a pneumatic pyrometer that has been tested and calibrated to $1,650^{\circ}$. It consists of two chambers through which an air current passes with constant and uniform velocity. The air enters the first chamber by an orifice, A, and the second through an orifice, B. If the specific gravity of the air remains the same, the same quantity will pass A and B, and the pressure in the two chambers will be the same. But if in any way, as by heating, the density of the air in the first chamber is altered, the volumes passing A and B will be different and the pressures in the chambers will no longer be the same. By registering this difference of pressure the temperature of the first chamber can therefore be ascertained. Berthelot (Paris Academy of Sciences, Jan. 31) measures high temperatures by an interference method based on the fact that if the density of a gas is diminished to the same extent by rise of temperature or by diminution of pressure, the index of refraction has the same value in both cases.

Conductivity.—Straneo ("Atti dei Lincei," VII, 11) by using a method of determining simultaneously electric and thermal conductivities, finds that the internal conductivity varies with the temperature, but in a degree too small to be exactly determined. The surface conductivity and the dispersivity increase with the temperature. Hall

(American Association) points out that the method of measuring thermal conductivity in which thin plates are used is unsatisfactory owing to the difficulty of determining the difference of temperature of the two faces. He obviates this by copper-plating the two faces of his iron plate and by using the copper-iron thermo-couples thus formed for determining the temperature difference. He finds that the conductivity of iron increases as the temperature is decreased at the rate of about 1 per cent. for 8°C . Lees (London Royal Society, Dec. 16, 1897) believes that he has established the following experimental laws connecting conductivity with temperature:

"1. Solids, not very good conductors of heat in general, decrease in conductivity with increase of temperature in the neighborhood of 40°C . Glass is an exception.

"2. Liquids follow the same law near 30°C .

"3. The conductivity of a substance does not always change abruptly at the melting point.

"4. The thermal conductivity of a mixture lies between the conductivities of its constituents, but is not a linear function of its composition.

"5. Mixtures of liquids decrease in conductivity with increase of temperature near 30°C . at about the same rate as their constituents.

B. O. Peirce and Willson (American Academy of Arts and Sciences, August), from a determination of the thermal conductivities of about 20 varieties of marble, when the faces of the slabs are kept respectively at 18°C . and 45°C . find that the conductivity may depend to several per cent. on the amount of absorbed moisture. The conductivities ranged from 0.00501 to 0.00761.

Convection.—Guébbard ("Nature," June 30) finds that when a slightly fogged photographic plate is developed in a shallow bath and the experimenter presses his finger on the plate during the process streaks are observed to radiate from the parts touched. These are due to convection currents caused by the warmth of the finger, and can also be produced by warmed inorganic bodies. These results are of interest because the streaks have been represented by some to be photographs of the "lines of force of animal magnetism."

Specific Heat.—Lummer and Pringsheim (Wiedemann's "Annalen") have measured the ratio of the two specific heats (at constant volume and constant pressure) in certain gases, using a new form of bolometer and employing the relationship between temperature and pressure in adiabatic expansion. The results are as follow:

Air.....	1.4025	Carbonic acid.....	1.2997
Oxygen.....	1.3977	Hydrogen.....	1.4084

Leduc (Paris Academy of Sciences, Oct. 31) concludes theoretically that the ratio of the two specific heats of air varies slightly with the temperature, the ratio between the value for 0° and that for 100° being 1.0006. For carbon dioxide the same ratio is 1.028. Behn (*ibid.*, October) concludes that if the decrease of the specific heat of metals with the temperature be represented by curves these will all intersect at the absolute zero. It is possible that all the specific heats themselves become zero at this point, and in any case the law of Dulong and Petit does not hold for low temperatures. Tilden, in a lecture before the Royal Institution, May 13 ("Science," July 29), describes experiments undertaken to discover whether the law of Dulong and Petit (that the product of atomic weight and specific heat is constant) is or is not exact. Earlier experimenters had concluded that it is not, and Prof. Tilden by using very pure metals sought to find whether their results were or were not due to impure materials. His result for cobalt and nickel, which make the specific heats respectively 0.1035 and

0.1093 seem to indicate non-exactitude of the law, "for," as he says, "although the exact values of the atomic weights of these two elements are not known, it is certain that they are not so far apart as would be implied by these values for the specific heats. Results with gold and platinum and copper and iron are similar. The author accounts for the divergences from the law on stereochemical grounds, assuming peculiarities in the configuration of the metallic atoms. That there are such differences he thinks follows from the theory of Werner, of Zurich, that isomerism in metallic compounds is to be explained on similar grounds to those now accepted with regard to the constitution of the carbon compounds.

Mechanical Equivalent.—Patterson and Guthe (American Association) have reconciled recent conflicting redeterminations of this constant by measuring with great care the value of the ampère in terms of the electro-chemical equivalent of silver, using a large specially constructed electro-dynamometer and employing the torque of a phosphor-bronze wire to equilibrate the counter-torque due to the effort between the magnetic fields of the stationary and movable coils. This eliminates the effect of gravity. The result obtained was 0.0011192 gramme per ampère per second. This exceeds Lord Rayleigh's value by $\frac{1}{10}$ of 1 per cent, and causes the discrepancy between the results of Griffiths and those of Rowland to disappear. Baille and Féry (Paris Academy of Sciences, May 23) have determined the mechanical equivalent by a new method, by measuring the heating effect on a cylinder of copper fixed in a rotating magnetic field. The value of J was thus found to lie between 422 and 426.

Equilibrium.—Bruni ("Atti dei Lincei," October), in a discussion of the thermodynamics of equilibrium in systems of two and three components having one liquid phase, comes to the following conclusion: "If to a system of two components with only one possible liquid phase there be added a third component which does not combine with the first two and is not isomorphous with them, the curves expressing equilibrium of the same order (curves of saturation in binary systems and cryohydrate curves in ternary systems) are parallel. Only in systems represented by the curve of the ternary mixture the third added component exists mostly in the solid phase."

Boiling Point.—The boiling point of liquid ozone has been determined by L. Troost (Paris Academy of Sciences, June 20) to be -119°C , the temperature being determined by means of an iron-constantin thermo-couple.

Leidenfrost's Phenomenon.—Stark (Wiedemann's "Annalen," June), by including in a telephone circuit a hot metal plate with a drop in the spheroidal state, shows that the drop performs, with respect to the contiguous layer of vapor, oscillations due to differences of surface tension between the hot and cold portions.

Measurement of Radiance.—Angström has devised an instrument for measuring radiance, which was exhibited by E. S. Ferry to the American Association. It consists essentially of two bolometer strips, one of which is heated by the radiance to be measured and the other is heated to the same temperature by an electric current, from which the absolute value of the radiance may be calculated.

Light Velocity.—Morby, Eddy, and Miller (American Association), from experiments to determine whether the speed of light is affected by magnetism, conclude that its velocity in carbon bisulphide is not altered by one part in a hundred million by

a magnetic field of such an intensity as to turn the plane of polarization through 180° in a path of 65 centimetres.

Photometry.—Rood ("Science," June 3) describes a form of flicker photometer consisting of a white upright prism of 90° whose sides are illuminated by the lights to be compared. Between this and the observer is a cylindrical lens or biprism of small angle, whose rapid oscillation causes the flicker, the illuminated sides of the prism being presented to the eye in very rapid succession. This instrument, like other flicker photometers, is independent of color.

Transparency.—Rubens and Aschkinass (Wiedemann's "Annalen," March) find that steam and carbonic acid absorb infra-red rays of wave length about 24μ in thick layers. Their absorption by the atmosphere accounts for the absence of these rays in the solar spectrum. Some liquids are very transparent to the rays, especially benzol.

Spectroscopy.—Michelson ("American Journal of Science," March; "Astrophysical Journal," June) has devised what he calls the "echelon spectroscope," which reveals details of the spectrum beyond the power of the best gratings hitherto invented. In this instrument spectra of a very high order are used; by building up a flight of glass steps, as in

DIAGRAM OF PRISMS.

the illustration, the difference in the optical path for various sections of the light may be made any desired number of wave lengths and a spectrum of order 20,000 may thus be produced. In a description in "Science," Aug. 19, C. R. Mann says:

"The blocks of glass composing this 'staircase' must be of exactly the same thickness, a result which is accomplished by polishing a plate of optical glass until its opposite surfaces are plane and parallel to each other, and then sawing this plate into pieces of the requisite size. Suppose now a beam of parallel light to fall on this pile of plates perpendicular to the face at A. In passing through the first block from a to b the beam will be retarded by, say, 20,000 waves, the number depending on the thickness and the index of refraction of the glass. Part of the light then comes out into air through the narrow opening bc and the rest goes on through the block cd. The part of the incident beam which comes out through the opening de has also been retarded 20,000 waves over the part that came through bc and so on. It is thus easily seen that this instrument, when looked through along the axis from B to A, gives the required conditions for the production of a diffraction spectrum of high order; for we have the light between the source and the point of observation divided into a number of beams, each of these beams having to travel 20,000 waves farther to reach its goal than its adjacent beam on one side of it, and 20,000 waves less than its adjacent beam on the other side of it."

With this instrument a resolving power of more than 300,000 has been attained, and it is believed that 500,000 will soon be reached. The highest power of the best gratings is about 100,000. Of course the field is extremely small. Perot and Fabry (Paris Academy of Sciences, Jan. 3) have devised a new form of interferential spectroscope composed of two plates of silvered plane glass, producing rings that are observed from an infinite distance. Fabry and Perot (*ibid.*, May 31) find that the order of an interference fringe of high order, such as those produced by two parallel silvered plates about 3

or 4 centimetres apart, can be determined by throwing simultaneously rays of two different known wave lengths—(say red and green), and noting the positions of exact coincidence of a red and a green ring.

Magneto-optics.—Further experiment on Zeeman's phenomenon ("Annual Cyclopædia," 1897, page 673) shows that the effect of a magnetic field is usually to divide light of one refrangibility into three components, two of which are displaced by diffraction analysis on either side of the mean position and are polarized oppositely to the third or residual constituent. The phenomenon has been investigated photographically by Preston in Dublin and by Michelson and Ames in this country. All spectrum lines are not tripled, some being left unchanged, some doubled, and others quadrupled or even sextupled. The polarization is usually such as to indicate that motions of a negative ion or electron constitute the source of light, but a few lines are affected in the opposite way. Cornu (Paris Academy of Sciences, Jan. 17) finds that the action appears to depend not only on the chemical nature of the source of light but also on the nature of the group of spectral rays to which each radiation belongs, and on its function in this group. If the direction of the field is normal to the lines of force the rays are quadrupled, not trebled. The same experimenter (*ibid.*, Jan. 24) has made measurements showing that the magnitude of the separation produced increases with the refrangibility of the ray. Fitzgerald (London Physical Society, Jan. 21) thinks that when the effect appears to be a doubling of the line, a third central line has been produced but absorbed by the surrounding medium. The same authority, in an article on "The Zeeman Effect and Dispersion" ("Science Progress," November), gives the following explanation of the effect: "The effect of magnetic force on the vibrations of molecules is a complicated one. . . . Every simple vibration of a point may be analyzed into two circular rotations, one right-, and the other left-handed, in a plane at right angles to the magnetic field and into a linear component in the direction of the field, all these being of the same period. The effect of the magnetic force in the simplest and apparently very common case is to leave the component in the direction of the field unchanged and to make one of the circular components rotate more rapidly and the other less rapidly than when there is no magnetic force acting. The changes of frequency are directly proportional to the strength of the magnetic field, but are independent of the intensity of the vibration of the molecule. This simplest action is what we would expect to take place when the magnetic force acts on a moving electron which is equally free to vibrate in every direction. On account of this important condition, however, we need not be surprised to find more complicated effects produced in the case of a large number of spectral lines. It is very improbable that the molecules of most gases are so symmetrical that all vibrations in every direction are equally possible, and, as a matter of fact, very complicated effects have been observed in the case of a large number of lines. The effect of magnetic force in this simplest case is to make the axis of the orbit of an electron rotate round the line of magnetic force. We might expect a disturbing force to produce other changes in the orbit, in general; such, for example, as causing the inclination of the orbit and its eccentricity to change. Actions such as this would produce complications in the spectra, as has some time ago been pointed out by Dr. Stoney.

"These theories as to light vibrations being due to simple harmonic vibrations of electrons are, however, almost certainly only provisional. They require the forces acting on the electrons to be directly

proportional to the distance from their positions of equilibrium. It is unlikely that electrons can be subject to such forces, and their vibrations are much more probably of the nature of perturbations of orbital motions executed under quite other laws of force. For example, the rotation of the lunar nodes is a vibration of a system, the earth, sun, and moon, which is controlled by forces varying inversely as the square of the distance and is one whose period is almost independent of the eccentricity of the lunar orbit, although the amplitude of the radiation such a rotation might emit might be directly proportional to this eccentricity. The whole question is very complicated. It practically assumes that the fundamental motions in the molecules are immensely more rapid than any of those we deal with in light vibrations, and that these latter are merely perturbations of the fundamental motions. It is well to keep these things in mind, although we are to all appearance so very far from any satisfactory explanation of it all, because it points out the direction in which to look for an advance in our knowledge. That we know so little and see so little ahead in these fundamental matters may be disheartening, but it shows how very important any advance in our knowledge of molecular motions is, and should encourage us to a study of even minute effects such as Zeeman has observed." Fitzgerald connects the phenomenon with other electro-optic effects as follows: "It appears probable that the whole cause of the Faraday effect is to be looked for in each substance in a Zeeman change of the free vibrations of the molecules of the substance by the action of magnetic force, this change in the free periods reacting through their resonances on the rate of propagation of the circularly polarized components of light passing through the magnetized medium. A theory on similar lines may be worked out to explain the Kerr effect and the Hall effect, this latter being an action on electrons moving continuously in one direction, not on simply vibrating ones." Becquerel and Deslandres (Paris Academy of Sciences, July 4) find that in a very intense magnetic field (35,000 C. G. S. units) the bands of nitrogen and cyanogen show no signs of doubling. Most of the rays examined broke up into three, but certain ones split into five. The distribution of these, considered as a function of the wave length, shows signs of periodicity.

Luminescence.—Levison (New York Academy of Sciences, Dec. 5) has attempted to classify all phosphorescent and fluorescent substances, grouping under the former head all those that give out shorter radiations than they receive, and placing under the latter those that give out longer radiations than they receive. The following is his arrangement of the former class:

Phosphorescent	Thermo- Heated or cooled.	
	Electro-	Statically electrified.
		Exposed to X-rays.
	Lumino-	
	Tribo-	Rubbed.
		Compressed.
		Hammered.
	etc.	

The fluorescent substances are subdivided similarly. Schmidt (Wiedemann's "Annalen," April) has performed some experiments to test the theory advanced by E. Wiedemann and himself, that fluorescence is due to the recombination of molecules split up into ions by the action of light. If this is true, fluorescent bodies would not be photo-electrically sensitive, but no such connection between the two phenomena was found in the experiments, which showed, on the contrary, that the most strongly thermo-luminescent bodies are also most

powerfully photo-electric. Guillaume ("Revue Générale des Sciences," Dec. 15, 1897), discussing an experiment of Burke that seems to show that fluorescent bodies are more strongly absorbent while fluorescing, suggests that the molecules are excited momentarily to a forced vibration and become for an instant susceptible of absorbing vibrations of the same period. He would bring the phenomenon under Kirchhoff's law by suppressing altogether the idea of temperature in this law. Villard (Paris Academy of Sciences, May 16) finds that those parts of a fluorescent screen that have been in shadow are more luminous when the object is removed than the parts previously illuminated. Wesendonck (Wiedemann's "Annalen," December, 1897) finds that a luminescent body is capable of imparting heat to a body warmer than itself, but that there is no contradiction of the second law of thermodynamics, as there is no ordinary thermal radiation. Burke (British Association) has made the luminosity produced by striking sugar practically continuous by using a hammer to strike the rim of a revolving disk of sugar about twice a second. The luminosity extends from the hammer inward and downward, and its spectrum is confined to the more refrangible side of the F line. The nature and appearance of the light are not dependent on the surrounding medium.

Bequerel Rays.—Stewart ("Physical Review," April) in a general review of the subject concludes that Bequerel rays are due to transverse ether waves, but that owing to feebleness and short wave length it is doubtful whether their interference can ever be shown. They are non-homogeneous, like X rays, and their similarity in behavior to these is a strong argument in favor of the short-transverse-wave theory of X rays. Schmidt (Wiedemann's "Annalen," May) finds that thorium compounds and some other substances give out Bequerel rays differing from those that proceed from uranium in not being polarized by tourmaline and in being less powerful, as measured by the time required to discharge an electrified plate. Russell believes that this ray-emitting power may be a general property of matter, for nearly every substance affects a sensitive plate in darkness, if given time enough. He shows in the Bakerian lecture before the London Royal Society, March 24, that certain metals and organic substances can produce images on a photographic plate, the activity of the organic substances being the greater. Printer's ink and copal varnish both are of this class, owing to the linseed oil in the former and the turpentine in the latter. Vegetable oils and essential oils containing terpenes are all active. All substances having similar effects are reducers, absorbing oxygen, and this apparently causes their power. The action, however, can take place through thin layers of certain solid bodies—for instance, gelatin, celluloid, and gutta-percha; but others, such as glass and mica, prevent all action. Elevation of temperature increases the action. Of common metals, zinc gives the best results. The active metals are, in order, magnesium, cadmium, zinc, nickel, aluminum, lead, and bismuth. The metallic surface must be brilliant. Inactive liquids, such as alcohol, if soaked in an active metal for a few days, become active. Further experiment indicates that the phenomenon is due to an actual emanation and not to luminescence. M. and Mme. Curie (Paris Academy of Sciences, July 18) have shown that the activity of pitchblende as a source of Bequerel rays is due to a new substance, which they have named *polonium*.

Electro-magnetic Theory.—Buisson (Paris Academy of Sciences, Feb. 7), to test the relation between transparency and electrical resistance required by the electro-magnetic theory of light, has

measured the transparency of a thin sheet of bismuth whose resistance was caused to vary suddenly by placing it in an electro-magnetic field. No variations in the transmitted light being observed, the author concludes that the conductivity that affects transparency is of a different order from the usual kind.

Pseudoscope.—Solomons ("Nature," Feb. 3) has devised a pseudoscope with which an approximate stereoscopic effect can be obtained with a single picture. A large, deep cylindrical lens is cut into two wedges, each having one flat and one curved side. These are placed together with the thick portions toward each other and held at a short distance over the picture. Two images result, each of which is compressed on the inner side, which is a property of the ordinary pair of stereoscopic views. By viewing these images with stereoscopic lenses the impression of solidity is produced, unless the original picture contained an object very near the observer.

Electricity. Resistance.—Le Chatelier (Paris Academy of Sciences, June 20) finds that tempering does not modify the resistance of steel except when it takes place above the temperature of recalcination (710°). The resistance then increases with the temperature of tempering, up to a value higher as the steel is richer in carbon. The increase of resistance in iron due to the presence of carbon averages 45 microhms for an addition of 1 per cent. by weight of carbon. The same is true of silicon. Le Roy (*ibid.*, Jan. 17) has measured the resistance of crystallized silicon, which he finds to be 1,300 times that of electric-light carbon. It diminishes on heating, falling 40 per cent. for a rise of 800° C. Gressman (American Association) reports that lead amalgams show a remarkable sudden decrease in resistance upon solidification, the resistance of the solid amalgam being sometimes as low as one fifth of the resistance of the fluid amalgam at its freezing point. If the thermoelectrical explanation—based on heterogeneity—of excessively high resistance of alloys is correct, an increase of resistance upon solidification would seem probable, for it is then that the alloy becomes heterogeneous. Branly (Paris Academy of Sciences, July 25) finds that although two smooth plane disks of zinc or copper when pressed together offer practically no resistance to the current, disks of iron, aluminum, or bismuth give a small resistance, which is greatly increased when they are brought forcibly together by falling from a height. M. Branly is unable to explain this fact. In 1877 Bosi ("Il Nuovo Cimento," April) described experiments that seemed to show that a very moderate velocity (10 or 12 centimetres a second) of an electrolyte with or against a current flowing through it changed its resistance. Hayward ("Physical Review," November) has been unable to detect any such action, using a 5-per-cent. solution of copper sulphate with a velocity of flow of 8 to 11 centimetres a second. Haagn ("Zeitschrift für physikalische Chemie"), in an investigation of the internal resistance of galvanic couples, comes to the following conclusions: 1. The internal resistance of galvanic elements with simultaneous electrolysis is independent of current intensity, the slight oscillations being due to changes of concentration. 2. In accumulators a slow increase of resistance takes place at first, and this becomes more and more rapid during the discharge, while during the charging the changes of resistance are in inverse order; these arise from the deconcentration of the sulphuric acid and the production of a passage resistance at the electrodes, especially at the peroxidized one. Fawcett (British Association) has constructed standard high resistances of great constancy by depositing cathode films on glass and heating them for a long time in a partial vacuum.

Conductivity.—Van Gulik (Wiedemann's "Annalen," September) finds by experiments on the conductivity of powders, by means of minute terminals under the microscope, that the influence of electric radiation increases conductivity by promoting mechanical contact (Lodge's view) and not by modifying the surrounding dielectric (Branly's view). Smithells, Dawson, and Wilson (London Royal Society, Nov. 17) conclude from experiments that the conductivity of vaporized salt is electrolytic, but differs somewhat from that of electrolytic solutions. Ohm's law is obeyed within limits. The conductivities of salts depend on the electro-positive constituent, and on the negative also at high concentrations. That of the haloid salts as a group differs from that of the oxyalts, the former increasing with the increasing atomic weight of the halogen, while that of the latter is approximately uniform, approaching that of the hydrates.

Thermoelectricity.—Rubens ("Zeitschrift für Instrumentenkunde") shows that the capabilities of the thermopile (now generally replaced by other devices for measuring small thermal changes) may be increased by reducing the thermal capacity of the couples. He uses fine wires of iron and "constantan" (a nickel alloy). The thermoelectric power of this couple is about half that of an antimony-bismuth couple, but this is outweighed by the gain in sensitiveness, due to decreased thermal capacity. Perrot (Paris Academy of Sciences, April 25) finds that the ratios for the electro-motive forces for a bismuth-copper couple in the two positions of the bismuth crystal (parallel and perpendicular to the principal axis) are between 2 and 2.4. Stansfield (London Physical Society, March 25) concludes that thermoelectrically there may be two classes of metals: (1) Ordinary metals, for which the curve representing the first differential of electro-motive force with respect to temperature is a straight line; and (2) the platinum metals, together with a few, such as nickel and cobalt, for which the curve of this differential multiplied by the absolute temperature is a straight line.

Contact Electricity.—Christiansen (Wiedemann's "Annalen," December, 1897) finds that the gas surrounding a jet of zinc, lead, or tin amalgam influences its uninterrupted length, the breaking up of the jet being retarded by air, oxygen, and sulphurous acid, owing to contact electrification. Dry air and oxygen have no effect.

Discharge.—Edmondson ("Physical Review," VI, 2) finds that the curves that represent the relation between potential difference and sparking distance are in general approximately hyperbolas, which become practically straight lines for sparks longer than 3 millimetres. Moore ("American Journal of Science," July) finds that the gaseous pressure in the direction of discharge is greater than that in either of the directions at right angles by an amount depending on the velocity of the discharge stream. Toepler (Wiedemann's "Annalen," jubilee volume) has succeeded in obtaining a stratified discharge in open air, recalling the stratified anode light, by interposing in the path of the spark a semi-conducting plate of slate, granite, or basalt, and ballasting the discharge with a heavy water resistance. F. Darwin (Cambridge [England] Philosophical Society, May 16) concludes from experiments on the figures produced on photographic plates by electric discharges that these figures are due chiefly to the light of the discharge, the difference between the effects of positive and negative discharges being due to the difference in the form of the discharge. Buisson (Paris Academy of Sciences, July 25) finds that the velocity of the electrified particles during discharge under the influence of ultra-violet light varies from 26 to 135

centimetres a second, according to the difference of potential between the plates of the condenser. It is independent of the intensity of the light. Ruthenford (Cambridge [England] Philosophical Society, Feb. 7) believes that the theory of discharge that attributes it to the disintegration of metallic particles will not explain the facts, and suggests that gaseous ions are formed at the surface of the negatively electrified plate. Heen ("Bulletin of the Belgian Royal Academy") obtains by modifying air with a Bunsen burner results in electro-dispersive power which can not be accounted for on Villari's theory of Röntgenized air, but indicate a special kind of energy, named by the author infra-electric. (For other discharge phenomena see the following paragraph.)

Propagation in Gases.—Wiedemann and Schmidt (Erlangen Medical Society) find that gases excited to incandescence by electric discharges will absorb electric waves even when they fail to do so if unexcited, but the dark cathode space will do so but feebly. Their experiments also seem to disprove the theory that conduction through rarefied gases is electrolytic. Trowbridge (American Academy of Arts and Sciences, XXXIII, 21) has installed a storage battery of 10,000 cells, with which he has investigated the behavior of gases to discharges of very high tension. He finds that beyond 1,000,000 volts the initial resistance of air decreases, and may fall as low as 1,000 ohms between terminals 2 to 3 inches apart. X rays can be produced with an electro-motive force of 10,000 volts, and there are indications of them at 5,000. The behavior of rarefied media to powerful electric stress seems to resemble that of elastic solids to mechanical stress; a so-called vacuum, which acts as an insulator for electro-motive forces that give a spark of 8 inches in air (about 200,000 volts), breaks down under 3,000,000 volts. A single discharge with this voltage through highly rarefied media produces X rays powerful enough to photograph the bones of the hand in one millionth of a second. During the discharge the apparent resistance of the medium is but a few ohms. The medium may be said to lose its elasticity and be ruptured.

Dielectrics.—Gray ("Physical Review," November) reports from measurements of the dielectric strength of insulating materials, made by himself and his pupils, that in the case of air there is practically no difference between the maximum value of the alternating electro-motive force and the static electro-motive force required to produce a spark of given length in this medium when approximately flat plates are used as terminals. In the cases of some solids, as, for instance, paraffined paper, the results seem to indicate considerably greater strength against a static charge than against an alternating electric stress, but the author concludes that further experiments are desirable and gives no results for such substances. Pellat and Sacerdote (Paris Academy of Sciences, Oct. 17) find that the dielectric constant of paraffin diminishes with rise of temperature, but that that of ebonite increases. Edmondson ("Physical Review," VI, 2) finds that the dielectric strength of air obtained with spheres is considerably higher than that obtained by other investigators with planes.

Vacuum-Tube and Cathode Phenomena.—Trowbridge and Burbank ("Philosophical Magazine," February) have devised a tube in which the space between anode and cathode is abolished and a continuous wire passes through the tube, which is then inserted in a circuit containing a spark gap and a Trowbridge rheostatic machine, whose condensers are charged in parallel and then discharged in series, producing a voltage of nearly 1,000,000. The tube glows all over and X rays are developed,

though they can not be used photographically because a brush discharge passes from tube to sensitive plate. The distinction between anode and cathode rays disappears. Wehnelt (Wiedemann's "Annalen," July) finds that the resistance of the dark cathode space to electric discharge is considerable, giving to the latter a disruptive character as if it were filled with a dielectric. E. Wiedemann (Wiedemann's "Annalen," jubilee volume) finds that when a positive-wire anode is brought into the dark cathode space the resistance of the intervening gas is increased, the positive light bending back till it merges in the negative glow. The same result follows the surrounding of the anode with a narrow tube. Gill ("American Journal of Science," June) explains the stratification of the vacuum tube as a form of Kundt's experiment in which heaps of powder accumulate at the nodes of a vibrating air column, the heaps being represented by strata of molecules between which the discharge is taking place in a luminous form (see also above, under *Discharge*). Swinton (London Physical Society, March 25) has investigated the circulation of gaseous matter in a Crookes tube, using a mica mill on a sliding rod, and finds that at high exhaustion a positively charged anode stream moves outside the cathode stream and in an opposite direction. At very high vacua there may be a regular circulation of positive and negative atoms. Birkeland (Paris Academy of Sciences, Feb. 21) finds that the discharge in a Crookes tube is uninfluenced by a magnet beyond a certain distance, but that, as it approaches, there is a critical position at which all the properties of the discharge are suddenly changed, the difference of potential between anode and cathode being reduced to one tenth, and the cathode rays being succeeded by others that produce no phosphorescence. This critical distance increases with the strength of the magnetic field. Kaufmann and Asehkinass (Wiedemann's "Annalen," December, 1897) find that the amount of deflection of cathode rays produced by a narrow field due to condenser plates mounted in a tube that crosses the vacuum tube at right angles is in accordance with the projection rather than the wave hypothesis. Paalzow and Neesen (Wiedemann's "Annalen," jubilee volume) find that when the force lines of a magnetic field lie across the path of a vacuum discharge the current is always enfeebled and sometimes broken. Villard (Paris Academy of Sciences," July 25), in a study of the phenomena supposed by S. P. Thompson to be caused by what he calls "paracathodic rays," attributes them to the diffusion of ordinary cathode rays. The same investigator ("Bulletin" of the Société Française de Physique, Nos. 108, 111) suggests that the cathode rays, from their reducing action, may consist wholly of hydrogen atoms due to traces of moisture in the vacuum tube. Wiedemann and Wehnelt (Wiedemann's "Annalen," March) find that when the lines of force are parallel to the axis of the tube the cathode rays are twisted into a bundle with successive nodes. This agrees with the theory that supposes the rays to consist of projected particles. Capstick (London Royal Society, May 26) has measured the fall of potential in the immediate neighborhood of the cathode in vacuum tubes, which is constant for the same gas, and which, he thinks, will prove to be connected with other constants. The values in volts for the gases experimented upon were as follow:

Hydrogen	298	Water vapor	469
Nitrogen	232	Ammonia	582
Oxygen	369	Nitric oxide	373

If gaseous conduction is electrolytic, the author thinks these numbers may be proportional to the

heats of dissociation, and thus the experiments might be taken to support Prof. J. J. Thomson's view that the current is carried by particles smaller than atoms, the result of their disintegration. Wien (Wiedemann's "Annalen," June) calculates that the velocity of the cathode rays is one third that of light. Malagoli and Bonacini ("Atti dei Lincei," VII, IV) find that both electrodes emit what they call "orthocathodic rays" at the same time, but that which connects with the negative pole of the exciter develops them more intensely. From the electrodes at a certain stage of rarefaction start two oppositely charged cones of radiation, one inclosed in the other or partially separate. The violet anodic light, like the orthocathodic rays, is intensely affected by a magnetic field, but oppositely. Goldstein (Wiedemann's "Annalen," January) finds that when the cathode is perforated the yellow layer next it streams through in rays called by him "canal rays," and fill the tube on the anode side, prolonging the cathode rays backward. They are not deflected by a magnet and produce no phosphorescence. (See also the next paragraph.)

Röntgen Rays (see RÖNTGEN RAYS, in "Annual Cyclopædia" for 1896).—Crookes, in his presidential address before the British Association ("Nature," Sept. 8), states as a now generally accepted conclusion that collisions among the flying atoms of an attenuated gas or their impact on an object in their path give rise to Röntgen radiation. "It has," he says "for some time been known that whereas a charged body in motion constitutes an electric current, the sudden stoppage or any violent acceleration of such a body must cause an alternating electric disturbance, which though so rapidly decaying in intensity as to be practically 'dead beat,' yet must give rise to an ethereal wave or pulse traveling with the speed of light. If the target on to which the electrically-charged atoms impinge is so constituted that some of its minute parts can thereby be set into rhythmical vibration, the energy thus absorbed reappears in the form of light, and the body is said to phosphoresce." Stokes similarly holds that the rays are due to the disturbed electric field caused by the sudden stoppage of the electrically charged atoms that constitute the cathode rays—an explanation already advanced by him to account for the Lenard rays before the discovery of those of Röntgen. This theory, now named the "pulse" theory, has an important bearing on the whole theory of light. According to it the disturbance that causes the X-ray phenomena is transverse, but of very short wave length. J. J. Thomson ("Nature," May 5) also believes the rays to be "pulses" rather than short waves, "not," he says, "because I think the properties of the latter would be different from those of Röntgen rays so far as we know them, but because electro-magnetic theory shows that pulses and not waves are produced by the impulse of cathode rays." Trowbridge, summing up his experiments in "The Century Magazine," concludes that the rays include two classes of phenomena—an electrical disturbance and its conversion into fluorescent light. His experiments show that anode rays as well as cathode rays exist and that both are subject to the laws of electrical induction. We should not expect, therefore, he thinks, that the rays should be reflected or refracted like light. Röntgen, the discoverer of the rays (Berlin Academy of Sciences), concludes that they consist of a mixture of rays of different absorbability and intensity, that rays which produce equal fluorescence can be photographically different, and that the eye is not entirely passive to the rays. Campbell-Swinton (London Royal Society, June 16) has studied the active area on the anti-cathode of a focus tube by means of pin-hole photography, and finds among other things (1) that

this area is larger the farther beyond the focus the anti-cathode intersects the cathode stream: (2) that when the intersection is considerably beyond, the area has an intense nucleus surrounded by a halo; (3) that when the anti-cathode is at 45° to the stream those portions of the stream that impinge most normally produce X rays best; (4) that at most suitable degrees of exhaustion the cathode stream proceeds almost wholly from a small central portion of the cathode; (5) that the parts of the stream cross at the focus; (6) that, as S. P. Thompson has pointed out, fluorescence is not due directly to cathode rays, but to what he calls "para-cathodic" rays, proceeding from the anti-cathode and differing from X rays in power of penetration and in magnetic deflectability. The author suggests that they may consist of rebounding cathode-ray particles that have elanged their negative for positive charges, and may thus be identical with anode rays. Morize (Paris Academy of Sciences, Oct. 17) finds by allowing the rays from a Crookes tube to fall through a narrow slit on a rapidly rotating plate that the average duration of total emission of X rays is about one thousandth of a second. Bordier (Paris Academy of Sciences, Feb. 21) finds that the process of osmosis is retarded by exposure to the rays. Wind (Amsterdam Royal Academy, June 25) has found faint evidence of the diffraction of the rays. Trowbridge and Burbank ("American Journal of Science," January) find that fluorspar phosphoresces brightly on heating after exposure to either the X rays or a brush discharge. They think it probable, therefore, that the rays produce an electrification of the fluospar. Villari ("Atti dei Lincei, VII," 8) finds that Röntgen rays in traversing a long tube that is opaque to them lose a large part of their power of discharging an electrified conductor. He attributes this to the action of the tube in cutting off lateral rays, which would accelerate the discharge by their effect on the surrounding air. The rays themselves do not seem to be modified by passage through the tube. Sagnac (Paris Academy of Sciences, Feb. 14) finds that air through which X rays pass gives off secondary radiations that affect an electroscope. This action he compares to the shining of a fluorescent liquid. The same investigator (*ibid.*, March 21) finds that a metal on which X rays fall emits these secondary rays and that they differ in penetrative power from the original rays. Those from aluminum are more penetrative than those from zinc. The rays produce photographic impressions, excite fluorescence, and discharge electrification. They are freely absorbed by aluminum (differing thereby from Röntgen rays), and then give rise to tertiary rays, which are still more readily absorbed. De Heen (Belgian Royal Academy) concludes that every source of disturbance in the ether gives rise not only to known radiations but also to other rays which differ from Röntgen rays only in wave length. They are absorbed so much more readily than ordinary light that our atmosphere completely sifts them from the solar radiation. These rays effect the discharge of conductors and an electric field behaves toward them as an opaque medium.

Electric Waves.—Bose (Calcutta Royal Society; abstract in "Nature," Feb. 10) has investigated the refractive index of glass for electric waves to test Maxwell's relation $K = \mu^2$, in which K is the specific inductive capacity and μ is the refractive index. He found that the refractive index for electric waves was 2.04, while the optical index for the D line is 1.53. Maxwell's relation would therefore make K equal to 4.16. Bose's measurements gave it various values between 2.7 and 9.8. He found the minimum thickness of air space for total reflection between two semi-cylinders with 30° incidence to

be 13 millimetres; with 60° incidence, between 7.6 and 7.2 millimetres. The effective thickness of the air film increases with the wave length. The same investigator (London Royal Society, March 10) finds that the plane of polarization of electrical waves is rotated by passage along a twisted structure, such as jute fiber. Muriani ("Rendiconti" of the Lombard Royal Academy, XXX, 4) has studied the phenomenon of "multiple resonance" (see "Annual Cyclopedion," 1890, p. 715) with the aid of the coherer. He finds no evidence of maxima and minima due to nodes and loops, and concludes that the radiations are not simple, but composed of an infinity of waves of different periods.

Hall Effect.—Donau (London Physical Society, June 24), from a mathematical investigation of the possibility of a Hall effect in a binary electrolyte, concludes that those experimenters who fail to find any such effect are correct.

High Frequency.—Tesla (London Physical Society, Jan. 21) has devised for high-frequency experiments an induction coil having in the primary circuit a separate self-inductance coil that is also used as an electro-magnet for the interrupter of that circuit.

Standard Cells.—The determination by Patterson and Guthe of the electro-chemical equivalent of silver (see "Mechanical Equivalent," under *Heat*, above) involves a corresponding change in the electro-motive force of the Clark standard cell, which would be 1.4327 instead of 1.4342 at 15°C .

Thermophone.—Braun (Wiedemann's "Annalen," June) finds that a bolometer, or a strip of brass, put in circuit with accumulators and a microphone may be used to transmit sound by means of the momentary expansions and contractions produced in it by a variable current.

Telegraphy.—Crehore and Squier have devised means for using individual pulsations of a sinusoidal alternating current for signaling in high-speed telegraphy. Tests in England show that their synchronograph is capable of transmitting words from three to seven times as fast as the Wheatstone apparatus at present in use.

Measurements.—Blondlot (Paris Academy of Sciences, June 13) measures quantity of electricity directly in electro-magnetic units by suspending a ring coil on a vertical axis inside a long horizontal bobbin, the same current flowing through both coils. The product of the current intensity into the time of oscillation is constant, and by adding a device for counting the vibrations a practical coulomb meter is made.

Magnetism. Magnetization.—Weyher (Paris Academy of Sciences, Nov. 21) reproduces the properties of magnets mechanically by means of combinations of vortices in air or water. The bars representing the magnets have a wooden axis on which are fastened paper vanes along its whole length. A similar bar set in rotation attracts or repels the first, according as the directions of rotation are the same or opposite; the neutral zone and other properties of magnets are shown. Mme. Curie ("Bulletin" of the Société d'Encouragement pour l'Industrie Nationale) finds that steel with 1.2 per cent. of carbon is best for permanent magnets. Steel does not take temper unless heated above the temperature at which its magnetic properties change. Different metals in steel do not usually modify the residual magnetization, but often considerably increase the field necessary for demagnetization (the coercitive field). The greater the coercitive field the less is the effect of blows. The best permanent magnets are made by heating the steel to 60°C . and partially demagnetizing it, after having magnetized it to the saturation point. Kirstädt (Wiedemann's "Annalen," May), to deter-

mine whether the outer parts of a rod or ring screen the inner portions against magnetization, split a ring into halves and bored holes, so that on recombination a hollow ring was formed. The surface was given various thicknesses, and it was found that in all cases the inner layers acquired the same magnetization as if exposed directly to the field. Weiss ("La Nature," June 18) has discovered that magnetic pyrite can be magnetized only in one plane, which he calls the "magnetic plane." The large hexagonal crystals from Minas Geraes show the phenomenon most clearly.

Torsion.—The following laws are established by Moreau ("Journal de Physique," March): (1) "At a point of a twisted wire outside the magnetic field the magnetic torsion is proportional to the torsion of the wire, to the square of the intensity of the field, if the field is weak and is independent of the diameter of the wire; (2) for points on different sides of the field the magnetic torsion has equal and opposite values if the ends of the wire are symmetrically placed with regard to the field; (3) along the length of the wire the torsion increases proportionally to the distance from the nearest end; it attains a maximum at the edge of the field and vanishes inside the latter. Knott (Edinburgh Royal Society, June 6), after an exhaustive review of the subject, concludes that the system of stress required to maintain the complicated state of strain in magnetized bodies can not be accounted for by any recognized theory connecting magnetism and stress.

Hysteresis.—Van Huffer (Amsterdam Academy of Sciences, Nov. 27, 1897), in experiments on a long soft bar of iron, finds that when a primary circuit in the middle is closed the rate of change of induction reaches a maximum at a certain distance from the middle and that this maximum moves outward toward the ends. Niethammer (Wiedemann's "Annalen," September) finds that the loss of energy in alternate-current hysteresis is greater than in magneto-static hysteresis. It is nearly the same for sinusoidal and flat curves, but less for pointed curves for the same maximum induction. Fromme (Wiedemann's "Annalen," May) explains the fact that magnetic after-effect or "creeping" diminishes when the reduction of the field to zero takes place rapidly by supposing the molecular magnets to be thereby thrown into more violent commotion, whereby they are better able to reach stable positions. Heat or mechanical stress may produce a similar effect.

Temperature Effect.—Ashworth (London Royal Society, Dec. 9, 1897) finds that the influence of chemical constituents in determining the magnetic behavior of iron under changes of temperature is subordinate to that of physical condition, such as annealing. Thus a kind of nickel steel exhibited in the glass-hard state a small increase of magnetic intensity with rise of temperature and a decrease with fall of temperature. When annealed the converse was the case. Steel music wire exhibits a negative coefficient, the higher and lower intensities corresponding to higher and lower temperature, but it can be made positive by annealing and by careful management can be rendered just zero. The longer and thinner the wire, the more negative is its coefficient, and it may be even made zero, or positive, simply by altering its dimensions.

Measurement.—Bouty (Paris Academy of Sciences, Jan. 17) measures the intensity of a magnetic field by allowing a liquid conductor to flow normally to the lines of force and measuring by the capillary electrometer the constant electro-motive force induced in the liquid. By increasing velocity of flow, the sensitiveness of the method can be increased almost indefinitely.

Miscellany. *Elastic Support for Physical Instruments.*—Broca ("Journal de Physique," October) points out that when galvanometers or other apparatus having movable parts are supported on India rubber the disturbances, far from being reduced, may in some cases be increased tenfold, owing to synchronism between the periods of free oscillation of the supported apparatus and the period of disturbance, which the rubber supports only intensify. On the other hand, when the apparatus consists only of rigid parts, as in optical experiments, there is no better way of insuring steadiness than by placing the instruments on a heavy table whose legs rest on blocks of rubber.

PHYSIOLOGY. The doctrine of a vital force, conferring peculiar properties and powers upon organized matter which are dependent on the continuance of life and cease upon its extinction, after having been contradicted and rejected by the mass of biologists and physiologists, has been revived within a few years past, and has found a number of able exponents. Among these is Dr. Lionel S. Beale, who has published an elaborate defense of the theory. He maintains the conclusion, arrived at as the result of observations carried on for more than forty years with high magnifying powers and experiments, that every living thing and everything that has lived in the past is or has been "absolutely dependent for existence upon the operation of vitality—a power manifested by living beings only," and capable of overcoming "all ordinary forces and properties of ordinary matter," and preventing for the time being their operation. He further holds that the more minutely investigation has been carried on the stronger has become the evidence in favor of vitalism. He denies the conclusions of physiologists who affirm the purely chemical and physical view of life and of all living matter because they are based upon experiments, not on living matter, but on matter that *was* living and had lost its vitality when it was examined. He gives the name of *Bioplasm* to this living matter in its original structureless state, from which all the forms of life have been developed, and assigns to it powers not possessed or exhibited by matter in any other state or under any other known conditions, such as those "of directing, moving, governing, and rearranging material particles; powers of analysis and preparing for synthesis; powers of preparing for and providing for, and as if they were foreseen, future changes and developments." The author supposes the living matter in fully formed organisms to be inconspicuous, and in specimens prepared by some methods not seen at all; vital power to be imparted to non-living matter only when the latter is infinitely near to matter that lives, while it does not appear to exert any influence upon matter separated only by the very slightest space; bioplasm or living matter invariably to proceed from bioplasm that existed already, and not to be capable, so far as is known, of coming from the non-living, while there is no gradual change from one state to the other; and all vital phenomena to be absolutely different from any physical phenomena. The author further denies the possibility of producing bioplasm artificially.

Respiration.—A course of experiments on life at high altitudes, made on Monte Rosa, at the height of 14,592 feet above the sea, is described by Prof. Angelo Mosso in the book "Fisiologia dell' uomo sulle Alpe." The researches were carried out with special physiological apparatus, some of which was designed particularly for this special class of studies. Some of the figures obtained indicate that there is a normal physiological dilatation of the heart during a mountain ascent. Many traces were taken of the respiratory

movements, among them some giving a record of the onset and culmination of a fainting fit. Phasic respiration, or "Cheyne-Stokes breathing," appears to be common at great heights, and is especially well seen during sleep. In one case the respiratory phases are separated by complete cessation of movement as long as twenty seconds. The respiratory organs tend to pause at the end of expiration. The diminution of stature which always takes place during the day is augmented by a mountain ascent. The author represents that much more work can be accomplished at an altitude of 14,800 feet than at the sea level, and that there is no increase in the frequency of the respiratory movement; indeed, both the frequency and the amplitude may be diminished, or with a frequency exactly like the normal the amplitude may be less. The unexpected statement is made that on the summit of Monte Rosa the rate of breathing was not always altered, even by fatiguing muscular work. This seems to be because while on the plains the organism takes in a quantity of oxygen which is more than sufficient for its immediate needs, the breathing is not augmented at great heights, since, though less oxygen is actually consumed, it is enough, and more than enough, for the needs of the organism. The experiments of Loewy and Leo Zuntz, on the other hand, show that on mountains, when a height of 8,900 feet is reached, even at rest there is a slight increase in the gas exchanges and in the rate of breathing, while there is a great increase of both at the height of 14,800 feet. Prof. Mosso believes that mountain sickness is due to an actual diminution in the quantity of carbonic acid in the blood, assuming in his theory of *acapnia* that this gas is the normal exciting agent for causing a discharge from the nerve cells in the medulla oblongata. Some of Prof. Mosso's conclusions are opposed to views previously held, or differ from those resulting from the experiments of others, and are regarded as subject to criticism or needing further verification.

It being a fact of common clinical experience that the most varied types of disease involve some damage to the lungs, with consequent increase of the danger to life, the functional variations in the process of oxygen absorption by the lung have been investigated, so far as they are of a physiological nature, by J. Haldane and J. Lorrain Smith. Studying conditions affecting the organism as a whole, as the state of fever and the accompanying infective process, and conditions in which the important element is some gross change in the lung tissue itself, the authors find that the oxygen tension of the arterial blood leaving the lungs is lowered to about that of the alveolar air by the general pathological processes that ordinarily occur in fever, and in particular by rise in temperature and by toxic agents of bacterial origin, and that the oxygen tension is also lowered by pathological changes occurring in the lungs locally as a result of irritation by high-pressure oxygen. The lowest tension observed in the cases where the animal was suffering from some general condition were on the whole higher than the lowest tensions observed when merely local changes in the lungs had been brought about. The observations of oxygen tension showed that interference with active absorption through the lung epithelium forms an integral part of many conditions of disease directly or indirectly associated with the lungs. The fact that the pathological conditions referred to tend to reduce the oxygen tension of the arterial blood to about that of alveolar air affords striking confirmation, the authors remark, of the conclusion that the absorption of oxygen by the lungs is an active physiological process and can not be explained as due simply to diffusion.

M. E. Wertheimer and M. Lepage represented to

the International Physiological Congress that in experimenting upon the accelerator nerves of the dog they had observed the hitherto unnoted fact that the acceleration, instead of being uniform and constant, as is usually represented, is discontinuous and interrupted occasionally by notable slowings and even intermittence of the pulsations. The phenomenon is regarded as simply a manifestation of respiratory irregularities in the heart of the dog, as may be determined by experiment, when the arrests and remissions of the acceleration are found to take place during expiration and the expiratory pause. The alternations may be accounted for when we recollect that the tonic activity of the pneumo-gastric diminishes during inspiration and increases anew during expiration. The authors regard the mechanism they describe as a means of protection against overworking of the heart in cases where anything tends to produce an excessive augmentation of the frequency of its beating.

With an instrument called a phonendoscope MM. Regnault and Bianche have studied the modifications impressed upon the thoracic organs by the movements of bicycling. Applying the apparatus to three champions in a race before the race took place, during its progress, and a few days afterward, they found that the abdominal organs, particularly the spleen, liver, and stomach, were much contracted, the fat under the skin was melted, but the heart and lungs escaped considerable contraction through the flow of blood provoked by the exercise. The continuous movements of the legs and the pelvis, together with the bent attitude, lifted all the abdominal organs upward, and these in turn raised the lungs and the heart, especially the right lung, which is so near the liver. The pyloric extremity of the stomach was raised, giving the organ the form of a wallet and causing the food to remain longer within it. In a similar way the heart was pushed up toward the neck. The extent of these evident displacements ranged from two to five centimetres.

M. F. Lalaine communicated to the International Physiological Congress the results of numerous experiments which he had made to determine the source of animal heat. His method was that of comparing the heat actually produced by the animal with the heat calculated from the combinations effected by the animal while it was sojourning in the calorimeter. The results pointed to the conclusion that, in every case and under whatever conditions, the heat produced by the animal was equal to the heat calculated from the amount of oxygen consumed by it during the same time.

Circulation.—In experiments on heart nutrition, reported to the International Physiological Congress, W. T. Porter found an atmosphere of oxygen to be of advantage in maintaining the contractions of the mammalian heart. A heart fed simply through the veins of Thebesius and the coronary veins will maintain strong rhythmic contractions for many hours if supplied with oxygen at high tension. The same took place when under similar conditions the heart was fed with blood serum alone. Further experiments seemed to permit the conclusion that even isolated portions of the mammalian ventricle supplied through their nutrient arteries with a small quantity of serum at very low pressure would maintain rhythmical, long-continued, forceful contractions when surrounded by oxygen at high tension.

Observations made by Leonard Hill with the Hill-Barnard sphygmometer upon arterial pressure under different conditions indicate that a fall of arterial pressure is concomitant with bodily rest and quiet mental work just as much as with sleep. On rising from bed in the morning and moving about the pressure rises from 10 to 20 milligrammes Hg, as

is constantly the case with muscular activity. If the resting position be once more assumed, the pressure soon falls back to its old level. A rise of pressure is produced by muscular labor, while after such exertion the pressure falls to normal far more rapidly than the pulse frequency. The arterial pressure becomes depressed below the normal resting pressure after severe muscular work. The pressure in the standing posture is constantly higher in the morning. As no noteworthy acceleration of the pulse accompanies the rise in pressure, it is accounted for as occasioned by the activity of the vasomotor mechanism. This overcompensates for the influence of gravity. In the evening, if the body be fatigued, the conditions are reversed. Not only is the pressure generally the same in the two postures, horizontal and standing, but in the standing posture the pressure is maintained by a considerable acceleration of the heart. So far as the author's experience goes, it is only during very excessive fatigue that the pressure becomes lower in healthy individuals in the standing posture. The arterial pressure may be raised 20 milligrammes Hg by plunging into a cold bath. If the subject sits perfectly quiet in the bath the pressure returns to that level which is normal for the resting position, and this will happen in spite of the fact that the subject may be shivering with cold. In a hot bath the pressure falls hardly below that level which is normal to the resting horizontal position. On rising from a hot bath the pressure rapidly reaches that height which is normal to the standing position. Thus, although the skin is flushed with blood after the hot bath, perfect compensation for the influence of gravity is brought about by visceral constriction and cardiac accelerations. The influence of meals on the arterial pressure seems to be slight. Tea raises the pressure; a moderate dose of alcohol may slightly lower it.

Prof. Charles Livon described to the International Physiological Congress experiments indicating that organic extracts produce effects on the blood tension that vary according to the gland with which the preparation is made. Thus extracts of the suprarenal capsules, the spleen, the pituitary body, the parotid of the sheep, etc., on injection produce intravenous hypertension, while those made with pancreas, thymus, the liver, the testicle, the ovary, etc., produce hypotension. The author has made further experiments, not yet completed, which indicate that modifications of its action upon blood tension are produced in the blood which traverses the several organs; and that this blood in passing through the organ becomes charged with special properties of tension action according to the organ.

As the results of the examination of certain "small, generally round, colorless granules," which M. F. Müller, of Vienna, described in 1896 as occurring in the freshly drawn blood from healthy and from diseased persons, Dr. W. R. Stokes and A. Wegefast, of Baltimore, find that "in the blood plasma and serum of man and many of the lower animals there are present varying numbers of granules which resemble the granules of the eosinophilic and neutrophilic leucocytes in size and appearance. After addition of dilute acids, dilute alcohol, etc., and subjection to body temperature, the granules of the leucocyte assume marked activity, and such treatment increases the number of granules present in those fluids. These free granules are almost certainly derived from the granular leucocytes. The filtration of the serum of the dog and rabbit through new Müncke porcelain cylinders removes its normal property of causing the agglutination and cessation of motility of many motile pathogenic bacteria, and of destroying large numbers of these organisms. This property can be partially

restored by adding a sediment consisting of leucocytes, free granules, and blood corpuscles. Since the red blood corpuscles are not germicidal (Büchner), it follows that the restoration of the bactericidal property is due to the addition of the leucocytes and free granules, and that these cells can furnish a germicidal material." The authors suggest as a hypothesis, which, however, they are not able to prove, that the bactericidal power of the leucocytes of the blood and of the serum of man and many animals is due to the presence of specific granules, especially the eosinophilic and neutrophilic. They think that the granular leucocytes, when called upon to resist the action of invading bacteria, may give up their granules to the surrounding fluids or tissues; and consider that this theory explains how apparently cell-free fluids can destroy bacteria.

An albuminous substance which he calls globin has been separated by Dr. F. N. Nichols from hæmoglobin, derived from the blood of a horse by a process the principal steps of which include treatment with hydrochloric acid, the formation of a watery, alcoholic solution, and precipitation with ammonia. The globin thus obtained differs in behavior from albumin in that it is precipitated by extremely cautious addition of ammonia, but is redissolved in an excess of the alkali: while if the solution has been previously acidulated with hydrochloric acid, the addition of ammonia still occasions a precipitate, but the globin is no longer redissolved in an excess of ammonia. Globin quickly undergoes digestion with pepsin and hydrochloric acid, and in the course of four hours is converted into true peptone. When subjected to the action of trypsin it yields leucin but no tyrosin. Its percentage composition is C 54.97, H 7.20, N 16.89, S 0.42. The ashes contain oxide of iron, probably an impurity. From its having been obtained from hæmoglobin partly through the agency of hydrochloric acid, the author regards it as a substance pre-existing in the form of a salt or etherlike compound. A third body is also obtained on the breaking up of hæmoglobin, which has not, however, hitherto been isolated. In its essential characteristics it resembles histon, but when coagulated by boiling differs from other true products of coagulation in the remarkable facility with which it dissolves in acids; and, unlike the nucleo-histon of Lilienfeld, it does not inhibit the coagulation of the blood. When injected into a vein it appears in the urine. Dr. Schulz suggests that many cases of albuminuria may depend upon the excretion or elimination of globin. The hæmoglobin of the dog gave a globin which in all respects resembles that of the horse, while the hæmoglobin of the goose behaves differently.

In experiments by F. Voit on the behavior of different kinds of sugar in man after subcutaneous injection, solutions of mono-, di-, and poly-saccharides were used and the urine was examined for the presence of the injected or any other sugar. By using this method of subcutaneous injection, the disturbing influence of digestion was avoided. In the first instance 11.24, in the second 60, and in the third 100 grammes of grape sugar were injected in solutions containing 10 per cent. of the sugar. Only in the third experiment, 2.64 grammes of sugar were excreted by the urine, in the second experiment only traces of it, and in the first none. Similar large quantities of fruit sugar and galactose were disposed of in the body. Among the mono-saccharides the non-fermentable sugar sorbinose was tried, with the result that after the subcutaneous injection, 36 per cent. of the quantity administered appeared in the urine. Of the pentoses, arabinose, and xylose, about half was disposed of in the body,

and of rhamnose about 14 per cent.; while the remainder was eliminated unchanged. When these pentoses were injected by the mouth, a larger portion was disposed of, and the possibility was suggested that this sugar may be to some extent destroyed or altered in the stomach. Of the disaccharoses, cane sugar and milk were completely excreted as such by the kidneys; and since, when taken into the stomach, they are both used up to a greater or less extent, the conclusion is obvious that only the intestine is competent to effect their decomposition and render them serviceable. On the other hand, the third disaccharide, maltose, was completely disposed of when injected subcutaneously. Trehalose, which is isomeric with maltose, was retained in the body to the extent only of 85 per cent. These results agree well with those of E. Fiseher on the action of blood serum on the different kinds of sugars outside of the body. They also show that the aldehyde nature of the different sugars does not form a measure of their destructibility, since milk sugar, in spite of its aldehyde nature, is not destroyed, while trehalose, which is not an aldehyde, is, and further, that the greater or less facility of the breaking up of a disaccharide does not coincide with corresponding behavior in the body. Thus, cane sugar, which inverts easily, passes unchanged through the body, while the contrary holds for trehalose. Raffinose, which is a trisaccharide, was found in two experiments to be destroyed to about 35 per cent., while it is unaffected by blood serum outside the body. The portion not destroyed reappeared in the urine as raffinose. Of the polysaccharides, so called, glycogen was completely destroyed so that it did not reappear in the urine either as glycogen or as sugar. Achroödextrin, erythroextrin, and amylodextrin (soluble starch) were used up in the body to the extent of about 75 per cent. of the quantity subcutaneously injected. M. Voit expresses the opinion that just as in Fiseher's experiments outside the body, in order to effect thorough fermentation of sugar, its antecedent splitting up into mono-saccharides is necessary, so the animal economy is not able to burn off the higher sugars until they have been broken up into their components.

Arsenic is known to have a remarkable effect in increasing the number of red blood corpuscles, in some cases of pernicious anemia, of leucæmia, and of lymphadenoma, although the blood condition in these diseases is often not perceptibly improved by its administration; and similar effects are observed in other diseases in which it has been administered. In chlorotic anemia, where it is given along with iron, it does not appear when given alone to produce this effect; and in health it is ineapable of increasing the number of red corpuscles above the physiological maximum—a fact which is equally true of all other tonic or dietetic measures. An investigation made by Ralph Stockman and E. D. W. Greig, with the aid of a grant from the British Medical Association, was undertaken with a view to the explanation of the effects of arsenic on blood-corpuscle formation in those diseases in which it has proved of value clinically. The experiments, made upon young and adult rabbits and upon young dogs, point very conclusively to a stimulation of the bone marrow as the method of action of arsenic as a hæmatinic in pernicious anemia and other morbid conditions. In these cases, however, although it may increase the number of blood corpuscles, it does not, so far as the authors can see, affect the real cause of the disease. It must therefore be regarded as a purely symptomatic method of treatment.

The leucocytes of the blood of dogs into whose veins minute quantities of mercuric perchloride had been injected when examined by M. Henry

Stassano showed, after careful separation, the presence of a perceptible amount of mercury. It appeared from the experiments that the leucocytes are the exclusive agents of transportation and absorption of mercurial compounds in the circulation.

W. M. Bayliss represented in a paper communicated to the International Physiological Congress that he had found no law of opposition between the visceral and the cutaneous vascular reflexes. The opposite results obtained by Grützner, Heidenhain, Dastre, Morat, and others he regarded as due to their not having sufficiently taken account of the passive changes in peripheral parts due to rise and fall of blood pressure. The author had been able to show by means of an artificial schema that a slight constriction or dilatation in one part arranged in multiple arc with a larger part might be overcome by a simultaneous constriction or dilatation of the larger part, and thus, although the muscular net of the vessels in the limbs, etc., may be in a state of contraction, the large simultaneous rise of arterial pressure due to contraction in the arterioles of the viscera forces even more blood through the limbs than in the normal state, and this causes an increase of the volume.

A paper by Mr. Hamburger in the Royal Academy of Sciences, Amsterdam, showed that venous propulsive pressure promotes in a high degree the destruction of *Bacilli anthracis* and their spores, which have been introduced under the skin.

Digestion.—The results of the researches of Dr. Aitchison Robertson on the process of amylolysis by ptyalin in mixed diets are of interest as having a direct bearing on the selection of a proper diet for invalids and infants. The author began by endeavoring to ascertain the quantity of saliva which he secreted with different articles of diet by weighing the portions, masticating them, and then, instead of swallowing them, ejecting and reweighing each bolus. With a dietary which he describes in detail, he found that he secreted the total amount of 400 grammes of saliva a day. Rinsing out the mouth with tepid water greatly promoted the flow of saliva; hence tea, though it contains tannin, rarely causes amylaceous dyspepsia, the excess of ptyalin counteracting the action of the tannin. Brandy, whisky, and beer are sialogogues, as also are sweets. Mechanical irritation of the buccal mucous membrane and movement of the jaws, as in speaking, cause an increase of saliva. Considerable daily variations were observed in the secretion. Many experiments, the details of which are recorded in the author's paper in the "Journal of Anatomy and Physiology," were made on mixtures of starch with different food constituents and beverages. Among other conditions, the author satisfied himself that porridge and milk form a more digestible compound as far as amylolysis by saliva is concerned than other combinations of oatmeal; that the more broken down and moist the starch particles are, the more rapid and extensive is the amylolysis. Bread in a light and spongy condition is more rapidly acted upon by saliva than less spongy bread, though the ultimate digestion is not more complete. Milk has a retarding influence on the salivary digestion of starch in bread, while broth has little or no effect. Tea and coffee have an inhibitory influence on amylolysis, but coca has little or none. Beer promotes the salivary digestion of starch. Alcohols, speaking generally, retard it even in dilute solution, wines appearing to have this influence chiefly owing to their acidity.

Many experiments, particularly those of Czernay and Kaiser, Pachon, Carvallo, De Filippi Monari, Ludwig and Ogata, go to show that dogs may live and be nourished and thrive after removal of their stomachs. The operation of the total extirpation

of the stomach in the human subject has now been successfully performed by Dr. Carl Schlatter, of Zurich, and followed by the union of the œsophagus with the jejunum and an apparently complete restoration of health. The patient was a woman fifty-six years of age afflicted with a malignant tumor in the stomach, while the conditions were such as not to permit of the successful application of the ordinary processes. Although the operation was a long one, occupying considerably more than two hours, the patient did not suffer seriously from shock and made an excellent recovery. She quickly regained the power of taking even solid food, and gained eleven pounds in weight during the course of the next six weeks. It having been found after the operation impossible to approximate the duodenum and the œsophagus, the duodenum was closed by careful suture, and the œsophagus was united to the jejunum about a foot below its origin. This direct union of the œsophagus and jejunum proved quite satisfactory, although a few instances of vomiting occurred, which were, however, ascribed to mistakes in the administration of food. As a rule there was no regurgitation into the mouth of the contents of the intestine, and the intestinal secretions were able to deal so satisfactorily with the various elements of an ordinary mixed diet that the excretions showed no marked deviation from the normal beyond the diminution of chlorides in the urine. The albumins of the food proved to be digestible without the aid of the gastric juice, and the bowel after a short time adjusted itself to the reception of a moderate meal direct from the mouth. Even the vomiting showed that that symptom may occur independently of the stomach, of which some authors have regarded it as a function. "The scientifically and practically important question," Dr. Schlatter concludes in his paper, "whether the total removal of the stomach in the human subject is compatible with a continuance of life has, with great probability, been answered in the affirmative by the case which has now been briefly narrated. The stomach is essentially an organ for the protection of the intestine, mitigating or removing such properties of the food as might have an injurious influence on the intestine. Provided that the food is of suitable quality, the intestine is quite competent to perform the chemical work of the stomach."

Both bile and pancreatic juice are found, in the general result of experiments, greatly to aid the absorption of fat in the intestine. Investigations by R. H. Cunningham as to the effect of the absence of these secretions show that some absorption of fat other than the natural emulsified fat of milk still occurs under that condition. The rate of absorption is much slower and the quantity absorbed is very much less than in the normal state, when both the bile and the pancreatic juice are present to act upon the vegetable cells. Their absence from the intestine does not, however, prevent the intestinal epithelial cells from ultimately absorbing fat, apparently by a process that is indistinguishable from that occurring in the normal state.

While preparing an aqueous extract of the pancreas of a pig, M. Eugène Choay made comparative experiments with it and commercial pancreatin. He found the proteolytic power of the extract far superior to that of the commercial article of a brand very well known in pharmacy. The same was observed with regard to the power of liquefying starch paste. Other experiments were made in its action on fibrin, starch, and fat, and the conclusions drawn are that it is of great importance to assay all pancreatins; that the aqueous extract of pancreas concentrated in a vacuum at a low temperature is an excellent preparation; and that pan-

creatin prepared according to the Codex has the same activity as the aqueous extract on proteic and amylaceous materials. They differ from that prepared in a vacuum only in that their power of saponification is greater.

From an investigation as to how far a glucoside constitution can be held to cover the whole range of proteids, A. Eichholz finds that three substances can be separated from white of egg, each of which is capable of yielding an osazone corresponding to glucosazone. These substances are, in the order of their solubility, ovomucoid, egg albumin, and ovomucin. Ovomucin has not been heretofore definitely described. Egg albumin has been regarded as a glycoprotein by Pavy and Krankow, while Mörner failed to obtain any osazone from it. Ovomucoid has been shown by Mörner and Krankow to yield on hydrolysis a powerfully reducing substance, but neither obtained from it an osazone-yielding product. Serum proteid as a whole is capable of yielding an osazone after hydrolysis. Purified serum albumin does not yield any osazone on hydrolysis, and the glycoprotein reaction of serum proteid as a whole appears to the author to depend on a portion of the globulin precipitated from the diluted serum by acetic acid, which on hydrolysis gives a very definite reducing and osazone reaction. Pure casein resembles serum albumin in its absolutely negative reaction to carbohydrate tests after hydrolysis. The author regards as the fact of primary importance appearing from the experiments and results the wide distribution, both qualitative and quantitative, of the class of bodies known as glycoproteids. "It is probable that every tissue containing proteids will be found to contain some admixture of glycoproteids. While agreeing with Dr. Pavy as to the importance of this class of compounds, I am unable to agree with him in considering that all proteids are glycoproteids, since pure serum albumin and pure casein resist all attempts to produce from them a definite osazone-yielding sugar. I should be inclined, as the result of the experiments given above, to classify proteids primarily as pure proteids and glycoproteids."

Some conclusions published by Prof. F. R. Fraser in 1897 concerning the antidotal properties of the bile of some animals against the toxins of such diseases as diphtheria and tetanus, and especially of the bile of noxious serpents against snake bites, have been fortified by further experiments. From these the author finds that the bile of noxious or venomous serpents is the most powerful antidote to venom, and is followed in efficiency by the bile of innocuous serpents, while the bile of animals having no venom-producing glands, although it is definitely antidotal, is less so than the bile of innocuous serpents, and much less so than the bile of noxious or venomous serpents. The bile of the venomous serpents examined was also found to have more antidotal power against the toxins of disease than the bile of the majority of non-venomous animals. Among non-venomous animals, the rabbit produced a bile definitely superior to the others against both toxins and venoms.

A proteohydrolic ferment has been found by Mlle. Em. Bourquelot and H. Herissey in the fungi *Amanita muscaria* and *Clitocybe nebularis*, the action of which is analogous to, if not identical with, that of trypsin.

Secretion.—Among the results of further studies by R. Hutchinson on the chemistry and action of the thyroid gland, it appears that the percentage of iodine in the colloid matter varies considerably, but amounts on the average to 0.309 per cent. of the dried substance. Of the products of the digestion of the colloid matter, only those which contain iodine are active, and the degree of activity of each

is roughly proportional to the amount of iodine present; but activity is not increased by artificially increasing the proportion of the iodine. The proteid-free body can be made to take up an additional quantity of iodine equal to what it already contains, but the activity of this product has not yet been tested. Intravenous injection of a solution of the colloid matter has no effect on the blood pressure or the heart. The fall of blood pressure which results from the injection of thyroid extracts is due mainly to one or more of the organic extractions present, and in a less degree to the presence of mineral salts. Previous removal of the ovaries or testes has no influence upon the results of thyroidectomy, and ovarian feeding has no curative influence in myxœdema. The author has not been able to find any evidence of the presence of a poison in the bile or central nervous system of animals suffering from the effects of thyroidectomy. Of 24 consecutive cases of complete removal of the thyroid, only 4 of the animals survived. The percentage of survivals can be raised by thyroid feeding, but only to a small extent. Parathyroid feeding has no effect in myxœdema. Keeping animals (dogs and cats) warm after thyroidectomy does not delay the onset of the acute symptoms, nor does it modify their course.

In his experiments upon the functions of the suprarenal capsules made upon the frog, M. P. Langlois used a red-hot platinum wire for the destruction of one or both capsules. He found that death invariably follows the destruction of both capsules, though not of one alone. As reasons for believing that the fatal issue is due to the suppression or abolition of an organ essential to life, and not to the shock of the operation or to any inhibitory action exerted, the author adduces the facts that no marked symptoms are observed during the first twenty-four hours after total destruction; that the fatal result is postponed when the destruction is incomplete; and that the subcutaneous insertion of fragments of the kidney with the capsules prolongs life, though such a proceeding would be without influence on the phenomena of inhibition. The average duration of life after the operation of extirpation of the suprarenals is about forty-eight hours, but in winter, and in the hibernating frog, life may be prolonged for twelve or thirteen days. The first symptoms observed after the operation were a kind of apathy and indisposition to move, even when irritated; then ensued inco-ordination of the movements, especially of the hinder limbs, followed by complete paralysis, and succeeded by a similar sequence of events in the fore limbs; the respiration became slower, the pupils contracted, the cardiac contractions became feebler, and the circulation less active, and the animal died. Further experiments led to the belief that the death of the animal was not due to any disturbance of the renal functions. The author believes that after the removal of both suprarenals a true auto-intoxication takes place, the animal generating poisons which, being normally either destroyed or changed in the gland, or by some material formed by the gland, are now poured into the blood.

Experiments by Snale Vincent indicate that in cats and dogs, at all events, the active principle of the suprarenal capsule is not absorbed when taken into the stomach.

A new way of counting the sudoriferous glands in the human subject devised by Dr. Eijkmann, of the Dutch Colonial Service in Jamaica, includes covering the subject, after he has been thoroughly washed, with an alcoholic solution of fuchsine, and drying. A sheet of fine white paper is applied for a few minutes in such a way as to avoid creases and folds. On removal, the paper will be found thickly

studded with red stains, each stain representing the aperture of a sudoriferous gland. The fuchsine has no effect upon the parts that keep dry, but wherever the paper has been moistened by a drop of perspiration there will be a mark. A whole series of "proofs" may be taken in this way without any need to renew the fuchsine. In determining the number of glands the system adopted for counting the red corpuscles of the blood may be followed. Dr. Eijkmann examined in this way the skin of various parts of the bodies of two Malays and three Europeans. He found as an average for the whole body 160 sweat glands per square centimetre in the former and 162 in the latter. But the distribution varied greatly according to situation, the hand and the brow being the parts most thickly studded.

An elaborate series of researches on the bile pigments of the higher animals and in some of the invertebrates has been carried on by MM. Dastre and Florese, by which they have satisfied themselves that bilirubin or bilirubinic acid does not exist free in bile, except, perhaps, in some strongly pigmented kinds like that of the pig, but that its occurrence is in combination with sodium as a neutral bilirubinate, for bilirubin is insoluble both in normal bile and in the decolorized bile of Plattner; moreover, the alkaline bilirubinate, contrary to the statement of Städeler, are only to a small extent soluble in water, while they are readily soluble in the alkalies and the alkaline carbonates. Bile is, in regard to the nature of its fundamental pigment, a solution of sodium bilirubinate in the alkaline carbonates. The second principal bile pigment, green pigment, biliverdinic acid, is in similar case. It is, however, slightly soluble in normal bile, and in decolorized bile, whether neutral or acid. It exists in the bile principally in the state of sodium biliverdinate dissolved in the carbonates. Solutions of bilirubin do not absorb oxygen from the air to pass into the condition of biliverdin. This absorption occurs only with the bilirubinate in becoming biliverdinate. The color of solutions of the fundamental pigment depends on the quantity of the pigment, and varies from a deep red containing $\frac{1}{1000}$ or more to a pale yellow, which is always the color of neutralized solutions. In normal bile taken from the gall bladder the authors have discovered two other intermediate pigments which they have named biliprasinic pigments. One of these is yellowish brown, and is the biliprasinate of soda. It is converted into biliprasin or green pigment by a current of carbon dioxide and by acetic and most other acids, especially in presence of alcohol. It is not stable *in vacuo*, but is decolorized by the action of light, and when exposed to air and light it becomes green, changing to sodic biliverdinate. It exists in some yellow biles. The second biliprasinic pigment—biliprasin—is green. It differs from biliverdin—that is, the biliverdinate—in becoming yellow (forming biliprasinate) on the addition of a few drops of alkali, and in becoming red (forming bilirubinate) on exposure to a vacuum. It is slightly soluble, especially in liquors charged with carbon dioxide. It constitutes the ordinary pigment of the bile of the calf, of the fresh bile of the ox, and of the bile of the rabbit. The two pigments have the simple relation to one another of the yellow one being an alkaline salt of the green one, and they are converted into each other by the alternate action of acids and of alkalies. This is contrary to what occurs with bilirubin and the bilirubinate, which are equally yellow, and with biliverdin and the biliverdinate, which are equally green. Hence, contrary to what is usually stated, yellow bile can become green without oxidation. True biliverdin is less common than is supposed in bile. The biliprasinic pigments are intermediate to the fundamental pigments, bilirubin

and biliverdin, in point of oxidation and of hydration. Those processes affecting the original fundamental pigment of the bile, bilirubin, begin possibly in the hepatic cellules and in the biliary ducts, and certainly go on in the gall bladder, but the artificial conditions for this change are not here realized. Hence the hypothesis of an agent or condition for inducing oxidation (hepatic oxidasis). In the invertebrates the authors distinguish pigments soluble in water and pigments soluble in chloroform. The former pigment is named by them "ferrine," and contains iron combined with some proteid. The pigment, soluble in alcohol and chloroform, contains no iron, and appears to be identical with the chlorophyll of plants.

In studies of the relation of the degree of acidity of the urine and the percentage of uric acid contained in it to the precipitation of the uric acid in the form of gravel, W. J. S. Jerome finds that the urine may be made to deposit uric acid, in healthy persons through the ingestion of a sufficient quantity of food rich in nuclein; that some urines, after an ordinary diet, have an abnormal tendency to the precipitation of uric acid; and that this tendency is not always due either to the presence of a high degree of acidity, or to a high percentage of the uric acid in the urine, or to the coexistence of these two conditions, however much such conditions may favor the precipitation.

In experiments to determine rather the sequence than the nature of changes in urine resulting from exercise, G. C. Garrott found that rapid but not laborious exercise taken by a man in good muscular condition, on ordinary diet and unrestricted fluids, to a degree just short of the production of excessive fatigue may be expected to produce some such results as (1) an excretion of urea rising to a maximum of possibly double the normal in about twelve hours, and only regaining the usual level after about thirty hours have elapsed, the increase beginning immediately after, but not during the exercise; (2) an excretion of uric acid rising to a maximum not greatly above the normal within six hours, and then falling rapidly if the condition of the subject be good and his food sufficient, but rising to a higher maximum and falling slowly if his condition be poor and food deficient; evidence that the rise in this excretion occurs during the exercise or precedes that of urea is wanting; (3) an increased excretion of acid, possibly during, and certainly immediately after the exercise, less than that of urea, but following the same course; (4) an increased excretion of phosphates, certainly not during the exercise, but immediately after, distinctly less than that of acid, and therefore small, but on the whole accompanying that of the latter; (5) an increased excretion of sulphates, proportionate to that of urea, but of less duration, and therefore of more intensity, this increase commencing during the exercise, and reaching a maximum of possibly three times the normal within six hours, and probably earlier, but terminating in twelve or fourteen hours; (6) a decrease in the excretion of chlorides, and the extent of which will vary directly with the amount of sweating, and inversely with the condition of the subject in relation to the exertion he is called upon to make. Profuse and prolonged sweating induced by Turkish baths at high temperatures may be expected to produce a reduction in the secretion of urine, hardly to be prevented by drinking much water; and a reduction in the excretion of chlorides—not, however, necessarily considerable. It must not be expected to produce any noteworthy effect on the excretion of urea, uric acid, urinary acid, phosphates, or sulphates.

Experiments by F. G. Hopkins and W. B. Hope on seven individuals confirm the statement of F.

Mares, made in 1887, that during the period of increased nitrogen excretion that follows a meal the increase of uric acid is of briefer duration than the excretion of urea and occurs characteristically in the earlier hours of the hyperexcretory period, a fact which is difficult to reconcile with the view that the uric acid takes origin from the nucleins of the diet, upon which the earlier stages of digestion have only a minimal influence. It is suggested by the authors that of the total quantity of uric acid normally excreted, that portion which bears a more immediate relation to food does not arise from nucleins, but from some more soluble constituent of the diet acting either as a direct precursor or as a factor in a synthetic process.

Experiments were described to the International Physiological Congress by Dr. Bédart, of Lille, in which, subjecting the skin of the mammary region of a number of women whose milk had gradually fallen off or even failed on one side to electrical excitation, he had succeeded in five cases out of eight in restoring the secretion durably. In two cases a breast which had failed began again to secrete milk. With an average of four or five sittings of ten minutes each the density of the milk was usually increased, and the nutrition of the child improved.

Muscular System.—At the meeting of the International Physiological Congress F. J. Allen showed that by the use of a very sensitive stethoscope he had ascertained that muscle, as such, makes no sound during contraction. But if the movement of the muscles is communicated to a membrane capable of sonorous vibration—the *membrana tympani*, for example—a sound may be produced even by a single muscular twitch. In order to produce an audible vibration the twitch must be sudden. Slowly contracting muscles produce no sound, as in plain muscle or cold-blooded heart muscle. Other muscles produce sounds whose intensity is in proportion to the suddenness of their contraction.

In a communication to the International Physiological Congress of the results of his studies in the frog, the turtle, and the cat of the process of muscular fatigue, Dr. Frederick S. Lee represented that the phase of contraction is lengthened greatly in the turtle, slightly in the frog, and apparently not at all in the cat. The one factor in the phenomenon of fatigue that is common to these species is the diminution of the lifting power of the muscles, and this must be regarded as the essential factor in the fatigue process. Of the two supposed causes of muscle fatigue—viz., decrease of contractile substance and accumulation of fatigue products with poisoning of the muscle thereby—the former apparently plays no part in the phenomenon; the latter is the sole cause. Fatigue is a safeguard against exhaustion. Attempts to demonstrate histological differences between resting and fatigued muscle gave negative results.

Decerebrate rigidity is a term which was used by C. S. Sherrington in a communication made to the Royal Society in 1896 to designate a condition of long-maintained muscular activity supervening on removal of the cerebral hemispheres. Although continued experimentation still leaves the author in doubt concerning the actual focus of the origin of the rigidity, he has supplemented his previous communication with a further account of the phenomenon and of some points connected with it. It appears from this that "decerebrate rigidity is only a type of extensor spasm of which allied examples follow various other lesions of the cerebello-cerebral regions. The development of it in a limb is largely determined by centripetal impulses coming from the same. The contraction of the muscles active in it can be readily inhibited by stimulation of various regions of the central nervous system,

among others of the sensor-motor region of the cerebral cortex. The activity of the rigid muscles can be readily inhibited by stimulation of various peripheral nerves, among others, of the afferent nerve fibers proceeding from skeletal muscles. Reflexes obtained from the decerebrate animal exhibit contraction in one muscle group accompanied by relaxation, inhibition in the antagonistic muscle group (reciprocal innervation)," and this in such distribution and sequence as to couple diagonal limbs in harmonious movements of similar direction.

From a series of investigations carried on by Elizabeth Cooke in 1894 and 1895 on the muscles of the frog with a view to determining the part played by osmosis in the animal muscles, and what differences in osmotic phenomena are determined by the different conditions to which living muscles are subjected, the results are deduced that a muscle immersed in a hypertonic sodium-chloride solution does not behave according to the laws of osmotic pressure governing two solutions having the pressure of the immersing fluid and the fluid which is isotonic for the muscle, but (owing doubtless to splitting-up processes within itself consequent upon the taking up of water by the muscle) behaves like a solution having a higher osmotic pressure than the solution for which it is isotonic; that a rise in temperature determines an increase in the osmotic pressure within the muscle, and this increase is greater than the increase which would result from a given rise of temperature in a solution the molecules of which do not dissociate; that in a muscle which has been removed for some time from the body a loss of water decreases the irritability of the muscle, and a taking up of water, up to a certain point, increases the irritability (beyond that point the taking up of water decreases the irritability of the muscle); that a muscle which has done work has a higher osmotic pressure than a resting muscle (the greater the fatigue the greater the increase in osmotic pressure); and that the increase in the osmotic pressure consequent on fatigue is due not to any change in the physical properties of the muscle, but to chemical changes within the muscle.

Experiments made upon dogs by J. Brunton Blaikie and Prof. Gottlieb, and reported to the International Physiological Congress, demonstrated that urea is present in the muscles of both well-fed and starved animals, but that its amount undergoes considerable variation according to the condition of the animal, the variation appearing to be essentially related to the amount of urea in the blood.

Nervous System.—The functions of the optic thalami have been investigated by M. J. Sellier and M. H. Verger, with special reference to the effect of lesions of them upon sensibility. In experiments with dogs fine needles were made to penetrate the substance of the thalami and a current of determined mean strength was made to pass. No symptoms of meningitis were observed in any of the animals, and only small, though sharply defined, destruction of the tissues was observed. The animals were allowed to recover from the operation and were tested systematically for a few weeks. When they were examined from eight to ten days after the operation, motility and sensitiveness to heat were always found intact. The sense of the position of the limbs and the tactile sensibility were always manifestly affected. At the end of a fortnight the disturbance of sensibility had disappeared, a fact which the authors regard as the most important outcome of their observations. Marked and permanent visual troubles were observed in two cases, but the authors were not able to determine whether there was complete

unilateral blindness or a crossed hemianopsia. They satisfied themselves that the optic thalami have no influence on the voluntary movements of the animal operated upon, and that there were no compulsory or forced movements. Their sensory office is undeniable, but the thalamic anaesthesia, like cortical anaesthesia, do not include sensibility to pain and are transitory—circumstances which support the view that the functions of the cerebral ganglia are similar to, if not identical with, those of the convolutions of the brain.

Two tracts in the lumbo-sacral region containing what Marle has named "endogenous fibers" are described by Dr. Alexander Bruce. These fibers occur in the posterior columns of the cord, and are so named because they are derived from cells in the cord itself and do not originate in the posterior roots. One of the tracts, named the cornu-commissural tract, lies in the anterior part of the posterior column in close apposition to the posterior commissure and septum and in part to the surface of the cord. The second, the septo-marginal tract, has a close relation to the posterior median septum. The cornu-commissural tract does not degenerate in locomotor ataxia even in its advanced stages or in injury to or compression of the cauda equina. It undergoes degeneration in conditions which lead to atrophy or degeneration of the cells of the posterior cornu. After giving a particular description of these tracts, Dr. Bruce observes that it is not yet possible to make a definite statement regarding the cells from which they originate, and that nothing can be asserted with certainty as to their function except that they are probably commissural.

From studies of the experimental junction of the vagus nerve with the cells of the superior cervical junction Dr. J. N. Langley concludes that there is no essential difference between the efferent "visceral" or "involuntary" nerve fibers, whether they leave the central nervous system by way of the cranial nerves, by way of the sacral nerves, or by way of the spinal nerves to the sympathetic system. All these fibers he takes to be preganglionic fibers, and he thinks that the preganglionic fiber is capable in proper conditions of becoming connected with any nerve cell with which a preganglionic fiber is normally connected, although apparently this connection does not take place with equal readiness in all cases. On the whole it appears that the functions exercised both by preganglionic and by post-ganglionic fibers depend less upon physiological differences than upon the connections which they have an opportunity of making during the development of the nervous system and of the other tissues of the body.

From a study of the changes produced by excitations in the cerebral neurones, the results of which were communicated to the International Physiological Congress, Dr. Héger, of Brussels, concludes that one of the important properties of the nervous cell is its variability. The variations bear upon the body of the cell, its prolongations, and its appendages. The three orders of variations may exist together or independently of one another. The investigation of their significance bears upon the question of the normal and pathological activity of the nervous centers.

In a paper read to the fourth International Physiological Congress at Cambridge, England, on the significance of the moniliform state of the cerebral neurones, M. D. Demoor gave the conclusion that the nervous elements being plastic, real anfiboid movements do not enter into the phenomena. The plasticity of the neurones is very important from the point of view of the mode of their association with one another, and of their relations with the terminal apparatus.

Dr. Caro Parascandolo, in experiments on dogs and rabbits, has studied the lesions of the nervous system that occur after burns of various degrees of severity. He has found retraction of the gray matter of the cord with deformed posterior cornua and perinuclear and peripheric chromatolysis in the cells; sometimes what he terms homogenization of the protoplasm; sometimes granular degeneration of chromatin with presence of chromatic rods in the nucleus; and sometimes total achromatolysis with destruction of the tissue network. The protoplasmic processes presented varicose atrophy or lost their connection with the cell body and were augmented; and degeneration of the cord, affecting the posterior cornua, was the rule. The author concludes that as the result of burns ptomaines make their appearance in the blood and muscles and other organs of animals suffering from them, and cause death by bringing about anatomical changes in the nervous centers. The alterations observable are similar to those met with in different types of infection. It is particularly worthy of notice that these ptomaines are capable by inoculation of producing in the nerve centers the same lesions as are observed in the case of burns.

The salient points brought out in an investigation by Prof. Louis Kahlenberg, of the University of Wisconsin, of the action of solutions on the sense of taste may be summarized as follow: In order that a substance may affect the sense of taste, it must be soluble in water, must be readily diffusible, and must be capable of reacting chemically with the protoplasm of the terminals of the nerves of taste. The modern theories of solutions lead to the conclusion that the taste of a solution that conducts electricity ought in general to be that of the ions and the undissociated molecules that the solution contains: sour taste is caused by hydrogen ions, while hydroxyl ions produce an alkaline taste, which in strong solutions is exceedingly disagreeable; chlorine ions have a salty taste, bromine ions one that is similar, but slightly different in quality from that of chlorine ions, while iodine ions have a salty taste that is different in quality and less intense than that of either chlorine or bromine ions. The taste of NO_3 ions is slight, probably a trifle salty. Only in strong solutions do they produce a sharp burning sensation on the tip of the tongue. The ions SO_4 and CH_3COO have but very little taste, the effect of the latter seeming to be a trifle sweet. The taste of sodium ions is slight, and is only imperfectly described as being a smooth effect on the tongue, somewhat similar to that produced by a very dilute solution of hydroxyl ions. Potassium ions have a more pronounced taste, peculiar, bitter, and rather disagreeable. Lithium ions have no pronounced taste, having a similar effect, but less in degree, with that of the sodium ions. Magnesium ions are bitter, and calcium ions too, but with a taste different in quality from that of magnesium ions. Silver ions have a metallic taste and cause a peculiar puckering sensation in the membranes of the mouth cavity. The taste and effect of mercury ions are somewhat similar to those of silver. The intensity of the salty taste of the halogen ions decreases as the atomic weight increases. A relation in the sense of the periodic law also appears to exist between the taste and the atomic weights of the cations. Instances are found that point to the conclusion that the greater the mobility of the ions as measured by their speed under the influence of the electric current, the more intense is the taste; but many exceptions point to the operation also of other factors. The intensity of the taste of solutions of substances containing amido-acid, alcoholic hydroxyl, and aldehyde groups was investigated, with results corresponding in general to what might

be expected from the relative readiness with which these substances permeate plant and animal membranes. The alkaloïds have in general a pronounced bitter taste, as they permeate protoplasm rapidly and exert a strong physiological action on the nerves; while colloid solutions are tasteless because the substances they contain diffuse very slowly and are chemically inert.

In the examination of the color sensations of nearly 109 persons, Mr. G. J. Burch observed that by exposing the eye to bright sunlight in the focus of a burning glass behind a red screen a condition of temporary red blindness is induced, during which scarlet geraniums appear black and roses blue. Green blindness and violet blindness may be produced by similar means. The author has systematically investigated the appearance of the spectrum during the color blindness induced by exposure to intense light from various parts of the spectrum, and finds that the red from A to B, the green near E, the blue halfway between F and G, and the violet at and beyond H produce well-defined and characteristic results, indicating that each of these colors corresponds to a definite color sensation. In each case all direct sensation of the color used for fatiguing the eye is lost, but the observer is conscious of a positive after-effect of the same color, by which the hue of all other colors is modified. The temporary abolition of one color sensation is without effect on the intensity of the remaining color sensations. Any two, or any three, of the four color sensations—red, green, blue, and violet—can be simultaneously or successively exhausted. The observed facts are, in the author's opinion, more in accordance with the Young-Helmholtz theory than with that of Hering, but they imply the existence of a fourth color sensation, namely, blue.

A number of cases of what may be called color hearing, or the association of a sense of color with certain sounds, are described by Dr. W. S. Calman, who finds that they may fall into two groups. In the first group a crude color sensation, often very beautiful, is associated with certain sounds, as those of the vowels severally, and of musical notes and instruments. The appearance is usually that of a transparent film like a rainbow, in front of the observer. In the second group color sensations occur whenever letters or written words (symbols of sound) are spoken or thought of, so that when a word is uttered the subject visualizes the letters, with each of which a distinctive tint appears. The author is led from his studies of the subject to regard the phenomenon as one of "associated sensations" analogous to the sensation of shivering which we experience in one part or other of the body at the sight or thought of an action, or when having to endure certain disagreeable or squeaking sounds. The tints excited are very definite and characteristic, each for its own sound, and do not vary as time goes on, while the colors are hardly ever the same in two persons.

Miscellaneous.—The results of more than one hundred cases are cited by MM. S. Arloing and Paul Courmont as showing that the aggregation of the tubercle bacilli when the blood serum is introduced into a culture may furnish, very rapidly, an important element of information in the early diagnosis of true tuberculosis. In two cases, however, the test failed, though tuberculosis was undoubted and in an advanced stage. The fact that positive results were almost always obtained when the tuberculosis lesions were in an early stage is taken as showing that the serum reaction is the more valuable. Feeble aggregation was induced in some cases where tuberculosis was not found by the ordinary clinical methods, and the inference is drawn that latent tuberculosis may be consistent

with the appearance of perfect health. One of the latter cases afterward developed into tubercular laryngitis.

A form of the tubercle bacillus capable of existing in cold-blooded animals, such as the frog, has been described by MM. Bataillen and Terre. A third form of this bacillus, originally human, has now been obtained after a passage of three days in the frog. On solid media this form grows rapidly at temperatures between 12° and 48° C., and is distinguished from the form previously described by three points, appearance of cultures, power of easily developing at high temperatures, and possession of the property of rendering beef broth turbid. The colonies on the potato are brownish and the bacilli are not stained by the methods of Gram or Ehrlich. Experiments on animals have led to the conclusion that many cases of pseudo-tuberculosis are in reality true tuberculosis, having as a cause one of the forms of Koch's bacillus.

The relations of toxins and antitoxins, particularly in the cases of snake poisoning and diphtheria, have been investigated by Dr. C. J. Martin and Dr. T. Cherry with reference to the nature of the substances themselves and the nature of the antagonism between them. The first of these two problems has not been satisfactorily answered, but the authors have found that the materials in question have high molecular weights, and should be classed with proteids or proteidlike substances. Applying a method of separating substances of large from those of smaller molecular size in a solution containing both, it appeared that the antitoxin of diphtheria did not pass through the filter. Its molecular size was therefore presumed to be of the same order as that of a globulin. When antitoxic serum was filtered in this manner, all the proteids, and together with them all the antitoxic virtue, were absent from the filtrate. Toxin, on the other hand, the molecular size of which is of the albumose order, was not held back by the filter. Corresponding results were obtained with the toxin and antitoxin of snake poison. Concerning the nature of the antagonism between the two substances difference of opinions has prevailed, some authors believing it to be chemical, like that between an alkali and an acid, and others regarding the action as indirect, operating in some way through the cells of the organism. Experiments with cobra poison in which the antitoxin was destroyed by heating the solutions to 68° C. for ten minutes, while the venom was not attenuated, have been held to show that the toxin and antitoxin do not act *in vitro*, but only *in corpore*, or that the action can not be explained as a simple chemical operation. Such experiments are shown by the authors not to be conclusive, because in them no account is taken of time as a factor in aiding chemical action; and they present experiments of their own, illustrated by a graphic curve, showing that when the antitoxin is allowed to act upon the toxin for more than ten minutes before the solution is applied they completely neutralize one another *in vitro*. This result was obtained with both snake venom and diphtheria toxin and the antitoxin.

The chief points noted in a paper by W. B. Hardy regarding continued observations upon the action of the hyaline cells of frog's lymph upon bacilli, are that actual measurements show that contact with an oxyphil cell of frog's lymph retards or stops the growth of a chain of *Bacillus filamentosus*; that the action of the cells upon this organism is generally determined by temperature. Below 19° C. the cells usually completely arrest growth; between 20° and 25° C. the growth is only retarded. The cells exert the action by coating the chain with a slime which is derived from the oxyphil granules. Con-

tact with a hyaline cell does not necessarily have any effect upon the rate of growth of *Bacillus filamentosus*. If the bacillus is inclosed within vacuoles developed in the cell substances, then retardation of growth occurs.

M. S. Arloing has found that the development of the immunizing effects of anti-diphtheric serum is influenced by the place and mode of introduction. When administered separately, its complete antitoxic action is greatest when it is introduced into the blood, and least when introduced into the conjunctive tissue.

In a research by J. T. Cash and W. R. Dunstan on the pharmacology of certain alkaloids in relation to their chemical composition, the pure alkaloids aconitine, benzaconine, aconine, and an aconitine derivative, diaetylaconitine, were examined with reference to their action upon warm- and cold-blooded animals, a similar series of experiments being made with each alkaloid for purposes of contrast. It was found that if the dose of aconitine, which is invariably lethal per kilogramme body weight, be represented by the unit, that, in very general terms, diaetylaconitine would have $\frac{1}{10}$ of the toxicity of aconitine, benzaconine $\frac{1}{300}$, and aconine $\frac{1}{1000}$. The variation in toxicity among these alkaloids is therefore enormous. The details of the chief results obtained and of the points of difference in the action of the several alkaloids are given in the paper of the authors. All the alkaloids examined reduce body temperature, though in varying degree. It is further pointed out that while the toxicity of aconitine mainly depends on the presence of the acetyl group, the introduction of two additional acetyl groups into the aconitine molecule does not materially alter the pharmacological action, but merely reduces the toxicity of the parent alkaloid. The removal of the acetyl group abolishes the stimulant action upon the respiratory center and pulmonary vagus. It also favors reduced activity in motor rather than in sensory nerve endings. The benzoyl group—present in benzaconine, absent in aconine—causes a peculiar and distinct modification in the heart's action, associated with a disturbance of sequence never witnessed after aconine. The curarelike effect of aconine and the intermittent failure of the stimulated benzaconine muscle are also traceable to the modification in chemical constitution arising from the absence or presence of the benzoyl group. Attention is drawn to the practical bearing of the fact that benzaconine and aconine, pharmacological antagonists of aconitine, occur with it in the root of *Aconitum napellus*, from which the medicinal preparations of the drug are made.

In experiments to determine the action of anesthetics on vegetable and animal protoplasm, J. B. Farmer and A. D. Waller studied the effects of carbon dioxide, ether, and chloroform with leaf of elodea and other plants and nerve of frog. The action of carbon dioxide was to produce an initial slight acceleration, followed speedily by a complete cessation of movement. On disconnecting the carbon-dioxide apparatus and aspirating air through the chamber, the protoplasm, after the lapse of two or three minutes, began to show signs of recovery. Fiftful movements of the granules first occurred, and then they soon resumed their processional motion around the cell, at first very slowly. The movements rapidly became accelerated and considerably exceeded the normal rate. The acceleration did not last long, and was followed by a slowing down to the ordinary speed. The results of experiments with chloroform and ether are also given in the authors' paper.

Conclusions are drawn by E. Overton from comparisons of experiments in growing plants in sugars with observations made on autumnal leaves in the

SAN JUAN, PORTO RICO.

Alps, that the red coloring matters of green plants are probably of the nature of glucosides, and are in most cases unions of tannin compounds with sugar. The chief factors in their production are sunshine, which, on the one hand, augments assimilation and the production of sugar, and, on the other hand, accelerates the chemical process leading to the formation of the pigment, and the low temperature, which prevents the conversion of the sugar into starch. In other words, the red autumnal tints are in great measure the direct results of the autumnal climatic conditions. It is possible in many plants to produce red autumnal tints at any time of the year by feeding with glucose. Generally speaking, this artificial production of red cell sap is possible only when the natural reddening of the leaf has its seat in the mesophyll cells. In cases where the coloration is in the epidermis experiments with glucose are unsuccessful.

As the result of the examination of numerous tumors, M. F. J. Bosc has found that the abnormal formations foreign to the tissues can be grouped under five morphological types—microbial forms, granulations, cellular forms of very variable origin, encysted forms, and sarcomatous forms. All these forms exist in epithelia, carcinoma, and sarcoma, but sarcoma contains especially the microbial forms and the granulations.

Prof. Küttner, of Tübingen, found from experiments with Röntgen rays, at the Constantinople Hospital, that splinters of bullets and of bone which had penetrated into the soft parts of the body could not be distinguished from one another. It also appeared that the opinion that deep-lying pus could be located was erroneous. Injuries to the central nervous system, the spinal cord, and the peripheral nerves were solely ascertainable by the aid of the Röntgen rays; it was impossible to do this before. It could, further, be seen whether a bone was totally or only partially severed. It was recommended that photographs be taken for shot wounds in the extremities. The author concluded that the Röntgen rays are of great importance for medical aid in war, but only for fixed hospitals, such as reserve hospitals and those installed in fort reserves, while for moving field hospitals their application is very limited.

For a long series of observations upon the surface and the deep temperature of healthy men M. S. Pembrey and B. A. Nicol applied their tests to the urine and the rectum. The average of 343 observations upon the temperature of the rectum was 98.24° F., and that of 377 determinations of the temperature of the urine was 98.64° F. for a day of twenty-four hours. The average for the time of activity (7 A.M. to 11 P.M.) was 98.58° F. for the rectum, and 99.12° F. for the urine; while for the period of rest it was, respectively, 97.42° F. and 97.67° F. The maxima of the averages were 99.25° F. and 99.58° F.; the minima, 97.03° F. and 97.25° F. The times of the maxima were about 6 P.M. and between 4 and 5 P.M.; the times of the minima were about 2 A.M. and between 4 and 5 A.M. The maxima of all the observations, except those taken immediately after considerable exercise, were 100.6° F. and 100.1° F.; the minima, 96.8° F. and 96.9° F. Muscular exercise produced a marked rise, even as high as 101° F., in the temperature of the rectum and urine. This might be accompanied by only a slight rise or fall in the temperature of the mouth. The temperature of the mouth was found not to be an exact measure of the deep temperature of the body. It is unreliable after exercise or in cold weather, owing to the cooling of the mouth. In some cases the buccal temperature may be from 3° to 4° F. below the temperature of the rectum or urine. Mental work has apparently little influence upon the

temperature; it is generally accompanied by a fall in temperature, owing to the concomitant decrease in muscular activity. The effect of rest and sleep is to produce a steady fall in the temperature, and is the most important factor in producing the fall in the curve of daily temperature. The effect of food is to raise slightly (from 0.3° to 0.7° F.) the temperature of the rectum and urine, and, in the case of the evening meal, somewhat to delay the fall of temperature at that time. The month shows a relatively greater rise, owing to the increase in the vascularity and muscular and glandular activity of the tissues bounding the mouth. After a hot meal the temperature of the mouth is often above that of the rectum. The temperature of the rectum shows an average excess of 0.48 F. over that of the urine, and of 1.17° F. over that of the mouth. The average temperature of the urine is 0.82° above that of the mouth. The relative values, however, vary under different conditions. The surface temperature of the skin in the exposed parts of the body is liable to considerable variations, but that of the parts habitually covered by clothes is fairly constant. A simple flat-bulb mercurial thermometer readily gives results which compare favorably with those given by thermo-electric methods of determining the temperature of the skin.

The formation of enamel has been studied by Charles S. Tomes in the teeth of the Elasmobranch fishes, and he concludes that just as the teeth in that order present the simplest known form of tooth development, so they also present the first introduction of enamel as a separate tissue. In the first introduction it was a joint product, made under circumstances which almost precluded the formation of an outer layer upon the teeth; but in the further specialization of teeth in reptiles and mammals the tooth germs sink more deeply into the submucous tissue, and are protected for a much longer time. The enamel organs become more specialized, and finally take upon themselves the entire work of enamel building, manufacturing both the organic matrix and furnishing it with lime salts, as unquestionably happens in mammals. If these conclusions be correct, it would be quite justifiable to call the formation in these fishes enamel, even though the dentine pupila has had a share in its production.

The hepatic organ is found by M. A. Dastre, whenever it is present, to be always distinguished from the other tissues by the increased amount of iron it contains. Thus in the crustacea the liver is rich in iron, containing four times as much as muscle, while the blood and ovary contain practically none. In cephalopod mollusks the hepato-pancreas contains, weight for weight, twenty-five times as much iron as any of the tissues; in Lamellibranchs the ratio is about 5 to 1, and in Gasteropods the same. The presence of this iron is independent of the metal in the blood. Thus, when copper is present in the blood as hæmacyanin, iron only is present in the hepatic tissue.

It has been shown by M. Raphael Dubois that the active agent in the production of light by animals and plants is a substance possessing the characteristics of the zymoses, which has been named, from that fact, *luciferose*. The light is not the result of combustion, or even of direct oxidation. The fixation of oxygen was shown by subsequent researches to be necessary, but it is effected indirectly, or through the intervention of luciferose, which behaves in this relation like an oxidizing ferment. The luminous organs of glowworms and of the eggs contained in the ovaries of the female give a blue color with tincture of guaiacum. The blood of the glowworm and of some other insects give the same reaction; but the au-

thor has demonstrated the importance of its photogenic function in the *Elateridae*. The luminous mucus collected from the bodies of dead fishes treated with chloroform likewise gives this reaction.

Experiments with reference to the influence of heat in the determination of sex, carried out by M. Marin Mahard on the development of *Mercurialis annua* at varying temperatures, have shown that in this case heat favors the production of female individuals.

PORTO RICO, an island in the West Indies, formerly a colony of Spain, ceded to the United States by the treaty of peace concluded at Paris in November, 1898. The revenue in 1895 was \$5,454,958, and expenditure \$3,903,667.

Area and Population.—The island, 108 miles long from east to west and 43 in extreme breadth, has an area of 3,688 square miles. The population is estimated at 900,000 to 1,000,000. In 1887 the population was 814,708, of whom 480,267 were white, 248,690 mulattoes, and 77,751 negroes. The foreign population numbered 41,000, including Spaniards, who numbered 35,000. San Juan, the capital, has about 30,000 inhabitants. Ponce had 37,545 in 1887.

Commerce and Production.—Porto Rico is one of the most productive of the Antilles, and its climate is the most equable and salubrious. Nearly the whole island is cultivated, the forests being confined to the ridge of mountains running through it and rising to the altitude of 3,600 feet. The soil is exceedingly fertile up to the tops of the mountains, and the climate is favorable to every kind of tropical produce. The coca palm grows along the shore, and about 3,000,000 coconuts are shipped annually, chiefly to the United States. On the steep hillsides bananas and plantains thrive without attention, and 200,000,000 bananas are exported every year. The most important product is coffee, the export of which constitutes nearly one half of the export trade of the island, being valued in 1897 at \$8,789,788. The coffee ranks with the best, and is all exported to Europe, bringing three times the price of the Brazilian. The export of sugar was \$3,747,891 in value. This has not been of late years a profitable crop except on a large scale, with the improved appliances. Of tobacco \$646,556 worth was exported in 1897. The soil and climate in Porto Rico appear to be as well adapted to this crop as in the most favored localities of Cuba, but the skill and care that are bestowed on it there are wanting, and the product has nothing like the same quality and reputation. The average export of coffee is 25,000 tons; of sugar 60,000 tons. Cotton is planted to some extent. The cacao plant has been more recently introduced and is cultivated with success. Orange trees yield six or eight times as much fruit as in Florida or California. Lemons, limes, and shaddock are equally prolific. Pine-apples grow to great size and are of delicious flavor. The guava shrub runs wild. Other fruits are the grape, date, fig, sapodilla, citron, mango, pomegranate, avocado, pear, plum, tamarind, star apple, mamie apple, cashew, granadilla, bread fruit, custard apple, etc. Indian corn is raised everywhere. Rice is also an important crop. The native vegetables are yams, sweet potatoes, cassava, cucumbers, peas, beans, carrots, eggplant, tomatoes, okra, yucca, pumpkins, and arrowroot. In drugs and dyestuffs and in cabinet woods the country is rich. Besides the oak, locust, gum tree, palms of many species, the mahogany, and logwood, the woods contain the laurel, boxwood, walnut, the fragrant cedar of which cigar boxes are made, lignum vitæ, tobacco tree, and the enormous ceiba, or silk-cotton tree. Aloes, sarsaparilla, jalap, and the castor bean are gathered wild. The principal minerals are

lignite, carbonates and sulphides of copper, zinc, and the magnetic oxide of iron, which is found in large quantities. Amber is also obtained. In former times gold was mined. Salt mines are abundant along the shore. In the east are quarries of gypsum. Cattle and hides are important exports. The total value of exports is about \$16,000,000 on the average. The value in 1896 was \$17,295,535, and that of imports \$18,945,793. The chief imports are flour, provisions, wines, oils, textiles, machinery, and lumber. Spain has furnished, besides wines and oil, most of the flour and textiles and manufactures of all kinds, but textiles have come also from England and Germany and from the United States, and flour also from the United States, together with petroleum, hardware, machinery, glassware, pork, lard, lumber and shooks and staves, butter, codfish, and cheese. The value of the imports from the United States in 1897 was \$1,988,883, and of the exports to the United States \$2,181,024. Spain has had till now 72 per cent. of the whole trade. In 1895 there were 1,077 vessels, of 1,079,036 tons, entered at San Juan.

Communications.—There are 137 miles of railroads, besides 170 miles under construction, and 470 miles of telegraph. Cables run to Jamaica and St. Thomas.

PORTUGAL, a monarchy in southwestern Europe. The throne is hereditary in the family of Saxe-Coburg-Braganza. The reigning King is Carlos I, born Sept. 28, 1863. The legislative power is vested in the Cortes, consisting of a House of Peers, containing 52 hereditary, 13 spiritual, and 90 life peers, and a House of Deputies, 120 in number, elected for three years by the direct vote of all citizens possessing an elementary education or an income of 500 milreis. The Cabinet of Ministers constituted on Feb. 7, 1897, was composed, in the beginning of 1898, as follows: President of the Council and Minister of the Interior, José Luciano de Castro; Minister of Foreign Affairs, Henrique de Barros Gomes; Minister of Justice and Ecclesiastical Affairs, Francisco de Veiga Beirão; Minister of Finance, Frederico Ressaou Garcia; Minister of War, Gen. Francisco Maria da Cunha; Minister of Marine and the Colonies, Francisco Felisberto Dias Costa; Minister of Public Works, Commerce, and Industry, Augusto José da Cunha.

Area and Population.—The area of Portugal is 36,038 square miles, including the Azores and Madeira, which have an area of 1,510 square miles. Continental Portugal, at the census of 1890, had a population of 4,660,095, and the islands 389,634; total, 5,049,729.

Finances.—The budget estimate of revenue for 1898-'99 is 51,355,943 milreis from ordinary, and 1,450,000 milreis from extraordinary sources; total, 52,805,943 milreis. The estimate of expenditure is 51,518,761 milreis for ordinary, and 1,136,276 milreis for extraordinary purposes; total, 52,655,037 milreis.

The public debt of Portugal in 1853 was less than 30,000,000 milreis. In 1890 there was an internal consolidated debt of 258,086,897 milreis, a foreign debt amounting to 46,366,759 milreis, 104,172,464 milreis of redeemable loans, and 19,565,172 milreis of floating liabilities; total, 428,191,292 milreis. In 1891 the Government was no longer able to meet its current obligations, and a law was then passed reducing by 30 per cent. the rate of interest on the internal debt payable in currency, which was 3 per cent. on the consols and 4½ per cent. on the amortizable debt. This was followed in 1893 by a law reducing the interest on the external consolidated debt payable in gold by 6½ per cent., or from 3 per cent. to 1 per cent. per annum. The Council of Foreign Bondholders in London found the

amount of the external debts outstanding to be £63,187,263, consisting of £39,261,051 of 3-per-cent. consols, £1,822,223 of redeemable 4-per-cent. bonds, £12,793,989 of 4½-per-cent. bonds, and £9,260,000 of bonds guaranteed by the tobacco monopoly. The internal consols, also held in London to a considerable extent, amounted to £56,941,901, and there were £6,181,905 of internal 4 and 4½ per cent. outstanding, while £31,136,773 of all the issues were stated to be in the hands of the Government. The floating debt amounted to 36,826,421 milreis on June 30, 1897. The interest on the funded debts in 1896 amounted to 17,160,140 milreis; the total expenditure for the public debt to 17,833,538 milreis, more than a third of the total revenue.

Commerce and Production.—Wine is the chief product of the country, and its production is increasing in all sections. The exports in 1896 were 451,210,500 litres of ordinary wine, 284,561,800 litres of port, 22,537,000 litres of Madeira, and 2,733,700 litres of liqueur wine. The port and Madeira go to England, and in lesser quantities to Germany; the common wine mainly to Brazil. Corn, wheat, and rye are grown, but imports of wheat are required. Olive oil, figs, oranges, onions, tomatoes, and potatoes are some of the other products. Sheep and goats are reared in the mountains, cattle in the northern districts, and in the extensive oak forests hogs are fattened on acorns. The mineral resources are great, but for lack of coal and transportation facilities many rich mines remain undeveloped. The total value of the ore production, including copper, iron, antimony, manganese, lead, etc., is about 1,000,000 milreis a year. Sardines and herrings are caught and cured for export.

Colonies.—Portugal has the following colonial possessions:

COLONIES.	Square miles.	Population.
Africa:		
Cape Verde Islands.....	1,480	114,130
Portuguese Guinea.....	4,440	820,000
Prince's and St. Thomas Islands.....	360	24,660
Angola.....	484,800	4,319,000
Portuguese East Africa.....	301,000	3,120,000
Goa, Damão, Diu.....	168	77,454
Timor.....	7,458	300,000
Macao.....	4	78,627
Total.....	801,060	9,216,707

The Cape Verde Islands are peopled by descendants of Portuguese settlers and women from the Guinea coast, who cultivate coffee, medicinal plants, and millet. The imports in 1896 were 1,595,900 milreis in value, and exports 386,500 milreis. The revenue for 1897 was estimated at 267,080, and exports 386,500 milreis. Portuguese Guinea, which is a part of the coast of Senegambia surrounded by French possessions, exports rubber, wax, oil seeds, hides, and ivory. The imports in 1895 were valued at 283,000 milreis; exports, 221,000 milreis. The revenue for 1895 was 58,200 milreis from local sources, supplemented by 146,000 milreis from the Portuguese treasury.

St. Thomas and Principe are fertile volcanic islands inhabited by Portuguese Creoles and negroes. An average of 600,000 kilos of cacao is produced in Principe and of 2,250,000 kilos of coffee in St. Thomas. Cinchona is also cultivated. The imports for 1896 were 1,055,500, and exports 2,283,917 milreis in value. The estimated revenue for 1897 was 300,900, and expenditure 201,385 milreis.

Angola is divided into the administrative districts of Congo, Loanda, Benguela, Mossamedes, and Lunda. The chief products are coffee and rubber, and after these, wax, sugar, vegetable oils, cocoanuts, and ivory. German capitalists have organized the Mossamedes Company for the purpose of carrying on

the cattle-rearing and fish-canning industries and developing the mineral resources of the country, which include copper, malachite, salt, iron, petroleum, and gold. The concession covers the newly discovered gold mines of Cassinga and a vast tract of country. The value of the imports in 1896 was 3,451,456 milreis; exports, 4,612,800 milreis. During the year 286 vessels, of 431,774 tons, visited the ports of San Paulo de Loanda, Benguela, Ambriz, and Mossamedes. There were 200 miles of railroad and 260 miles of telegraph posts. The revenue for 1897 was estimated at 1,374,430, and expenditure at 1,714,240 milreis. (See CAPE COLONY and SOUTH AFRICA.)

The Portuguese possessions in India are Goa, on the Malabar coast; Damão, north of Bombay; and the island of Diu. Salt works furnish the principal industry in all these places. The estimated revenue of Goa for 1897 was 873,118 milreis; expenditure, 935,363 milreis.

Macao, at the mouth of the Canton river, contained, with the dependant islands of Taipa and Coloane, 74,568 Chinese, 3,106 native Portuguese, 615 Portuguese from the Continent and 177 from the islands, and 161 foreigners. Trade is mostly in the hands of Chinamen, and the chief industry has been preparing opium for export to the Chinese of the United States and Australia, which is now declining. The export in 1896 was £285,600 in value. The revenue of Macao and Timor for 1897 was estimated at 497,305 milreis; expenditure, 473,100 milreis. Though Macao still contributes to the cost of the administration of Timor, this possession was made administratively independent in 1896. The delimitation of the boundary between the Dutch and the Portuguese parts of the island of Timor has not been completed. The chief exports of Portuguese Timor, which consists of the eastern half and the neighboring island of Pulo Cambing, are coffee and wax.

Politics.—The political situation is dominated by the financial exigencies of the Government. The Chamber in January, 1898, passed a bill granting trade and industrial monopolies in the Portuguese possessions, upon which the cotton manufacturers of northern Portugal closed their mills by way of protest. The campaign of Major Mousinho d'Albuquerque, Governor-General of Portuguese East Africa, against Gungunhana was no sooner victoriously ended by the capture of the Kafir chief than trouble broke out in St. Paul de Loanda, where the natives in January, 1898, attacked the fortress of Humbe repeatedly. A railroad in East Africa from Quilimane to Ruco, on the frontier of British Central Africa, was authorized in June. Major Mousinho d'Albuquerque was replaced by a Governor-General more acceptable to the English and arrangements were discussed regarding the eventual cession of Delagoa Bay.

On May 2 Barros Gomes retired from the Cabinet, and Senhor Beirão succeeded him as Minister of Foreign Affairs, retaining at the same time the portfolio of Justice. After introducing a bill for the conversion of the external debt, the Government withdrew it in January to enter into fresh negotiations with the bondholders. Many public meetings were held evincing the popular repugnance to the conversion scheme. It was passed, nevertheless, by the Chamber of Deputies on March 8, and on April 29 by the Chamber of Peers, in which the Ministerial following had been strengthened by the nomination of new peers. The Cortes were closed on June 4. On Aug. 15 the Cabinet resigned and was reconstructed as follows: Prime Minister and Minister of the Interior, José Luciano de Castro; Minister of War, Col. Sebastião Telles; Minister of Foreign Affairs, Francisco de Veiga Beirão; Min-

ister of Finance, Senhor Espregueira; Minister of Justice, Senhor Alpoim; Minister of Marine, Senhor Villaca; Minister of Public Works, Elvino Brito.

PRESBYTERIANS. The annual statistical returns of the alliance of the Reformed Churches holding the Presbyterian system show that there are 80 such bodies throughout the world, with a total membership of 4,627,149 in 29,634 congregations.

The twelve branches of the Presbyterian Church in the United States return, altogether, 11,703 ministers, 14,891 churches, and 1,542,401 communicants.

I. Presbyterian Church in the United States of America (Northern).—The following is a summary of the statistics of this Church as published with the "Journal of the General Assembly" for 1898: Number of synods, 32; of presbyteries, 228; of ministers, 7,190; of churches, 7,635; of communicants, 975,877; of members of Sabbath schools, 1,034,164; of candidates for the ministry, 1,161; of local evangelists, 135; of licentiates, 469; of deacons, 9,696; of elders, 28,000; of additions on examination during the year, 57,041; of baptisms, 21,574 of adults and 27,768 of infants; of licensures (of ministers), 329; of ordinations, 290; of churches organized, 124. Amount of contributions: For home missions, \$972,993; for foreign missions, \$749,497; for education, \$84,056; for Sabbath-school work, \$112,781; for church erection, \$149,702; for the Relief fund, \$95,149; for the freedmen, \$118,359; for synodical aid, \$82,619; for aid for colleges, \$164,840; for the General Assembly, \$84,679; for congregational purposes, \$10,219,891; miscellaneous contributions, \$668,905. The figures show an increase in one year of 14,966 communicants, 9,702 members of Sabbath schools, and \$262,885 in contributions; and since 1870, or in twenty-eight years, of 429,316 communicants, 585,307 members of Sabbath schools, and \$4,063,440 in contributions.

The total income of the Board of Education for 1897-'98 was \$66,361. The report showed that the debt had been reduced \$1,500, and was at the time of making the report to the General Assembly \$7,720. One hundred and fifty-three new students had been received, making 814 beneficiaries in all—a decrease in two years of 223.

The Board of Aid for Colleges and Academies reported to the General Assembly that it had enjoyed, on the whole, the most prosperous year in its history. It had aided 28 institutions, the whole number of students at which was 2,733. It had suffered a loss of \$61,239 by the defalcation of its treasurer, who had been arrested, but had escaped. The amount lost had been made good by individual contributions of friends of the home mission work, and the board had been able to close the year without a deficit, and without having been obliged to use any part of its ordinary income to replace the subscribed funds. The receipts for the year had been \$117,622, against \$77,086 in 1896; besides which \$57,763 had been contributed to make good the loss by embezzlement, leaving \$3,475 yet to be replaced. The expenditures of the board had been reduced 20 per cent. below those of the preceding year.

The year's receipts of the Board of Ministerial Relief had been \$197,136, and showed a gain over the previous year of \$9,073 in church collections and \$1,820 in individual contributions. The board, having canceled the obligation of \$20,911 charged against it in the previous year, was out of debt. There were upon the roll of beneficiaries for the year 873 names, viz., 342 ministers, 473 widows, 29 orphan families, 7 woman missionaries, and 24 guests in the ministers' house at Perth Amboy, N. J.

The total receipts of the Board of Publication and Sabbath-School Work had been, in the Sabbath-

school and missionary work, including what it had received from the publishing department (two thirds of its profits), \$114,845; while the profits of the business department were \$31,047, of which \$20,698 were turned over to the Sabbath-school and missionary department. The net profits of the business department were \$4,680 more than in 1896. One hundred and thirty-five free libraries had been sent out by this department, containing 9,513 volumes. The missionary work had been prosecuted in 29 States and Territories, comprising 23 synods and 63 presbyteries, the present number of missionaries being 76. The missionaries had organized during the year, 1,028 Sabbath schools, with a membership at starting of 4,896 teachers and 46,518 pupils.

The Board of Home Missions reported that the direction of the previous General Assembly for its reorganization with one secretary had been carried out, and the Rev. Charles L. Thompson, D. D., had been appointed the secretary, and had entered on his work March 1. A system of monthly payment of missionaries had been instituted instead of the former system of quarterly payments. The financial burdens of the year had been unusually severe. The debt had increased from \$147,297 to \$167,839; but a part of this increase might be considered only apparent, as resulting from the changes in the system of payment. The gross receipts for the year had been \$698,940, as against \$702,404 in 1896. Thirteen hundred and ninety-three missionaries and 330 missionary teachers had been employed. These returned 84,682 members of the Church and 107,541 hearers in the congregations; 7,995 additions on profession of faith, and 3,715 baptisms of adults and 4,322 of infants; 250 Sabbath schools organized; 88 church edifices built, 10 churches become self-supporting, and 39 churches organized, during the year.

The receipts for the year of the Board of Missions for Freedmen had been \$126,000. The debt had been slightly reduced. The Assembly directed that the expenditures for the year be limited to the amount appropriated during the past year.

The report of the Board of Foreign Missions mentioned revolution in Guatemala; war, famine, plague, and earthquake in India; excitement in China because of the aggressions of certain European powers; and alarm in Persia because of certain ecclesiastical and civil transactions, as having affected its work during the year. The 24 missions, however, with their 110 stations, had had a period of substantial growth, especially in Korea, where 347 adults had been baptized, much church building had been done, and some successful efforts had been made at self-support. The missions in China had advanced. The baptism of a number of high-caste Hindus and Mohammedans in India was mentioned. The number of additions on confession of faith, 415, in western Persia was unusually large. The general receipts for the year had been \$889,387, and the receipts on account of the debt \$79,738, making the total receipts \$979,125. The appropriations and disbursements had been \$864,702. The General Assembly reaffirmed its previous recommendations for the taking of two collections yearly for foreign missions; advised that foreign mission work have a place in the instruction of the Sabbath school, with encouragement of systematic giving; and directed that candidates to foreign fields be required to answer certain questions touching belief in evangelical truth, and acceptance of the Christian standard.

The one hundred and tenth General Assembly met at Winona Park, Ind., May 19. The Rev. Wallace Radcliffe, D. D., of Washington, D. C., was chosen moderator. Much interest was taken in the case of the Rev. A. C. McGiffert, D. D., a

professor in the Union Theological Seminary, New York, who was charged in an overture from the Presbytery of Pittsburg with having taught in his book, "A History of Christianity in the Apostolic Age," doctrines contrary to the standard of the Church and subversive of the truth of the Scripture. "In this volume," the complaint charged, "the New Testament is very irreverently handled; no special supernatural guidance is ascribed to its sacred writers; the genuineness of more than one half the books composing it is called in question; discordant and mutually contradictory teachings are declared to be contained in it; and its authority as a divine rule of faith and practice is set aside. Further, in said volume great distinguishing principles of the Presbyterian Church and even fundamental doctrines of evangelical Christendom are denied. Against such teachings of said volume the presbytery deems it a duty to bear testimony to disavow all complicity with them, and to condemn them as false and subversive of the Christian faith." Three reports were brought in by the committee to whom the case was referred. All agreed in recognizing the interest in the integrity of the doctrine of the Church that was shown by the petitioners in recognizing the widespread belief that the utterances of Dr. McGiffert were inconsistent with the teaching of the Scriptures as interpreted by the Presbyterian Church and by evangelical Christendom, and in deploring the renewal of controversy, but differed concerning the disposition that should be made of the case. The majority report recommended that no action be taken at present, in the earnest hope that Dr. McGiffert might be led to make a satisfactory explanation of his position in relation to the standards of the Church, or in default thereof peaceably to withdraw from the Assembly. The first minority report advised that the Assembly, without passing judgment upon the teaching of the book or upon the views of its author, direct the Presbytery of New York, of which Dr. McGiffert was a member, to confer with him "for the relief of the Church," either by a satisfactory explanation or otherwise, and to take such further action as the peace and purity of the Church might require. The second minority report recommended "the Assembly, without pronouncing upon the question as to how far the terms employed by the Presbytery of Pittsburg are or are not justified by the actual teachings of the book referred to, deem it wise that no further action be taken." The recommendation in the majority report was amended so as to read that "the Assembly therefore, in the spirit of kindness no less than in devotion to truth, counsels Prof. McGiffert to reconsider the questionable views set forth in his book, and if he can not conform his views to the standards of the Church, then peaceably to withdraw from the Presbyterian ministry," and was then adopted. Questions concerning the use of wine at the banquets of Presbyterian colleges and universities had been agitated in the Church for several years, and the attention of the General Assembly had been invited to the subject. More recently an inn had been established at Princeton, N. J., the application of which for a license had been indorsed by some of the professors in the university there. Much feeling had been raised throughout the Church by this apparent implication of members of one of its institutions of learning with the liquor traffic; and the presbytery to which one of them was attached had passed a vote of censure upon him, in consequence of which he had withdrawn from the Presbyterian Church. The Standing Committee on Temperance in its regular report on the subject had represented that the Church was not moribund or somnolent in the support of temperance, but was growing in responsive-

ness to the calls of God. Respecting overtures from the Synod of South Dakota and the Presbytery of Chillicothe on Princeton University, and those from two other presbyteries in regard to the use of liquor in connection with schools and colleges, the chairman of the committee represented that the overtures on Princeton rested on misrepresentation. The stand taken by that institution was as high as any in the Church or in the land. A great injustice would be wrought touching it by any action other than that proposed by the committee (declaring that none was necessary), as it would be considered, whether general or not, as against the institution. The committee's report was not approved, but the minority report, which differed from it only in so far as touched the use of intoxicating liquors in schools, was adopted, "with applause." In it the Assembly reiterated the deliverances of former Assemblies in declaring that the word of God enjoins temperance, and that its principles of love and self-sacrifice commend total abstinence; urges the ministers and elders to bear frequent and pronounced and public testimony against intemperance as a menace to all social institutions and opposed to the achievement of every Christian ideal; and "called upon all who are connected with our beloved Church to exercise increased diligence and watchfulness over themselves and those committed to their care in respect to intemperance, whether as parents or teachers in our schools and colleges, in order that our homes and schools may be purged of the evil of intemperance, and the drink traffic may be driven from our land, and this without reflection upon the authorities of any collegiate institutions." It having been shown that the Presbytery of New York had erased the name of the Rev. Charles A. Briggs, D. D. (see "Annual Cyclopadia" for 1896 and 1897), from its roll, its action was approved. In relation to a bill before Congress to authorize the erection of a denominational church on the grounds of the Military Academy at West Point, the Assembly, citing the provision of the Constitution of the United States prohibiting legislation respecting an establishment of religion, resolved that "the Assembly, entertaining the views expressed by Judge Story that while Congress may recognize religion in its legislation, as in appointing chaplains, it is prohibited by the Constitution from an enactment recognizing churches or religious sects," therefore entered its protest against the "prospective legislation as being opposed to the Constitution of the United States and the spirit of the institutions of this country."

Upon invitation of the Board of Foreign Missions of this Church, a conference of various mission boards was held July 13, to consider the subject of establishing missions in Cuba, Puerto Rico, and the Philippine Islands. A report was adopted declaring that the existing situation in these countries involved certain moral and religious responsibilities which, independent of the precise character of the political relations that might be hereafter formed with them, the Christian people of America should carefully consider. It was agreed that the Caroline Islands should be deemed the distinctive field of the American Board of Commissioners for Foreign Missions. Seven boards had either already undertaken work in Cuba, or were expecting to undertake it, namely, the Home Mission Board of the Southern Baptist Convention, the Missionary Society of the Methodist Episcopal Church, the Board of Missions of the Methodist Episcopal Church, South, the General Conference of Free Baptists, the Foreign Missionary Society of the United Brethren in Christ, the American Church Missionary Society of the Protestant Episcopal Church, and the New York and Indiana Yearly Meetings of Friends.

Three boards contemplated work in Puerto Rico, namely, the Missionary Society of the Methodist Episcopal Church, the Board of Missions of the Methodist Episcopal Church, South, and probably of the Southern Baptist Convention. Three boards were "seriously disposed to consider" the opening of missionary work in the Philippine Islands, namely, the Board of Foreign Missions of the Presbyterian Church in the United States of America, the Missionary Society of the Methodist Episcopal Church, and the American Baptist Missionary Union. In the interest of the principles of comity and the belief that the situation in respect to these countries afforded an excellent opportunity of carrying out these principles from the point of view of Christian fellowship, the meeting recommended "that each of the boards mentioned appoint a committee of two on the field or fields which it thinks of entering, each group of committees to confer with a view to frank and mutual understanding as to the most effective and equitable distribution of the territory and work under the several boards; second, that the committee take early steps to secure all available information regarding these various islands as missionary fields, and that all the information thus obtained be shared with the other committees concerned, with a view to subsequent action; third, that the committee on the Philippine Islands be requested to inform the American Board that no board has expressed an intention of undertaking work in the Ladrone Islands, and that the question was raised whether the equipment of the American Board in connection with the Caroline Islands does not better fit it for work in the Ladrone Islands, if it should become expedient to undertake it."

II. Presbyterian Church in the United States (Southern).—The tables published with the "Journal of the General Assembly" give statistics of this Church for 1898, of which the following is a summary: Number of synods, 13; of presbyteries, 77; of ministers, 1,448; of churches, 2,873; of communicants, 217,055; of pupils in Sabbath schools, 146,907; of candidates, 362; of licentiates, 73; of ruling elders, 8,957; of deacons, 7,533; of teachers in Sabbath schools, 20,250; of baptized non-communicants, 39,326; of additions during the year on examination, 10,842; of baptisms, 3,998 of adults and 4,901 of infants; of censures, 54; of ordinations, 70; of churches organized, 82. Amount of contributions: For home missions (Assembly's), \$28,562; for evangelization (local), \$110,232; for the Invalid fund, \$13,377; for foreign missions, \$121,662; for education, \$53,894; for publication, \$7,969; for colored evangelization, \$12,383; for the Bible cause, \$5,096; presbyterial contributions, \$15,472; for pastors' salaries, \$792,807; for congregational purposes, \$587,917; miscellaneous contributions, \$97,681. The number of members is 5,361; of pupils in Sabbath schools, 3,409, and the amount of contributions \$13,960 more than in 1897; and increase is shown, since 1874, or in twenty-five years, of 112,099 communicants, 86,644 pupils in Sabbath schools, and \$735,391 in contributions.

The report of Fredericksburg College to the General Assembly showed that it had been separated, in compliance with the directions of the previous General Assembly, from the Home and Training School, in which there were 35 students. The property of the institution was valued at \$10,200 while its outstanding obligations were \$14,260. The training school for woman missionaries was discontinued.

Ten students had attended the classes of Stillman Institute for the Training of Colored Ministers.

The Executive Committee of Publication estimated that its issues from the press during the year had been, in round numbers, 100,000 copies of books

and tracts. It had made grants to Sabbath schools, churches, mission fields, pastors, and evangelists to the amount, in all, of \$6,918. The contributions of the churches to this work had been \$7,005.

The receipts of the Executive Committee of Home Missions for the year, including those for the Assembly's home missions and for the Invalid fund had been \$52,353, and the expenditures \$39,300. The funds were classified as on account of home missions proper; of the Regular Loan fund, from which during twelve years \$6,955 had been loaned, enabling 51 white churches to erect or repair church buildings; of the William A. Moore fund for Church Erection, from which \$4,825 had been loaned to 19 churches, and which had now \$2,357 cash on hand; and of the Invalid fund, from the income of which \$10,480 had been paid out in aid of 39 aged or infirm ministers and 107 widows or families of deceased ministers. After retiring from the control of Armstrong Academy, School, and Home for Indian Boys in 1894, the board began a system of school work in towns and neighborhoods in the Indian Territory, which had grown in importance. About 650 pupils had been in the schools during the past session, more than one third of whom were missionary pupils, taught free of charge. Six white and five Indian ministers were engaged in the Territory, supplying all the organized churches and "eight or ten other points" with regular or occasional preaching, and returning 130 additions by profession. Mission work was also carried on among Mexicans immigrating to the United States.

The receipts of the Executive Committee of Foreign Missions had been \$146,478, a larger sum than was ever before contributed in a single year. The expenditures had exceeded that sum by \$363. Eight new missionaries had been sent out during the year, and one had been added by marriage. The whole number of missionaries on the roll was 155, of whom 56 were ordained ministers. The whole number of communicants in the mission fields was 2,948, and 533 additions by profession of faith were recorded in 1897. To these numbers should be added the members of a church in Brazil from which no report had been received. The additions were equivalent to about 17 per cent. of the membership, while the additions to the home churches averaged about 7 per cent.

The General Assembly met in New Orleans, La., May 19. The Rev. E. M. Green, D. D., of Danville, Ky., was chosen moderator. A complaint was presented from the Rev. Dr. W. M. McPheeters and nine others against the act of the Synod of South Carolina in officially indorsing a petition to the Postmaster-General and through him to the President of the United States asking that the transmission of the mails on Sunday be stopped and all post offices closed on that day. The petition had been communicated to the Synod of South Carolina with a request for indorsement of it by Bishop Stevens of the Reformed Episcopal Church. A motion was made that the synod declare itself unable to comply with the request, "not because it fails to recognize the fact that the transportation of the mails and the opening of the post offices on the Sabbath is a flagrant violation of God's law as declared in his Word, and as impressed upon the constitution of nature; nor because it was in any doubt as to the injurious tendencies and effects of such violation of God's law upon our material, moral, and political interests as a people; but simply because it is our settled conviction that synods and councils as such should handle or conclude nothing but that which is ecclesiastical, and should not intermeddle with civil affairs which concern the commonwealth." This was modified so as to give way to a motion to table a motion previously made to refer the subject

to a select committee and that motion was lost. The synod then on the recommendation of its committee decided to adopt the petition and forward it to the proper parties. The complaint of Dr. McPheeters, maintaining that the action of the synod was unscriptural and unconstitutional, prayed the Assembly to reverse it. After a full debate of the question the General Assembly by a vote of 92 to 47 refused to sustain the complaint, on the ground that the action complained of was based upon chapter xxxi, section 4, of the Confession of Faith. The Assembly having been notified of the organization of the colored Presbyterian synod, accepted the act as in accord with its long-cherished plans, and welcomed the new synod as a body of like faith and order with its own to the relation of fraternal correspondence with it; and, in view of the fact that it had encouraged the movement by promises of material assistance, engaged it to aid the synod with all moral and financial support within its power. A communication had been received from colored Presbyterians asking that the organization of this body be deferred, for the reasons among others that the colored church organization was not in a position of self-support, and that not many colored Presbyterian churches were yet informed of such a proposition. This subject was referred to the Executive Committee on Colored Evangelization, with power to act. The purchase of a property called the Echohrouse homestead, immediately adjoining the city of Tuscaloosa, to serve as the permanent quarters of the Stillman Institute, was approved; and the Assembly hoped that arrangements might be made at once for a thorough academic as well as theological training there. The report of the Permanent Committee on the Sabbath included accounts from 50 of the 77 presbyteries, and these testified to a growing disregard of the day by the people of the country. The encouraging feature of them was that the people of the Presbyterian Church were holding fairly well the customs of the fathers in Sabbath observance. A resolution was unanimously adopted as pertinent to the prevailing war excitement and anxiety for news, calling the attention of the ministers to the historic position of the Church in all such matters: "That while ministers and people, in public and private, should pray for our rulers, and for the officers and men of the army and navy, and that peace with honor may soon be established, yet it is the duty of ministers to proclaim from their pulpits at all times nothing but 'the glorious Gospel of the blessed God.' . . . We urge also upon all our people that they abstain on Sabbath from such reading and conversation as may be inconsistent with the holy resting of the Lord's Day, devoting its sacred hours wholly to the public and private exercises of God's worship, 'except so much as is to be taken up in the works of necessity and mercy.'" The Assembly's Sabbath resolutions advised that ministers preach at an early day on the subject, reading in connection with the service the reports and resolutions of the Assembly; commended the literature of the American Sabbath Union, and appointed representatives to act with that body; and in regard to the communication addressed to the Postmaster-General (referred to above), deemed it "unwise and inexpedient thus to petition the civil authorities, and would rather urge upon our people to enforce the observance of this sacred ordinance by precept and example." To an overture asking whether a ruling elder has a right to give a charge to pastor or people in an installation service, the Assembly replied that a ruling elder may be appointed to give a charge to the people. In reply to an overture on the subject the Assembly explained that the use of the words "system of doctrine" in

the terms of subscription "precludes the idea of the necessary acceptance of every statement in the standards by the subscriber, but involves as much as is vital to the system as a whole. Differences of opinion as to whether any divergences are or are not vital to the system, where of sufficient importance, should be determined by the proper constitutional courts." The report on Young People's Societies represented that the committee had found evidence of great zeal and activity on the part of many that deserve to be fostered and encouraged by ministers and church sessions, and urged the importance of giving the young people help in the organization of societies calculated to train and develop them in every good work; "and in all cases where societies have been organized antagonistic or in any way unfriendly to our system of doctrine or government, we recommend, not the destruction of such organizations, but an earnest effort to bring them into active sympathy with the true spirit of Presbyterianism." A committee was appointed to consider the subject of Christian education in schools under Presbyterian control. A committee was appointed to address a pastoral letter to the ministers and people of the Church, affectionately warning them against all errors, and urging them to steadfastness in the faith.

III. Colored Presbyterian Synod of the United States and Canada.—Simultaneously with the meeting of the Southern Presbyterian General Assembly at New Orleans, May 19, a convention of representatives of the colored Presbyterians of the Southern States was held. The Rev. E. W. Williams, of South Carolina, was chosen moderator. Resolutions were adopted reciting the facts that a convention had been called by the independent presbytery within the bounds of the General Assembly of the Southern Presbyterian Church, through the agency of its Executive Committee on Colored Evangelization, of which this meeting was a result; that it was the purpose of the presbyteries ereating the present convention to organize a separate colored Presbyterian church in the United States and Canada, and to establish, when the way may be made clear, a separate and self-governing colored Presbyterian General Assembly. It was therefore resolved that until the way is clear to establish a General Assembly, the body shall be known as the Separate, Self-governing Colored Presbyterian Synod of the United States and Canada. The standard of doctrine of the Presbyterian Church in the United States was adopted; gratitude was expressed to the Southern Presbyterian Church for its sympathy, co-operation, and financial support; the presbyteries represented in the convention were advised, as far as practicable, to seek the advice, counsel, and co-operation of their white brethren in the execution of their work. Standing executive committees were constituted—on Foreign Missions, Home Missions, Education, and Sabbath Schools. The thanks of the convention were returned to the General Assembly's Executive Committee on Colored Evangelization, with the request that it continue its work in the interest of the colored people.

The Colored Presbyterian Church is estimated by the Rev. Dr. E. Guersat, in the "Christian Observer," Louisville, Ky., to include 56 churches, with 132 ruling elder, 1,556 communicants, and 1,903 pupils in Sunday schools; besides 6 parochial schools, with 497 pupils, and 13 Sunday-schools taught by white teachers, with 860 pupils.

The number of colored Presbyterian members in the Southern States is estimated by the "Christian Observer," Louisville, Ky., to be, including special colored organizations and colored members in the Northern, Southern, and Cumberland Presbyterian Churches, about 25,000. As there were

about 14,000 colored members connected with these churches before the civil war, this number shows an increase of about 11,000, or a rate of gain of about 300 a year, while the colored population has increased about 67 per cent. since 1860. A tendency appears in some places, as in some parts of South Carolina, among the colored Presbyterians even to prefer other denominations. Many of those in that State who were Presbyterians in 1861 passed into the Baptist and Methodist Churches after the civil war, and in Charleston the Presbyterian colored members are not half so numerous as they were before emancipation.

IV. United Presbyterian Church in North America.—The tables of religious statistics for 1898, given in the "Independent" (New York) of Jan. 5, 1899, credit this Church with 873 ministers, 899 churches, and 114,287 communicants.

From the annual reports made to the General Assembly it appeared that the receipts of the Board of Education had been \$5,521. Sixty-four students had been recommended by presbyteries for aid—28 fewer than in 1896. Statistics had been collected showing that of the young people of the Church attending school, 2,935 were in the institutions of the Church, and more than 500 in undenominational schools or the schools of other denominations.

The year's receipts of the Board of Church Extension had been \$24,980 from direct contributions; besides which \$43,890 had accrued from legacies, loans returned, investments paid in, etc., and \$17,378 in balance from the preceding year. The expenditures had been \$66,962; and a balance of \$1,890 remained available for current expenses and new work.

The Board of Ministerial Relief had received \$31,306, and expended \$27,830. Attention was called in the report to the quarter of a century's good work the board had done, its present position, and its good prospects.

The total receipts of the Board of Home Missions had been \$67,267, and the expenditure \$77,192. The debt had therefore increased, and now amounted to \$20,326. While the missions had failed to show rapid extension, there had been a decided gain over the previous year in all the leading items of the report, and the increase of the contributions by the missions—from \$13,460 to \$14,827 in contributions to the boards, and from \$61,794 to \$72,232 for salaries of pastors and supplies—was especially noticeable. In no former year had so large a proportion of the stations been regularly supplied with preaching. Aid had been given to 206 stations, with 15,289 communicants, and an average attendance of 17,570 in the 197 stations which sent in reports; 1,433 additions by profession, a net gain of 1,394 members; and of 1,696 teachers, and 19,496 pupils in Sabbath schools.

The Board of Freedmen's Missions had received \$52,461, and expended \$50,971. It returned 593 church members at 10 stations, and 3,358 pupils in 11 day schools. Four of the stations had colored pastors. Three senior students in the theological seminary had been licensed as probationers. Thirty-three colored teachers, including ministers employed by the board, had all been educated in its institutions. Many young men and young women who had gone out from the missions had taught in the public schools in different parts of the South during the year, nearly all of them conducting also a Sabbath school. About 20,000 persons had received secular and religious instruction by these means.

The receipts of the Board of Foreign Missions from ordinary sources had been \$114,330, and its expenditures \$153,638. In consequence of this excess of expenditure the board had been obliged to bor-

row largely, and its debt had increased during the year from \$6,400 to \$23,238. It had in Egypt 43 congregations, 2 of which were self-supporting and 33 had native pastors; 5,725 communicants, with an average attendance of 11,021 on morning service; a Protestant community numbering about 20,000; 11,522 pupils, 2,464 of whom were Moslems, in the 165 day schools; 15 ordained American missionaries and 3 physicians; and 597 members had been received on profession during the year. The native contributions averaged \$3 per member. The mission in India was under the care of 15 ordained missionaries and their wives, and had 17 congregations, 1 of which was self-supporting, with services held at 160 other stations; 2,215 communicants and 4,115 baptized adults not communicants; a Christian population of 10,007; and returned 349 additions by profession. There had been a net decrease of 398 in membership. The 3 training and industrial schools and 154 day schools had 6,441 pupils, and more than 39,000 patients had been treated in the hospitals.

The Woman's Missionary Board returned the amount of "thank offerings" for the year as \$17,555. It had supported 37 woman missionaries in the foreign field, of whom 2 medical missionaries had treated 30,181 patients; 10 domestic missionaries and a school at Camden, Ala., for which buildings had been completed. It had also made Church Extension grants of \$11,200 to 7 parsonages.

The fortieth General Assembly met in Omaha, Neb., May 25. The Rev. R. G. Ferguson, president of Westminster College, was chosen moderator. The Committee on Union with the Associate Reformed Synod of the South reported that no correspondence on the subject had been had during the year. There had been co-operation in home mission work and in the Young People's Christian Union, and this was regarded as tending to unity by a more direct way and with earlier and better results. Notwithstanding its own recommendation to the contrary, the committee was continued. The representative of the General Assembly in the Committee on the Federation of Churches reported that the scheme had proved impracticable. A committee appointed by the previous General Assembly to consider and report upon a satisfactory plan for collecting information for the Committee on Narrative and State of Religion reported that the plan followed heretofore of sending a formula of questions to each session had been found to be burdensome, and recommended that hereafter the Committee on Narrative immediately after the meeting of the Assembly prepare an outline for inquiry as to the state of religion, and enter into correspondence with persons in all parts of the Church and engaged in all departments of Church work, making a careful study of the drift of religious thought and of the forces adverse and favorable to the spiritual life. These recommendations were adopted. Upon hearing the report of the Committee on the Introduction of Young Men into the Ministry, the Assembly enjoined the presbyteries to inquire carefully in regard to the natural gifts, personal character, literary attainments, and spiritual endowment of all who apply to be taken under their care, and directed that the seminaries exercise their inherent right to fix the standing and grade of each student, and that in case a student is dismissed from a seminary the authorities of the institution report the case fully to the presbytery. Of the report of the Board of Education on a comprehensive educational policy and the distribution of the beneficiary fund, the part relating to the distribution of funds for beneficiaries was amended and adopted. It requires, among other things, that students receiving aid must be under the care of a presbytery, receive its formal indorsement and recommendation, and be in attendance at one of

the denominational institutions; that a thorough collegiate education be required of young men as a qualification for entering the ministry, and presbyteries be urged not to make application for theological students who are undergraduates and do not intend to complete a full collegiate course; and that absolute abstinence from the use of tobacco be made an essential requirement for receiving aid from the beneficiary fund. The intention of the Assembly was expressed by resolution that, "as so many of the young people of our Church are in schools and colleges of other denominations or in institutions indifferent to religion, we aim to secure their attendance on our own institutions of learning by continuing to raise these institutions to the highest possible degree of efficiency, as well as by the earnest use of our personal influence to that end." A special committee was appointed to report to the next General Assembly a comprehensive educational policy. Declarations of former General Assemblies condemning the use of tobacco were reiterated, and overtures were ordered handed down to the presbyteries for addition to the book of government declaring the use sinful and inconsistent with the Christian profession; forbidding the ordination to the offices of deacons and elders of persons who will not promise to abstain from it; and directing that no student of theology shall be admitted to licensure and no licentiate shall be ordained unless he promises to refrain from it.

A memorial concerning the alleged violation of the law of the Sabbath by the singing of voluntaries was answered by a reference to the action of a former General Assembly authorizing the use of chants in the worship of God. The work of the Church in Egypt having become extended over a territory so large that a synod was necessary, the Assembly ordered the division of the Presbytery of Egypt into four—those of the Delta, Middle Egypt, Asyut, and Thebes—to be constituted into a synod to be called the Synod of the Nile. The directors of the Trans-Mississippi Exposition, at Omaha, having decided to open its gates on Sunday, the Assembly asked them to reconsider their action, alleging several reasons why the exhibition should be closed on that day. The directors invited the Assembly to visit the exposition, offering transportation and personal guidance. To this invitation the Assembly replied, appreciating the courtesy extended, but declining to accept it "on account of the action already taken in the opening of the exposition on the Lord's Day." A constitution for the Young People's Association was adopted, recognizing the affiliation of the society with that of the Associate Reformed Synod, and giving the joint body the name of the "Convention of the Young People's Christian Union of the United Presbyterian and Associate Reformed Presbyterian Churches of North America." Members of the Church were advised "to weigh carefully and prayerfully the effect of their votes upon the liquor problem, and so to use the power of the ballot as to be clear of all responsibility for the existence of the rum traffic." A Committee of Supplies was instituted for each presbytery, who, after consultation with vacant congregations, shall appoint all the supplies, and through whom applications for appointments must be made. The Board of Publication was directed to encourage the sale of its books through retail agencies.

V. Associate Reformed Synod of the South.—This Synod returned for 1898 95 ministers, 125 churches, and 10,868 communicants.

The Synod met in Chester, S. C., Nov. 10, the Rev. J. C. Galloway, D. D., being moderator. A fraternal delegate presenting the greeting of the United Presbyterian Church expressed the conviction that the two Churches were one if the people

could be got to see it. The Board of Foreign Missions was directed to enter into correspondence with the Board of Foreign Missions of the United Presbyterian Church with reference to sending missionaries to Cuba or Puerto Rico. A fraternal delegate from the Southern Presbyterian Church presented an overture from the General Assembly of that body proposing negotiations looking to organic union, but the Synod declined to enter into such negotiations. The question of accepting a gift from Mr. Joseph Wylie for building a girls' dormitory at Erskine College was the subject of a debate which turned upon the question of coeducation. The gift was accepted.

VI. Reformed Presbyterian Church in North America—Synod.—This body reported for 1898 119 ministers, 115 congregations, 9,990 communicants, 11,695 members of Sunday schools, 2,705 members of Young People's Societies, and total contributions of \$162,950, or an average of \$16.33 per member. Several congregations have established home missions in destitute localities, and the Synod has a mission among the Chinese in Oakland, Cal., the Jews in Philadelphia, the Indians in the Indian Territory, and the freedmen in Selma, Ala. The Board of Foreign Missions reported to the Synod a debt of \$10,000, which has since been reduced. The missions are in China, with Tak-Hing, on the West river, as a center, Syria, Asia Minor, and Cyprus.

VII. Reformed Presbyterian Church in North America—General Synod.—The General Synod met in Philadelphia in May. The Rev. G. W. Scott, of India, a native Hindu, was chosen moderator. The reports showed prosperity in all branches of the work of the Synod. The India presbyteries were declared to have equal rights, powers, and privileges with the other presbyteries under the care of the General Synod. These presbyteries reported 9 congregations, with 1,130 communicants, and a general prosperity, notwithstanding the famine and the plague. The General Synod had in 1898 41 ministers, 50 churches, and 6,288 communicants.

VIII. Cumberland Presbyterian Church.—The statistical reports of this Church are gradually becoming more complete, only 201 churches having failed to return the numbers of their communicants, and requiring to be estimated for, against 293 in 1896. The whole number of communicants returned is 180,635, against 175,642 in 1897. The number of additions during the year was 15,646, or 2,572 less than in 1896. Increase was shown in the number of churches with installed pastors, in the number with preaching every Sunday, and the number with Sunday school all the year; while the number of churches received by presbytery, the number of church houses dedicated, the number of parsonages erected, and the number of churches dissolved were less than in 1896.

The total resources of the Board of Education for the year were reported to the General Assembly to have been \$13,776. More than 60 students had been registered in the theological seminaries, while the number of beneficiaries and the attendance upon the colleges and preparatory schools had been about the same as in former years.

The Board of Ministerial Relief reported that it had not been able to help all the deserving applicants for aid. Less than one third of the congregations—900 out of 2,900—had contributed to the cause. The presbyteries were directed by the Assembly to use their power in at least one meeting during the year "to correct the negligence of their pastors and sessions by positively calling them to account for unfaithfulness."

The net profits of the publishing house had been

\$7,718. Four new books had been issued during the year and three others were in course of publication. Improvements to be made in the Sunday-school publications were under the consideration of a committee.

The year's receipts of the Board of Missions had been \$56,189, besides \$13,841 received from a legacy after the report had closed. Ten synods had regularly organized synodical missionary associations. The plan of co-operation between the board and the synodical associations adopted two years previously had worked satisfactorily. Home mission churches were maintained in fifteen cities of the United States. The mission in Mexico was represented by a church of 100 members, a Sunday school, a Christian Endeavor Society, and the Griffin Industrial School for Boys at Aguas Calientes. During the twenty years of the existence of the mission in Japan, 20 missionaries had been sent there, of whom 14 were at work at the present time. Of the 1,086 persons who had been baptized, 668 were still in connection with the churches. There were besides 6 ordained native ministers, 1 girls' school, a Bible school for the training of Bible women, English schools and classes, night schools and schools for the poor, and a kindergarten. Three missionaries had been sent out in September, 1897, one of them under the auspices of the Christian Endeavor Society, to establish a mission in China, expecting to labor in the province of Honan. Very little progress had been made in church extension. The report commended the Women's Board for its efficiency in disseminating missionary information and in the development of the young people and children in missionary activity.

The mission in Japan was begun in 1877 and has become a branch of the "Church of Christ" in Japan. From Sept. 26, 1880, till the close of 1897 there were 1,126 baptisms. The 6 churches were at the latter date ministered to by 4 ordained ministers, of whom 2 were installed pastors, while 15 chapels with informally organized groups of believers were served by 11 licensed evangelists. Ten Bible women were laboring among the women and children.

The eighteenth annual meeting of the Missionary Convention of Cumberland Presbyterian Women was held at McKeesport, Pa., May 14 to 17. The treasurer's receipts for the year had been \$13,995, and the payments \$13,019. Reports were made of work in the Southern mountain region, where two schools were sustained, and of the Chinese mission in San Francisco. Hindrance had been experienced from failures of the crops in some of the States.

The sixty-eighth General Assembly met at Marshall, Mo., May 19. Gen. H. H. Norman, of Murfreesborough, Tenn., was chosen moderator. A paper was presented by the representatives of the Cumberland Presbyterian Church in the Presbyterian Alliance relative to co-operation in home missions, explaining the plan which had been adopted by the alliance and its bearing upon the polity and interest of the Church. Accepting the report, the Assembly approved the plan, adding as an interpretation of the fourth section (advising that Presbyterian Church members of any branch, when moving into new communities in which there is no congregation of their own Church, unite for the time being with some other Presbyterian or Reformed Church, if such there be), that it was not intended to recommend that Cumberland Presbyterians under such circumstances should unite at once with another Presbyterian Church without consideration of Cumberland Presbyterian interests, but that when they decide to unite with a local congregation they give preference to a Church of the Presbyterian family. The Assembly further recommended that when

members move into a place where there is no Cumberland Presbyterian church "they consult the presbytery having jurisdiction as to the possibility of the organization of a Cumberland Presbyterian church in that community. If, in the opinion of the presbytery, such organization is advisable and probable, the member should be advised to retain his membership in the Cumberland Presbyterian communion, co-operating meanwhile in the local work of another Presbyterian Church. If, on the other hand, the presbytery thinks the organization of a Cumberland church in said community to be unadvisable, then the member should be advised to enter the communion of another Presbyterian Church." Of a report on Church government presented by a committee appointed to consider that subject, the Assembly adopted provisions advising against the selection of incompetent clerks of presbyteries and synods; recommending that clerks of presbyteries receive adequate remuneration for their services; urging that stated clerks become members of Sabbath schools; advising that sessions maintain better control of Sabbath schools and Christian Endeavor Societies; advising that when the sessions of a group of churches can not decide on a preacher the matter be referred to the Presbyterial Committee on Pastorates and Supplies; recommending the utmost care in the selection of that committee; commending the action of stated clerks of presbyteries in refusing to enroll names of ministers received on promise of letter, and of women as elders and preachers; and advising that one man serve as clerk and treasurer of the congregation, as was already contemplated with respect to the presbytery. A protest against the action of the previous General Assembly sustaining the course of the Synod of Kansas in seating a woman member of its meeting was referred to a committee which presented majority and minority reports. Both reports were tabled, the Assembly thereby refusing to reopen the question. The Sabbath report spoke of the dangers that menace the Christian Sabbath and of attempts to relax the observance of it, advised members of the Church to refrain from encouraging Sunday traffic in any way, and suggested the publication of a tract on the subject. The previous General Assembly had ordered the salary of the general manager of the publishing house to be reduced, whereupon he had refused to serve at the diminished compensation, and the board had continued him at the old rate. A presbytery sent up a protest against this condition. The Assembly's committee to whom the subject was referred found that the course of the board had been governed by regard for the best interests of the Church, and that if the General Assembly had had all the facts it would have approved it; so, while not commending any disobedience to the orders of the General Assembly, the committee recommended the continuance of the publishing agent at the old salary. The recommendation of the committee was concurred in. A manse department was instituted, to be under the direction of the Women's Board of Missions, with memberships at fifty cents a year, and synodical and presbyterial organizations; in the disbursement of the fund raised, half the amount received by any congregation to be considered as a gift, and half as a loan to be repaid in installments. A committee was appointed to draft a plan for synodical church extension work for the consideration of the next General Assembly. The Assembly reiterated its disapproval of church fairs and church entertainments where pay is taken at the door, and advised against the attendance of members on such things, even when given by other churches. The Assembly directed that no proposals for consolidation or co-operation should be made to other churches by any

part of this Church, nor if made by other churches, or parts thereof should be publicly considered by any part of this Church until the General Assembly shall have properly authorized such proceedings.

IX. Presbyterian Church in Canada.—The report of the Church and Manse Building Fund for Manitoba and the Northwest showed that since the fund was established, sixteen years ago, 305 churches and 63 manses had been built with the assistance of the committee. These buildings were valued at more than \$500,000.

The report of the Aged and Infirm Ministers' fund showed that the contributions for the past eleven months had been \$712 greater than for the previous full year. The churches had, however, failed to make up for the adverse balance from the preceding year. There was therefore a shortage in the fund, so that the question of paying annuities in full upon the modified scale that had been acted upon during the last few years had become a serious one. The fund is made up of dues paid by ministers who connect themselves with it and of contributions from the churches; while ministers who do not contribute are given a share in the benefits. A special committee reported measures urging all ministers on ordination to connect themselves with the fund, and giving all who reach the age of sixty-seven years and have paid all the yearly rates the privilege of retiring from the active duties of the ministry and being placed upon the fund; ministers who fail to pay the annual rates not to be entitled to make any claim upon the fund as a matter of right, but to have their cases considered by the General Assembly. An effort is to be made to bring the fund up to at least \$200,000.

Reports from 993 Young People's Societies, 783 of which were Christian Endeavor Societies, gave a total of 36,521 members, a decrease from the previous year of 1,883. Some societies had been disbanded and many new ones had been formed, and the actual whole number was estimated to be nearly 1,200. The proportion of young men to young women in the societies was about as 37 to 64. The number of young men was relatively larger in the rural districts, while in towns and cities it was sometimes quite insignificant. The contributions of the societies had been smaller than in 1896—\$29,303, as against \$34,181—and the average per society had fallen from \$38 to a little more than \$29.

Reports from 2,144 Sabbath schools showed an attendance of 18,819 officers and teachers and 154,000 pupils, nearly 68 per cent. of whom were present every Sabbath, while 67,169 persons were studying their lessons at home. The figures show an increase during the year of 227 schools and 3,750 pupils, and a decrease of 381 studying their lessons at home. The Sabbath schools had contributed \$24,541, an increase of \$276, to the schemes of the Church, and \$9,821 to other objects; while the congregations had contributed \$11,956 to the support of the schools, and the schools \$52,262 to their own support.

The work of French evangelization included 38 fields, having 94 preaching stations, served by 28 ordained missionaries, 16 colporteurs and students, and 21 missionary teachers. The interest among the people to whom the work is directed was represented as increasing.

The General Assembly met in Montreal, June 15. The Rev. Robert Torrance, D. D., was chosen moderator. The Home Mission Committee of the eastern section—including the maritime provinces, Labrador, and Bermuda—reported that its receipts, \$14,245, had been \$849 less than those of the preceding year; the latter had, however, been increased through the responses to a special appeal for the removal of the debt. The receipts of the committee

for the western section, including the other provinces of the Dominion, had been exceptionally large, having been increased by gifts of \$12,000 from British sources, and by contributions of \$7,000 for the special Klondike fund. A suggestion was made in the discussion of these reports that it might be advisable to give the home missionaries a furlough, such as is given them in India and elsewhere, so that they might be refreshed by a visit to the presbytery and to the Assembly, privileges which are now denied to many. The statement was also made that no Church in the new world or the old world had so large a home mission field in proportion to its resources as the Presbyterian Church in Canada. Communications were received from the woman missionaries in India, taking exception to certain representations which had been made to the Church at home, such as that the friction in the mission was aggravated by the women not confining their speaking and voting to their own work. The woman missionaries said that they had no desire to infringe on the rights of presbyteries, but expressed themselves opposed to the ruling adopted by the General Assembly at its last meeting, that they should be constituted into a council, with the right to meet, discuss, and formulate their views on all matters bearing upon their own work. They held that in all matters ecclesiastical there ought to be perfect equality, with one council, composed of men and women, and that the formation of a second council would be very injurious to the work. The subject was referred to a committee, upon whose report the Assembly agreed that ordained missionaries of one year's standing who have passed their first examination in the native language shall be a finance committee; that a women's council shall be formed of the woman missionaries, the estimates of the one and the plans of the other to be under the supervision of the Foreign Mission Committee. A proposition for the reorganization of the Home Mission Committee, assigning to it the duty of looking after the men and the money for the supply of the whole field; while the supervision of the details of home mission work should be left with the various synods—as was already done with respect to the Western Synod—was referred to a committee to report upon it the next year. Provision was made for obtaining from the various legislatures and the Dominion Parliament acts of incorporation for the Board of Trustees of the Presbyterian Church in Canada, to have power to receive gifts and conveyances, and to make a legal transfer of them. The reports of the colleges—Morris College, Quebec, Manitoba College, Queen's University and College, Knox College, Toronto, and the Brantford Ladies' College—engaged a considerable proportion of the attention of the Assembly.

X. Church of Scotland.—The 1,789 churches and preaching stations of the Established Church of Scotland returned for 1898 about 1,850 ministers, 641,803 communicants, and 2,200 Sunday schools, with 21,174 teachers and 229,302 pupils. The total income of the Church for all purposes was £485,695. The reports showed increase in nearly every department. The income for home missions was £12,688, an increase of £600. The receipts for foreign missions—nearly £50,090—were the largest ever recorded. These missions returned 8,156 baptized persons, 13,000 pupils in mission schools, and 1,400 zenana pupils. The number of members in the home churches was 8,395 more than in the previous year. The Association for the Augmentation of Smaller Livings had distributed £8,178 among 335 livings. A further sum of £6,000 would be required to bring all the livings up to £200 per annum. Seventy-one livings had been permanently augmented.

The General Assembly met in Edinburgh, May 19. The Rev. Dr. William Leishman was chosen moderator. A report of the expressions of the presbyteries upon an overture sent down to them by the previous General Assembly for the extension of the pastorate and the granting of ordination to probationers, showed that 25 presbyteries had approved, 10 desired delay, 8 recommended a period of practical training before ordination, and 32 considered no change necessary. A modified scheme was submitted by the Reform Committee to the effect that a period of probation should be served by all, and at the end of the time a certificate should be granted showing that the probationer had passed to the satisfaction of his minister and the presbytery. A motion was carried recommending that presbyteries should use more freely the powers they already possess for granting ordination in special cases. In connection with the passage of a resolution affirming the responsibilities of presbyteries in regard to visitation, a committee was appointed to consider and report to the next General Assembly a plan of legislation defining the objects of visitation, and to formulate a system for it. The new hymnal for all the Presbyterian churches was adopted. The subjects of religious education, disestablishment, and the contemplated union of the United Presbyterian and Free Churches were discussed in the light of their bearing on the religious interests and the prospects of the Established Church.

XI. Free Church of Scotland.—Reports made to the General Assembly in May showed that at the end of the year 1897 there were 1,107 congregations connected with this Church, with 290,789 communicants and 111,346 adherents. The total income for the year ending March 31, 1898, was £666,400. Of this total sum more than £186,000 had gone to the support of the ministry, £12,900 to home missions, £75,865 to foreign, colonial, and Jewish missions, and £40,600 to education and colleges.

The General Assembly met in Edinburgh, May 19. The financial reports showed a decrease for the year of £7,000 in total income; but, as the total income of the previous year represented an increase of £23,000, the present result was not regarded as indicating any real tendency to a decline. The Committee on Union reported concerning continued negotiations for union with the United Presbyterian Church, and recommending that the preliminary steps be taken toward an incorporating union. A motion offered by Principal Rainey represented that the proposed questions and formula fully preserved the vital principles of the Church, and along with the accompanying outline of the uniting act formed a basis on which the two churches might worthily and happily unite; and directed that the report be remitted to the presbyteries for their consideration, and that the committee be reappointed for further negotiation. A protest signed by "about a dozen" ministers was offered, which maintained that the proposals for union were not of a character that could be completely adopted. The motion of Principal Rainey was adopted by a vote of 486 to 41. On the presentation of the report of the Committee on Church and State, a resolution was adopted reaffirming the findings of previous Assemblies, that the present alliance of Church and state in Scotland ought to come to an end, in the interest alike of public justice, of ecclesiastical freedom, and the unity, welfare, and efficiency of the Presbyterian Church in Scotland. The new hymnal which has been prepared by a committee representing the various Presbyterian Churches of Scotland and Ireland, was adopted.

XII. United Presbyterian Church in Scotland.—This Church has, according to the statistical

reports for 1898, 582 congregations, 622 ordained ministers, 195,631 communicants, and 12,000 teachers, and 105,701 pupils in Sunday schools; and returns a total income of £398,314.

The Synod met in Edinburgh, May 2. The Rev. William Blair, D. D., was chosen moderator. The reports from the churches showed a decrease in total income, and a slight falling off in membership and attendance at Sunday schools and Bible classes. The Committee on Union with the Free Church of Scotland reported that they had found that the standards of the two churches were practically the same, and believed that each Church could enter into the union with all its existing rights and liberties conserved, and all its traditions and testimonies behind it. The Sustentation and Augmentation funds could be worked side by side. On account of the large size of the united Church, it would be necessary to have a representative Assembly. In dealing with such large and far-reaching influences, it was impossible to draw up a hard-and-fast scheme and endeavor to impose it on the churches. They would require to feel their way. The Synod expressed satisfaction with the progress made in the matter of the proposed union, and remitted the subject to the presbyteries and sessions of the Church for approval and suggestions; reappointed the committee with instructions to continue the negotiations; and urged presbyteries to cultivate friendly relations with the Free Church, and to co-operate with it in Christian work as far as possible.

XIII. Presbyterian Church in Ireland.—This Church has 84,000 families under its care, and a yearly income of £192,000. The debt amounts to more than £80,000. Its annihilation is included in the proposed twentieth-century scheme. The supplementary dividend of the Sustentation fund since it was started, twenty-seven years ago, has fallen from £22 to £11.

The Foreign Mission Committee reported that the native membership in the Chinese mission had increased from 1,800 to 3,234; that 1,473 persons had been baptized during the year; and that about 1,600 inquirers were under instruction. In connection with the Jewish mission, 24 had been baptized. The report of the Colportage Committee showed a very large increase in the number of Bibles sold, the present number being about 3,000 Protestant Bibles and 2,500 of the Douay Version.

The General Assembly met at Belfast in June. A memorial signed by 135 out of 400 members of the First church at Strathbane was presented against the use of an organ there. The General Assembly had decided in 1884 not to interfere with congregations desiring to use instruments in their praise service. A small organ had been introduced into the Sunday-school services of the Strathbane church about twenty years before. Recently the session had received a petition for the introduction of an organ into the Church services. The subject was referred to the stipend payers, who pronounced by a large majority in favor of the organ. The presbytery was appealed to by the opponents of the innovation, who were represented in the memorial before the Assembly, but refused to interfere. The matter was then taken to the synod, and it instructed the presbytery to have the organ removed. The decision of the General Assembly reversed the order of the synod, being: "That the memorial be received; that, inasmuch as the session are unanimous in favor of having instrumental aid in conducting the worship of the sanctuary, and inasmuch as the great majority of the congregation are with them, the Assembly does not see reason to interfere with their action in the matter." The vote upon this decision was 125 in

the affirmative to 62 in the negative. The reports on temperance showing that a considerable number of the office bearers of the Church do not practice total abstinence, a motion was adopted urging "on ministers, ruling elders, Sabbath-school teachers, and all members of the Church the great and pressing duty of personal abstinence."

XIV. Presbyterian Church in England.—The returns of this Church showed an increase both of congregations and of members. There were 327 churches and preaching stations, affording accommodation for 162,644 persons. The number of communicants was 71,444, and the value of church property £1,801,215, against which were debts amounting to £81,073. The aggregate sum of £270,577 had been raised for all purposes during the year, an increase of £9,007 from the previous year. Since the Synod was constituted in England in 1876, the number of congregations in that country had increased from 271 to 327, and of members from 34,146 to 162,044, while the value of the church property had improved from £973,485 to £1,801,215; the debts thereon had decreased from £121,173 to £81,073. The home mission report urged measures to raise the £20,000 needed to complete the £50,000 aimed at as a Church Building fund. The London Presbytery had during the year initiated ten church extension efforts.

The amount of contributions by the home churches to the Foreign Mission fund had been £25,000; besides which the native churches had made considerable contributions for the extension of work in their several fields. The society had in China 160 stations, 55 medical and other European missionaries, 25 of whom were women, without reckoning wives of missionaries; 153 native agents, 69 organized congregations, 10 hospitals, 15 native pastors entirely supported by their congregations, and 5,466 communicants.

The Synod met in Liverpool, late in April. The Rev. William Hutton was chosen moderator. The report on religion and morals mentioned indications in the returns from the churches of earnest spiritual life throughout the denomination. The Synod recorded its "peculiar satisfaction in the continued expansion of interest in the Sunday-school examinations, and especially in the fact that pupils connected with the mission church in China had taken part in the scriptural examinations. A plan for increased representation of the eldership in presbyteries, and suggestions of schemes to provide a more frequent interchange of pastorates, either by an optional time limit or otherwise, were sent down to presbyteries and sessions for consideration and report. Charges were preferred against the Rev. Dr. John Watson, pastor of the church in which the Synod was held, and known in literature as "Ian Maclaren," based on his teaching in the book "The Mind of the Master," but were not entertained.

XV. Welsh Calvinistic Methodist Church.—The General Assembly met at Newport, Monmouthshire, June 14. The Rev. Evan Jones was chosen to preside instead of the moderator-elect, Rev. John Roberts, who had been obliged to return to the mission field in India. The report on foreign missions, of which the chief stations are in the Khassia Hills, India, showed general progress. The sum of £14,000 had been contributed by the home churches to repair the loss occasioned by an earthquake suffered the previous year. The report on the state of the denomination showed growth in every direction. The Presbyterian Joint Committee reported favorable progress in the matter of transference of church members, in which the Free and the United Presbyterian Churches of Scotland, and the Presbyterian Church in Ireland, England, and Wales

were co-operating, and expressed the hope that each Church would continue efforts to make the transference of members as complete as possible, so as to keep in touch with every moving member at home and abroad, and reduce the loss by leakage to as low a point as possible. The Forward Movement Committee reported that during the last seven years the movement had gained from among the lowest classes of society in large towns and industrial districts as many as 15,000 or 20,000 people. Of 30 churches established during that time, several were now self-supporting. A report of a joint committee of this Church and the Welsh Congregational churches looking to the cultivation of closer relations through exchange of pulpits and interchange of fraternal delegates, was adopted.

PRINCE EDWARD ISLAND, a province of the Dominion of Canada; area, 2,133 square miles; population in 1891, 109,088. Capital, Charlottetown.

Government and Politics.—In 1897 Frederick Peters, who had been Premier of the island several years, resigned and removed to British Columbia, where he entered a legal partnership with Sir C. H. Tupper. His place was taken by the Hon. A. B. Warburton, who, however, before many months accepted a judgeship, and also resigned. Before doing this he pressed upon the Dominion certain claims which the province wanted settled and which previous governments at Ottawa had refused to accept. The following was the basis of a memorandum unsuccessfully submitted by Messrs. Warburton, Macdonald, and Richards:

"1. Failure to provide steam accommodation. 2. The terms of union were incorrectly worked out. It assumed net debt and obligations resting on the Dominion at the time much lower than the actual amount. The cost of completing the Intercolonial and Canadian Pacific Railways and the canals was \$75,000,000 more than was computed. Prince Edward's share of this expenditure was \$1,101,926. 3. The island has been left out in railway subsidies given to other provinces. 4. The province is entitled to a larger share of the fishery award than has been assigned. The delegates mention that some of these claims, when presented by Senator Ferguson and his associates, had been acknowledged. They proposed that those claims be submitted to arbitration."

On Aug. 9, 1898, the following new Cabinet was announced, Liberal, like its predecessors: Hon. D. Farquharson, Premier; Hon. H. C. McDonald, Attorney-General; Hon. Angus McMillan, Provincial Secretary and Commissioner of Public Lands; Hon. James R. McLean, Commissioner of Public Works; without portfolio, the following: Hon. James W. Richards, Hon. Peter Sinclair, Hon. Benjamin Rogers, Hon. Peter McNutt, and Hon. A. McLaughlin. It was also stated that a new Department of Agriculture would be created. The "Summerside Journal" described Mr. Farquharson, from a personal and not political standpoint, as follows: "The new Premier is a very shrewd and successful business man, a speaker of some considerable ability, and well posted in political matters, he having been in politics for the past twenty-two years, during all of which time he has occupied a seat in the local Legislature. He is a very strong temperance man, and has long been an active and vigorous worker in that cause." The Opposition was naturally not so well satisfied, and in a by-election that ensued in Queen's County it gave the new Government a bad blow by electing the Hon. W. Campbell, a Conservative, to replace the late Premier Warburton in the Assembly. The following is a summary of the Opposition policy and charges.

The Peters Government, they allege, came into power facing a debt, according to their own Auditor,

of \$171,000. They issued debentures to the amount of \$185,000 to pay off that debt, yet, at present, as a result of mismanagement and indefensible extravagance, the public debt of the province is considerably more than \$500,000, and the Farquharson Government have no prospect of reducing it except by vastly increasing direct taxation. The Conservative Government successfully carried on public affairs for many years without levying a cent of taxation; but the Liberal Government levied taxes on lands and buildings, on incomes, on commercial travelers, and on nearly everything that was taxable, and still failed to make ends meet or to keep down the debt, which the ratepayers of the island must ere long face. The Conservatives never interfered with the school act, but the Liberals have laid violent hands upon it, and shorn it of one of its essential features, and thus materially decreased the salaries of teachers and given education a setback from which it will require years to recover. The Conservatives carried on the public works of the province in a careful and economical yet efficient manner. The Liberals have made the Public Works Department a vehicle for extravagance of the most pronounced character, and have scattered contracts and jobs with a lavish hand "where they would do the most good"—that is, where they would bring support to the Government. And to-day the roads and bridges in many parts of the province are in a wretched condition. The way the Liberals spent the money on the roads of this province at election times, without receiving value for these expenditures, was something shameful, and a scandal to the province.

Prohibition.—The central question of importance in island politics during the year was that of prohibition. It has always been a foremost one, and many public men are in favor of the policy. In December, 1893, the people were asked by the Peters Government whether they favored it or not, and 14,000 electors cast their ballot as follows: Queen's County, 4,226 for, and 1,513 against; Prince County, 3,579 for, and 1,109 against; King's County, 2,811 for, and 768 against; total, 10,616 for, and 3,390 against. After that time nothing definite was done until the Dominion plebiscite took place, Sept. 29, resulting in a vote of 5,617 in favor to 425 against. An important point in the general controversy was the following extract from a letter dated April 7, 1898, from the Dominion Minister of Justice to Mr. Warburton, then Premier: "The regulations to which you refer are all within the jurisdiction of the Provincial Legislature, and it is open to the Legislature to legislate in the direction which you indicate, as far as they think it in the public interest to go, to the extent of total prohibition. There is nothing to prevent any province prohibiting the sale of intoxicants for consumption as a beverage within the limits of the province, if so disposed."

Miscellaneous.—The Hon. David Laird was appointed to the superintendency of the Northwest Indians. For many years he had been an energetic journalist and citizen of Charlottetown.

Considerable progress was made in dairying and cheese production during the year, and a public report on the subject presented by Mr. A. W. Woodward.

Several railway projects were pressed upon public attention, but so far unsuccessfully.

PROTESTANT EPISCOPAL CHURCH IN THE UNITED STATES. A summary of the statistics of Church progress in the year shows the following: The number of dioceses in the United States, 58; missionary jurisdictions in the United States, 17; missionary districts in foreign lands, 4; clergy (bishops, 84; priests and deacons, 4,734),

4,818; parishes and missions, 6,458; candidates for holy orders, 496; ordinations—deacons, 161; priests, 183; baptisms, 63,229; confirmations, 44,788; communicants, 680,205; marriages, 17,693; burials, 35,073; Sunday-school teachers, 46,397; Sunday-school scholars, 434,560; total of contributions, \$13,816,669.84.

The gross receipts for missions for the fiscal year that ended Aug. 31, including those for "specials" and miscellaneous purposes, amounted to \$770,966.99. The contributions for the work undertaken by the board were \$402,540.74, and the amount received for legacies for designated uses \$92,615.50, making the amount at the disposal of the board \$495,156.24, of which \$15,708.31 was deposited to protect outstanding liabilities, leaving to be applied to the payment of appropriations \$479,447.93. Legacies amounting to \$57,975 were permanently invested. The number of parishes and missions contributing was 3,722, or 275 more than during the last fiscal year. The number of contributors and the amount of church offerings were larger than in any previous year. The year was closed without debt. The Lenten offering from Sunday schools, amounting to \$81,761.09, was the largest yet made by \$5,647.50, and was an increase of \$18,599.99 over last year's offering. The number of schools contributing was 3,031, a gain of 401 compared with the previous year.

The gross receipts for domestic mission work (including a balance from 1897 of \$36,854.52) were \$400,426.57. The expenditure (including \$53,959.71 for Indian and \$54,595.50 for colored missions) was \$252,845.72; specials amounted to \$35,674.76; legacy expenses (one half), \$145.12; one half of cost of administration and collection, \$12,342.15; one half of cost of printing reports of the board, "Spirit of Missions," etc., \$9,371.70; legacies for investment, \$26,437.50; one half amount paid to an annuitant, \$150; returned to Standing Committee on Trust Funds, \$32,000; transfers, \$50.22; making the total expenditure for domestic missions \$369,017.17, and leaving for domestic missions and specials at the close of the fiscal year a balance of \$31,409.40. The salaries of the bishops and the stipends of the missionaries in 19 missionary jurisdictions were paid, and, in addition, assistance was given to 41 dioceses. The whole number of missionaries, clerical and lay, male and female, receiving salaries or stipends was 1,126, an increase since 1897 of 120, and the amount appropriated for the whole work (including the sums not directly chargeable to the dioceses) was \$281,694. A larger number of parishes (with one exception) contributed for domestic missions than ever before, the number given being 3,505, an excess over 1897 of 264.

The gross receipts for foreign missions (including a balance from 1897 of \$25,248.87) were \$350,957.28. The expenditures were: On account of mission work, \$186,525.44; specials, \$42,368.30; legacy expenses (one half), \$145.11; one half of cost of administration and collection, \$12,342.14; one half cost of printing reports of the board, "Spirit of Missions," etc., \$9,371.70; legacies for investment, \$26,437.50; one half amount paid to an annuitant, \$150; returned to Standing Committee on Trust Funds, \$44,689.48; making the total amount of payments for foreign missions \$322,029.67, and leaving for foreign missions and specials at the close of the fiscal year \$28,927.56. The number of parishes and missions that contributed to foreign missions was 3,490, being 282 more than in 1897 and a few more than any previous year, and the amount given by them was greater than ever before.

The total number of mission stations reporting to the commission on work among the colored people is 135, and a summary of the approximate

results during the last twelve months gives: Number of dioceses aided, 24; persons confirmed, 818; communicants (1897), 6,608; (1898) 7,556; baptized, 1,479; Sunday-school scholars (average), 6,248; teachers, 633; day scholars (average), 3,940; teachers, 128. Net value of mission buildings, etc., \$420,439; amount of collections, \$24,864.92. The number of colored clergy is 88, of whom 75 are laboring in these dioceses. About 60 white clergymen also take part in the work.

The Bishop of Nevada and Utah, while reporting that every parish and mission in Utah has made a contribution to the general missionary work of the Church during the year, says: "With difficulty have we maintained our work. Mormonism has as strong a hold as ever; indeed, I am not sure but that it has a stronger hold. It is most aggressive in its methods. Many hundred missionaries are at work in all parts of this country."

The result of Church work among the aboriginal races is most encouraging. Statistics of the Alaskan mission give the number of clergy, 7; church edifices, 9; organized missions, 9; unorganized missions, 12 (an increase of 11 missions during the year); communicants, 294; Sunday-school teachers, 12; Sunday-school scholars, 317; teachers in schools for natives, 5; scholars in schools for natives, 317. The baptisms during the year were 214; the confirmations, 38; and the amount of contributions, \$2,113, an increase from \$542 in 1897. In South Dakota, where is the largest Indian work, the Right Rev. Dr. Hare completed twenty-five years of service as missionary bishop, and more than 3,000 Indians gathered in attendance upon the twenty-fifth annual convocation of the Church in South Dakota, held last autumn in the Rosebud reservation. The results of Bishop Hare's great work are the chapels, schools, and the 70 congregations scattered over that great prairie waste, in which now stand 53 neat churches, 37 mission houses, 4 boarding-school houses averaging 50 pupils each, and 33 residences. More than 10,000 Sioux Indians have been baptized, 12 of whom have been trained, educated, ordained, and sent to minister to their own people.

Church work among the Swedes has grown and prospered in a measure unprecedented in the history of any mission that the Church has yet undertaken among foreign-speaking people in the United States. Within eleven years 30 parishes and mission stations have been established, 13 of which possess their own church building, administered by 22 Swedish clergymen of this Church, and having about 7,500 communicants. During the past year there have been nearly 1,000 persons baptized, and upward of 200 confirmed. There have been about 2,150 public services held, and \$20,000 contributed toward the maintenance of the clergy.

Never in the history of foreign missions has the outlook for aggressive Christian work seemed more propitious. In Liberia, the national Legislature at its last session exempted the mission schools from duties on all goods and building material imported into the country. Four town lots and 150 acres of farm land were granted to the mission at two places on Caralla river, 30 acres at Neweress, and at the previous session a tract of 20 acres was given at Cape Mount, making 50 acres at that place. Statistics of the West African mission for the year show that there are 15 day schools, 15 boarding schools, and 22 Sunday schools now in operation in connection with the mission. The church buildings number 7; the places where service is held, 83; there are 3 mission houses and 1 school, American built, and 15 mission houses, used also for school purposes, native built. The baptisms during the year were 336; the confirmations, 86; and the contributions amounted to \$1,875.96.

In China there has been a marked increase in both educational and evangelistic work. The baptisms of natives were 385; confirmations, 183; amount of contributions, \$1,020.43. Early in the year the complete prayer book in the classical style, *Wen-li*, was issued. The bishop has prepared an edition in Mandarin, and the first part of the prayer book has been prepared and printed in the Shanghai colloquial. The schools at Shanghai have been doing excellent work. The great changes that are taking place in the empire are leading the Chinese to seek for Western learning in larger numbers, and so great is the demand that the schools can not receive a tenth of those who apply for admission. Recently a Chinaman received a degree for writing out the Ten Commandments and commenting upon them. They were represented as "the great code of laws of the western nations." The Scriptures in China have at last gained a recognition by the Government, and a knowledge of them is required from students in the state examinations.

Of the Japan mission the Bishop of Tokio says: "The spiritual tone of our people is steadily rising. This is evidenced by the increased interest in missions, by the organization in both dioceses of woman's auxiliaries to the Japanese Missionary Society, and in more churchly ways of thinking, working, and worshipping. There is also a marked advance in the matter of self-support. Nearly every station has increased its contributions to the various activities of the Church. There has been a decided increase in the number of pupils in all of our schools. This is largely due in the case of our boys' schools to the fact that they are now recognized by the Japanese Government and conform themselves to the Government regulations. We have been much concerned by the attitude of the Government toward religious instruction in schools receiving its license. It assumes strict neutrality toward religious instruction, whether Shinto, Buddhist, or Christian, during the hours in which the fixed curriculum is to be taught. We have consented to this rule as a condition for Government recognition, but claim and exercise the liberty of teaching Christianity before and after school hours in the school buildings. Since receiving Government license the students in St. Paul's College have doubled in number."

In the year 4 churches were consecrated, 3 deacons advanced to the priesthood; 250 Japanese baptized, 203 confirmed, and \$5,150.79 contributed. Mission work was extended into Kanazawa, the largest and most flourishing city on the west coast.

A movement of importance was inaugurated by the Haytian Church at its last annual convocation, whereby that Church entered into an agreement to receive the congregation of the Holy Trinity at San Petro de Macoris, in the Republic of Dominica, into its jurisdiction. The Church in Hayti abstains from engaging to give the congregation pecuniary aid. Statistics of the Haytian Church give: Clergy, 12; mission stations, 20; candidates for orders, 3; lay readers, 18; teachers, 11; Sunday-school teachers, 12; baptisms, 65; confirmations, 9; communicants, 480; marriages, 6; burials, 42; day scholars, 190; Sunday-school pupils, 301; total of contributions, \$2,536.42.

The condition of the Mexican Episcopal Church continues to be encouraging. It has 7 priests, 7 deacons, 2 candidates for orders, 5 other readers, 28 congregations, 6 parish schools, 6 teachers, and about 250 scholars. The baptisms during the year were 112; confirmations, 73; and communicants, 572.

Miss Marion Muir, who since 1867 has been the most efficient head of the Greek Mission School, died suddenly on Aug. 15. The Board of Missions

has since determined to close the school and end the work, which was begun in 1829.

The receipts of the American Church Missionary Society amounted to \$34,032.50; the disbursements to \$29,917.11. Of these sums the receipts for the working of the society were \$27,714.76; the expenditures, \$29,917.11. Of the balance cash on hand, \$14,199.41, the sum of \$4,984.10 is available for the work of the society. The society kept alive the work in Cuba throughout the war.

The contributions for the Brazilian work were \$12,700, and no work in the Church has increased as that has, the expenses remaining practically the same. The number confirmed in Brazil in the year was 116, and the contributions there amounted to \$3,410. The Book of Common Prayer has been translated into Portuguese.

The summary of the work accomplished in the year by the Woman's Auxiliary and its junior department, in which 2,449 parishes and missions took part—379 more than last year—shows an increase in contributions to the amount of \$24,921.36. In money \$219,076.19 was given, and boxes valued at \$180,359.82. Of this total of \$399,436.01, the junior department gave money and boxes to the amount of \$45,240. In addition to these contributions the triennial "united offering" presented at the meeting of the General Convention amounted to \$80,475.69, which amount will be devoted to the Christian education of women. The united offering of the Woman's Auxiliary in 1901 is to be given to the Board of Missions, with the request that it be divided into equal parts—one part to be given to each of the missionary bishops who shall be in charge of domestic or foreign jurisdictions at the time, and one equal part to be given to the commission for work among the colored people, to be used at their discretion; the offerings in each case to be reckoned as specials, and in addition to the appropriations made by the Board of Missions.

The American Church Building Fund Commission reports that in the year gifts to the amount of \$3,050 were made to 23 churches, and loans amounting to \$16,725 were made to 10 churches. The contributions to the Permanent Building Fund were \$45,274.02; interest on loans and investments amounted to \$13,408.94, and the loans returned to \$30,484.74. Two gifts amounting to \$500 were also returned. The fund now amounts to \$343,891.64.

The General Convention of 1898 met in Washington, Oct. 5. The following action was taken: A new diocese was constituted by the division of the Diocese of Indiana. The new diocese comprises all the counties of the State of Indiana north of the southern limits of Benton, White, Carroll, Howard, Grant, Blackford, and Jay Counties.

The seven missionary jurisdictions of Idaho, Nevada and Utah, northern California, the Platte, western Colorado, Wyoming, and Spokane were rearranged as to their boundaries, and all except the last were renamed.

The new missionary jurisdictions are as follow:

Boise.—Southern Idaho and greater part of western Wyoming.

Laramie.—Western Nebraska and eastern Wyoming. Laramie was placed under the charge of Bishop Anson Rogers Graves, formerly Bishop of the Platte.

Sacramento.—Northern California and western Nevada.

Salt Lake.—Utah, western Colorado, eastern Nevada, and a small part of southwest Wyoming. This missionary jurisdiction was placed under the charge of Bishop Abiel Leonard, formerly Bishop of Nevada, Utah, and western Colorado.

Spokane.—Eastern Washington and northern Idaho. Placed under the charge of Bishop Wells.

The following missionary bishops were elected:

Asheville.—The Rev. Junius Moore Horner, associate principal of Horner School, Oxford, N. C.

Boise.—The Rev. James Bowen Funsten, rector of Trinity Church, Portsmouth, Va.

North Dakota.—The Rev. Samuel Cook Edsall, D. D., rector of St. Peter's Church, Chicago.

Sacramento.—The Rev. William Hall Moreland, rector of St. Luke's Church, San Francisco.

A new foreign missionary jurisdiction was formed in Japan, to be known as the missionary district of Kioto, which was placed under the charge of Bishop McKim, of North Tokio.

Rev. Lucien Lee Kinsolving, rector of the Church of the Saviour, Rio Grande, Brazil, and resident representative of the bishop in charge of the Church in Brazil, was elected, and nominated to the presiding bishop for consecration as Bishop for the United States of Brazil, with the title of Bishop of Rio Grande do Sul, Brazil.

A memorial was received from the churches in Europe, asking for a more adequate provision for episcopal oversight, and a petition by members of the Anglican Church resident in Honolulu was presented. It prayed that the Anglican Church in the Hawaiian Islands may be received into the Protestant Episcopal Church as a missionary jurisdiction, and that it may have union with the General Convention.

The action of the General Convention indicated the policy of the Church that while Cuba, so long as she was semi-independent, could not form part of the territory of the Church, Puerto Rico passed under her jurisdiction on its cession to the United States. It was resolved: "That in behalf of Puerto Rico the Board of Managers of the Board of Missions be requested to take such action as, after conference with the Bishop of Antigua, may be deemed practicable and desirable"; and the work in Cuba was placed under the oversight of the Committee on the increased Responsibilities of the Church, who are instructed "to ascertain by correspondence, and, if practicable, personal visitation, all available facts in the case, and to report to the Board of Missions such facts, with any recommendations which they may think it expedient to make."

Various revisions of the constitution were made, notably one intended to further church unity; and the dissolution of the Prayer-Book Society was consummated. It was determined that the General Convention of 1901 shall meet in San Francisco.

The statistics of the Anglican Church in Hawaii for 1898 show: Number of clergy, 8; church edifices, 7; parishes and missions, 9; baptisms, 100; confirmations, 81; communicants, 600; Sunday-school teachers, 22; Sunday-school scholars, 300; parish school teachers, 5; parish school scholars, 96; contributions, \$6,800.

William Stevens Perry, D. D., LL. D., D. C. L., second Bishop of Iowa, died May 13; Charles Todd Quintard, M. D., D. D., LL. D., second Bishop of Tennessee, died Feb. 15; John Henry Dneacht Wingfield, D. D., LL. D., first Missionary Bishop of Northern California, died July 27. The Church lost by death 97 other clergymen also. On Jan. 27 the Rev. William Neilson McVicker, D. D., rector of Holy Trinity Church, Philadelphia, having been duly elected Bishop Coadjutor of the Diocese of Rhode Island, was consecrated bishop. June 24, the Venerable William Montgomery Brown, Archdeacon of Ohio, having been duly elected Bishop Coadjutor of the Diocese of Arkansas, was consecrated bishop. Sept. 6 the Rev. Thomas Edward Green, S. T. D., D. D., rector of Grace Church, Cedar Rapids, Iowa, was elected bishop of the diocese in succession to the Right Rev. William Stevens Perry, but he declined the office.

Q

QUEBEC, a province of the Dominion of Canada; area, 228,900 square miles; population in 1891, 1,488,535. Capital, Quebec.

Government and Politics.—The Marchand Government, which assumed office after the general elections of May, 1897, has an excellent record, upon the whole. Faults there have been of course, and the Conservative Opposition have bitterly contested certain vacant seats—notably in December, 1898, when four seats were vacant at once. But the Government has been fairly sustained. At a banquet given to the Hon. F. G. Marchand in Montreal, on Jan. 26, 1898, he announced his policy as being one of economy and the re-establishment of the much-disturbed finances of the province. This principle seems to have been consistently carried out. On Nov. 23, 1897, the first session of the ninth Legislature was opened by Sir J. A. Chapleau, Lieutenant Governor, with a speech from the throne, in which he said:

"You have reason to rejoice that the Dispenser of all good has been pleased to grant this province a bountiful harvest, and that the produce of our agricultural industry has found favor on foreign markets, which leads us to hope for ever-increasing remunerative prices in the future. This is for all the assurance of prosperity.

"You will be called upon to give your assent to measures of the highest importance. Among these a new law on public instruction occupies the first place. It contains important changes in the old law, without other innovations, however, than those necessitated by the requirements of the hour. Fully alive to the responsibility that devolves upon it as regards everything connected with the welfare and progress of the province, the Government can not fail to evince an interest in so important a question as that of education. Thus the bill that will be submitted to you contains a provision for the creation of a Ministry of Public Instruction, the working whereof will not entail additional expense, for the number of ministers will remain the same as at present.

"Agriculture and colonization have already received the most careful attention from my Government, and such attention will continue to be given. It is but proper that we should take advantage of the tide of colonization flowing toward our arable lands and attract our energetic and patriotic settlers to the newly opened townships.

"My Government has also undertaken the mission of improving municipal roads, and it will spare no effort to give a continual and increasing impetus to that policy which is destined to produce the most beneficial results and to increase the welfare and wealth of our population.

"I am pleased to observe the new vigor that seems to be manifested by our manufacturing industries. The immense water powers scattered throughout the province and that have remained undeveloped for so many years are beginning to be utilized. Thanks to them, new industries have been established and have already produced excellent results.

"My Government, on assuming power, was compelled to fulfill obligations undertaken by the late Administration, and for which no provision was made in the budget of the last fiscal year. The result of the obligations thus contracted has been a considerable deficit and the creation of a floating debt which makes it necessary for the Government

to have recourse to a new loan in order to consolidate it.

"By an act of Parliament of the United Kingdom of Great Britain and Ireland entitled 'An Act respecting the establishment of provinces in the Dominion of Canada,' it was enacted that the Parliament of Canada might from time to time, with the consent of the Legislature of the province, increase, diminish, or otherwise alter the limits of such province, upon such terms and conditions as might be agreed upon by the Legislature of such province. The late Government passed an order in Council accepting the description of the northern limits of the province offered by the Federal authorities. This order in Council was considered by the Federal Government as insufficient to fully satisfy the requirements of the law in this matter. You will be called upon to pass an act whereby the province will consent to accept the limits thus determined, so that the Parliament of Canada may definitely establish them. This legislation is required to give effect to the agreement and to enable the Federal power by definite legislation to place on record the acknowledgment of the rights of the province. You will be happy to learn that by the passing of that act, the area of the province of Quebec will be increased by 67,499,950 acres of land."

The Hon. Horace Archambault was elected Speaker of the Legislative Council, and the Hon. Jules Tessier Speaker of the Assembly. The Legislature adjourned on Jan. 15, 1898. The proposed school legislation was perhaps the most important matter of the session. A bill was introduced by the Hon. J. E. Robideux on Dec. 13, and was widely discussed. The central feature was to be the appointment of a Minister of Education (as in Ontario a member of the Government and necessarily a political partisan) in place of the existing non-partisan chief superintendent. The measure eventually passed the Assembly, but was thrown out in the Council. The following statement explains the political situation from two standpoints in December, 1898:

1. *The Liberal View.*—The Conservatives promised, on taking office in December, 1891, that there would be no new loans. They kept their promise by floating the Taillon loan, which replaced an indebtedness of \$3,860,000 by \$5,332,976. The bonds were sold at 77 without tender. This was in 1893. In 1894 there was another loan of \$2,920,000. In 1896 there was another loan of \$3,017,333. Mr. Marchand on taking office found that his predecessor's extravagance necessitated a further loan of \$700,000. The Conservatives on taking office promised there would be no new taxes. They imposed a tax on real estate transfers, licenses were imposed on manufacturers and traders, succession duties were levied, direct taxes were laid on professional men, and municipalities were subjected to a variety of new charges. In all, nearly two millions of new taxes were collected by them. The Conservatives promised on taking office that there would be no new railway subsidies. They kept this promise by withdrawing subsidies from new lines and giving them to old lines to the amount of \$963,000. By extending lapsed subsidies to the amount of \$1,486,507, they paid in five years for railway subsidies \$5,286,920. And in that time only 416 miles had been added to the system in Quebec. The Conservatives on taking office promised there would be no

more deficits. Their deficits for four years aggregated \$5,474,189, and this despite their special taxes. Mr. Marchand made only two promises: that he would do his utmost to keep the expenditure within the revenue, and that he would improve the educational system.

2. *The Conservative View.*—This party, under the leadership of the Hon. E. J. Flynn, late Premier, asserts, with truth, that the province was almost bankrupted by the admitted corruption and extravagance of the Mercier régime, and that the difficulties in the way of favorable loans, the necessity of borrowing money at any cost, and the equally imperative necessity of increasing taxation to recover the depleted treasury and put the province on its feet again, explain sufficiently the charges about loans, new taxes, and deficits. A period of hard times also added to their difficulties. Yet they came out of the troubles with improved finances and position generally. The railway subsidies were, in the main, enforced carrying out of obligations previously entered into by the Mercier Government.

Finances.—Apart from any other consideration, there can be no doubt of the improved financial position of the province during 1897-'98. The following statement as to the debt of Quebec, covering the period of attempted recuperation after Mercier's downfall in 1891, was made by Mr. Marchand in his budget speech on Dec. 14, 1897:

"In order to be able to fully understand the difficulty that we have to overcome, it is advisable in the first place, I consider, to define the actual position as clearly as possible. For that purpose I will take the liberty, without any recrimination against previous Administrations, of stating the facts exactly as they are. The constant increase of our public debt during the period of the last Legislature has been considerable, and here is a proof of it: The excess of the liabilities over the assets on the 30th of June, 1892, according to the budget speech of the 31st of January, 1893, was \$23,641,346.28. From this amount must be deducted the railway subsidies then lapsed under existing laws confirmed by the act 59 Victoria, chap. v, amounting to \$2,018,760.22; leaving as the total excess of liabilities over assets at that date the sum of \$21,622,577.06. On the other hand, the excess of liabilities over assets of on the 30th June, 1897, as shown in the detailed statement laid before this House, was \$25,491,658.16. Whence it results that during the past five years, instead of diminishing as was pretended, the debt has been increased by \$3,869,081.10. The increase has taken place notwithstanding the fact that the new taxes had added an average amount of nearly \$500,000 per annum to the revenues of the province during the same period, yielding for those five years a total increase in our revenue of \$2,262,452.55. On the other hand, the funded debt has during the same period grown to enormous proportions, both by the negotiation of permanent loans, destined to pay off temporary loans, railway subsidies, and various other floating debts, and by heavy discounts on some of the permanent loans effected for that object. On the 30th of June last, 1897, the outstanding debentures of the funded debt amounted to \$34,196,654.08; while on the 30th of June, 1892, according to the budget speech of the 31st of January, 1893, they amounted only to \$25,175,320.01, which leaves a sum of \$9,021,334.07 to represent the increase in our funded debt from the 30th of June, 1892."

The chief items of receipt and expenditure for 1896-'97 under his own Administration were given as follow: *Receipts*—Dominion of Canada, \$1,257,183.70; Crown lands, \$879,898.26; law stamps, \$177,426.80; registration stamps, \$63,875.90;

Building and Jury fund, \$27,565.83; law fees, \$9,654.38; municipalities for maintenance of prisoners, \$12,751.96; licenses, \$586,176.42; direct taxes on commercial corporations, \$134,404.03; tax on transfers of property, \$74,856.99; manufacturing and trading licenses, \$10,393.77; duties on successions, \$229,441.72; percentage on fees of public officers, \$6,671.83; legislation, \$8,391.39; lunatic asylums municipal contributions, \$7,703.59; "Quebec Official Gazette," \$21,637.58; casual revenue, \$7,570.62; civil service contributions for pensions, \$5,712.61; interest on loans and deposits, \$35,556.71; interest on price of the Q. M. O. and O. Railway, \$299,395.07; Marriage License fund deposit, St. Lawrence Fire Insurance Company, \$15,000; Aylmer Courthouse fund, \$17,976.14; temporary loans, \$700,000; proceeds loan, 1896, \$1,124,200; proceeds loan, 1897, \$1,224,000; proceeds of inscribed stock issued in conversion of debt, \$3,015,853.86; cash on hand at July 1 each year, \$784,799.49. *Expenditures*—Public debt, \$1,550,874.16; legislation, \$288,623.41; civil government, \$277,247.91; administration of justice, \$662,665.77; public instruction, \$410,060; agriculture, colonization, and immigration, 404,695.75; public works and buildings, ordinary \$165,783.76, extraordinary \$176,832.28; asylums and charities, \$358,616.77; miscellaneous (including payments by revenue officers out of collections), \$558,527.67; purchase of property, \$30,000; repayment railway guaranteed deposits, \$381,187.62; trust funds, \$14,999.01; reimbursement Railway Subsidies fund—costs of collections and refunds, \$8,355.22; railway subsidies and Q. M. and O. Railway, \$1,346,475.01; redemption of debt—part of loan of 1896 and premium, \$3,015,853.86; add, payment of warrants outstanding at June 30, 1892, '93, '94, '95, '96, \$173,122.23; deduct, unpaid warrants outstanding at June 30, 1893, '94, '95, '96, '97, \$443,257.08.

The Upper House.—For many years there have been fitful agitations among Quebec Liberals for abolition of the appointive Legislative Council as being a fifth wheel to the Government coach. All measures or suggestions, however, have been blocked by the Council itself. Mr. Marchand's Government has taken up the matter, and every member duly appointed to a vacancy in the Council has to pledge himself to vote for its abolition when the time comes. On Dec. 11, 1898, Mr. McCorkill, a new appointee, announced this fact and declared the policy of the Government to be as stated. There is only one other provincial House of this nature now in Canada.

Dairy and Agriculture.—In 1897-'98 the Government expended upon agriculture, immigration, and colonization \$307,476, an increase of about \$20,000 over the preceding year. From sources of revenue connected with this department it received \$4,112,547, an increase of \$237,744. In some directions the agricultural and dairy development was not satisfactory. A decrease in cheese-producers' earnings is the dominant fact of the season now closed. Not counting the \$50,000 lost through a recent large failure in Montreal, factory men are \$2,000,000 out of pocket as a result of their labors since last spring. This is a decided reverse of the rule which has governed the business for the past ten years: for since 1888, while the average yearly price may have fluctuated, the aggregate return as a result of expansion in the output has recorded a steady increase from year to year. But this season not only have prices been 40 cents a box lower, but the exports show a decrease of 13½ per cent. compared with 1897. Lower prices were, of course, largely instrumental in restricting production of cheese, but another influence was also at work. In fact, the impression has prevailed for

some years that the expansion of cheese making in Canada should be moderated so as not to reach the danger point of overproduction. Accordingly, more attention has been devoted to butter-making, in which the margin for increase is considerably greater, and to this diversion of effort, coupled with the fact already mentioned, the record of the present season may be traced. It is not assumed from this that Great Britain has reached her purchasing limit for Canadian cheese, but rather that, as there is greater room for expansion in butter, it would be foolish to neglect the opportunity offered. From the middlemen or exporters' standpoint, also, the results of the season have been less satisfactory

than in 1897. The autumn output of cheese via Montreal (much of it from other provinces) was in 1898 as follows: Quantity, 1,900,000 boxes; cost price per box, \$6.35; spot price per box, \$6.60; cost value, \$12,065,000; spot value, \$12,540,000.

Prohibition.—This was a living issue in Quebec politics in 1898, owing to the Dominion plebiscite on the subject. Sir Henri Joly, a member of the Liberal Government at Ottawa from Quebec, opposed it, and Mr. S. A. Fisher, another member, supported it. But the province voted overwhelmingly against any such policy, the vote being 98,447 against 19,565 in favor. This practically balanced the favorable majorities in other provinces.

R

REFORMED CHURCH. I. Reformed Church in America.—The Committee on the State of Religion reported to the General Synod of the statistics of this Church as follows: Number of churches, 633; of ministers, 683; received on confession, 5,039; of members, 110,273, showing a gain of 2,213 over the previous year; of members of Sunday schools, 123,667, an increase of 3,000; amount of contributions for denominational objects, \$227,860, or \$22,971 more than in 1896; of contributions for other objects, \$103,857, an increase of \$2,952; of congregational expenditures, \$1,005,870, or \$32,445 less than in the previous year.

The number of Sunday schools was represented to be eight more than in the previous year. The total enrollment of members in them was 123,667. The number of catechumens was 37,441. The Sunday schools had contributed \$20,309 for foreign and domestic missions and education, indicating a gain of \$2,742 over the contributions of the previous year. The Christian Endeavor Societies had contributed to the same causes \$9,937, a gain of \$1,774.

The income of the Widows' fund, including the balance from the preceding year, had been \$10,796, and the expenditures \$8,809. Legacies amounting to \$15,169 had been added to the permanent fund. An increase was shown from every source of revenue except church offerings.

The report of the Permanent Commission on Systematic Beneficence showed that there had been a decided advance in systematic giving, resulting in an increase of \$16,500 in the offerings for foreign missions, and of \$10,000 in those for domestic missions. The committee was requested by the General Synod to correspond with delinquent churches with a view of engaging their co-operation in this work.

The number of Christian Endeavor Societies was given as 560, 156 of which were junior societies, with, in all, 30,000 members. The Missionary League had a membership of 20,000. These societies together had in the past year contributed \$8,100 to the domestic and foreign missions and to the women's boards.

The Board of Education had 102 students under its care. More churches than ever before had contributed to its support. The Synod decided to ask for \$15,000 from the classes for its work during the coming year. The three theological seminaries returned 78 students, 13 of whom were in India. Twenty-three students had been graduated.

The permanent fund of the Disabled Ministers' fund had been increased to \$63,293. The income of the fund had been \$6,243. The expenditures had exceeded the receipts by \$812. A special committee was appointed with reference to the increase of the resources of the fund, and was authorized, with the approval of the Board of Direction, to employ an

agent to solicit individual gifts and secure bequests for the fund.

The Board of Domestic Missions had received from all sources \$84,699, or \$12,482 more than during the preceding year. One fourth of the receipts had been from legacies and invested funds, while \$20,125, or nearly one third of the remaining \$63,484 contributed by the living membership of the Church, was received from the Women's Executive Committee. One fifth of the accessions by confession to the communion of the Church had been from the 222 churches aided by the board, and more than one seventh of the Sunday-school enrollment was in the same churches. The Synod decided that the sum of \$120,000 was the least amount that could adequately meet the needs of the board during the current fiscal year, and directed the apportionment of that amount among the several churches.

The contributions of the year for the Board of Foreign Missions had been \$124,301, an increase over the preceding year, but insufficient to meet the expenses in full, so that more debt was incurred. The missions in Arcot, India, North and South Japan, and Arabia had been re-enforced. The Synod of Amoy, China, representing the missions in China of this Church and of the Presbyterian Church in England, has a Widows and Orphans' fund established on a secure basis.

The receipts of the Woman's Board of Foreign Missions exceeded \$36,000, and were larger than those of any previous year. Missions in India, China, Japan, and Arabia were represented at the annual meeting of the board, May 10.

The General Synod met at Asbury Park, N. J., June 1. The Rev. Edward B. Coe, D. D., LL. D., was chosen president, and the Rev. S. M. Zwemer, missionary to Arabia, vice-president. The report of the Committee on the Amsterdam Correspondence (see the "Annual Cyclopædia" for 1897 and 1896) represented that the historiographer of the Synod, the Rev. Dr. E. T. Corwin, was successfully gathering exceedingly valuable historical material in the archives of the Reformed Church of the Netherlands, his researches continually revealing items of incalculable value and interest. He hoped to complete the work of gathering and transcribing the most important records by November, 1898. The funds as yet collected did not permit a further extension of the work. The resolutions of the Synod, acknowledging the courtesies shown by the classis of Amsterdam and other judicatories of the National Reformed Church of the Netherlands, called the attention of the churches, and especially of the older ones, "that formed the nuclei of the denomination in its present greatness," to the effort to secure this historical information, and requested them to make liberal donations toward it. A prop-

osition having been made to transfer to the council of Hope College, Michigan, for Western investments, certain funds held by the Board of Direction for the benefit of that institution, a committee appointed to inquire into the legality and expediency of such a transfer, and the power of the General Synod to make it, reported that by the terms of its charter, the Board of Direction was obliged to invest trust funds under its direction within the State of New York, and could not invest them otherwise, without rendering its members personally liable; the petition of Hope College could not therefore be granted. An amendment to the resolutions of the committee was offered authorizing the transfer to the council of Hope College of such funds for its endowment as were given directly to it, provided it could be made without bringing personal responsibility upon the members of the Board of Direction; and with this amendment the report of the committee was adopted. A special committee was appointed to report to the next meeting of the General Synod a summary of the history of particular synods. The publication of the Liturgy of the Church in the German language was authorized. The Theological Seminary at New Brunswick, N. J., was represented as being embarrassed by a shrinkage of interest on its invested funds, the income from which was now \$4,800 less than in 1882. Measures were taken to meet this difficulty. The Board of Foreign Missions was authorized to employ a field secretary to visit the churches in the interest of the cause. A delegate also was appointed to attend the General Assembly of the Italian Evangelical Church, which was appointed to meet in Florence, Italy, in October, 1898.

II. Reformed Church in the United States.

—The statistics of this Church for 1898 give it 1,029 ministers, 1,660 congregations, 242,299 members, with 11,677 confirmations during the year, 273 students for the ministry, 1,466 Sunday schools, with 24,770 teachers and 182,134 pupils. During the year covered by the reports \$202,726 was raised for benevolent purposes and \$1,093,791 for congregational expenses. These figures reveal an increase during the year of 7 congregations, 7,683 members, 835 teachers and 1,200 pupils in Sunday schools, and more than \$7,000 in contributions for congregational expenses, and a decrease of 200 confirmations and \$35,000 in benevolent contributions. A vote taken in the classes on a proposal for the establishment of a new foreign mission in China, in addition to the one already in operation in Japan, was adverse to that step.

III. Reformed Church in South Africa.—The Reformed Church in South Africa is divided into several branches, among which are the Dutch Reformed Church of Cape Colony, the Church of South Africa, the Presbyterian Church of Basutoland, the Dutch Reformed Church of Orange Free State, the Hall and Protestant Reformed Church of South Africa, all of which are connected with the Presbyterian and Reformed Alliance; the Reformed Church of Cape Colony, the Reformed Church under the Cross (at Strydenberg), and the Christian Reformed Church of South Africa.

The Reformed Church of Cape Colony numbers 13 churches. The General Synod, consisting of 6 preachers, 21 elders, and 2 deacons, met at Middelburg, Jan. 31 to Feb. 3, when a deputation from the Church under the Cross at Strydenberg, a secession from the Dutch Reformed Church of Cape Colony, applied for recognition. One point of difference exists between the two bodies, in that the Reformed Church sings psalms only, while the Church under the Cross permits hymns. The Synod resolved to co-operate with the Church under the Cross, and to aid it as needed. The matter of recognizing it as an

ecclesiastical body was referred to the Synod of the Reformed Church in South Africa considered as a representative body of the smaller Churches collectively.

IV. Evangelical Church of Italy.—The Evangelical Church of Italy was organized in 1870 by Father Alessandro Gavazzi, in Milan, under the name of the Free Church. It now returns, in its yearbook for 1897, 29 organized congregations, with mission work at 132 other places. Its clergy consists of 18 ordained pastors and 9 evangelists. It sustains 6 day or parochial schools, with 29 teachers and 922 pupils; 8 evening schools, with 18 teachers and 397 pupils; and 27 Sunday schools, with 92 teachers and 1,349 pupils. Under its system of Bible colportage 1,137 Bibles and 1,613 New Testaments were distributed in 1896. The theological seminary which was sustained at Rome for several years was discontinued in 1895. Since then courses of theological lectures have been delivered in Florence by one German and two Italian theologians.

REFRIGERATING AND ICE MAKING.

The production of artificial cold is an industry that has had a steady growth during the past generation. The earlier machines were not economical, but experience has developed methods that compete with the storing of natural ice, so that refrigerating plants have become common, not alone in cold-storage warehouses, but in large hotels, manufacturing establishments, etc. In several cities of the United States, notably St. Louis and Denver, plants have been established for the general sale and distribution of cold, through pipes, to the premises of subscribers, and the service is said to be both satisfactory to the customer and profitable to the investors. The ammonia-expansion system is most commonly used, and may be employed for either ice making or refrigerating. The delivery of the cold direct into the premises where the temperature is to be reduced is about 40 per cent. cheaper than the production of the same low temperature by the making of artificial ice and storing it in the cold room. The principle upon which the manufacture is based is that a gas when compressed gathers heat enormously, and if robbed of this heat and allowed to expand at a future time it seeks to regain its lost heat by withdrawing heat from its surroundings. Almost any gas can be used for this purpose, but ammonia gas is commonly preferred, because it can be liquefied with comparatively little pressure. Anhydrous ammonia is employed, being obtained by distillation of common ammonia to remove the water. This is compressed by a combined steam pump and compressor, much as air is compressed. The resulting liquefaction induces heat, which is economized by circulating cooling water about the vessel or pipes containing the liquefied ammonia. Thus the ammonia is cooled and the heat largely transferred to the water, which is then pumped back to the boiler that supplies the steam pump, thus economizing fuel. The liquid ammonia is then carried in a pipe to the place to be cooled, and being there admitted by a valve in a small stream to expansion coils that afford plenty of room for its evaporation, it begins to return to the gaseous form, and to draw heat from its surroundings, which gradually reduces the temperature. This may be regulated by the amount of ammonia evaporated in the coils. If the consumer wishes to make ice, he has only to place proper cans of water in contact with the expansion coils, and in due time ice is formed.

For refrigerating, the brine system is frequently preferred to the direct-expansion system. A strong brine made with common salt will bear a very low temperature without freezing. The plan is there-

fore to place tanks of brine in contact with the evaporating coils, and to circulate the brine by means of a pump throughout the premises to be cooled. This system has the advantages of requiring less ammonia and of affording no chance for accidental leakage of the ammonia in the cold rooms, such leakage being liable to inflict severe damage on goods. In a general distribution system, as in Denver, the direct-expansion method is employed. A large compressor pump and steam engine, usually combined in one machine, are employed at the central plant to compress the ammonia. An ammonia condenser with liquefying coils is also provided, besides minor machinery. Three sets of pipes are laid through the streets, known respectively as the liquid line, vapor line, and vacuum line. The liquefied and cooled ammonia is sent out in the vapor line and connected with the expansion coils that are placed on the premises of customers, enabling them to turn on the cold by a simple twirl of a valve. After the ammonia in the various coils has fully evaporated and expanded, doing all the cooling work of which it is capable, it is led back to the vapor line, and assisted back to the central plant by means of a suction pump. The vacuum line is connected at regular intervals with both the other lines by means of valves that are normally closed, but which render it possible, in case of accidents or difficulty in either of the other lines, to alter the valves so as to cause one line to flow through a portion of the vacuum line, permitting the corresponding section of the defective line to be emptied and examined for repairs. The vacuum line, as its name implies, is ordinarily pumped so as to be comparatively empty, and thus a section of either of the other lines is readily turned into the vacuum line, the suction being so complete that not even fumes are left in the vacated section of the emptied line to annoy the workmen who make the repairs. Pipes for these lines are laid with extreme care, in order to avoid disturbance by frost, etc., resulting in distortion of the joints and consequent leakage. The customary plan is to provide a complete bed of cement and to cut the pipe in longitudinal half sections, so that the lower halves may be laid first, and the joints thoroughly protected against leaks. The upper halves are then attached with cement joints, and the whole completely surrounded with cement. At the completion of each section, where the shut-off and transfer valves are placed, are manholes to facilitate their operation. By such means as these the loss from leakage is reduced to a minimum, which is quite important, as the leakage, besides being a direct loss, is seriously objectionable to property owners on whose premises it occurs or to the general public in the vicinity where the loss takes place. It will be apparent that this system obviates any loss of heat by transfer through the line, as the liquefied ammonia sent out does not begin to withdraw heat from its surroundings until it is afforded a chance for expansion, which is not given until it is actually in the coils of the customer.

For making ice by the ammonia system, distillers, purifiers, and filters are employed to cleanse the water, which is let into cans of 100 to 300 pounds capacity. With one of the larger outfits it is possible to make 150 tons of ice every twenty-four hours after ice making begins. Sometimes the ice is made in plate form, being cast in tanks that yield a cake about 8 by 16 feet and 12 to 16 inches thick. Artificial ice thus made is produced so cheaply and conveniently, and has such an advantage in the way of purity, that it has gained a market in many cities within the ice-gathering belt, and ice-making and refrigerating machinery is every year being introduced a little farther north.

RESERVATIONS, INDIAN. The area of land that is reserved from the national domain for occupation by Indian tribes aggregates 84,571,459 acres, or 132,143 square miles—almost equal to the area of Ohio, Indiana, and Illinois combined. The reservations—which are in California, Colorado, Idaho, Kansas, Michigan, Minnesota, Montana, Nebraska, Nevada, New York, North Carolina, North Dakota, Oregon, South Dakota, Utah, Washington, Wisconsin, and Wyoming, and Arizona, New Mexico, Indian, and Oklahoma Territories—number 138, the 22 small reserves of the Mission Indians in California and the 19 Pueblo reserves in New Mexico being counted as one each. Of these reservations no two are exactly similar, and no two tribes present the same condition. Some of the Indians live a mere animal life, while others are largely civilized and have become absorbed into our national life. The great majority receive nothing directly from the Government in the way of subsistence or support, while certain tribes—as the Sioux, Cheyennes, Arapahoes, and Apaches—depend largely upon Government rations. The established policy of the Government toward the Indians now aims at the destruction of the reservation system, together with that of tribal organization, the allotment of land in severalty to the Indians as they shall become sufficiently enlightened to accept it, and their incorporation into the nation as citizens. The initiation of this policy was the act of March 3, 1871, forbidding the future recognition of Indian tribes or nations as independent powers, with which treaties might be entered into, substituting agreements merely, subject to ratification by Congress. It was radically fixed, however, by the act of Feb. 8, 1887, known as the Dawes bill, or “land-in-severalty law,” applicable to all reservations except those of the Five Civilized Tribes, and three others in Indian Territory, those in the State of New York, and one in Nebraska. Prior to the passage of this act allotment of land in severalty was stipulated for in treaties with certain Indian tribes, and, by acts of Congress, allotments have been made to specified tribes since 1885. By this act the President is authorized to have the lands of Indian reservations surveyed and allotted in severalty, and in 1890 the amount was fixed at 80 acres to each Indian, without regard to sex or age. Patents to the individual holdings contain a restriction against alienation for twenty-five or more years; and the Indian receiving land in fee is declared an American citizen, and is brought under the laws of the State or Territory in which he resides. Surplus lands remaining after allotment will be purchased by the United States and opened to settlement. In special instances this is done in advance. While many of the tribes and fragments of tribes on reservations are in a condition to accept lands in severalty, to others the application of the law would be preposterous.

The policy of seclusion having thus been abandoned, the landed estate of the Indians has suffered somewhat rapid reduction. In 1890, after the opening of Oklahoma, it aggregated 116,000,000 acres, or 181,350 square miles. But during that year about 13,000,000 acres were ceded to the United States—9,000,000 by the Sioux in North and South Dakota and 4,000,000 by the Chippewas in Minnesota. In 1891 agreements with the Indians, ratified by acts of Congress, restored 8,164,765 acres to the public domain, and in September, 1893, the Cherokee Outlet, or “Strip,” of 6,361,135 acres, was opened to settlement under the homestead laws and to disposition as school lands.

The first effect of the general allotment act of Feb. 8, 1887, was the immediate admission to full citizenship of 10,122 Indians to whom allotments

had been made previously under special laws and treaties, and the admission to citizenship of all Indians who had voluntarily taken up their residence apart from their tribes and adopted the habits of civilized life. By special laws and treaties 3,072 Indians of various tribes had previously become citizens. Under the allotment act 22,639 allotments of land have been patented and delivered to Indians on reservations, and under the same act allotments are also made to nonreservation Indians. During 1896 2,364 patents for allotments were delivered to Indians on reservations.

Since May 14, 1855, reservations for Indians have been made by executive order (with or without the authority of Congress) in addition to treaty or agreement; and when they are no longer required, they are restored to the public domain by order of the President and disposed of like other public lands. The largest area of Indian land lies within Indian and Arizona Territories, South Dakota, Montana, Oklahoma, Washington, Utah, and North Dakota.

The total Indian population of the United States, exclusive of Alaska, was shown by a census of the tribes taken by the Indian Office in 1895 to be 248,340, or, exclusive of the Five Civilized Tribes, 182,370. Of this number, 81,202 wear citizen's dress wholly and 31,701 in part; those who can read number 33,115, and 41,242 can use English enough for ordinary purposes. During the year 23,462 dwelling houses were occupied by Indians and 1,944 were built by Indians, and 269 church buildings were owned by Indians. The births during the year were placed at 3,502, and the deaths at 2,974, only partial reports having been made of either; 734 formal marriages took place and 48 divorces were granted. Sixteen suicides occurred. Twenty-three Indians were killed by Indians, and 5 by whites. Four whites were killed by Indians. By the court of Indian offenses, 762 Indian criminals were punished; by civil courts, 218; and by other methods, 371; while 400 whisky-sellers were prosecuted.

History.—Indian reservations within the United States have their origin in the right of Indian occupancy of lands, acknowledged by Great Britain and subsequently by the United States, which requires, preliminary to survey or disposition of public lands, the extinguishment of the Indian title and claims. A uniform course has been pursued in making such extinguishment by purchase only. In but one instance has the right of conquest been exercised—that of the Sioux Indians in Minnesota, after the outbreak of 1862; and in this case even the Indians were provided with another reservation. and were paid the net proceeds of sales of their lands. Early reservations were made by treaty only. The Plymouth Colony, in 1640, set aside from a large tract purchased from surrounding tribes a home for the grantees and their children forever, and other instances of the sort abound. Prior to 1776 the colonies conducted their Indian relations individually, negotiating for cessions of land and extinguishing the Indian title; but by the Articles of Confederation "the sole and exclusive right and power of regulating the trade and managing all affairs with the Indians" was transferred to the Federal Government, which at once proceeded to put in force principles defined by George III in a proclamation of Oct. 7, 1763, viz., the right to expel intruders upon Indian lands and the right of the Government solely to purchase Indian lands.

The first treaty made with Indians by the United States as a nation was that of 1778 with the Delawares, looking to assistance from them during the War of Independence and to the organization of a fourteenth (Indian) State, with representation in Congress. In 1783 commissioners were appointed

to make treaties with all the Indian nations (then recognized as such) in due convention with all the tribes; but as this proved impossible, treaties were entered into with these severally—a system continued until 1871, to which date more than 360 treaties were made. From that time the Indian has been considered the nation's ward.

The majority of earlier treaties looked mainly to the acquisition of land, and it is claimed that in the first twenty-five years of national existence the ratification of 38 treaties secured 200,000,000 acres. Encroachments of whites upon lands north of the Ohio river, claimed by the Indians as the boundary between their possessions and those of the whites, and the rejection by United States commissioners of the remonstrance of the confederated Indian nations in council at the foot of the Maumee rapids, Aug. 13, 1793, led to the bloody wars that were closed by the treaty of Greenville, Aug. 3, 1795, and to the subsequent outbreak of Tecumseh.

Conflict between State and Federal authority in the control of Indians was obviated to all practical effect by cessions of Western lands made by the thirteen States, and by the proposed removal of Indians within State boundaries thither, stipulated for in particular by Georgia in 1802. The ordinance of 1787 for the government of the Northwest Territory provided for the maintenance of good faith toward the Indians, secured to them their property and lands, and protected them against unjust wars; and the provision or its principle was repeated or embodied in acts organizing the majority of the Territories subsequently erected within the limits of the original cessions from the colonies. The States containing such provisions in their incipient organization were Indiana, Michigan, Illinois, Mississippi, Alabama, Wisconsin, Iowa, Minnesota, Oregon, Kansas, Nebraska, Colorado, Dakota, Nevada, Idaho, Montana, and Wyoming.

As regards the Indian title to domain afterward acquired by the United States by the treaty of purchase of Louisiana from France, April 30, 1803, the United States pledged itself to execute and respect all existing treaties with Indian tribes until by mutual consent "other suitable articles shall have been agreed upon"; but in the cessions from Mexico no such stipulation was made, that republic holding no treaty relations with Indian tribes, nor ever having recognized the Indian right of occupancy. The States and Territories covered by the treaty of Guadalupe Hidalgo are California, Nevada, Arizona, New Mexico, and Utah. Within these limits reservations have been set aside for Indians, but the only tribes with whom treaties have been made for cessions of lands are the Navajos, Comanches, and Kiowas; and in California, in particular, no compensation has ever been made to Indians for lands taken forcibly from them. The long-disputed tenure of the Mission Indians of that State was established by a decision of the Supreme Court of California, Jan. 31, 1888, though their claims, conflicting with those of settlers, are still the subject of legislation by Congress.

Stringent laws regarding trade and intercourse enacted by Congress in 1790, 1793, and 1796 initiated the policy of seclusion, with provisions for attempts at civilization of the Indian by the Government, more fully defined by the act of June 30, 1834, which was framed to meet the exigencies arising after the removal of the Indians east of the Mississippi to lands westward of that stream.

Such removal, as has been said, was early contemplated, and provision was made for it by act of Congress, March 26, 1805. A grant of lands west of the Mississippi was also made to the Choctaws for a home in 1820. But difficulties, particularly in Georgia with the Cherokees in their relation of

a tribal government to State authority (a controversy decided in their favor by the Supreme Court of the United States), led to the execution of the project, the first definite plan of which was submitted to Congress Jan. 27, 1825, and was that of the Secretary of War, John C. Calhoun, looking to the establishment of two Indian reservations—one in the Northwest for Indians of the Algonquin and Iroquois tribes, and a second for Appalachians in the Southwest. This was followed by a report of Hon. James Barbour, Secretary of War, to the Indian Committee of the House, Feb. 3, 1826; and the "Indian Country," acquired by treaty with Kansas Osage Indians several years previously, was defined by act of May 30, 1830. To 1834 17 tribes of Indians, numbering 77,497, were removed to this country, nation, or territory—as it was successively termed—and a few thousands were afterward added in completion of an experiment that proved "as costly to national honor and treasure as to the life and happiness of its victims."

From 1834 Indians have existed in the tribal relation and possessed of specific tracts of lands in but 3 of the 13 original States—Massachusetts, North Carolina, and New York—the citizens of the last-named State having petitioned against the removal of the remnant of the Six Nations within its borders. The example of the New York Indians is cited as proof of the capacity of Indians for civilization on small reservations and surrounded by whites.

Lands patented to the emigrated tribes were by treaty assured to them forever; but the tide of emigration setting toward the West on the annexation of Texas and the acquisition of Western territory led to the establishment in 1854 of the Territories of Kansas and Nebraska by consent of various tribes, native or removed thither, who ceded their lands in trust or unconditionally with the exception of 1,300,000 acres, reserved to themselves as homes. But the stipulations were not respected by the United States. The executive office of Kansas was established within the Shawnee country, the Legislature meeting at that nation's mission, and intrusions of settlers (notably in the case of the site of the present city of Leavenworth) led to the removal after 1866 of all adjacent tribes within the boundaries of the lands patented to the Cherokee, Choctaw, and Creek nations respectively—Dec. 31, 1838, March 23, 1842, and Aug. 11, 1852. These lands included what was known as Indian Territory prior to the opening of Oklahoma (with others in Kansas afterward relinquished), in which had been included the Chickasaw nation, confederated with the Choctaws in 1837, and the Seminoles, becoming part of the Creeks after the Florida war. The reservation occupied by the Seminoles from about 1842 was changed to its present location in 1866, and the five constitute what are known as the "Civilized Tribes." Under the treaties of 1866, removals of other tribes to the Indian Territory have taken place at intervals (until Feb. 17, 1879, by executive order merely, but after that date by authority of Congress), and the advocates of seclusion retained the hope of a final concentration therein of all the Indian tribes of the Union and the formation of the ideal Indian State. The question was set at rest by the admission of whites into the interior in 1889, and the erection, May 2, 1890, of the Territory of Oklahoma, severed its entirety.

The plan of a single large reservation in the Northwest for tribes of that region was prior to 1887 also often revived. Commissioners in California, Oregon, and Washington secured reservations to Indians, but they were invaded with impunity, the peaceful Indian population of the coast

having suffered and continuing to suffer outrage which led at last to warfare. Treaties entered into at Fort Laramie in 1851 with the wild Indians of the plains and mountains (across which the United States army protected emigrant trains) established boundaries and assigned reservations, which, especially in Colorado, the Government proved unable to protect; and wars, often wantonly provoked by the whites with hostile Sioux, Cheyennes, and Arapahoes, and other tribes (in Arizona and New Mexico amounting to wars of extermination), were carried on from 1854 till the appointment of a peace commission in 1867-'68, with an appropriation of \$500,000 to carry out its intent. Wars since that date have been principally with the Apache, Southern Cheyenne, and Arapaho, Kiowa, Comanche, Piegan, Northern Cheyenne, Nez Percé, Modoc, and Sioux Indians, to the outbreak of the last nation in 1890-'91; the origin or result of all being the reduction of territory that had been guaranteed to the tribes.

In 1875 the benefits of the homestead act of May 30, 1862, were extended to Indians, with provision against alienation of patents for a period of five years—by act of July 4, 1884, changed to twenty-five years. The renunciation of tribal relations was made necessary for homesteading.

Strenuous objection to the allotment act of 1887 was made by the Five Civilized Tribes in the interest of the Indians, although they are by treaty rights themselves excepted from its provisions. But it has been deemed a necessity by the Government to imbue the Indian with an idea of property, and to accustom him to self-support.

For the question that has been raised whether the number of Indians in the United States has decreased since 1882, or whether it is not possibly as large as when the first settlements were made by Europeans on the North American Continent, it seems to be shown by figures that the race is decreasing. The largest nation is that of the Sioux, in the two Dakotas. The enumeration of all the tribes is practically impossible.

The following is the distribution of Indian area and population by the report of the Commissioner of Indian Affairs for 1895:

Arizona.—Ten reservations, under five agencies, with an area of 22,029 square miles. Population, 37,723, of which 215 are not under an agent. The largest tribe is that of the Navajos, numbering 20,500, who occupy 12,029 square miles, partly in this Territory and partly in New Mexico and Utah. The Navajos are a peculiar tribe, differing from other Indians in that they are almost exclusively engaged in pastoral pursuits, owning vast flocks of inferior sheep and goats and great herds of ponies, but few cattle. They are peaceable, self-supporting, and independent, and are almost the only Indians who ask nothing from the Government. Previously to 1893 they were extremely conservative and distrustful of any attempts to educate their children, resisting all appeals to allow them to be sent away to school, while it was impossible to plant schools in their midst. Fifteen of their representative men were taken to the Chicago Exposition in 1893, and returned amazed at their glimpse of civilization. This created an intense enthusiasm and desire for education, so that parents brought their children voluntarily to the only school on the reservation, which was not capable of receiving more than 150 pupils, and the attendance at which had previously been 15. Many were refused admission for want of accommodations, and some went away crying. The other tribes in the Territory are principally Apaches of various bands, Moquis, Papagos, Pimas, Maricopas, Mohaves, Chimehuevis, Hualapais, and Suppais.

California.—Five reservations, under four agencies; area, 676½ square miles. The population numbers 12,574, of whom 6,995 are not under an agent. The Mission Indians are the most numerous, and other tribes are Hoopas, Klamaths, Concoos, Ulies, and Wylaclies, Little Lakes and Redwoods, etc.

Colorado.—There is but one reservation in this State, that of the Ute Indians, who reluctantly agreed to the relinquishment of their lands and to removal to Utah as long ago as the autumn of 1888. The Commissioner of Indian Affairs protested against the ratification of this agreement, and the Utes are still in possession of their lands. The area of the reservation is 1,710 square miles. The tribe numbers 1,142.

Idaho.—Four reservations, under as many agencies, having an area of 2,963½ square miles. The population—of Shoshones, Bannocks, Sheepeaters, and Nez Percés, with 533 Pend d'Oreilles and Kootenais not under an agent—numbers 4,198.

Indian Territory.—Twelve reservations, under two agencies, with an area of 31,062 square miles. The Union agency, under which fall the Five Civilized Tribes, is not an agency in the common acceptance of the term. These tribes possess governments with constitutions similar to that of the United States and based thereon, divided into executive, judicial, and legislative departments, though the title of the land is vested in the nation, and each individual occupies as much as he desires. In some instances farms of 4,000 to 8,000 acres are held by single Indians, who employ others as assistants. The total population of Indian Territory is 67,358, of whom 65,970 belong to the Five Civilized Tribes: the Cherokees numbering 25,388; the Chickasaws, 6,000; the Choctaws, 17,819; the Creeks, 13,863; and the Seminoles, 2,900. The Indians under the Quapaw agency are, respectively, Peorias, Ottawas, Quapaws, Modocs, Senecas, Eastern Shawnees, Miamis, and Wyandottes, and number in all 1,388. By section 16 of the act of March 3, 1893, the President was authorized to appoint three commissioners to enter into negotiations with the Five Civilized Tribes for extinguishment of tribal titles to lands in Indian Territory, looking to the ultimate creation of a State or States of the Union which shall embrace these lands. The three commissioners appointed by the President and confirmed by the Senate were Henry L. Dawes, of Massachusetts, Meredith H. Kidd, of Indiana, and Archibald S. McKennon, of Arkansas, who went to Indian Territory at the close of the year 1893, but have as yet made no report.

Iowa.—One reservation, owned in fee by purchase, has an area of 4½ square miles. The population—of 398 Pottawatomies, Sacs and Foxes of the Mississippi, and Winnebagoes—is under an agent.

Kansas.—Five reservations under one agency. The area is 51 square miles, and the population—of Chippewas and Munsees, Sacs and Foxes of the Missouri, Iowas, Kickapoos, and Prairie Band of Pottawatomies—numbers 1,124.

Michigan.—Three reservations under one agency, with an area of 9½ square miles. The population—of Chippewas, Pottawatomies, and Ottawas—are all citizens of the United States, voters, and eligible to office. They are not known or recognized by tribal relations either by State laws or treaties, and in every respect, so far as the rights of citizenship are concerned, stand on an equality with the whites.

Minnesota.—Ten reservations under two agencies. The area is 3,505½ square miles. The population, of Chippewas only, is 7,280.

Montana.—Six reservations under as many agencies. The total area is 14,660 square miles. The population of 10,783 consists principally of Black-

feet, Bloods and Piegans, Crows, Kootenais (from Idaho), Flatheads, Gros Ventres, Assiniboines, Yanktonnais, and 1,333 Northern Cheyennes.

Nebraska.—Five reservations under three agencies. The total area is 196½ square miles. The population—of Sioux, Winnebagoes, Omahas, and Poncas—numbers 3,889.

Nevada.—Four reservations under two agencies. The total area is 1,490½ square miles. The population—of Pah-Utes, Pi-Utes, and Shoshones—numbers 8,537.

New Mexico.—Four reservations (counting the 19 small Pueblo reserves as one) under two agencies. The total area is 2,808 square miles. The population—of Mescalero and Jicarilla Apaches and Pueblos—numbers 9,834.

New York.—Eight reservations under one agency. The area is 137 square miles. The population—of Senecas, Cayagus, Onondagas, Oneidas, Tuscaroras, and St. Regis Indians—numbers 5,135.

North Carolina.—One reservation, of 102 square miles, owned by purchase. The population—of Eastern Cherokees—numbers 2,893, and is under an agency.

North Dakota.—Four reservations under three agencies. The total area is 5,957½ square miles. The population—chiefly of Sioux, Chippewas, Arickarees, Gros Ventres, Mandans, Yanktonnais, Hunkpapas, and Blackfeet—numbers 8,134.

Oklahoma.—Thirteen reservations under five agencies, have a total area of 10,859 square miles. The population, of 12,570, consists of 23 tribes, the largest of which are the Cheyennes, Osages, Comanches, Kiowas, and Arapahoes.

Oregon.—Five reservations under four agencies. The total area is 2,540½ square miles. The population, made up of several small bands, numbers 4,565, and of these 600, under no agent, roam the country along Columbia river.

South Dakota.—Seven reservations under six agencies. The total area is 15,371 square miles. The population, of Sioux in various bands and Cheyennes, is 18,861.

Utah.—Two reservations under one agency, with an area of 6,207 square miles. The population, of Utes, numbers 2,160, of whom 390 are not under an agent.

Washington.—Twenty reservations, under five agencies, have an area of 6,323 square miles. The population, made up of small tribes, as in Oregon, numbers 9,334, of whom 209 are not under an agent.

Wisconsin.—Seven reservations, under two agencies, have an area of 651½ square miles. The population, of Chippewas, Oneidas (from New York), Menomenees, Stockbridges and Munsees, Winnebagoes, and Pottawatomies, numbers 9,089, of whom 1,210 are not under an agent.

Wyoming.—One reservation under an agency, with an area of 2,828 square miles. The population, of Northern Arapahoes and Shoshones, numbers 1,748.

In Florida there are 565 Seminole Indians; in Indiana, 318 Miamis; in Maine, 410 Old Town Indians; and in Texas, 290 Alabamas, Cushattas, and Muskogeas.

Industries.—As regards the character of the lands included in these reservations, exclusive of Indian and Oklahoma Territories, the greater part is worthless for farming without irrigation, and accordingly appropriations have been made by Congress for irrigation on the reservations. For this purpose \$30,000 were expended during the fiscal year 1896. The law of March 3, 1875, requires that able-bodied Indians between the ages of eighteen and forty-five must labor in order to be entitled to rations, and they yearly receive instruction in farm-

ing. If an Indian will go upon an allotment and work to improve it, the Government assists him in building a house, gives him a team, agricultural implements, wire for fencing and grain for seedling, and the supervision and counsel of a practical farmer to aid him in the cultivation of his crops. For the pay of such farmers \$70,000 were expended in 1895. Field matrons are also employed, whose duties are to instruct Indian women in matters of the household, to assist and encourage them in bettering their homes and taking proper care of their children, and to incite among Indians generally aspirations for improvement in their life—morally, intellectually, socially, and religiously. The appropriation for field matrons has increased from \$5,000 in 1892 to \$15,000 in 1896. Exclusive of the Five Civilized Tribes, Indians on reservations in 1895 cultivated 369,974 acres of land, 37,899 acres were broken during the year, and 1,168,839 acres were under fence, while 561,681 rods of fence were built during the year and 8,366 families were actually living upon and cultivating land in severity. The crops raised were 1,016,754 bushels of wheat, 875,349 bushels of oats and barley, 2,266,944 bushels of corn, 476,272 bushels of vegetables, 10,410 bushels of flax, and 216,096 tons of hay; 100,082 pounds of butter were made, 5,953,000 feet of lumber were sawed, and 48,931,000 feet of timber marketed, while 80,568 cords of wood were cut. The value of products of Indian labor sold by the Indians to the Government during the year was \$371,324, and the amount of those sold to other customers \$581,006. Indians with their own teams transported 23,061,000 pounds of freight, the amount earned by such freighting being \$103,725. As far as practicable, remunerative work is given to Indians by the Government, and, in addition to moneys paid them for miscellaneous work and for supplies raised by themselves, \$400,000 was paid in salaries to Indian employees in 1896. In addition to hauling goods and the sale of grain and other farm produce raised by themselves (one enterprising Indian having recently obtained the contract to furnish corn for two Government schools), other sources for self-support among the Indians are the cutting of hay, working on irrigating ditches, raising of beef cattle, logging, cutting of cord wood, digging of ginseng root, sheep shearing, laboring as ranchmen, carrying load, labor in construction of railroads in Arizona, the sale of fish, berries, wild rice, maple sugar, and (lately in Wisconsin) frogs' legs. Too considerable, as well as too easy, a source of revenue is the leasing of land. On several reservations the making of "real" pillow lace has been taught to Indian women, who have shown themselves to be apt learners, dexterous workers, and tasteful designers. The income of the Indians from their native manufactures, such as beadwork, gloves, moccasins, pottery, pipes, baskets, and blankets, is still considerable, but is probably diminishing. A unique industry recently introduced on the Flathead reservation in Montana was that of the herding of buffaloes with cattle, by which the fur or hair of the cattle is improved, being much longer and much finer in texture than that of the pure buffaloes. A herd of 150 buffaloes is now ranging upon the reservation, and the owner derives a comfortable income from the sale of the cattle, which are shipped to Chicago. As far as possible the outing system is being extended in Indian schools, by which the pupils are enabled to earn money on neighboring farms during vacation. Several Indians are traders, and Indians are frequently employed as clerks in stores. A good many mechanics support themselves at their trades. There are a few physicians, trained nurses, clergymen, and engineers. The rights of

Indians on their reservations are "those only of a tenant for life on the lands of a remainderman, and no more."

Leases.—The leasing of Indian lands, allotted and unallotted, for farming, grazing, and mining is permissible, subject to the approval of the Secretary of the Interior, but the indiscriminate leasing of allotments is not allowed. No allottee is allowed to lease his lands unless by age, disability, or inability he can not personally improve it. The period of leases for farming and grazing has been extended from three to five years, and the term for mining or business is placed at ten years. Originally, leases of lands by Indians were permitted by the Interior Department; subsequently they were allowed only under authority of Congress, and cattle were ordered from the Cherokee Strip by proclamation of President Harrison, Feb. 17, 1890, the Five Civilized Tribes having, in the opinion of the Attorney-General, no right to make contracts for leasing these lands. The present authority for leasing Indian lands is the act of Feb. 28, 1891, amended by the act of Aug. 15, 1894. The sale of dead and fallen timber is allowed to Indians on reservations, but the Five Civilized Tribes and holders of allotments may cut and sell timber at will.

Railroads are run through Indian lands only after conference and agreement (sanctioned by Congress) and compensation paid, the sum usually being deposited in the United States Treasury as a trust fund for the benefit of the Indians.

Legal Status.—As regards the legal status of Indians on reservations prior to March 3, 1885, offenses of Indians against Indians were left to tribal jurisdiction. From that date specified crimes have been punished by Federal authority, and the provisions of the allotment act look to the extension of the law over the race. On March 1, 1889, a United States court was established in Indian Territory, having civil as well as criminal jurisdiction, the authority of which was enlarged in 1890 and made also to include extradition of criminals. For suppression of barbarous and demoralizing practices, courts of Indian offenses were established by the Indian Office in 1882, each court to consist of three judges appointed by that office for one year and subject to removal by the commissioner. These courts were afterward recognized by Congress, and appropriations are made for their maintenance. They are now known simply as Indian courts. Offenses cognizable and punishable by these courts are "sun," "scalp," and "war" dances, plural marriages, practices of medicine men, sales of women, stealing and abuse of property, and sale and use of liquor. Indian police have been organized since May 27, 1878, and the cost in 1895 was \$125,000. The force is regarded by the Indian Office as an indispensable one in the maintenance of order and suppression of crime.

Trade with Indians on reservations, restricted since 1786 to licensed traders, is losing its distinctive characteristics, and among the civilized tribes restriction and supervision of trade by the Indian Office has long been merely nominal. The most important question under this head is therefore that of the sale of intoxicating liquors. The act of Feb. 13, 1862, modified in 1873, but restored to its original force Feb. 27, 1877, made it a crime, punishable by fine or imprisonment, to sell liquor to Indians under care of an agent, on or off reservations; and on Feb. 14, 1890, the British Government signified a desire for the extension of the law to embrace Canadian Indians temporarily within the United States. Since the opening of Oklahoma especial difficulty has been experienced in preventing sale of liquor on adjacent reservations, and large quantities have been destroyed by the Indian police.

Education.—The appropriation for Indian education in 1896 was \$2,056,515, increased to \$2,517,265 for 1897. Of the total Indian population, exclusive of the Five Civilized Tribes (who, like the New York Indians, support their own schools), 38,000 were children of school age, and of this number 23,393 were enrolled in 296 Indian schools, of which 223 were under the immediate supervision of the Indian Office. Twenty-two nonreservation boarding schools had an enrollment of 5,085, and an average attendance of 4,461 pupils; 77 Government boarding schools on the various reservations had an enrollment of 8,489 pupils, with an average attendance of 7,056; and 124 day schools, in the heart of the Indian country (all except 8 being on reservations), had a capacity of 4,424 pupils. These 223 schools show an increase of 1,205 in enrollment over 1895, and of 1,561 in average attendance. A few tribes reported the enrollment of the entire available school population, and in several schools the average attendance exceeded 95 per cent. of the enrollment. The total number of school employees in 1896 was 1,364, and the total of salaries paid to such employees was \$998,411. The total number of children taught in Government schools was 17,789; those taught in contract schools numbered 4,439; and those taught in all other schools, 1,343.

Appropriations.—The Indian appropriation act for the fiscal year 1896 declared it to be the settled policy of the Government to make no appropriation whatever for education in any sectarian school.

Of the amounts expended yearly for the subsistence of the Indians, the greater part is in fulfillment of treaty stipulations, the respective amounts due the tribes being either specified in the treaties or estimated by the Interior Department, while only a portion is gratuitous. To meet treaty obligations during 1896 \$2,982,147 were appropriated, and \$695,625 for miscellaneous support and gratuities. The total appropriation for the Indian service for the fiscal year 1896 was \$8,763,751.24, while that for 1897 was \$7,189,496.79. The total of the present liabilities of the United States to Indian tribes in 1895 showed \$1,239,160 as the annual amount necessary to meet stipulations indefinite as to time now allowed, but liable to be discontinued; \$3,573,000 as the aggregate of future appropriations that will be required during a limited number of years to pay limited annuities incidentally necessary to effect payment; \$691,770.87 as the amount of annual liabilities of a permanent character, and \$12,474,417.74 as the amount held in trust by the United States on which 5 per cent. is annually paid, and amounts that invested at 5 per cent. produce permanent annuities.

In addition to amounts annually appropriated for the Indian service, the Government holds in trust funds belonging to various tribes, and the annual interest accruing therefrom is paid over to those tribes or is expended for their benefit. The interest on the principal of the trust funds belonging to the Five Civilized Tribes is placed semiannually with the United States Assistant Treasurer at St. Louis, Mo., to the credit of the treasurer of each nation, respectively, and its expenditure is under the control of the nation and its council. The total amount of 4- and 5-per-cent. funds thus held by the Government in lieu of investment aggregated \$33,196,476.13 in 1895, the annual interest collected on it being \$1,647,516.52. The trust funds owned by the Five Civilized Tribes amounted to \$9,113,386.45. The largest trust fund owned by any single tribe is that of the Osages, amounting to \$8,245,251. It arises from the sale of lands. In proportion to population, the Osages are the richest people in the world.

Claims.—The act of March 3, 1891, provided for the final adjudication by the Court of Claims of claims against the United States for depredations committed by Indians, and authorized the payment of such claims from the annuities due the tribes, and from funds due them arising from the sale of their lands or otherwise. Vigorous protest against the manner of payment has been made by the Indian Office. The number of Indian depredation claims of record in the Indian Office in 1896 was 8,007, of which 4,271 had not been sent to the Court of Claims. That court, with which many claims were originally filed directly, reported 10,841 claims on file in 1894, the amount claimed therefor being \$43,515,867. The presentation of any claims of the kind after 1894 was barred by the act of March 3, 1891.

The direct total cost of the Indians to the United States from 1776 to the close of the fiscal year 1896 was \$315,824,372.32. The grand cost, including wars for the century from July 4, 1776, to June 30, 1886, was \$929,239,284.

Miscellaneous.—To religious and other societies upon Indian reservations the allotment act of 1887 confirmed a grant of 160 acres each, so long as it should be occupied, the work carried on by the religious denominations having been found a very potent, if not indispensable, auxiliary to the efforts of the Bureau for the elevation of the Indians.

Indians have at various times, under authority from the Indian Office, been taken from reservations for exhibition, but the practice is discontinued, and fewer permits of the kind are now made. Whenever engagements with Indians for exhibition are made, their employers are required to enter into written contracts with the individual Indians, obligating themselves to pay such Indians fair stipulated salaries for their services; to supply them with proper food and clothing; to meet their traveling and needful incidental expenses, including medical attendance, from the date of leaving their homes until they return thither; to protect them from immoral influences; and to employ a white man of good character to look after their welfare. They are also required to execute a bond for the faithful fulfillment of such contracts.

Indians now form an integral part of the regular army of the United States, and by becoming soldiers they do not lose their right to lands, annuities, and other assistance furnished by the Indian Office in fulfillment of treaties.

Administration of Indian Affairs.—On July 12, 1775, a plan was adopted by the Continental Congress to secure and preserve the friendship of the Indian nations, and commissioners were appointed for three departments of Indians—a northern, a southern, and a middle department. Benjamin Franklin, Patrick Henry, and James Wilson were elected commissioners for the middle department; Philip Schuyler, Joseph Hawley, Turbot Francis, Oliver Wolcott, and Volkert P. Duow, commissioners of the northern department; and John Walker, of Virginia, and Willie Jones, of North Carolina, with three others, commissioners of the southern department. On April 29, 1776, a standing Committee on Indian Affairs was organized in Congress. Article IX of the Articles of Confederation gave to Congress the exclusive right and power of regulating the trade and managing all affairs with the Indians, and on Aug. 7, 1786, the Indian Department was divided into two districts—the southern, comprehending all the nations of Indians within the United States south of Ohio river; and the northern, comprehending all other nations of Indians in the United States west of Hudson river. Two superintendents were appointed, who reported to the Secretary of War and were under his direction. The Federal Constitu-

tion provided that Congress "shall have power to regulate commerce with the Indian tribes," and, by decisions of the Supreme Court "commerce" being declared to mean "intercourse" between citizens of the United States and the individuals composing those tribes, it followed that nothing could arise out of our relations with the Indians that was not subject to regulation by Congress. In 1790 an act of Congress inaugurated a system of licensed trade with the Indians, forbade the sale of Indian lands unless authorized by the Government, and prohibited trespass upon Indians or Indian lands. In 1806 the office of Superintendent of Indian Trade was created. In 1802, to promote civilization among the friendly Indian tribes, and to secure the continuance of their friendship, the annual expenditure of \$15,000 was authorized, to furnish them with useful domestic animals and implements of husbandry and with goods or money, in the discretion of the President, and the appointment of temporary agents was permitted. This was followed by the act of March 3, 1819, which inaugurated the policy of educating the Indians, looking to the "employment of capable persons, of good moral character, to instruct them in the mode of agriculture suited to their situation and for teaching their children." After this period school funds were created in treaties entered into with the Indians, the interest from which was applied to the establishment and maintenance of schools on the reservations. But not until 1877 was a definite system of education for the Indians at public expense entered upon, when the appropriation of \$20,000 was made, which in 1885 was increased to nearly \$1,000,000, and which has grown steadily year by year. On July 9, 1832, the office of Commissioner of Indian Affairs was created, but the act of June 30, 1834, stands as the organic law of the Indian Office, which was transferred from the War Department to the Department of the Interior, March 4, 1849. The restoration of Indian affairs to the control of the military has been advocated at various times, and from March, 1869, to July, 1870, army officers, detailed for the purpose, acted as agents at most of the agencies, and similar action was taken in the Sioux country during the last outbreak of that tribe in 1890. Under the act of July 13, 1892, army officers are now detailed to act as Indian agents whenever vacancies in that office occur, and are under the orders of the Secretary of the Interior. Originally, the duties of Indian agents related only to the superintendence of trade with the various tribes; but with the increase of white settlement and the ensuing attitude of dependence of the Indians for protection, they became more diverse, and at present they may be defined briefly as follows: To induce Indians to labor at civilized pursuits; to preserve order on the reservations; to protect Indians holding lands in severalty and Indian rights in matters of trade; to remove persons found in the Indian country contrary to law; to suppress traffic in intoxicating liquors; to investigate depredation claims; to oversee all employees; to have charge of all Government property and agency stock; to receive and distribute supplies; to disburse money received; and to supervise schools. Until 1869 Indian agents reported to superintendents of two or more agencies and to the Commissioner of Indian Affairs at Washington—a system vicious and dangerous in the extreme, discontinued as one of the first changes inaugurated by President Grant in his "peace policy," which was said to have been "fraught with more good to the Indian and the country than all the measures of years past." From 1870 till about 1880 Indian agents were appointed by recommendation of the several religious denominations, but without satisfactory results. In 1896

there were 55 Indian agents, covering one or more reservations, of whom 38 were civilians and 17 army officers acting in that capacity. The salary of an Indian agent ranges from \$800 to \$2,200, and bonds are required from them in \$2,000 to \$125,000. The employees under Indian agents on the reservations, exclusive of school employees, are physicians (the Government having assumed the medical oversight of the great body of the Indians, with the exception of the Five Civilized Tribes), clerks, interpreters, farmers, carpenters, blacksmiths, apprentices, herders, etc. Whenever it has been found practicable to employ Indians, it has been the policy of the office to give them the preference, and in the large majority of instances they have been found faithful and earnest. There are Indian employees at every agency, except 2, one of which is very small, and the other has only 2 employees. One agency has 107 Indians employed, another has 76, and 2 have 51; 22 have over 20, and 19 have from 10 to 20 Indians on the rolls. These figures do not include employees in schools. The appointment of Indians is permitted without examination or certification by the Civil Service Commission to all places except those of superintendent, teacher, teacher of industries, kindergartner, and physician. The total number of whites employed in the Indian service in the field in 1896 was 635, and the total number of Indians, in excepted places and having salaries below classification, was 1,434. The total of salaries paid to whites employed at agencies during the year was \$546,670, while the total of salaries paid to Indians aggregated \$258,140, nearly half the amount paid to white employees. White school employees at the agencies during the year numbered 1,365, and Indians employed in excepted places 705. The salaries paid to the white school employees amounted to \$849,645, and those paid to the Indians to \$148,766.

In addition to the clerical force of the Indian Office at Washington, there are employed in the Indian service 5 Indian inspectors in the field at a salary of \$2,500 per annum; 5 special Indian agents, at a salary of \$2,000; and a superintendent of Indian schools, with a salary of \$3,000. Various commissioners are appointed, as exigencies arise, to negotiate with Indians, to select and appraise lands, etc. Prior to 1851 commissioners to frame treaties with the Indians were appointed at the pleasure of the President, but after that date they were ordered by Congress to be chosen by him from officers of the Indian Department only. Prior to 1787 the States were empowered to appoint commissioners to the Indians, who, under Federal superintendents, in some cases made treaties. Since 1869 an advisory board of 10 Indian commissioners, appointed by the President, with headquarters in New York city, supervise the letting of contracts and furnishing supplies for the Indians, and oversee the moral and physical condition of the race, visiting and inspecting reservations, and reporting annually to Congress. This service is rendered gratuitously.

Indians who maintain an advanced form of tribal government, in addition to the Five Civilized Tribes, who have severally a republican form of government assimilating closely the governments of the States, are the New York Indians, whose government is based on a constitution approved and ratified by the Legislature of the State of New York; the Osage Indians, whose Government is based on a constitution approved by the Interior Department; the Pueblo Indians of New Mexico, who live under their ancient form of local town governments; and the Eastern Cherokees, who have an organized form of tribal government, and have been individually recognized as citizens of North Carolina.

Indians on reservations are not taxed, and after

allotment their lands are exempted from taxation for a period of twenty-five years, being held in trust for them by the United States Government. The Indian Office holds also that whatever the right of a State or Territory to assess or tax personal property of Indian allottees, acquired by purchase or inheritance, all articles issued to them by the Government are exempted from taxation, and, in the case of horses or cattle, such ruling applies also to their increase.

In the allotment of lands, the question has arisen, What is an Indian? where the rights of half-breeds and mixed bloods are concerned. The old English common law which makes the father the controlling factor and determines relationship through him, appears not to be applicable to the condition of the American Indians, where the mother, and not the father, is the chief factor, and according to which half-breeds and mixed bloods are recognized as Indians.

The general allotment act of 1887 provided, as has been said, for the naturalization and citizenship of all Indians within the United States. Prior to that act Indians became citizens by treaty conditions and special acts of Congress, the first treaty being that with the Cherokees in 1817. The Choctaws in 1820 concluded a treaty providing for the future allotment of their lands east of the Mississippi, and for their becoming citizens. The first lands allotted to Indians in severalty were those of the Brothertown Indians in Wisconsin, authorized by act of Congress, March 3, 1839. These Indians, on receiving their patents in fee, became citizens of the United States. The same policy was followed in the case of several other tribes, notably the Ottawas and Chippewas, the Pottawatomies, the Shawnees and Wyandottes, but with disastrous results where no restrictions were made as to the alienation of lands conveyed to the Indians in fee simple. No Indian ever exercised the right of citizenship under the fourteenth amendment to the Constitution, as its provisions were held to be limited to those only who were born owing no allegiance to any tribal government and bearing the burdens of taxation. It has been much discussed whether the Indians residing in the territory ceded by Mexico became citizens of the United States under the treaty of Guadalupe Hidalgo, inasmuch as, under what is known as "the plan of Iguala," Indians were recognized as citizens of Mexico, and would thus have become citizens of the United States. They never have been so treated, however, and the Pueblo Indians in New Mexico, although a sober, virtuous, and industrious people, and recognized as politic and corporate bodies, far in advance of other tribes in civilization, still await action by Congress to entitle them to the privileges of citizenship.

RHODE ISLAND, a New England State, one of the original thirteen, ratified the Constitution May 29, 1790; area, 1,250 square miles. The population, according to each decennial census, was 68,825 in 1790; 69,122 in 1800; 76,931 in 1810; 83,015 in 1820; 97,199 in 1830; 108,830 in 1840; 147,545 in 1850; 174,620 in 1860; 217,353 in 1870; 276,531 in 1880; and 345,506 in 1890. By the State census of 1895 it was 384,758. Capitals, Providence and Newport.

Government.—The following were the State officers during the year: Governor, Elisha Dyer; Lieutenant Governor, Aram J. Pothier, succeeded in May by William Gregory; Secretary of State, Charles P. Bennett; Treasurer, Clinton D. Sellw, succeeded in May by Walter A. Read; Attorney-General, Willard B. Tanner; Auditor, A. C. Landers; Superintendent of Education, T. B. Stockwell; Adjutant General, Frederick M. Sackett; Factory Inspectors, J. Ellery Hudson and Helen M. Jenks; Record Commissioner, R. Hammett Tilley; Chief

Justice of the Supreme Court, Charles Matteson; Associate Justices, John H. Stiness, Pardon E. Tillinghast, George A. Wilbur, Horatio Rogers, W. W. Douglas, and Benjamin M. Bosworth; Clerk, B. S. Blaisdell—all are Republicans.

Finances.—The receipts for 1897 were \$1,405,680.14. The deficit and checks outstanding Jan. 1, 1897, were \$26,017.02; the amount paid on account of appropriations, \$1,329,013.88; the amount paid on note, money borrowed by authority of Legislature, \$50,000. The balance in the treasury, Dec. 31, 1897, was \$649.24. The Statehouse construction loan sinking fund amounted to \$209,422, an increase during the year of \$27,254.

Wealth.—The valuation of the ratable property in the several towns and cities in 1897 was \$384,817,957, an increase of \$1,324,433 over 1896. The cities of the State contain ratable property valued at \$266,564,635. The entire land area of Rhode Island is equal to 694,400 acres, of which 465,043½ acres are in farm properties. The number of farms reported is 6,441. The total value of farm properties, which includes land, buildings, live stock (exclusive of poultry and bees), implements, etc., is \$30,759,698. The value of poultry on hand Nov. 1, 1895, was \$397,610.62, and the value of bees \$12,681.70. The total investment in farming, poultry raising, and bee keeping in 1895 amounted to \$31,169,990.32. The investment in farming may be subdivided as follows: Lands, \$16,388,729.50; buildings, \$10,687,446.50; implements, \$827,346.80; live stock, \$2,094,393.70; greenhouses, \$325,284; and other miscellaneous capital, \$436,497.50.

The following amounts were in 1895 invested: In textile industries, \$73,536,762; in metals and machinery, \$18,056,872; jewelry, \$12,175,444; rubber goods, \$4,049,485; stone and marble working, \$818,658.

Insurance.—The amount of life insurance in straight companies in force at the beginning of the year in the State was \$38,678,368, an increase of over \$2,000,000. The amount in industrial companies was \$17,476,393, an increase of \$1,782,491. In assessment companies the amount in force was \$2,707,367, an increase of about \$7,000.

There are 26 fire insurance companies in the State, 3 joint-stock and 23 mutual companies; the joint-stock companies with a cash capital of \$900,000; admitted assets, \$3,168,614; liabilities, \$1,494,671; surplus, \$773,943; the 23 mutual fire insurance companies with cash assets, \$4,918,493; contingent assets, \$17,667,228; liabilities, \$2,212,944; surplus, \$2,706,451. The risks written and renewed in the State by the 26 Rhode Island insurance companies during the year 1897 amounted to \$424,999,834.

Banks.—There are 35 savings banks in the State, which had aggregate deposits in 1897 of \$69,434,455.48, an increase of \$750,757.58 over 1896. This wealth belongs to 138,301 individual depositors, who in number in 1897 were 2,153 larger than in 1896. There are 6 State banks of circulation and deposit, which in 1897 had a cash capital paid in of \$916,675, and deposits amounting to \$721,711.66. The aggregate resources of these 6 State banks in 1897 amounted to \$1,911,559.89. There are 8 trust companies in the State, which in 1897 had an aggregate capital stock of \$2,840,100.19, and a surplus of \$1,130,100.19. The combined resources of these financial institutions then was \$26,053,275.18, and their banking clientele 7,610 depositors. There are also 57 active national banks in the State, with capital stock, \$19,337,050; with resources, \$55,587,225.81; a surplus fund, \$4,951,962.09, and individual deposits subject to check, \$18,436,658.13.

Education.—The school census of 1897 gave an enumeration of 76,262; the number reported as attending public schools was 53,195; number reported

as attending Catholic schools, 11,025; number reported as attending select schools, 1,307; number reported as not attending any school, 9,735. Number of graded schools, 1,098; number of ungraded schools, 246.

The school census shows a gain of 1,062 on the number enumerated, the gain in attendance at public schools being 1,255, and in select schools 180, while there is the slight falling off of 266 at the Catholic schools.

There has been no increase in the number of high schools in the State, but there has been a gain of over 10 per cent. in the enrollment and of just 10 per cent. in the actual attendance. The total cost of instruction *per capita* on the basis of attendance has been \$25.48.

The average salary of teachers is \$527.85, an increase of 90 cents over 1896. The wages of men have fallen off \$1.29 a month, while those of women have gained 2 cents a month.

There is an increase of 5 evening schools over last year, with a gain in enrollment of 1,265. The *per capita* cost on the average attendance has decreased \$1.20.

The expenditures for public day schools were \$1,131,086.43; for public evening schools, \$49,671.55; for the State Normal School, including mileage for pupils, \$25,837; for the Agricultural College, \$9,997.83; School of Design, \$3,000; teachers' institutes, \$265.40; free public libraries, \$5,740. Besides these current expenses, \$89,069.82 was paid for a normal school building, \$40,077 for a drill hall at the Agricultural College, \$534,613.81 for sites, buildings, and furniture of schools, and \$16,363 for apparatus and reference books.

The State Home and School cost \$20,238.85; the Institute for the Deaf, \$17,928.91; the Reform School for Boys, \$49,672.13; the Reform School for Girls, \$3,759.90; and \$3,224.23 was paid for pupils at the Massachusetts School for the Feeble-Minded, \$272.50 to the Pennsylvania School for Feeble-Minded, and \$7,291.40 to the Perkins Institution for the Blind.

Of the total expenditure for education, which amounted to \$1,329,001.71 for current expenses, and \$681,157.81 for permanent improvements, \$409,705.98 came from the State treasury.

The Normal School Board reported that there were 250 young women and 1 young man in the school.

The catalogue of Brown University shows a total enrollment of 925, against 860 in 1897; the graduate students number 99, and the Women's College has an attendance of 165. The resignation of President Andrews was accepted in September, and B. F. Clark was elected acting president.

The University Grammar School, founded in 1764, is to be merged in the English and Classical School at the end of the year. It has been a preparatory school for the university, which owned the building and grounds, and now desires to use them for its own expanding work.

The city of Providence has received \$245,000 from John Nicholas Brown for a public library building, and Frederic Clark Sayles, first Mayor of Pawtucket, has offered to found one for that city.

Charities and Corrections.—The total number of inmates at the State institutions at Cranston at the end of 1898 was about 2,210. They were classified as follows: Workhouse and House of Correction, 211 men, 88 women, 299; Hospital for the Insane, 348 men, 370 women, 718; almshouse, 152 men, 161 women, 32 boys, 23 girls, 368; prison, 170 men, 2 women, 172; Providence County Jail, 221 men, 20 women, 241; Sockanosset School for Boys, 358; Oaklawn School for Girls, 54.

The receipts from labor and other sources at the

State Prison were \$26,685.28; expenditures were \$51,727.41.

Military.—The Governor recommended to the Legislature in February that the usual encampment be omitted this year, and the money saved for needed equipments; and it was so resolved.

The apportionment to the State on the first call for troops was 690. The brigade of State militia, consisting of two regiments of infantry, a battalion of cavalry, and one of artillery, was about 1,100 strong, and the naval battalion had about 185 men. The troops raised for the war were quartered on the State camp ground at Quonset Point in North Kingstown, on Narragansett and Wickford Bays, 17 miles from Providence. The total expense incurred by the State in recruiting and equipping the troops was \$221,344.

Industries.—The operatives of the cotton mills took part in the general strike that followed the reductions of wages in New England factories in January.

The factory inspectors found employed in 433 establishments 78 more than last year, as follows: Men, 35,967; women, 27,292, boys under sixteen years of age, 2,616; girls under sixteen years of age, 1,923; total, 67,798. This is an increase over last year of 4,029 in the number of men employed and 3,158 in the number of women employed, a decrease of 275 in the number of boys employed and an increase of 28 in the number of girls employed; a total increase of 6,940.

The figures show that while there was an increase of 7,187 in the number of adults employed, there was a decrease of 247 in the number of children under sixteen years of age. This is the first material proportional decrease in the number of children employed that has been reported since the factory inspection law went into effect.

Providence.—The Legislature passed an act enabling the citizens of the compact part of the town of Johnston to vote on its annexation to the city of Providence. The vote, May 25, showed that more than 75 per cent. of the qualified voters cast ballots, and 1,011 voted in favor of annexation and 494 against, so that this part of Johnston became a part of Providence, June 1. It includes an area of about 1,200 acres, of generally improved property, containing 26 miles of platted streets, 15 miles of which have been received as public highways, and more than half of which are graded and curbed and paved or macadamized. It will add to the taxable valuation of property in the city over \$5,000,000. The increase of population will be more than 8,000, including 1,500 persons who are qualified to act as voters.

The customs statistics for 1898 show that the total of duties collected at the port was \$220,210, and the value of imports \$720,092, of which those free of duty were valued at \$101,878.

Providence now has a street railway to Taunton, Mass.

Legislative Session.—The winter session of the Legislature opened at Providence, Jan. 25, and closed May 6. J. Edward Studley was Speaker of the House. The Assembly took a recess March 4 for a month. The summer session at Newport extended from May 31 to June 15. Adjournment was taken to Nov. 22, so that measures made necessary by the revised Constitution might be enacted. Its rejection at the polls made further legislation unnecessary, and final adjournment was taken Nov. 23.

United States Senator Nelson W. Aldrich was re-elected June 14, by a vote of 96 to 4.

An appropriation of \$150,000 was voted, April 21, for military and naval expenses, and an additional \$150,000 June 15. An appropriation was made

also for medals to be given to honorably discharged soldiers and sailors of the Spanish war.

W. H. Walker was chosen quartermaster-general, and Olney Arnold commissioner of the sinking fund.

The completed State census of 1895 was presented at the May session by the superintendent, Henry E. Tiepke.

A resolution was passed favoring the resolution introduced in Congress proposing an amendment to the Constitution giving Congress power to fix uniform hours of labor in factories throughout the United States.

A new law in regard to the collection of taxes protects investors in mortgages. Heretofore a rule has been in force that where property on which a tax was due to the municipality had been disposed of, the tax might be levied on other property in which the one against whom it was assessed had an interest; so that a piece of mortgaged property might become liable for a large amount of taxes due on other property which the owner had disposed of. The new law provides that if any person is taxed for several parcels of real estate, each of such parcels shall be liable for the payment of the tax assessed against it, even though the same may have been aliened; and no such parcel shall be liable for any tax assessed against any other parcel. If any person is taxed for real estate and for personal estate in the same tax, the whole of such person's tax may be collected either out of the real or personal estate. If any person is taxed for several parcels of real estate and for personal estate in the same tax, and the tax on personal estate can, in the opinion of the collector, be best collected out of the real estate, each of such parcels shall be liable for the payment of the tax assessed against it, together with such portion of the tax on the personal estate as the assessed value of such parcel bears to the aggregate assessed values of all of such parcels.

A law regarding education provides that all teachers hereafter must have certificates from the State board. State aid is to be provided for towns consolidating ungraded schools to form graded schools, and to those making provision for attendance of their pupils at other high schools and academies. Towns consolidating their schools may pay for conveyance of pupils to and from school.

An act applying to street railways that should accept its provisions before Oct. 1, 1898, provides that in lieu of all other special State taxes, companies paying a dividend of 8 per cent. or less shall pay a State tax of 1 per cent. of their gross receipts. Those paying dividends greater than 8 per cent. pay an amount equal to the excess of the dividend over 8 per cent. The contract can not be altered without consent of both parties. Issues of capital stock are subject to the approval of the Railroad Commissioner. Cities and towns may not revoke the franchise, but may order change of route with the approval of the commissioner; appeal may be taken to the Appellate Division of the Supreme Court.

Other acts were:

Providing that the law on commercial fertilizers be enforced by the Board of Managers of the Agricultural College.

Prohibiting the confinement of juvenile offenders with older prisoners. Children under thirteen, when held for trial, must be committed to the custody of the Board of Charities or some specified charitable society; and if convicted must be sent to reform schools, except for offenses punishable by imprisonment for life.

Providing that soldiers and sailors in service in time of war may vote.

Allowing persons to petition the Supreme Court

for a judgment declaring their citizenship and their residence and domicile in the State.

Providing that there shall be no days of grace on notes, etc., unless expressly provided for, except three days for bills of exchange and one day in case of evidences of indebtedness falling due on holidays.

Providing that the Governor may draw on the Treasurer for \$3,000 annually, instead of \$2,000 as heretofore, for payment of any special services of a public nature.

Appropriating \$14,000 annually, instead of \$12,000, for education of deaf, blind, and imbecile children.

Providing for the procuring of lists of soldiers in Colonial and Revolutionary wars by the Commissioner of Records.

Making taxes assessed in fire districts a lien against real estate, to continue two years if estate is aliened.

Political.—State officers were elected April 6, and a Legislature.

The first candidates to be put in nomination were those of the Prohibition party, which held its convention in Providence, Feb. 22. Besides reaffirming the central principle of the party, the resolutions declared in favor of woman suffrage, Sunday observance, radical changes in taxation laws, an amendment to the election laws insuring to all parties having place on the official ballot an equal right to supervisors of elections, and the no-license movement; and said also:

"We deplore the continuance of hard times, and declare it to be our firm conviction that the annual expenditure of more than one billion dollars by the people of the United States for that which is not bread and which satisfieth not is the greatest cause of hard times.

"We condemn the lax manner in which the laws of the State are being enforced, and especially the practice of attorney-generals whereby the imprisonment fixed by law is remitted by said official. As declared by the Supreme Court, the practice is a vicious one."

The nominations were: For Governor, Edwin A. Lewis; Lieutenant Governor, C. D. Harp; Secretary of State, Joseph A. Peckham; Treasurer, Elisha T. Read; Attorney-General, James A. Williams.

The Democratic Convention met March 14. The resolutions cited the important acts passed by the last Legislature with a Democratic majority four years ago; among which were an amendment to the Constitution giving registry voters in cities the right to vote for city council, an act for the calling of a constitutional convention, and a corrupt-practices act; they then condemned the acts of the Republican Legislature since, naming the franchise grant to the Providence street railway, and said:

"This year, owing to a revolt against bossism in the cities of Providence and Pawtucket, the opposition numbers about 20 per cent. of the Legislature. The result has been an exposure of machine politics such as modern Rhode Island has never before witnessed."

After mentioning the bills introduced in the Legislature by the opposition and not acted upon in consequence of the recess taken by the Assembly, the resolutions closed with the following:

"We pledge our party against the repeal of the ten-hour law, or its amendment to lengthen the hours of labor; and in behalf of our great manufacturing population we call upon the Republican State Convention, which meets in this city two days hence, to pledge that party also against repealing the ten-hour law for women and children, or lengthening their hours of labor.

"We denounce the extravagance of the Statehouse Commission, which seeks to impose upon the people of the State a \$3,000,000 Statehouse, after it had entered into an implied contract with the people that the Statehouse should not cost over \$1,500,000.

"We are in favor of a constitutional convention at the earliest possible moment."

Following were the candidates: For Governor, Daniel Church; Lieutenant Governor, Lafayette Bartlett; Secretary of State, Miles A. McNamee; Treasurer, Edmund Walker; Attorney-General, George T. Brown.

The Republican Convention, March 16, adopted a platform largely devoted to national issues. On State matters it said:

"We commend to the intelligent electors of the State the resolution proposing an amendment by way of a revision to our State Constitution. Framed by an able and non-partisan commission, after great study and deliberation, unanimously reported to the General Assembly, and passed by both houses thereof without a dissenting vote, we believe its final adoption to be in the line of progress and for the best interests of the State.

"We are glad to see the growing demand for good roads and the advance in the knowledge of their necessity and the improved methods of their construction. We think that the time has come for the inauguration of a policy looking to the immediate betterment of the main highways and avenues of trade throughout the State, to be accomplished without imposing a disproportionate expense or unnecessary burdens upon the smaller towns of the State.

"We believe that the Statehouse now being constructed by a non-partisan commission, composed of eminent citizens honored by their respective political parties, should be completed at as early a date as possible, in order that the State may begin to realize a return for the outlay which it has already made, and that for this reason the authority should be granted to the General Assembly to issue bonds to the amount of \$800,000 for the purpose of finishing the building. To refuse to continue the work at this time will entail expense upon the State, and the work already done can not fail to be injuriously affected. The various State offices should be assembled in the new building at the earliest possible moment, thus securing their valuable records and papers from destruction by fire, and saving an outlay for rentals nearly equal to the interest on the proposed loan."

The State officers were renominated, with the exception of the Lieutenant Governor and the Treasurer, who declined to stand for renomination. The ticket was: For Governor, Elisha Dyer; Lieutenant Governor, William Gregory; Secretary of State, Charles P. Bennett; Treasurer, Walter A. Read; Attorney-General, Willard B. Tanner.

The Republican State ticket won in the election. The vote for Governor stood: Dyer, Republican, 24,743; Church, Democrat, 13,224; Reid, Socialist-Labor, 2,877; Lewis, Prohibition, 2,012.

The Legislature elected stands: Republicans in the Senate 33, in the House 65; Democrats in the Senate 4, in the House 7.

The proposition to bond the State for \$800,000 additional to continue work on the Statehouse was carried by a majority of about \$2,800. The majority for the original appropriation of \$1,500,000 in 1892 was 8,792. The capital cities favored the present appropriation, but many of the smaller towns voted against it.

Constitutional Commission.—This body, consisting of 15 members appointed by the Governor, organized March 16, 1897, electing Thomas Durfee

chairman and Archibald C. Matteson clerk. Its report was presented to the Legislature Feb. 23. A resolution was passed March 4 that the revision should be submitted to the electors, and it was voted upon at the November election, but failed to secure the necessary three fifths, though it received a majority of the votes east.

ROMAN CATHOLIC CHURCH. The Spanish-American war and its results, direct and indirect, had the gravest effects upon the actions of the Vatican in the year 1898. His Holiness Leo XIII exerted all his influence in the effort to avert a conflict, even to the extent of offering his services as a mediator between the two powers. At the close of the war, the cession of Cuba, the Philippines, and Puerto Rico to the United States necessitated changes in the ecclesiastical administration of those islands to bring it in harmony with their new civil administration. The Spanish Church had previously exercised a direct or indirect influence over ecclesiastical appointments in Cuba and Puerto Rico, and Church affairs were frequently administered from Madrid. The Vatican, in accordance with its policy of vesting, as far as possible, ecclesiastical control in the power which has temporal control, in October appointed Archbishop Chapelle, of New Orleans, apostolic delegate for Cuba and Puerto Rico and *chargé d'affaires* for the Philippine Islands. He was instructed, as were the local bishops and priests, to lend all assistance possible in the work of reconstruction. Such control over the Church in the ceded territory as was not vested in the apostolic delegate reverted directly to the Vatican.

The work of the Holy Father for the unification of all Christians in the Catholic Church resulted in 1898 in the establishment and extension of missions among the schismatic Copts in Egypt, and in several concessions to the Slavic peoples of Austria, Bulgaria, and Roumania. One of the most important briefs issued by the Pope in the year was the papal constitution on the devotion and Confraternity of the Holy Rosary. The charge of the confraternity, which embraces chapters in nearly every church in the world, was by the new constitution formally made dependent on its supreme head, the Master General of the Dominicans. The constitution, which defined the rules, rights, and privileges of the confraternity, was preceded by an encyclical letter on the same subject, exhorting the faithful especially to this devotion.

His Holiness in December gave a constitution to the College of St. Bede the Venerable at Rome, and appointed Cardinal Vaughan protector of the college and Mgr. Merry del Val deputy protector. The establishment of the college was entirely the work of his Holiness, and at his expense. Its immediate aim was to meet the exigencies of the movement in England toward the Catholic Church, and its establishment was considered by the Pope as another step toward the realization of his hope for the reunion of Christendom. Among the other public acts of the Holy See were an encyclical letter addressed to the archbishops and bishops of Scotland, regarding the interpretation of Holy Scripture, and warning the bishops against the erroneous doctrines on the Holy Eucharist prevalent in England; an encyclical issued in August, and addressed to the clergy and people of Italy, protesting against the suppression of Catholic societies by the Italian Government; an extension of special privileges and indulgences to those participating in the celebration of the nine hundredth anniversary of the institution of the commemoration of All Souls at Cluny, France; and an approval of the proposal submitted to him by the Committee of the Divine Redeemer, in connection with which his Holiness gave orders for the celebration of a general jubilee at the close

of the century. He also issued an apostolic letter expressing his approval of the constitution of the Sisters of St. Joseph in the United States. By a *motu proprio* issued in June he confirmed and as far as was necessary granted anew to the Sacred Congregation of Indulgences and Relics all the faculties and rights vested in it by its founder, Clement IX, July 6, 1669, and declared these to belong solely to this congregation.

The Pope in November caused an article to be written for the "Civita Catolica" warmly approving the Czar's proposal for disarmament. The article recalled the fact that the Pope supported the peace congress at Buda-Pesth in 1896, and concluded by urging the Catholics of all countries to support with all their strength, even by popular meetings and public demonstrations, the idea of a peace congress.

The Pope at the same time sent to all the representatives of the Holy See abroad instructions to do what they could with the Government to which they were accredited, and with the Catholics in their vicinity, in favor of disarmament. His Holiness said to one of the cardinals: "I hope God will permit me to live long enough to see the objects of the Czar realized, and the peace of Europe established on a firm and definite basis."

The twentieth anniversary of the election of Leo XIII to the pontificate was celebrated on Feb. 20.

His Holiness in December received a deputation of the officers of the disbanded pontifical army. He also received several deputations during the year, among others one of Mexican pilgrims in March, one of Italians in August, and one of English pilgrims in October.

The Church of St. Joachim at Rome, erected by contributions from Catholics in all parts of the world as a memorial of the golden jubilee of his Holiness (1893), was finished in August, and the fathers of the Redemptorist Congregation solemnly placed in charge of it.

The Roman branch of the Confraternity of Notre Dame de la Compassion for the conversion of England was inaugurated at Rome on Feb. 2. His Eminence Cardinal Gaeton Alvisi Massella was on March 14 named protector of the Sisters of the Christian School of Mercy. Among the decisions of the Sacred Congregation of Rites, not elsewhere noted, were the following: The carrying of images and statues of the saints in procession with the Blessed Sacrament was prohibited; the recital in the public functions of the Church of litanies not having the approbation of the Holy See was not approved. A litany of the Sacred Heart was approved for liturgical use in the dioceses of Marseilles and Autun, in France. The canonization process by the Sacred Congregation of Rites was concluded in the questions of Blessed Hroznata, martyr, and Blessed Innocent V of the Dominican Order. By a decision of the Sacred Congregation of the Inquisition national and other flags belonging to secular societies were forbidden to be introduced into the church on the occasion of religious functions, or in funeral processions accompanied by the clergy.

Statistics.—Two cardinals died in the year: Eleazer Tasehercau, Archbishop of Quebec, born Feb. 17, 1820, created cardinal June 7, 1886; and Sylvester Sembratowicz, Ruthenian Archbishop of Lemberg, born Oct. 3, 1836, created cardinal Nov. 29, 1895.

The Sacred College of Cardinals when complete consists of 6 cardinal bishops, 50 cardinal priests, and 14 cardinal deacons. There were in 1898 57 cardinals and 13 vacancies. Five of the cardinals were created by Pius IX and 52 by Leo XIII; 123 cardinals died in the present pontificate. Of the

57 cardinals, 30 were Italian, 9 Austrian, German, or Polish, 7 French, 3 British, 4 Spanish, 2 Portuguese, 1 American, and 1 Belgian. Of the 46 cardinal priests, 2 were patriarchs, 26 were archbishops, and 7 bishops of residential sees, and the others had received episcopal consecration.

There were in the Church 14 patriarchal sees, 971 archiepiscopal and episcopal sees; and the number of patriarchs, primates, archbishops, and bishops, including those retired and the archbishops and bishops of titular sees, was 1,284.

United States.—The Supreme Court of the United States, in February, handed down a decision adjudicating a bequest for masses to be a charitable bequest. Cardinal Gibbons, under date of December 5, sent a petition to Congress on behalf of himself and the archbishops of the United States, praying that the subject of Indian education under Government and contract systems be reopened. Under the contract system appropriations were made annually for Indian education, and contracts were let to the various religious societies which had previously established schools in the reservation. At no time, said the cardinal, was complaint made in regard to the quality of education furnished, the objection which led to the abrogation of this system being that sectarian schools were supported at public expense. Under the law at present in force unsectarian Government schools have been established and the appropriation for denominational schools had been cut down 20 per cent. annually since 1895. The latest report of the Commissioner for Indian Affairs asked for a law compelling the attendance of all Indian children at Government schools, with or without the consent of their parents. Cardinal Gibbons advocated a law making education compulsory, but permitting the Indian parent to send his child to a mission school if he chose. The petition closed with the request that the whole subject of contract and Government schools be reopened, and the results of the different systems compared.

Earlier in the year Bishop Ryan, of Philadelphia, addressed the Senate Committee on Indian Affairs to sustain the appropriation for maintaining pupils at the Indian contract schools, and on Oct. 13 the Committee of Archbishops on Indian Affairs, in session at Dunwoodie, N. Y., appropriated \$67,000 for the Indian schools.

Mgr. Byrne, Bishop of Nashville, in December, presented a petition to his Holiness praying that the constitution of the brothers of the Christian schools be altered so as to allow them to teach the classics in the schools and colleges in the United States. The brothers had hitherto been permitted to teach these branches, although such instruction was contrary to the letter and spirit of their original constitutions. On this account the central authorities of the order forbade the continuance of this practice in derogation of the rule. Many ecclesiastics in America, who desired to retain the successful services of the brothers on behalf of Catholic higher education, seconded the plea of the Bishop of Nashville that the United States be exempted from this provision of the constitution of the order.

A bill was passed in July by the House and Senate of the United States authorizing the Secretary of War to permit, in his discretion, the erection of religious edifices on the military reservations of the United States. The law was the result of a petition by Catholics for permission to build at their own expense a chapel on the United States reservation at West Point, a Government chapel being already there, with a chaplain paid by the United States. Subsequent to the passage of the bill, the required permission was given by the Secretary of War. The law was made necessary by the ruling of the Attor-

ney-General, that the Government could not permit any sectarian institution to be constructed on public lands.

The only episcopal appointment made in the year was that of the Right Rev. John F. Cunningham to be Bishop of Concordia, Kan. Other appointments were: The Very Rev. George Searle, C. S. P., director of the Vatican Observatory; Very Rev. John S. Zahm, C. S. C., provincial of the Fathers of the Holy Cross; Right Rev. A. Schmitt, O. S. B., abbot of St. Meinrad's Monastery in Indiana; Rev. Casimir Augier, Superior General of the Oblates of Mary Immaculate; Very Rev. John J. Fedigan, provincial of the Order of St. Augustine in America; Right Rev. Edmund M. Obrecht, abbot of the Trappist Monastery at Gethsemane, Kentucky. On April 14 was held the diamond jubilee of the priesthood of Right Rev. William Vaughan, Bishop of Plymouth; on April 27, the silver episcopal jubilee of Most Rev. William H. Gross, Archbishop of Oregon; on May 4, of Most Rev. M. A. Corrigan, Archbishop of New York; on Oct. 5, the golden jubilee of Right Rev. B. J. McQuaid, Bishop of Rochester. At the same time the cathedral of Rochester was consecrated.

The bishops and distinguished priests who died in 1898 were: Very Rev. James McGrath, provincial of the Oblate Fathers in America; Mgr. Edward McColgan, Vicar General of the Archdiocese of Baltimore; Right Rev. Fentan Mundwiler, O. S. B., abbot of St. Meinrad's; Most Rev. J. B. Salpointe, Archbishop of Sainte Fé; Right Rev. Thomas McGovern, Bishop of Harrisburg; and Most Rev. William Hickley Gross, Archbishop of Oregon.

Alaska.—The second Catholic church to be built in the Klondike region was dedicated in Dawson City, August 12. It replaced a smaller one burned four months earlier, and was the gift of one man. The church had in 1898 a congregation of 600.

Canada.—In presenting the papal encyclical on the subject of the Manitoba elementary schools the archbishops of Canada took occasion to set forth their position toward this question and the principles involved in it for Catholics. They counseled moderation, and advised the people to tolerate the system until such a time as they were enabled to demand what they should consider a just system of elementary education. Until then it was necessary to continue to support both Catholic and state schools.

Of the eight archbishops of Canada, three died in 1898: Right Rev. James Vincent Cleary, Archbishop of Kingston; His Eminence Cardinal Taschereau, Archbishop of Quebec; and Most Rev. John Walsh, Archbishop of Toronto. Other deaths were Right Rev. Louis Lootens, Bishop of Victoria, B. C., and Right Rev. Francis Louis La Flèche, Bishop of Three Rivers. Most Rev. Louis Nazaire Bégin was appointed Archbishop of Quebec; Most Rev. Charles H. Gautier, Archbishop of Kingston; and Right Rev. Alexander Christie, Bishop of Vancouver Island.

The vicariate of Pontiac was erected into the diocese of Pembroke on Sept. 21, and Right Rev. Narcisse Zephyrin Lorain by apostolic letter was appointed its first bishop. The Catholic population of Canada in 1898 was 2,184,480.

Great Britain.—The Catholic hierarchy of England in January published a vindication of the bull "Apostolicæ Curæ," by which the Pope in September, 1896, decided that the Catholic Church could not recognize as valid the orders administered by bishops of the Anglican establishment. To this bull two Anglican prelates had sent a reply, urging that Anglican ordination constituted a valid priesthood (*sacerdotium*) as it was understood in the early Christian doctrine. The vindication of the Catholic hierarchy pointed out that an essential

difference between the two orders was one of intention, if the Anglican communion held that Christ did not institute a priesthood such as was held to be conferred in Catholic sacramental orders, i. e., a *sacerdotium* in which the minister offers up Christ, really and objectively present as the victim. The Anglican bishops were requested to define what they meant by the priesthood of the Catholic Church, and whether the powers they believed to pertain to it involved the offering of a real or only of a symbolic sacrifice. If the real presence was held to be a part of the ceremony of the Anglican Church, one barrier between the two orders was removed. If the sacrifice on the other hand was held to be symbolic merely, the ordaining prelates of the Anglican Church, since they did not believe in powers such as were held to belong to Catholic priests, could not have the requisite intention of conferring them.

Cardinal Vaughan, under date of Dec. 28, sent a pastoral letter to the clergy of the archdiocese, apropos of the conquest of the Soudan by the sirdar, and the consequent opening for the establishment of missions. He expressed a hope that the American Church would join in the work, and that the enmity entertained in France toward England in the Soudan might disappear in the common work of civilizing the country.

In the United Kingdom and its colonies in 1898 there were 28 archiepiscopal and 104 episcopal sees and 28 vicariates apostolic and prefectures apostolic. Two archiepiscopal sees, 4 episcopal sees, 5 vicariates apostolic, and 2 prefectures apostolic were vacant. The number of archbishops and bishops holding office in the British Empire was 167, which included 11 coadjutors and 4 bishops auxiliary. In England there were 3,212 priests, 2,247 secular and 965 regular clergy serving 1,854 churches.

The estimated Catholic population of the United Kingdom was as follows: England, 1,500,000; Scotland, 365,000; Ireland, 3,550,000. There were 31 Catholic peers, 18 Catholic lords not peers, 55 Catholic baronets, 19 Catholic members of the Privy Council, 3 Catholic members of the House of Commons for England and 69 for Ireland. The Building Committee for the new Catholic cathedral at Westminster received in September a gift of \$100,000 from an anonymous layman. The silver episcopal jubilee of Bishop Hedley, of Newport, was celebrated on Dec. 30, in Cardiff. Bishop Wilkinson of Hexham and Newcastle on Dec. 23 celebrated his golden jubilee.

On May 12, the territory comprising the vicariate of Wales was erected into a diocese under the title of Menevia.

The archbishops and bishops of Scotland in July received an encyclical letter from his Holiness, by which they were admonished against the errors of private judgment in the interpretation of Holy Scripture, and warned against the false teaching regarding the Holy Eucharist prevalent in England.

Right Rev. Hugh McDonald, Bishop of Aberdeen, died on May 29.

Ireland.—The Catholics of Ireland continued during the year their agitation for the establishment of a university for Catholics. Though it was unsuccessful so far as any direct legislation was concerned, it resulted in the conviction, by many members of the English Legislature, that the demand was reasonable and just. Mr. Balfour speaking as leader of the House of Commons, in February, declared that it filled him with dismay that "Parliament should tamely acquiesce in a condition of things which practically and substantially deprives two thirds of the population of Ireland of higher educational advantages." To the annual

appeal of the Irish bishops, early in the year, the English hierarchy added a petition to the Marquis of Salisbury as head of the Government, praying that the relief they demanded might be granted to the Catholics of Ireland.

The state of affairs from which relief was asked was in 1898 as follows: Of the two universities in Ireland, Trinity College was Protestant by history, teaching, tradition, and association. The other, the Royal University, was non-sectarian, but consisted merely of an examining board authorized to confer degrees. The three Queen's colleges, in Belfast, Galway, and Cork, though non-sectarian in foundation, had become sectarian by teaching and tradition. They were supported by parliamentary grants, so that non-Catholics might receive a free collegiate education. What the Catholics demanded was the establishment of a college, similar to one of the three Queen's colleges; so managed that Catholics might conscientiously attend it, and so endowed that pupils of slender means might obtain at it the same advantages as at either of the three Queen's colleges. Agitation had so far progressed toward the end of 1898 that in the opinion of Mr. Balfour, Parliament, which had shown such consideration for the religious feelings of the Soudanese in the establishment of the Gordon Memorial College, could no longer consistently refuse to establish a college for Catholics in Ireland.

France.—The ninth centenary of the institution of All Souls' Day was celebrated at Cluny, Nov. 30 to Dec. 10, in the presence of the cardinals of Lyons, of Rheims, and of Autun, under special privileges from the Holy See, which allowed the daily celebration of solemn mass for the dead, notwithstanding the occurrence of double feasts. The translation into French by l'Abbé Klein, of the Institute of Paris, of Father Elliott's "Life of Father Hecker," the founder of the Paulist Society, aroused considerable discussion in ecclesiastical circles in France. The doctrines of Father Hecker were attacked as heretical by l'Abbé Maignen, in a book entitled "Is Father Hecker a Saint?" Theological flaws were said to exist in Father Hecker's published works, and the whole matter was finally made the subject of a special session of the Sacred Congregation of Rites, called by the Pope to close the question. The decision, which was reached late in the year, was embodied in an encyclical letter, which up to Dec. 31 had not been issued.

The case of the canonization of Joan of Arc came before the Sacred Congregation of Rites on June 28, in the shape of an investigation of the validity of the apostolic process in the Orleans court regarding the virtue and miracles, *in specie*, for her beatification. This was the second of the three processes required for canonization. The first, which results in the conferring of the title "Venerable" was concluded in 1897. The second, the beatification, requires two miracles for its establishment. The third, the canonization proper, requires the proof of three miracles by her direct intercession. It was expected that this process would be reached in 1899. The progress of the case was watched with great eagerness throughout France. Special preparations were made for a celebration in her honor at Orleans, in May, 1899.

The Chamber of Deputies, in April, passed a law imposing such taxes upon religious communities that payment was impossible if the orders were to continue in existence. Of 180,000 religious in France, 120,000 refused to pay the tax. As a result the premises of many of the oldest religious communities in the world were sold at public auction. Including the pupils of the colleges, convents, and orphanages whom they taught, and the inmates of the homes, asylums, and hospitals whom they

tended, housed, and fed, 2,500,000 persons were in 1898 the beneficiaries of the 180,000 religious subject to the tax.

By an apostolic brief, Leo XIII, in October, confirmed the right of the French to protect Christians in the East. The brief was asked for by the Cardinal Archbishop of Rheims, in connection with the massacre of French and German priests in China.

Mgr. Valteau, Bishop of Quimper, and Mgr. de la Foata, Bishop of Ajaccio, died in the year.

The third national congress of French Catholics was held at Paris, Nov. 27 to Dec. 4. The best Catholic orators of France spoke on various subjects pertaining to religion and society. A pilgrimage of "penitence and expiation" to Lourdes, in April, 1899, was organized under the lay leadership of the Comte de Mun.

Germany.—The strained relations which had existed between the German court and the Holy See were somewhat ameliorated in 1898, by several important concessions made to Catholics by the Emperor. Among these was the reinstatement of the Dominicans in the convent at Cologne from which they had been excluded at the close of the eighteenth century. The convent was one of the most ancient and most celebrated houses of the order, and was the home of Albert the Great, St. Thomas of Aquinas, and Blessed Ambrose of Sienna. The Emperor further conferred the order of the Red Eagle of the first class upon Mgr. Piavi, Patriarch of Jerusalem. Under the direction of the cardinal archbishop the monument of St. Ursula, in the sanctuary of St. Ursula at Cologne, was opened in October for the purpose of lowering it to the level of the floor of the church. The monument dates from the sixth century. Inside it was found a Gothic sarcophagus, covered with a large slab of slate, upon which a picture of St. Ursula was painted. Inside the sarcophagus was a small wooden box, filled with bones, presumably those of St. Ursula and her companions, martyred by the Huns in the fifth century.

Austria.—An important decision of the Sacred Congregation of Rites removed what had been for years a cause of difference between the Vatican and the Church in Austria, Roumania, Bulgaria, and the other countries evangelized by St. Cyril. By the decision the Slavic language was permitted to be used in the liturgy where an established custom of thirty years could be shown to have existed, and where there was no danger of mutilating the sense of the words by the mixture of different dialects. The right of deciding claims to use this permission was vested in the bishops. No other language could be used in the liturgy of the churches obtaining this privilege, and the liturgical books were to be printed and edited under the supervision of the Apostolic See. Another ground of dissension was removed in the admonition to the bishops to have both Slavic and Latin taught in their seminaries in order to enable priests to administer to the Slavic churches. The concession was regarded as an important one, inasmuch as the right to use the Slavic language had been claimed for centuries by the Slavic Church, which maintained that its use had been recognized by early Popes, and had been established when the country was first converted to Christianity.

The golden jubilee of the imperial and royal house of Austria was celebrated on Dec. 2, by the laying of the foundation of the cathedral in Philippopolis by Mgr. Menini, Archbishop of Sofia and Philippopolis, and by services in the churches at Vienna, in the National Teutonic Church at Rome, and in the Church of St. Mary in London, at which latter the Queen and Prince of Wales were each represented, as were all the foreign embassies by their ambassadors and staffs.

Russia.—The year was marked by a general amelioration of the relations existing between Russia and the Holy See. The most important of these was the accrediting of M. Tcharykow as minister to the Holy See for the purpose of presenting to his Holiness the programme for the disarmament congress. As in the preceding year, the Holy See had no direct episcopal communication with the bishops of the Catholic Church in Russia, all relations being carried on by means of the Ministry of Worship. The sending of a Russian ambassador to Rome, however, was looked upon in ecclesiastical circles as an indication that the Czar desired to re-establish free communication between the Vatican and St. Petersburg, and that the next step would be the appointment of an apostolic delegate to the Russian court.

Belgium.—Mgr. Keesens, Senator for Leinburg, late in the year introduced a measure into the Upper Chamber of Belgium for increasing the salaries paid by the state to Catholic priests, which up to that time had been 950 francs a year, as against 1,870 paid to Jewish pastors, and 2,640 to ministers of all Protestant denominations. The support of Catholic clergy by the state was regarded by the Legislature as an act of restitution for the confiscation of all ecclesiastical property by the law of Nov. 2, 1789. The Very Rev. A. Canon Hebbelynck was appointed Rector Magnificus of Louvain University on July 31, to succeed the Right Rev. Mgr. Abbeloos, resigned. By a decree of the Sacred College of Propaganda, confirming the choice of the Board of American Bishops, Canon Jules de Becker was appointed president of the American College, Louvain, in place of Mgr. Willemssen, resigned.

Spain.—By her loss of temporal sovereignty in Cuba and the Philippine Islands, Spain lost also the ecclesiastical control she had previously exercised. The Spanish priests in her former colonial possessions were not recalled, but were placed either under the control of the American delegate apostolic or under the direct supervision of the Propaganda. Instructions were issued to them to assist the new civil authorities in pacifying the people and civilizing the country.

The apparent danger of a Carlist rebellion after the close of the Hispano-American war caused the Pope to issue instructions to the Spanish hierarchy to do all in their power to avert a rising. In case of its occurrence, the priests and bishops were directed to assist and support the reigning family.

Italy.—No essential modification of the strained relations existing between the Quirinal and the Vatican took place in the course of the year. The continued aggressive action of the Italian Government in suppressing Catholic societies, both religious and social, called forth an encyclical of protest from his Holiness, in which the clergy and people were exhorted to remain firm, to keep from disorder, and to refrain as far as possible from participation in Government. The Catholics of Italy late in the year asked the Pope for permission to vote in municipal elections, but the request was not granted. If, as was the consensus of opinion at the Vatican, the Italian Government was in danger of collapse, it was not considered desirable that its fall be hastened or participated in by the Catholic element in the country.

The Holy Father in April received a body of pilgrims from Perugia, saying Mass for them in the Sistine Chapel. After giving them his apostolic blessing, the Pope announced his gift of 500,000 francs to the Institution of Perugia.

At Turin in September took place the public exhibition of the sacred winding sheet in the Church of St. Sindone, and afterward its transfer from that church to the cathedral. The Church of St.

Sindone being the chapel royal of the house of Piedmont, King Humbert himself was present.

Cuba.—As a result of the Spanish-American war, Spanish ecclesiastical jurisdiction in the island of Cuba and Puerto Rico ceased with the defeat of Spain. The Most Rev. Placid Louis Chappelle, D. D., Archbishop of New Orleans, on Oct. 12, was appointed apostolic delegate extraordinary for Cuba and Puerto Rico and *chargé d'affaires* for the Philippine Islands. After a consultation with Cardinal Gibbons in December he thus defined his mission in Cuba, and also the change in ecclesiastical jurisdiction brought about by the war:

"While striving to watch over the religious interest of the Catholic Church, helping the bishops in the work of reorganization, I shall use my utmost influence to help the Government of the United States to succeed in the work of political and social reconstruction.

"All the relations between the Church in Spain and in the two islands have ceased so far as the former exercised any authority. Heretofore the priests were often appointed from Madrid, and Spain exercised great influence and authority, both directly and indirectly. All this is now ended, and for the present the priests and the laity come directly under the supervision of the Church at Rome. The islands have not been placed under the jurisdiction of an American diocese."

In November the Archbishop of Havana issued a pastoral letter which was read in all the churches in Cuba, exhorting the people to respect the new form of Government, with which, he said, the Catholic Church in Cuba would work entirely in harmony. He thanked the Government of the United States for the courtesy and respect shown to priests during hostilities, and asserted his belief that under the new Government the Church would be left free and unrestrained, although not supported by the state, as was the case under Spanish rule.

The Philippines.—More than 6,000,000 of the inhabitants of the Philippine Archipelago were nominally Catholics in 1898. Of these less than one sixth were cared for by secular or native clergy, the remainder being attended to by priests belonging to religious communities, who were nearly all Spaniards. The Church received its principal support from the civil authorities. Of the tribute levied throughout the islands, amounting to about 15 francs *per capita*, the church received a franc and a half, or one tenth, with which churches were built and schools endowed. This alliance between church and state made rebellion against one rebellion against both, and in the insurrection of the Filipinos many monks were put to death, and much ecclesiastical property was either confiscated or destroyed.

The only change in the ecclesiastical administration of the islands made in 1898, was the appointment of the apostolic delegate to Cuba as *chargé d'affaires* for the Philippines. His mission was to examine and report what changes were in his opinion necessary as a result of American accession. It was not thought advisable to bring the islands under the supervision of the American Church until the country should, in part at least, recover from its disturbed condition.

Denmark.—The number of mission stations in Denmark in 1898 was 40, of which 24 contained resident pastors. For the first time in modern years a missionary priest took up his residence in Iceland, establishing a parish at Faskrudsfjord.

South America.—His Holiness Leo XIII under date of Christmas Day, issued a brief, *cum diuturnum*, to the archbishops and bishops of the various countries in Latin America which put forward the design of their holding a general council at Rome.

in the year 1899. The happier relations existing between the Papal See and the governments of the various republics of South America, and especially the fortunes of the Church in Brazil, which has steadily advanced since the abolition of the empire, created a hope, said the brief, that a new and far greater future might be reserved for the Latin American churches during the twentieth century. The conferences of the bishops and archbishops is to be directed toward a preparation for this future.

Syria.—Mgr. Ephraïm Rahmani, Archbishop of Aleppo, was elected in October by the Synod of Mardin to the patriarchate of Antioch, to succeed the late Patriarch Cyril Behnam Benni. His election revived the hope of an extension of the movement for reunion in the Jacobite Church.

Foreign Missions.—All countries occupied by paganism, schism, and heresy are under the immediate direction of a cardinal prefect of the Sacred Congregation of Propaganda. They are divided into 400 dioceses, vicariates, or prefectures apostolic, whose chiefs are nominated by the cardinal prefect. The missionaries are recruited from 32 seminaries, of which 15 are at Rome. About 30 religious societies also contribute missionary priests and the missions are further assisted by the services of numerous orders of teaching brothers and sisters, and Sisters of Charity. The whole number of missionary laborers in 1898 was as follows:

Priests, 13,314; brothers, 4,503; European sisters, 42,345; native sisters, 12,419. The receipts of the various missionary collecting societies for 1898 were: The Propagation of the Faith, \$1,228,736; the Holy Infancy, \$679,500; the schools of the East, \$54,270. The two last named are for the education of pagan and schismatic children, and their receipts are divided among 181 missions.

The French Société des Missions Étrangères reported as the number of adult heathen baptized in 1898, 70,942, as against 46,826 in 1897. The missions covered by these returns were Indian, Chinese, Indo-Chinese, and Japanese. Of the 1,631 priests engaged in this work under the direction of the society, 581 were natives. In China 6 priests of the society were killed in the course of the year, and more than 20 others were cast into prison where they were at the end of the year. An embassy was sent to Peking to secure their release, but had not succeeded up to Dec. 31.

The report of Indian missions showed a total of 1,925,992 Catholics in that country, with 2,395 priests, of whom 1,599 were natives. There were 32 ecclesiastical seminaries, with 926 students. The proportion of Catholics to population throughout India was 1 to 145; in Ceylon, 1 to 17. In August a Eucharistic Congress for India was held at Madras, at which were present 8 bishops and 60 priests.

The Bishops of Meliapur and Trincomalee in December settled the question of the delimitation of their respective dioceses, the former of which lies under the Portuguese Padroado.

A mission station was established in May by the Marist fathers in the Solomon Islands, the last stronghold of cannibalism. Father Bouillon, the curate of the new diocese, barely escaped forming part of a cannibal feast on one of the islands of New Georgia, at which there were 10 victims.

ROUMANIA, a monarchy in eastern Europe. The legislative power is vested in a Senate of 120 members, elected for eight years by two classes of property holders, and a Chamber of Deputies consisting of 183 members, elected for four years by all the taxpayers, divided into three classes. The heir to the throne, six bishops of the Greek and two of the Roman Church, and two representatives

of the universities have seats in the Senate. The reigning King is Carol I, born April 20, 1839, a son of Prince Karl of Hohenzollern-Sigmaringen, elected Domn of Roumania in 1866 after the abdication of Prince Alexander Cuza, and proclaimed King on March 26, 1881. The ministry at the beginning of 1898, constituted in April 12, 1897, was composed as follows: President of the Council and Minister of Foreign Affairs, Demeter Sturdza; Minister of Agriculture, Industry, Commerce, and Domains, A. Stolojan; Minister of the Interior, M. Pherekyde; Minister of Finance, G. M. Cantacuzino; Minister of War, Gen. A. Berendef; Minister of Public Instruction and Worship, Spiro Haret; Minister of Justice, Alexander G. Djuvara; Minister of Public Works, I. I. C. Bratiano. M. Djuvara early in 1898 gave up the portfolio of Justice to M. Parrani. On Oct. 14, G. M. Cantacuzino resigned the Ministry of Finance, and was succeeded by M. Parrani, whose place was taken by ex-Minister Stoicescu.

Area and Population.—The area of the kingdom is 48,307 square miles, with a population estimated at 5,478,800. Of these about 4,950,000 belong to the Orthodox Greek, 150,000 to the Roman Catholic Church, 15,000 are Armenians, 13,800 Protestants, 10,000 Lipovani, 300,000 Jews, and 30,000 Mohammedans. There are 3,618 primary schools, with 5,411 teachers and 298,253 pupils, out of a total school population of 731,780. The universities of Bucharest and Jassy have 1,650 students. The Government in 1896 expended 9,140,527 lei on primary and 5,970,942 lei on secondary education. Of the total population about 70 per cent. are dependent on agriculture. Nearly all the cultivators own their farms. The number of marriages in 1897 was 41,387; of births, 247,814; of deaths, 171,071; excess of births, 76,743.

Finances.—The budget for the financial year 1899 makes the total receipts 222,095,000 lei, or francs, of which 33,800,000 lei come from direct taxes, 66,570,000 lei from indirect taxes, 51,650,000 lei from monopolies, 24,922,000 lei from domains, 16,745,000 lei from public works, 10,174,000 lei from the Ministry of the Interior, 4,690,000 lei from the Ministry of Finance, 1,415,000 lei from the Ministry of War, 160,000 lei from the Ministry of Foreign Affairs, 229,000 lei from the Ministry of Education and Worship, 229,000 lei from the Ministry of Justice, and 11,450,000 lei from various sources. The total expenditures were estimated at the same figure as the revenue, comprising 81,807,073 lei for public debt, 71,300 lei for the Council of Ministers, 6,612,490 lei for the Ministry of Domains, 5,612,490 lei for the Ministry of Public Works, 18,407,465 lei for the Ministry of the Interior, 26,621,167 lei for the Ministry of Finance, 45,380,325 lei for the Ministry of War, 1,662,281 lei for the Ministry of Foreign Affairs, 27,868,709 lei for the Ministry of Education and Worship, 6,677,836 lei for the Ministry of Justice, and 1,344,284 lei for supplementary credits and extraordinary expenditures.

The public debt on April 1, 1898, amounted to 1,244,849,525 lei. The interest payable in the year 1899 is 70,910,178 lei.

Commerce and Production.—The production of wheat in 1896 was 25,088,700 hectolitres; of corn, 23,056,700; of barley, 11,201,700; of oats, 5,187,300; of rye, 4,305,100; of tobacco, 40,590 quintals; of wine, 4,627,800 hectolitres; of prunes, 967,250 hectolitres. Other crops are colza, flax, and hemp. The total value of the imports in 1897 was 355,783,000 lei, and of the exports 224,180,000 lei. The imports of cereals were 5,400,000 lei in value, and exports, 179,800,000 lei; imports of fruits, vegetables, etc., 23,800,000 lei and exports, 14,800,000 lei; imports of animals and animal food products, 1,000,000 lei.

and exports, 2,600,000 lei; imports of fuel, 10,100,000 lei, and exports 2,200,200 lei; imports of minerals, pottery, and glass, 7,600,000 lei, and exports 1,000,000 lei; imports of metals and metal manufactures 74,900,000 lei, and exports 1,900,000 lei; imports of hides and leather, and leather goods, 16,000,000 lei, and exports 1,600,000 lei; imports of timber and wood manufactures, 5,700,000 lei, and exports 6,700,000 lei; imports of textile manufactures and materials 150,000,000 lei, and exports 2,600,000 lei; imports of paper 6,000,000 lei; imports of drugs 28,800,000 lei; imports of fats and oils 7,300,000 lei; imports of all other articles 10,800,000 lei, and exports 4,700,000 lei.

The commerce was divided among different countries, as follows:

COUNTRIES.	Imports.	Exports.
Austria-Hungary	96,645,000	53,406,000
Great Britain.....	78,759,000	54,675,000
Germany.....	98,987,000	6,532,000
Belgium.....	14,467,000	75,938,000
France.....	23,915,000	5,092,000
Turkey and Bulgaria.....	15,476,000	11,614,000
Italy.....	11,196,000	7,107,000
Russia.....	8,163,000	3,6 8,000
Switzerland.....	4,169,000	169,000
Greece.....	1,774,000	273,000
Other countries.....	2,325,000	3,766,000
Totals.....	355,788,000	224,180,000

Navigation.—The number of vessels entered at Roumanian ports during 1897 was 33,845, of 9,367-850 tons. Cleared, 33,441, of 9,235,535 tons. The merchant navy comprised 54 steamers, of 7,099 tons, and 263 sailing craft, of 66,177 tons; total, 317 vessels, of 73,276 tons

Communications.—The railroads, all of which are state property, had in 1898 a total length of 1,797 miles, in addition to which there were 201 miles building and 706 miles projected. The state telegraphs in 1897 had a length of 4,286 miles, with 10,304 miles of wire. There were dispatched 1,621,050 internal, 537,436 external, 96,765 service, and 81,129 transit messages. The post office in 1897 transmitted 18,498,355 letters, 14,386,506 postal cards, and 31,022,339 printed inclosures. The receipts were 6,136,280 lei, exclusive of 3,090,269 lei from telegraphs; expenses, 8,809,512 lei, including those of the telegraph department.

European Commission of the Danube.—The International Commission to improve and control the navigation of the Danube, composed of representatives of the Austro-Hungarian, British, French, German, Italian, Roumanian, Russian, and Turkish governments, has police jurisdiction and issues regulations which have the force of law, levies imposts, and exercises other sovereign rights independently of the Roumanian Government on the waters of the Danube below Braila. The receipts for 1897 were 3,572,979 francs, including 1,946,679 francs from tolls, 59,130 francs from miscellaneous sources, 1,254,900 francs of surplus from the preceding year, and 311,270 francs from material, etc. The expenditures were 843,620 francs for administration, 605,682 francs for technical service, 228,179 francs for various charges, 702,054 francs of special expenditures for 1897, and 387,660 francs for the purchase of material, etc.; total, 2,767,195 francs, leaving a surplus of 805,784 francs. This added to the reserve and pension funds makes the total assets 2,457,070 francs, with no debts. The number of vessels, exclusive of packet boats, which passed out at the Sulina mouth of the Danube in 1897 was 1,324, of 1,397,917 tons, of which 1,093, of 1,357,731 tons, were steamers, and 231, of 40,186 tons, sailing vessels. Of the total number 540 steamers, of 854,585 tons, and 4 sailing vessels, of 892 tons, were English;

83 steamers, of 112,031 tons, and 17 sailing vessels, of 4,482 tons, were Greek; 84 steamers, of 94,693 tons were Italian; 109 steamers, of 92,964 tons, and 1 sailing vessel, of 72 tons, were Austrian; 129 steamers, of 59,206 tons, and 11 sailing vessels, of 1,545 tons, were Russian; 61 steamers, of 52,118 tons, and 19 sailing vessels, of 4,659 tons, were Roumanian; 20 steamers, of 14,274 tons, and 178 sailing vessels, of 28,398 tons, were Turkish; 27 steamers, of 32,060 tons, were French; 29 steamers, of 31,512 tons, were German; and 11 steamers, of 14,288 tons, and 1 sailing vessel, of 138 tons, were of other nationalities. The export trade in wheat amounted to 549,633 tons; in rye, 195,811 tons; in maize, 784,049 tons; in barley, 313,061 tons. When the regulation of the Danube was begun in 1856 the Sulina branch was a crooked stream, not over 9 feet deep in the shoal places, having a length of 45 miles. The worst of the windings have been abolished and the depth has been more than doubled. When the plan decided on by the commission in May, 1898, is carried out the last of the curves will disappear. This plan is to execute a cutting 5 miles long, 400 feet broad, and 20 feet deep, which, together with the former cuttings, will convert the Sulina branch into an almost straight water way 35 miles in length, extending from the port of Sulina to the Tulcha branch of the main river.

RUSSIA, an empire in northern Europe and Asia. The throne is hereditary in the dynasty of Romanoff-Holstein-Gottorp. The Government is an absolute monarchy in which legislative, executive, and judicial powers are united in the Czar, or Emperor, who is assisted by a Cabinet of ministers, each of whom has charge of an executive department; by a Council of State, which examines and passes upon projects of law submitted by the ministers; by a Ruling Senate, which watches over the general administration and superintends the judiciary; and by a Holy Synod, which directs ecclesiastical affairs. The Czar is the head of the national Russian Church, which is identical in doctrine and ritual with the Orthodox Greek, maintaining the relations of a sister Church with the patriarchates of Constantinople, Jerusalem, Antioch, and Alexandria. The reigning Emperor of All the Russias is Nicholas II, born May 18, 1868, who succeeded his father, Alexander III, Nov. 1, 1894. The heir presumptive is the Grand-Duke George, brother of the Czar, born April 27, 1871. The Committee of Ministers at the beginning of 1898 was as follows: President, J. N. Durnovo; Minister of Public Instruction, Count J. D. Delianoff; Minister of Foreign Affairs, Count Michael Muravieff; Procurator General of the Holy Synod, K. P. Pobedonostseff; Minister of War, Gen. P. S. Vannovsky; Controllor General, T. J. Filippoff; Minister of the Interior, J. L. Gorenkyn; Minister of the Imperial House, Appanages, and Stud, Gen. Count J. J. Vorontzoff-Dashkoff; Minister of Marine, Vice-Admiral P. P. Tyrtoff; Minister of Agriculture and Domains, A. S. Yermoloff; Minister of Justice, N. V. Muravieff; Minister of Finance, S. J. Witte, Minister of Railroads and Communications, Prince Hilko; without portfolios, D. M. Solsky and N. J. Stoyanovsky. The Grand-Dukes George, Vladimir, Alexis, and Michael have seats in the Cabinet. After the retirement of Gen. Vannovsky, Gen. Kurupatkin was, on July 14, 1898, appointed Minister of War.

Area and Population.—The table on the next page gives the results of the census of Jan. '28, 1897, for all the governments and independent districts into which the empire is divided.

The division of population according to sex was: In European Russia, 46,433,636 males and 47,753,114 females; in Poland, 4,753,879 males and 4,688,711 females; in Finland, 1,250,426 males and 1,277,875

females; in the Caucasus, 5,129,931 males and 4,593,622 females; in Siberia, 2,959,557 males and 2,772,175 females; and in Central Asia, 4,084,900 males and 3,505,375 females; for the Russian Empire, including 4,951 male and 2,461 female Russians in Bokhara and Khiva, 64,616,280 males and 64,594,833 females. In European Russia 77,648,200 of the population lived in rural villages and 10,505,700 in towns; in Poland, 6,791,800 in the country and 1,464,700 in towns; in Finland, 2,144,913 in the country and 234,227 in towns; in the Caucasus, 6,788,011 in the country and 770,114 in towns; in Siberia, 3,968,609 in the country and 345,071 in towns; in Central Asia, 4,665,267 in the country and 651,831 in towns.

Finances.—The ordinary revenue in 1896 amounted to 1,368,719,351 rubles in currency, and the expenditures for ordinary purposes, including 139,804,467 rubles paid on previous budgets, was 1,229,044,280 rubles, leaving a surplus of 139,675,071 rubles, or, including a balance of 59,278,270 rubles from previous budgets, 198,953,341 rubles. The extraordinary receipts were 43,500,457 rubles, not including 2,810,064 rubles left from previous budgets, and the extraordinary expenditure was 255,308,655 rubles. The revenue has increased in ten years 548,000,000 rubles, but of this increase 257,000,000 rubles represent the revenues from railroads purchased by the state, the interest charges and working expenses of which absorb the receipts. Increased import duties account for 85,000,000 rubles of the increase, augmented duties on spirits for 37,000,000 rubles, augmented taxes on tobacco, naphtha, sugar, and matches for 59,000,000 rubles. and increased revenue from direct taxation, state domains, etc., for the remainder.

Of the extraordinary revenue of 1896 the sum of 26,039,000 rubles came from state loans and the remainder from debts paid by railroads, perpetual deposits in the Bank of Russia, and various other sources. Of the extraordinary expenditure 132,310,000 rubles were for railroad construction and increase of rolling stock, 122,951,000 rubles for payments in the conversion of the state debt, and 48,000 rubles for payments on purchased railroads. For the five years ending with 1896 the ordinary revenue has constantly exceeded the ordinary expenditure, the total balance being 185,452,067 rubles in gold and 437,953,803 rubles in paper. The extraordinary revenue has for this period fallen short of the extraordinary expenditure by 50,443,895 rubles in gold and 367,437,109 rubles in paper, leaving still a balance of 135,008,172 rubles in gold and 70,516,694 rubles in paper. In the budget for 1898 the total ordinary revenue is estimated at 1,364,458,217 rubles, of which direct taxes produce 100,577,816 rubles; indirect taxes, 623,679,874 rubles;

the mint, mines, posts, and telegraphs, 48,529,100 rubles; sale of spirits by the state, 85,461,000 rubles; state domains and railroads, 370,127,108 rubles; sale of state domains, 593,339 rubles; redemption of land by state's peasants, 43,181,586 rubles, and by liberated serfs, 37,376,714 rubles; repayment of railroad and other loans, 57,318,227 rubles; war contributions, 2,450,000 rubles, and miscellaneous sources, 5,163,453 rubles. Of the amount raised by direct taxation 40,875,716 rubles came from land and personal taxes, 45,277,800 rubles from trade licenses, and 14,424,300 rubles from taxes on capital. The receipts from indirect taxes are specifically 260,453,000 rubles from the excise duty on spirits, 34,913,000 rubles from tobacco excise, 51,046,000 rubles from sugar, 20,782,000 rubles from naphtha, 7,015,200 rubles from matches, 169,260,000 rubles from customs duties, and 70,210,674 rubles from stamps.

An increase of nearly 22,300,000 rubles was looked for in receipts from state sales of spirits, also an increase of 31,500,000 rubles under the head of state railroads, owing to taking over more railroads from expropriated companies, while in direct taxes a falling off was expected, the land tax having been lowered on account of a short crop in 1897, which was expected to be repeated in 1898. Compared with 1897 the estimates of 1898 show an increase of 46,000,000 rubles in ordinary revenue and of 66,000,000 rubles in ordinary expenditure. The ordinary revenue in a period of ten years has exceeded the ordinary expenditure by 467,000,000 rubles.

The total ordinary expenditure for 1898 was estimated in the budget at 1,350,085,213 rubles, of which 218,675,036 rubles were for interest and redemption of state debts, 51,716,196 rubles for interest on railroad obligations, 1,701,500 rubles for discharge of unpaid arrears, 2,612,842 rubles for expenses of the superior state bodies, 20,374,941 rubles for the Holy Synod, 12,597,492 rubles for the Ministry of the Imperial House, 4,802,176 rubles for the Ministry of Foreign Affairs, 288,808,674 rubles for the Ministry of War, 67,050,000 rubles for the Ministry of the Navy, 211,118,038 rubles for the Ministry of Finance, 35,737,983 rubles for the Ministry of Agriculture and Domains, 80,175,211 rubles for the Ministry of the Interior, 26,440,843 rubles for the Ministry of Public Instruction, 264,677,232 rubles for the Ministry of Railroads, 42,733,274 rubles for the Ministry of Justice, 7,178,935 rubles for the State Control, 1,614,850 rubles for the direction of the imperial studs, and 12,000,000 rubles for unforeseen expenses. The purchase of the Vistula and Fastovo lines is the cause of an increase of 37,800,000 rubles in the expenses of operating railroads. The extension of the sale of spirits by the state is the cause of another increase in the budget, and there are increases in the naval budget of 7,100,000 rubles, in the war budget of 4,400,000 rubles, in the expenses of the Ministry of Agriculture of 2,200,000 rubles, and in the education budget of 200,000 rubles. The extraordinary expenditures for 1898 were estimated at 123,964,710 rubles, of which 34,447,020 rubles were for the Siberian Railroad, 3,718,363 rubles were for works connected with it, 13,565,183 for the construction of other railroads of general benefit, 10,000,000 rubles for local branches, 49,234,145 rubles for rolling stock for the Siberian and other railroads, and 10,000,000 rubles for expropriation of private railroads. There were 106,291,706 rubles disposable in the imperial treasury, and the perpetual deposits in the Bank of Russia gave 3,300,000 rubles in extraordinary revenue, leaving a deficit in the extraordinary budget that was exactly balanced by the estimated surplus of 14,373,004 rubles in the ordinary budget. The free balance in the treasury, which was 246,501,327 rubles on Jan. 1, 1897, was reduced by 91,795,936 rubles in that year, and by the addi-

tional drafts upon it in 1898 was brought down on Dec. 31 to 48,413,685 rubles. The state debts on Jan. 1, 1897, amounted to 2,128,826,100 rubles in gold and 3,542,137,294 rubles in paper, equal altogether to 6,735,376,443 rubles in paper or silver at the fixed ratio of 1 ruble 50 kopecks of paper or silver to 1 gold ruble. In this sum are included 621,281,634 rubles of uncovered paper currency. The total debt had been increased in ten years nearly 1,454,000,000 rubles, 27.5 per cent., by conversion operations and new loans, but the increase in the annual interest charge is less than 7,000,000 rubles. The cash in the treasury on Jan. 1, 1897, was 246,501,328 rubles, and the debts owed to the state amounted to 3,000,997,928 rubles in paper, including 1,548,692,609 paper rubles to be paid back for redemption of peasants' lands, 241,003,772 rubles in gold and 457,664,545 rubles in paper due from railroads, 133,627,835 rubles in paper due from local treasuries, the Turkish indemnity debt of 176,785,800 gold rubles, etc. The improved financial credit of Russia has enabled the Government to reduce the interest on most of the state loans. In 1898 the bonds of some of the principal land and mortgage banks were converted from $4\frac{1}{2}$ or 5 per cent. to $3\frac{1}{2}$ or 4 per cent. paper.

The amount of gold accumulated in the treasury and in the Bank of Russia in the middle of September, 1897, reckoned in paper, amounted to 1,131,700,000 rubles, while the total amount of paper out was 1,068,778,167 rubles. The gold reserve proper was 862,500,000 rubles in currency value, covering 80.7 per cent of the circulation. The free coinage of silver was discontinued in 1893. Regulations issued in 1897 fixed the value of the silver or paper ruble at $\frac{1}{10}$ of a gold imperial. Another ukase promulgated in April, 1898, orders that all accounts must be based on this gold ruble, and that the obligatory tender of silver is not to exceed 25 rubles, though the Government will accept silver to any amount except in payment of gold customs duties, and even in this case up to the amount of 5 rubles. The silver coin in circulation, including fractional currency, will be limited to 3 rubles per capita. The Government intends to withdraw gradually the paper notes of small denominations in order to accustom the people to the use of gold. At the end of 1897 the paper in circulation had been reduced to 999,000,000 rubles, less by 122,000,000 rubles than the previous year. The total amount of the new gold currency in possession of the Government, in the State Bank, and in circulation was 1,470,500,000 rubles. The silver currency amounted to 162,000,000 rubles. During the year the amount of silver in the treasury was reduced by 10,000,000 rubles, but 49,000,000 rubles more went into circulation. Whereas only 37,000,000 rubles of gold coin were in circulation at the end of 1896, a year later the figure had risen to 155,000,000 rubles, and the holdings of the treasury had at the same time been increased by 109,000,000 rubles. Important discoveries of gold were made during 1898 in the Minusinsk district and other parts of Siberia.

The Navy.—The naval fortress of Cronstadt, flanked by the fortified ports of Wiborg, Swaeborg, and Dünabünde, is the base of the Baltic fleet, consisting of 3 first-class battle ships, 1 of the second, and 5 of the third class; 9 coast-defense vessels, and 4 third-class cruisers, with 23 gunboats and minor vessels and 44 first-class torpedo craft. The "Petrovskiy," "Poltava," and "Sevastopol," launched in 1894, have 16-inch armor, a displacement of 10,960 tons, 4 12-inch guns mounted in turrets, with 6 6-inch and 18 small quick-firers, and engines of 10,600 horse power, giving a speed of $17\frac{1}{2}$ knots. There are building the "Oslyabya"

and "Peresvjet," of 12,694 tons, to be fitted with 14,400 horse engines, and to carry 4 10-inch guns, with 6 6-inch, 6 4.7-inch, and 30 small quick-firers. Another new ship will have a displacement of 11,000 tons. The "Sissoi Veliky," launched in 1894, the "Rotislav," launched in 1896, and a new ship now building are powerful turret ships of 8,880 tons, with 16-inch armor plates, 4 12-inch guns, 12 6-inch and 18 small quick-firers, and 8,500 horse power engines, making 16 knots. Besides the three great battle ships mentioned above, there are building for the Baltic fleet 3 first-class cruisers and 24 torpedo boats of the largest size.

In the Black Sea, the barbette ships "Tchesme," "Ekaterina II," and "Sinope," launched in 1886 and 1887, have a displacement of 10,180 tons, compound armor plating 18 inches in thickness, and 2 56-ton disappearing guns coupled in barbettes at each angle of the triangular citadel, with 7 6-inch and 14 smaller quick-firing guns. These were followed by the "Dvenadzat Apostoloff," of 8,076 tons, carrying four of the great guns, and in 1892 by the "Georgi Pobiedonosetz," of 10,300 tons, which has the 6 12-inch guns and 7 6-inch quick-firers, with 24 smaller ones, which was further improved in the "Tri Sviatitelia," launched in 1893, having, like its predecessor, a belt of 16-inch armor, but displacing 12,480 tons, permitting an armament of 4 12-inch guns, 8 6-inch quick-firers, 4 of 4.7-inch bore, and 52 small ones, with the same steam power, 10,600-horse, giving a speed of 16 instead of 16½ knots.

The "Vladimir Monomach," of 5,700 tons, launched in 1882, and the "Dmitri Donskoi," launched in 1883, having a somewhat lighter armament and with the same engines, 7,000 horse, making 16½ knots instead of 15, were the earliest of the Russian belted cruisers. The "Admiral Nachimoff," of 7,700 tons, which was launched in 1885, made better speed with a more powerful armament. The "Pamiat Azova," of 6,000 tons, launched in 1888, carries an 8-inch gun in a barbette on each broadside, with a quick-firing battery of 13 6-inch and 17 smaller guns, and with 8,000 horse engines, can speed nearly 19 knots. The "Rurik," launched in 1892, having a displacement of 10,933 tons, with engines of 13,250 horse power, has a very strong armament, consisting of 4 8-inch, 16 6-inch, 6 4.7-inch quick-firing and 8 smaller guns, can steam 18 knots, and, with a coal capacity of 2,000 tons, has a cruising radius of 20,000 miles at a mean speed of 10 knots. More powerful is the cruiser "Rossia," displacing 12,300 tons, with engines of 18,000 horse power, giving a speed of 18 knots, and an armament of 4 8-inch, 24 6-inch, 6 4.7-inch quick-firing, and nearly 40 smaller guns. Another cruiser, now building, is an improvement on this last vessel, having 14,000 tons displacement. The "Gromoboi" has about the same dimensions as the "Rossia." The "Oushakoff," "Seniavin," and "Apraxin," built for coast defense, are strongly armed cruisers of good speed. Two new cruisers, the "Diana" and "Pallada," have a displacement of 6,500 tons, engines of 11,610 horse power, and an armament of 6 6-inch, 6 4.7-inch, and 35 smaller guns, all quick-firers. These vessels were launched in the autumn of 1898, also the battle ship "Oslyabya." Her sister ship, the "Peresvjet," was launched on the Neva on May 19. The "Aurora," a sister to the "Diana," has been begun. New docks at Sebastopol were completed in May. An armored cruiser of 8,000 tons was ordered to be built in the new shipyard at Nikolaieff, where a new battle ship, the "Prince Potemkin Tavrichesky," a counterpart of the "Three Saints," is being built. The Government gave orders abroad for two more ships of the type of the "Oslyabya," each of 13,000 tons, as well as for a cruiser of the "Aurora" type and one like the "Svetlana," and also four tor-

pedo-boat destroyers. A shipbuilding yard is to be established by the Government at Sebastopol for the express purpose of building torpedo boats and destroyers. Of the existing battle ships, the "Peter Veliky" was launched in 1872, the "Alexander II" in 1887, the "Nicolas I" in 1889, the "Navarin" in 1891, the "Sissoi Veliky," "Petrovavlovsk," and "Poltava" in 1894, the "Sevastopol" in 1895, and the "Perisviet" and "Oslyabya" in 1898. There are 11 armored cruisers of the first class, of which the "Knyaz Pojarski" was launched in 1867, the "General Admiral" in 1873, the "Minin" in 1874, the "Guerzog Edinburgsky" in 1875, the "Vladimir Monomach" in 1882, the "Dimitri Donskoi" in 1883, the "Admiral Nakhimoff" in 1885, the "Pamiat Azova" in 1888, the "Rurik" in 1892, the "Rossia" in 1896, and the "Gromoboi" in 1898. Of the three first-class protected cruisers, the "Admiral Korniloff" was launched in 1887, and the "Diana" and "Pallada" in 1898. The navy now has 44 torpedo craft of the first class, and 81 of the second class. The vessels under construction in the spring of 1898 included 6 first-class battle ships, 1 of the second class, 1 large armored cruiser, 1 iron-clad for coast defense, 4 smaller protected cruisers, 3 gunboats, about 20 destroyers, and a first-class torpedo boat. The Minister of Marine, Admiral Tyrtoff, has elaborated a new naval programme for which he asked for 200,000,000 rubles. The sum of 90,000,000 rubles was finally granted, to be spread over the seven years from 1898 to 1905. It was decided to build 3 new battle ships of the "Oslyabya" type, of 12,675 tons each. These will be armed with 4 improved 10-inch guns of 40 calibers. There are 12 new destroyers, repetitions of the famous English-built "Sokol," under construction for service at Vladivostok and Port Arthur. Contracts were made in the United States for the construction of two or three large battle ships, of 13,000 tons, to be armed with 12-inch guns. Several torpedo-boat destroyers were also ordered in Philadelphia.

Commerce and Production.—The exports from the Russian empire for 1898 amounted to \$389,557,000; from European Russia alone, \$373,634,000. The imports of the whole empire were \$367,832,000; of European Russia, \$339,571,000. The exports increased 5 per cent. over those of the previous year, while the imports decreased in a like proportion. The increase in the value of exports was due chiefly to the rise in grain prices in the autumn 10 per cent. over those of the previous year, though the grain exports were 3 per cent. less. The exports of maize were nearly two thirds greater, and those of barley were larger. The exports of flax, hemp, and codilla were \$35,556,000, nearly a fifth less, owing to a fall in prices. The exports of mineral oil fell on account of American competition and greater demand at home. The exports of sugar declined by one half by reason of increased home consumption. The exports of timber, mainly to England, amounted nearly to \$30,000,000. The exports of eggs, which increase year by year, were valued at over \$13,750,000. Butter, wool, hides, furs, and manganese ore were exported in increased quantities. The increasing exports of manufactured goods are noticeable in every class, especially in cotton goods and iron manufactures. As regards imports, there was a larger demand for fibers, especially raw cotton, jute, and silk. The imports of cotton came more by sea on account of the fall in price and a temporary difficulty in getting it from central Asia. The imports of cast and wrought iron and steel increased in spite of the heavy customs duties, reaching nearly \$22,500,000. There was a considerable decrease in tea imports. Imports of chemical products decreased on account of the development of native production. Heavy metallic goods and machinery also decreased, al-

though certain classes of machinery, such as spinning, agricultural, and electric machines, were imported in greater quantities. Many orders for railroad locomotives, electric plant, and other machinery, which formerly was supplied by Great Britain, went to the United States and Germany. There was an increase in imports of coal and coke. The exports to France, Holland, Egypt, China, and British India increased, also those to Austria-Hungary, which were 30 per cent. more, and those to Belgium, which gained 40 per cent., and to Roumania, the increase being as much as 43 per cent. There was a marked decrease in the exports to Turkey. Those to Great Britain declined in a like proportion, owing to decreased exports of grain, flax, hemp, and oil seeds; those to Italy also, on account of the curtailed supply of sugar; and those to Germany, which were checked by the German law prohibiting time bargains in grain.

When 350,000,000 acres of land were transferred to the emancipated serfs it was expected that agriculture would develop enormously, for the peasants were provided not only with their freedom but land enough to supply their wants, and the landowners received needed capital in compensation for the land sufficient to make the remainder of their estates more productive than the whole had been. The enormous amount of floating capital and of labor set free by these changes drifted, however, into an unexpected course, and the result has been the development of industrial, mining, and commercial undertakings, while agriculture has made scarcely any progress, and the population, which increases at the rate of 1,000,000 a year, finds it harder to live on the land. The landowners are poorer and less enterprising than in the times of serfdom, and the peasantry, lacking horses to till their own land or that of the landowners, unable to meet the payments for land redemption on account of the decline in the prices of grain, with agricultural wages also declining, are falling into deeper poverty than they have ever known. At the same time the increase in savings-bank deposits, which has been greatest in years of agricultural depression, shows that the country as a whole is growing richer; that industrial enterprise, favored by the very banks that were created to facilitate the redemption of peasants' lands, is increasing at the expense of agriculture. The conditions for mining and manufacturing industries are indeed favorable, for there is an unlimited supply of labor to be had at wages much below those paid in any other European country. Russian statisticians calculate that, even with the primitive appliances now in use, all the agricultural labor of the country can be performed in 5,000,000,000 working days, which represents only half of the available labor of the country. With the dense population of Europe on one side and that of China at the other end of the empire, the economists and statesmen of Russia expect an immense impetus to Russian industry when the great arterial railroad through Siberia is completed. For eighteen years past the Government has directed every effort to the development of native industries as the remedy for the poverty and distress that weigh upon many millions of the Russian people. During sixteen years the production of pig iron in Russia has nearly quadrupled, that of manufactured iron has increased 80 per cent., and that of steel has more than doubled. The textile, engineering, electrical, and other works at St. Petersburg, where the fuel is wood from the neighboring forests, continually growing scarcer, the mines of the Ural, and the iron mills and manufactories of all kinds established in southern Russia within communication with the Donetz coal basin, have been developed largely with French and Belgian capital, of which more than

\$500,000,000 is said to have been brought into Russia within ten years and to be earning an average of not less than 15 per cent. interest. The beet-sugar factories, of which there were 238, in 1898 produced 754,758 tons of sugar. There were 869,881 acres planted to sugar beets in 1897. The export of sugar increased from 55,000 tons in 1887 to 117,000 tons in 1897.

In 1898 Kazan, Nijni-Novgorod, Vyatka, Perm, Simbirska, and Samara, usually fertile provinces in the Volga region, suffered a repetition of the crop failure of 1897, and the famishing peasantry had to be fed by means of Government aid and private charity. In the previous winter a large proportion of the peasantry in 19 large provinces in southern and southeastern Russia were only rescued from starvation by the distribution of flour by the Government. In the spring acute distress prevailed in Voronezh, Kaluga, Kursk, Orloff, Riazan, Tamboff, and Tula, the reserve stores of grain having been exhausted. Siberian grain was brought forward by the new railroad and exported to Austria and Germany, but there were not cars enough to transport the stocks accumulated along the railroad nor ships enough to carry the wheat that could be shipped from the ports of the Kara Sea. To facilitate trade over the northern sea route the Russian Government has granted exemption of duty for salt, coal, agricultural, gold-mining and other machinery, and materials for the fishing industry imported at the mouths of the Ob and Yenesei. English vessels have been engaged in this commerce since the route was explored by Capt. Wiggins, and a German company has been formed at Hamburg to engage in the Siberian trade. To open up the Siberian country and relieve the congested parts of central and southern Russia the Government has encouraged the migration of peasants, though at one time the rush was so great that it had to be held in check. Cosacks and time-expired soldiers have been settled at the cost of the Government in the Amur region for military as well as colonization purposes. In the summer of 1898 the Government transported 200,000 peasant families to the wheat belt of central Siberia and gave 40 acres of land to each, together with agricultural implements and employment on the railroad. The railroad, with its eastern termini at Port Arthur and Vladivostok, will by means of the existing lines through European Russia to Moscow and St. Petersburg, have direct communication with a new ice-free port that is being constructed on the northern coast near the Norwegian frontier at Ekaterine Harbor in the Bay of Kola.

Railroads.—The length of railroads in operation on Sept. 1, 1898, was 26,060 miles, and the length under construction was 7,520 miles, not counting the railroads of Finland, which had a total length of 1,535 miles. A large number of branches and feeders of the Russian trunk lines and the new Siberian Railroad are in progress or about to be begun. For four of these, loans to the amount of 234,325,000 German marks, with interest at 4 per cent. guaranteed by the Government, were raised in Berlin during the summer of 1898. In 1897 no less than 1,860 miles of new railroads were opened. Several strategic railroads have been built in the Caucasus. The Murghab section of the Transcaspian Railroad, running from Merv to the Afghan frontier, was pushed to completion. The Siberian Railroad at the beginning of the year was open as far as Krasnoyarsk and laid to within less than 200 miles of Irkutsk. Rails for the Manchurian Railroad were ordered from the United States, and also locomotives. This branch was to be completed within six years and the remaining parts of the Siberian line within four years. The rate of building has been about 450 miles a year. When opened to Irkutsk in

the autumn of 1898 the completed part had a length of 3,230 miles. Before the end of the year the rails were laid 40 miles further to the west shore of Lake Baikal at Lisvenitchaia, whence the cars will have to be transported by boat about 40 miles to the other side of the lake. The chief engineering difficulties were found east of Irkutsk, where there were still 1,600 miles to be built before reaching the Pacific. The work was carried on from both ends. On the Siberian line only Russian materials and native laborers were employed. The journey from Irkutsk to Moscow now occupies nearly twelve days. The traffic over the completed parts of the line has been much greater than was anticipated. The Siberian Railroad, though the journey begins at Moscow, starts from Cheliabinsk, 160 miles east of the frontier between Siberia and Russia proper. The original route from Cheliabinsk to Vladivostok was 4,740 miles, but the short cut through Manchuria has greatly reduced the distance. Throughout the summer and autumn of 1898 the rails were put down at the rate of 4 miles a day. The railroad is a single track with a siding every 4 miles and one at each of the stations, leaving the main line always free for through traffic. The stations, which are 15 or 20 miles apart, are well built of brick or stone and well equipped. The railroad that is being built through Manchuria to Port Arthur (see CHINA) will make this port on the China Sea the earliest and the principal eastern terminus of the line, rather than Vladivostok. As a consequence the original plan was changed, even the second plan was amended, and the new scheme is being reconsidered in favor of a more direct route to Port Arthur.

Posts and Telegraphs.—The post office in 1896 carried 242,306,000 internal and 31,684,000 foreign letters, 47,376,000 internal and 6,535,000 external postal cards, 221,842,000 internal and 22,619,000 external newspapers and circulars, and 17,052,000 internal money letters of the declared value of 20,119,269,000 francs and 521,000 foreign ones of the value of 390,468,000 francs. The telegraphs had in 1896 a total length of 83,386 miles, with 168,068 miles of wire. There were 12,364,338 internal messages in 1896, 1,012,449 sent abroad, 1,030,595 received from abroad, 185,247 in transit, and 1,000,129 connected with the service; total, 15,592,758. The receipts were 56,903,224 francs; the expenses of posts and telegraphs together, 121,945,008 francs; receipts of the post office, 169,825,304 francs.

The Spirit Monopoly.—The Government monopoly of the liquor trade, which was introduced first in 1895 into the provinces of Perm, Ufa, Orenberg, and Samara, in the following year into nine more provinces, and in 1897 into seven more, was on Jan. 1, 1898, extended to Poland and five more provinces, including St. Petersburg, so that it is now in operation in about half of European Russia. The primary object was to put an end to the grievous influence of the retailers of spirits on the moral or economic condition of the people. No compensation was given to the retailers who were not employed under the new system, but some was given to communities and municipalities whose revenues suffered. The Government expected no increase of revenue except such as might result from the cessation of abuses and the improvement in the general economic condition of the people. Spirits of a deleterious character are not sold at all. The manufacture still remains in the hands of private persons, but no distillery is allowed to produce more than its greatest production during one of the three years preceding the establishment of the monopoly in the district, and no new distillery is to be erected nor any old one reopened without the consent of the Government. It was expected that the system would aid the small agricultural distiller and place

him on an equal footing with the great industrial distiller. The monopoly does not extend to beer or wine. The amount of spirits required in each district is fixed by the Minister of Finance, and two thirds of this quantity is furnished by local distilleries at a fixed price, while the remaining third is acquired by contract. Spirits required by manufacturers of liquors must be purchased from the Government, which makes itself responsible for proper rectification and permits no sales of unrectified spirits. The rectification is done in Government establishments, whence the spirits are issued for sale to the dealers. They are issued in bottles of different sizes, with the quantity, strength, and price marked on the labels. The prices must not be increased, the only interest of the seller being a small commission that he receives from the Government. With few exceptions, the bottles must not be opened on the premises. The reports from the provinces where the system was first tried were satisfactory. There has been a marked decrease of drunkenness, and the Government incidentally made considerable profits. In St. Petersburg the system has encountered much opposition on account of the large number of persons thrown out of employment.

Proposal for the Reduction of Armaments.—On Aug. 24 the Minister of Foreign Affairs, by order of the Emperor, communicated to the foreign ambassadors a proposal for an international conference on the preservation of peace and partial disarmament in the following document:

"The maintenance of universal peace and a possible reduction of the excessive armaments which weigh upon all nations in the present condition of affairs all over the world represent the ideal aims toward which the efforts of all governments should be directed.

"This is the view which fully corresponds with the humanitarian and magnanimous intentions of his Majesty the Emperor, my august master.

"Being convinced that this high aim agrees with the most essential interests and legitimate requirements of all the powers, the Imperial Government considers the present moment a very favorable one for seeking by way of international discussion the most effective means of assuring for all peoples the blessings of real and lasting peace, and above all things for fixing a limit to the progressive development of present armaments.

"During the last twenty years aspirations toward general pacification have grown particularly strong in the consciences of civilized nations. The preservation of peace has been made the aim of international policy; for the sake of peace the great powers have formed powerful alliances, and for the purpose of establishing a better guarantee of peace they have developed their military forces in an unprecedented degree and continue to develop them in spite of every sacrifice.

"All these efforts, however, have not yet led to the beneficent results of the desired pacification. The ever-increasing financial burdens attack public prosperity at its very roots. The physical and intellectual strength of the people, labor and capital, are diverted for the greater part from their natural application and wasted unproductively. Hundreds of millions are spent to obtain frightful weapons of destruction which, while being regarded to-day as the latest inventions of science, are destined to-morrow to be rendered obsolete by some new discovery. National culture, economical progress, and the production of wealth are either paralyzed or turned into false channels of development.

"Therefore, the more the armaments of each power increase the less they answer to the purposes and intentions of the governments. Economic disturbances are caused in great measure by this sys-

tem of extraordinary armaments, and the danger lying in this accumulation of war material renders the armed peace of to-day a crushing burden more and more difficult for the nations to bear. Evidently, therefore, if this situation be prolonged, it will certainly lead to that very disaster which it is desired to avoid and the horrors of which strike the human mind with terror in anticipation.

"It is the supreme duty, therefore, at the present moment of all states to put some limit to these unceasing armaments and to find means of averting the calamities which threaten the whole world. Impressed by this feeling, his Majesty the Emperor has been pleased to command me to propose to all governments accredited to the imperial court the meeting of a conference to discuss this grave problem. Such a conference, with God's help, would be a happy augury for the opening century. It would powerfully concentrate the efforts of all states which sincerely wish to see the triumph of the grand idea of universal peace over the elements of trouble and discord. It would, at the same time, bind their agreement by the principles of law and equity which support the security of states and the welfare of peoples."

All the small states accepted the Czar's proposal at once. Italy, Germany, Great Britain, France and Austria also acquiesced, and the United States accepted and promised to send a delegate.

Revolt in Central Asia.—After Gen. Kurnpatkin was recalled from Asia to assume the duties of the Minister of War in the early part of 1898, he was succeeded as governor general by Gen. Poozerefsky, whose administration was over the whole of Russian Turkestan as well as the Transcaspian territory. On May 18 the Russian military camp at

Andijan, in the northeast of the province of Ferghana, was attacked by a body of 1,000 fanatical Moslems, led by the mullah Ishan Mohammed Ali Khalif, from Marghilan, who cut the telegraph wires and proclaimed a holy war. There were 163 soldiers encamped at Andijan, to which place the railroad from Samarkand had just been completed. After 22 had been killed and 16 wounded the rebels were repelled, leaving 11 killed and 8 wounded. They scattered, but the leader was followed and eventually captured.

The people of Ferghana, after the original conquest of Khokand, showed at first extreme aversion to Russian rule, but finding it just and beneficial they became reconciled to it. Later abuses crept in and the people suffered under corrupt native administrators, causing an increase of brigandage and a revival of the first feelings of hatred. The native mullahs became disaffected when their immunity from taxation was canceled. Fanatics from India worked on the religious feelings of the inhabitants, preaching a holy war. In 1896 and 1897 organized bands murdered officials and otherwise disturbed the province. The rising at Andijan was part of a concerted movement embracing the whole of Ferghana, but it was premature. Gen. Paul Schveikoffsky, the military governor of Ferghana, was peremptorily dismissed for not being prepared for the outbreak. The minor state of siege was proclaimed in Marghilan, Andijan, Khokand, Samarkand and Osho. Native officials were deprived of administrative and police functions. Of 522 persons who were arrested, 6 were promptly hanged, including Mohammed Ali Khan, and 380 were condemned to death by court-martial, but of these 362 were reprieved and sent to the Siberian penal settlements.

S

SALVADOR, a republic in Central America. The National Assembly is a single Chamber of 42 members elected for each annual session by universal male suffrage. The President, who is elected for four years by the vote of the nation, is Gen. Rafael Antonio Gutierrez, inaugurated March 1, 1895. The Vice-President is Dr. Prudencio Alfaro. The Cabinet in the beginning of 1898 was composed as follows: Minister of the Interior, Dr. Prudencio Alfaro; Minister of War and Marine, Dr. Juan F. Castro; Minister of Charities and Public Instruction, Dr. Carlos Bonilla; Minister of Finance, Public Works, Public Credit, and Justice, Dr. Antonio Ruiz. The direction of foreign affairs was delegated to the Diet of the Greater Republic of Central America, constituted on Sept. 15, 1896, by a treaty between Salvador, Honduras, and Nicaragua, which provided that the Diet of 9 delegates should sit by turns at the respective capitals, first at San Salvador in 1897, and should direct the foreign relations and common affairs of the federated republics, each of which retained its internal autonomy and independence. The president of the Diet for 1898 was Dr. Rafael Reyes, of Salvador.

Area and Population.—Salvador, with an area of 7,225 square miles, had at the beginning of 1894, according to an official estimate, 803,534 inhabitants. San Salvador, the capital, has about 50,000. Education is gratuitous and obligatory. The army numbers about 4,000 men, and the militia 18,000.

Rebellion.—The constituent assembly for the organization of the United States of Central America adopted a constitution which entered into force on Nov. 1, 1898. A council of government, formed

of three delegates of the Diet, one from each republic, assembling at Anapala on that date, assumed the government of the federation provisionally until the inauguration of a president on March 15, 1899. The President was to be elected directly by the people of the three republics for four years. Endowed with the supreme executive power, he was to be commander-in-chief of the military and naval forces. The candidate for the presidency was J. Rosa Pacose, of Salvador. In the mean time the presidents of the three republics were to assume the grade of governor, and in Salvador a new governor was to be elected in November to succeed President Gutierrez. The principal aspirants to this office were Gen. Tomas Regalado, Horacio Villavicencia, and Carlos Melendez. The first named represented the sentiment opposed to the union of the republics, which was very strong among the Salvadorians because the chief part of the financial burden would fall on them. While the delegates of the Diet were perfecting the arrangements for the institution of the Federal Government the anti-unionists of Salvador took up arms to resist the change, and Gen. Regalado headed the insurrection. There was no force in the country strong enough to master the rebellion, and when the Honduran troops marched in they were compelled to retire. President Zelaya, of Nicaragua, refused to meddle. Before the end of November all the departments submitted to the Provisional Government established by Tomas Regalado. After this check to the Federal movement the organizers of the federation discontinued their efforts for the present and declared that the respective republics had resumed all their sovereign rights. (See HONDURAS.)

SAMOA, a kingdom occupying the Samoan Islands in the South Pacific Ocean, of which the independence and neutrality were guaranteed by the act of the Samoan conference signed at Berlin on June 14, 1889, by representatives of Germany, Great Britain, and the United States. The reigning King is Mataafa, elected to succeed Malietoa Laupepa, who died on Aug. 22, 1898. The chief justice is William Chambers. The president of the municipal council is Dr. Raffel.

The kingdom comprises fourteen volcanic islands, having a total area of 1,701 square miles, with 35,565 inhabitants in 1897, native Christians of the Polynesian race. The white residents number about 450. There are 800 or more laborers from other islands working on the plantations. A commission has confirmed the titles of Germans to 75,000, of British to 36,000, and of Americans to 21,000 acres. The foreigners pay nearly all the taxes, as the native poll tax of \$1 a head never has been collected except from the adherents of Malietoa in Tuamasaanga, the middle part of Upolu. The principal article of export is copra, of which 5,606 tons were shipped during 1896. Cotton, coffee, and fruit are also exported, and plantations of cacao have been made. The total revenue in 1897 was \$27,705, of which \$17,426 came from import duties, \$4,160 from export duties, \$2,006 from state taxes, and \$4,113 from municipal taxes. The imports in 1897 amounted to \$346,111, in which the share of the Germans was \$186,938, of the English \$54,328, of the Americans \$55,189, and of others \$49,656. The total value of the exports was \$251,158, of which the German share was \$227,504, of the English \$8,801, of the Americans \$8,412, and of others \$6,433. In 1897 58 steamers, of 76,369 tons, and 22 sailing vessels, of 5,367 tons, called at Apia.

Political Affairs.—The Samoan problem entered on a new phase when Malietoa died. The treaty provided for the election of his successor according to the laws and customs of Samoa. The loyal Samoans who paid taxes were far less numerous than the rebels of Aana, Atua, Manono, and Savaii, who had twice taken up arms against the Government. If these hostile tribes were allowed to vote the result would be the election of one of the rebel chiefs, Tamasese or Mataafa, and the possible oppression of the loyal Tuamasaanga. The Germans, who had befriended these rebel candidates in previous struggles, considered the moment opportune, when civil war was again threatened by rival claimants for the throne, to urge the revision of the treaty. If they could not obtain the sole protectorate for Germany, they desired a partition of the islands, giving to them Upolu, to the English Savaii, and to the Americans Tutuila. The American Government took steps to occupy Pago Pago harbor, which it obtained for a naval station by the treaty of 1878. When the American chief justice of Samoa decided in favor of extending the municipal boundaries of Apia, upholding the action of the municipal council against the appeal of some Germans whose property would become subject to taxation, the German Government protested that the chief justice had exceeded his powers. The reply of the United States conceded that a strict interpretation of the treaty gave him no authority in the matter, but pointed to a precedent established by a former chief justice nominated by Germany, and suggested a modification of the treaty providing for such contingencies. Germany would not consent to a modification of the treaty except by a conference authorized to make a complete revision. Until the election of a new king, which did not take place till December, the Government was administered by a commission composed of the American, British, and German consuls, with the chief

justice as president. There was a dispute over the election that nearly resulted in violent disturbances, when Mataafa's followers took up a warlike attitude. Plans for a United States coaling station at Pago Pago were prepared by Commander R. B. Bradford and Civil Engineer M. T. Endicott. The chief justice finally decided the question of the royal succession in favor of Malietoa Tanu. Mataafa, who was declared ineligible, contested this decision and prepared to enforce his claims with arms, being supported by the German president of the municipality of Apia.

SAMPSON, WILLIAM THOMAS, an American naval officer, born in Palmyra, Wayne County, N. Y., Feb. 9, 1840. He was born on what is known as the Morison Hill farm, on which property Joseph Smith made the excavation which, according to his statement, resulted in the discovery of the golden plates of the Book of Mormon. His father was engaged in agricultural pursuits, and the boy's early education was principally gained in the country schools of Wayne County. As a youth he was bright and promising. When he was in his seventeenth year, Representative Morgan, of New York State, nominated him for a cadetship in the Naval Academy at Annapolis. Young Sampson entered upon his studies at the academy on Sept. 24, 1857, proved an apt scholar, and was graduated at the head of his class in 1861. Almost immediately, as midshipman, he was ordered to the frigate "Potomac" and he proved so proficient and

WILLIAM THOMAS SAMPSON.

attentive that his first promotion, as master, was accorded before the close of the year. His subsequent service in the navy furnishes a record of unswerving devotion to duty. His talents and exemplary conduct have from time to time received full recognition at the hands of his official superiors.

The second step in his advancement was reached on July 16, 1862, when he was made a lieutenant. In 1862-'63 he was ordered to service in the practice sloop "John Adams," and in the following year he was stationed at the Naval Academy as an instructor. Next he was appointed to the ironclad "Patapsco," one of the South Atlantic blockading squadron doing duty before Charleston in 1864. Lieut. Sampson was on that vessel when she was destroyed in the harbor of Charleston, January, 1865. His next experience was on board the flagship "Colorado" of the European squadron, from 1865 to 1867. During this tour of service, on July 25, 1866, he was promoted to be lieutenant commander. From 1868 to 1871 he was again at the

Naval Academy as an instructor. A year later he was ordered to the "Congress," on special duty, and, in 1873, he served a second time on the European station. In 1874-'75, he commanded the "Alert," receiving his promotion as commander on Aug. 9, 1874. A third term of duty as instructor at the Naval Academy was performed from 1876 to 1878. Shortly after the completion of this task he was given command of the "Swatara" of the Asiatic squadron, and then came a term of three years (1882-'85) in office as assistant superintendent of the United States Naval Observatory.

In 1886 Commander Sampson, who had assumed charge of torpedo stations, was appointed a member of the board to report upon necessary fortifications and other defenses for the coast. Prior to this he had been chosen as a member of the international conference held in Washington for the purpose of fixing a prime meridian and a universal day. The implicit confidence of the naval authorities in Commander Sampson's ability and tact was well illustrated in 1886, when, for the fourth time, he was ordered to Annapolis, on this occasion as superintendent. That he fully justified the selection is evident from the fact that his rule at the academy continued undisturbed for four years. In the meantime (in 1889) he served as delegate from the United States to the International Maritime Conference held in Washington. His promotion to the rank of captain took place in March, 1889. On Nov. 15, 1890, the new cruiser "San Francisco" was placed in commission, and Capt. Sampson was selected to take charge of that vessel during a tour of duty on the Pacific coast. He then assumed the place (1893-'97) of chief of the Bureau of Ordnance. On June 16, 1897, the first-class battle ship "Iowa" was placed in commission, and Capt. Sampson was chosen to command her. At that time the "Iowa" was deemed the most formidable vessel in the United States navy.

In February, 1898, when the destruction of the "Maine" in the harbor of Havana was made known, President McKinley, in ordering a board of inquiry to ascertain the cause of the disaster, named Capt. Sampson as presiding officer. After war was declared with Spain, Capt. Sampson was ordered to command the North Atlantic squadron, with the rank of acting rear admiral, and the "New York" was selected as his flagship. His command included the squadrons of Commodores Schley and Watson, as well as that under his own immediate orders. He took the command from Rear-Admiral Sicard, who was relieved on account of failing health. When he attained the rank of acting rear admiral, Capt. Sampson passed over the heads of ten officers previously his seniors, all commodores.

His record since his appointment to this responsible post is well known. Public opinion is apparently divided as to the exact share taken by Admiral Sampson in the destruction of Admiral Cervera's fleet at Santiago, but no question ever has been raised, in the navy or out of it, as to his ability to meet any emergency within the limits of his professional duties. For his services in connection with the war with Spain, Admiral Sampson has received the thanks of the President. Owing to a dispute in Congress between his friends in that body and the friends of Rear-Admiral Schley, concerning certain events connected with the naval campaign in Cuba, his promotion was held over when the last session adjourned, but since that time his merits have been passed upon by a board of naval officers, and he has been reported as fully qualified for promotion.

It has been said of Admiral Sampson that, if necessary, he can build, from beginning to end, any naval weapon of warfare now in use. He is also

sufficiently equipped in technical knowledge to repair any engine or electrical device used in the navy. Admiral Sampson is married, and has two sons and four daughters.

SANTIAGO DE CUBA, SOCIETY OF THE ARMY OF, an organization formed in October, 1898, somewhat resembling the Grand Army of the Republic, which was founded after the civil war. The purpose of the society is to record the history and conserve the memory of the campaign that resulted in the surrender, July 17, 1898, of the Spanish army and of the city and province of Santiago de Cuba. The membership consists of all officers and soldiers of the United States army (including acting assistant surgeons and authorized volunteer aids) who constituted the expeditionary force to Santiago who worthily participated in the campaign between June 14 and July 17, 1898, and who apply for membership and pay the annual dues of \$3. There are three classes of members: First, original; second, by inheritance, consisting of lineal descendants of original members; third, by succession, consisting of blood relatives of members of the first or second class to whom, in the absence of lineal descendants, the right of inheritance to one membership may be devised by descendant members. The officers are a president, four vice-presidents, a secretary and treasurer, an historian, a registrar general (who may have four division registrars to assist him), and a council. The council consists of ten members, together with the officers and all ex-presidents, the latter having all the privileges of regular members of the council. The officers are to be elected annually. The council acts as an advisory body, passes upon applications for membership, has the financial control, and may call meetings of the society. The president may at his discretion, and shall at the request of five members of the council, call a meeting of the council. Local branches may be formed with the prior approval of the council. A suitable medal and insignia for the officers and members are to be provided. The constitution may be changed by a two-thirds vote of the membership, and the by-laws by a three-fourths vote of the council. The officers elected at the organization were: President, Major-Gen. William R. Shafter; first vice-president, Major-Gen. Joseph Wheeler; secretary and treasurer, Major Alfred C. Sharp; registrar general, Major Philip Reade; historian, Major-Gen. Creighton Webb.

SANTO DOMINGO, a republic in the West Indies, occupying the former Spanish colony in the eastern part of the island of Hayti, first established in 1844 and restored after two years' occupation by the Spanish troops in 1865. The Congress is a single Chamber of 24 members, elected by direct qualified suffrage for two years. The President, who is elected by an electoral college for four years, is for the term ending in 1900 Gen. Ulisses Heureaux. The Vice-President is Gen. Wenceslao Figuereo. The Cabinet was composed in the beginning of 1898 as follows: Secretary of the Interior and Police, Gen. J. D. R. Betancourt; Secretary of Foreign Affairs, Enrique Henriquez; Secretary of Justice and Public Instruction, S. E. Valverde; Secretary of Fomento and Public Works, Gen. T. Cordero; Secretary of Finance and Commerce, J. Alvarez; Secretary of War and Marine, Gen. T. D. Morales.

The export of sugar in 1895 was 2,390,960,000 pounds; of coffee, 4,106,000 pounds; of cacao, 8,762,000 pounds; of tobacco, 6,634,000 pounds; of molasses, 621,492 gallons; of honey, 28,492 gallons; of wax, 321,495 pounds; of orange peel, 80,000 pounds; of skins, 17,206; of bananas, 67,255 bunches; of divi-divi, 2,606,000 pounds; of logwood, 17,358 tons; of cedar, 115,325 tons; of mahogany, 14,-

558 feet, besides 352,670 pieces of timber. The exports of coffee, cacao, and tobacco go to Europe; those of sugar, logwood, lignum vitae, mahogany, honey, wax, hides, and bananas to the United States. The imports from the United States are flour, lumber, kerosene, salt meat and fish, canned provisions, dairy products, coal, also machinery and hardware, in competition with England, Germany, and Belgium, and cotton goods in competition with England. Trade has suffered a severe depression, owing to the decline in the prices of sugar and coffee, the unstable paper and silver currency, and high duties on imports and exports. In August, 1897, all customs duties were increased 3 per cent., and on April 1, 1898, they were raised 10 per cent. The export duty on sugar amounts to 25 cents a quintal. Many sugar estates are involved in financial difficulties. The production of other things is increasing and the quality of the products improving. The development has been greatest along the line of the railroad opened in 1887 between La Vega and Samana Bay, a distance of 60 miles. Another line, built by American engineers, which connects the capital with Puerto Plata, on the north coast, was completed in 1898. It is 45 miles long, crossing two ranges of mountains, and affords an outlet to some of the richest coffee and cacao lands on the island. Immigration is encouraged by the authorities, and has been large during the disturbances in Cuba. The cultivation of bananas is extending rapidly, and much American capital is being invested. The public revenues are collected by an American corporation, the San Domingo Improvement Company. The value of the sugar exported during 1898 was \$2,463,906, all of it to New York. The total imports of Dominican products into the United States during 1897 were \$2,369,424, and the exports from the United States to Santo Domingo were \$1,098,635 in value. The number of vessels engaged in foreign trade entered during 1897 was 344, of 364,609 tons, and of these 142, of 183,130 tons, were American.

Attempted Rebellion.—Taking advantage of the popular discontent caused by the commercial depression and of the financial difficulties both of the Government and of the President, who had advanced \$1,000,000 to the Government, Juan Jimenez, in the beginning of June, 1898, attempted to start an insurrection with the object of overthrowing President Heureaux. Gen. Jimenez, once a merchant in New York, was the founder of the flourishing town of Monte Cristo and the originator of extensive commercial enterprises covering the whole of Santo Domingo. When he revealed political aspirations he incurred the jealousy of Heureaux, and after participating in several revolutionary uprisings he was compelled to reside abroad, settling in 1890 in Paris. Fitting out an expedition in the Bahamas, he sailed in May, 1898, for Cape Haytien, and thence to Monte Cristo. Gen. Garcia, who had the management of the affair at that place, was not prepared when Jimenez arrived unexpectedly on the American steamer "Fanita." The Government, however, had been warned in good time. Gen. Jimenez insisted on making an attempt to capture the town with the assistance of Gen. Garcia, Gen. Augustin Morales, and only 11 men. They summoned the Governor, who had 20 soldiers in his garrison, to surrender. Instead of doing so, the garrison opened fire, killing 5 revolutionists. Jimenez escaped to his vessel, but all his followers, save Garcia, were captured and tried by court-martial, and all were shot except his secretary, who turned informer. When Gen. Jimenez returned to Great Inagua he was arrested under the foreign enlistment act, and in the beginning of August was tried before a jury at Nassau, but was acquitted.

SCHLEY, WINFIELD SCOTT, an American naval officer, born in Frederick County, Maryland, Oct. 9, 1839. He was appointed a cadet in the Naval Academy at Annapolis from his own State on Sept. 20, 1856, and was graduated in 1860. His seafaring experience began with a voyage to Japan on the United States vessel that escorted the Japanese embassy home in 1860, and he remained abroad until the beginning of the civil war. During his service on the frigate "Niagara," in 1860-'61, it captured the first prize ship of the war, the "General Parkhill." In 1861 he was promoted to the

WINFIELD SCOTT SCHLEY.

rank of master, and was attached to the frigate "Potomac" of the Western Gulf squadron at Ship island. His promotion to a naval lieutenantancy took place July 16, 1862. He entered shortly afterward upon a series of exciting experiences that culminated in the capture of Port Hudson. This period extended from March 16 to July 9, 1863. At the beginning of these operations, under the orders of Admiral Farragut, he made the original reconnaissance leading to the attack upon Port Hudson. His vessel, the "Winona," on that occasion received 98 shells in her hull, and lost from 15 to 20 men, but evaded capture. After the reconnaissance his duties took him on board the "Monongahela" and the "Richmond." He participated in all the engagements, including service with a field battery.

At the close of the civil war Lieut. Schley was ordered to the Pacific coast. He was present at the bombardment of Valparaiso and Callao by the Spanish fleet. In 1865 he was instrumental in suppressing an insurrection of Chinese coolies in the middle Chincha island. In the following year he was promoted to lieutenant commander, dating from July 25. In the same year he lauded a force at La Union, San Salvador, to protect American interests while a revolution was in progress. Then came a three years' term as instructor at the Naval Academy (1867-'69). The next important event recorded during Lieut.-Commander Schley's sea service was made in connection with a cruise in the "Benicia," on the Asiatic station in 1871-'72. During that cruise he took part in the capture of Korean forts on Salee river, after two days' fighting, in June, 1871. Under the Tai-Wen-Kun, ruler of Korea, American survey boats were attacked in Han river, and Commander Schley was sent with a land expedition to chastise the Koreans. He took with him 650 men and 7 howitzers, and led this force successfully to the capture of a fort that could

be reached only by descending a ravine 80 feet in depth and ascending a precipitous acclivity of a similar height. The fort was taken in the face of fierce opposition. From 1873 to 1876, Commander Schley was engaged in educational duties at the Naval Academy. His next promotion, whereby he became entitled to the rank of a commander, was gazetted while he was instructing the cadets at Annapolis, on June 10, 1874.

Following this term of land service came three years on the sea. Officially his post was on what was known as the Brazil station. When on the "Essex," which he commanded in 1879-'80, Commander Schley went to the vicinity of the South Shetland Islands in search of a missing sealer, and rescued a shipwrecked crew on the island of Tristan d'Acunha. From 1880 to 1883 Commander Schley officiated as lighthouse inspector, and also was connected with the work of the Bureau of Equipment. In 1884 he volunteered to command a relief expedition in search of Lieut. Adolphus W. Greely and his company of arctic explorers. The United States vessels "Thetis" and "Bear" were fitted out for this special purpose, and promptly dispatched. The Greely party, when found, on June 22, 1884, gave evidence of utter exhaustion and rapidly approaching collapse. Lieut. Greely and six of his associates were discovered at Cape Sabine, Grinnell Land. The searching expedition, under Commander Schley, passed through 1,400 miles of ice during the voyage. Shortly after his return he was commissioned by the Naval Department as chief of the Bureau of Equipment and Recruiting, and he held that place creditably for four years. While doing duty in the bureau, Commander Schley was promoted to the rank of captain. His first sea service as captain was undertaken on the "Baltimore," a protected cruiser, which was launched Oct. 6, 1888, and placed in commission Jan. 7, 1890. Capt. Schley's connection with the "Baltimore," however, began in 1889. He retained command of this vessel three years, and after that was for three years lighthouse inspector. This term ended in 1895, during which year he served as a member of the Board of Inspection and Survey (March to October).

On Oct. 5, 1895, Capt. Schley assumed command of the armored cruiser "New York," and he remained in charge of that vessel until March, 1897. From March, 1897, to March, 1898, he was chairman of the Lighthouse Board. In the month preceding the termination of his work in this capacity Capt. Schley was promoted to the rank of commodore. When war began between Spain and the United States, Commodore Schley was selected to command the flying squadron, and his flag was raised on the cruiser "Brooklyn," on which ship he remained while the war was in progress. His operations during the campaign are described under UNITED STATES.

The recommendation of the President that Commodore Schley be made rear admiral was not acted upon by Congress before its adjournment, owing to a dispute between his friends in that body and those of Rear-Admiral Sampson, as to the part taken by each of these officers in the naval operations before and after the exit of Admiral Cervera's fleet from Santiago harbor. Commodore Schley appeared recently before an examining board and qualified for promotion to the rank of rear admiral. In 1886 he published, with James Russell Soley, a book entitled "The Rescue of Greely."

SERVIA, a monarchy in southeastern Europe. The legislative body is a single chamber called the Skupshtina, composed of 198 members elected by the votes of all male Servians paying 15 dinars, or francs, in direct taxes. The reigning King is Al-

exander I, born Aug. 14, 1876, who succeeded in 1889 to the throne vacated by the abdication of his father, Milan I, and assumed the government in person on April 13, 1893. The ministry, constituted on Oct. 23, 1898, was composed as follows: President of the Council and Minister of Foreign Affairs, Vladan Georgevich; Minister of the Interior, Jefrem A. Andonovich; Minister of Finance, Steva D. Popovich; Minister of Commerce, Agriculture, and Industry, Sima Lozanich; Minister of Public Instruction and Worship, Andrea Georgevich; Minister of Justice, Costa N. Cristich; Minister of War, Col. D. Vukovich; Minister of Public Works, Gen. J. Atanatskovich.

Area and Population.—The area of Servia is 19,050 square miles. The population on Jan. 1, 1898, was computed to be 2,384,205, consisting of 1,224,756 males and 1,159,449 females. The number of marriages in 1897 was 21,157; of births, 101,605; of deaths, 63,237; excess of births, 38,368. Belgrade, the capital, had in 1898 a population of 59,259.

Finances.—The budget for 1898 makes the total revenue 68,824,500 dinars, of which 22,035,000 dinars came from direct taxes, 6,000,000 dinars from customs, 3,850,000 dinars from excise, 2,500,000 dinars from law courts, 19,461,000 dinars from monopolies, 3,034,500 dinars from domains, posts, and telegraphs, etc., 660,000 dinars from instruction and sanitary service funds, 6,200,000 dinars from the state railroad, and 5,084,000 dinars from other sources. The total expenditures were fixed at 68,822,569 dinars, of which 1,200,000 dinars were for the King's civil list, 360,000 dinars for ex-King Milan's allowance, 76,810 dinars for court employees, 20,762,545 dinars for the debt, 150,000 dinars for the Skupshtina, 155,816 dinars for the Council of State, 341,500 dinars for general credits, 2,714,451 dinars for pensions and subventions, 1,722,531 dinars for justice, 2,927,081 dinars for public instruction and worship, 1,644,217 dinars for foreign affairs, 3,353,750 dinars for the interior, 8,227,415 dinars for finance, 15,754,613 dinars for war, 4,764,903 dinars for public works, 3,227,927 dinars for agriculture and commerce, 426,258 dinars for miscellaneous expenses, and 1,012,652 dinars for auditing accounts.

The public debt on Jan. 1, 1898, amounted to 409,537,500 dinars, of which 353,500,000 dinars consisted of the 4-per-cent. conversion loan of 1895.

The Army.—Under the law of 1896 every Servian is liable to serve two years in the standing army. The effective strength provided for in the budget of 1897 was 661 infantry officers and 14,000 men, 101 cavalry officers and 1,400 men, 270 artillery officers and 4,000 men, 65 engineer officers and 1,000 men, 10 officers of train and 300 men, 49 sanitary officers and 500 men, and 68 administrative officers and 24 officers on the general staff. The war strength is estimated at 110,245 men of all ranks in the five divisions of the regular army, 14,863 outside of division formations, 35,643 in depots and recruiting stations, 126,610 in the first ban, and 66,005 in the second ban; total, 353,366 officers and men.

Commerce.—The total value of the imports in 1897 was 45,314,000 dinars, and of the exports 55,940,000 dinars. Of the imports 2,153,000 dinars and of the exports 21,625,000 dinars were horticultural and agricultural products; 839,000 dinars of imports and 3,713,000 dinars of exports were articles of food and drink; 3,733,000 dinars of exports were colonial products; 1,227,000 dinars of imports and 24,587,000 dinars of exports were animals and animal products; 4,260,000 dinars of imports and 3,256,000 dinars of exports were hides, leather, and rubber; 5,147,000 dinars of imports

and 102,000 dinars of exports were wool and woollen manufactures; 1,534,000 dinars of imports and 247,000 dinars of exports were cereals; 3,769,000 dinars of imports and 220,000 dinars of exports were metals and metallic goods; 1,926,000 dinars of imports and 322,000 dinars of exports were china, clay, and glass products; 901,000 dinars of imports were paper; 1,446,000 dinars of imports and 42,000 dinars of exports were drugs, dyes, and chemicals; 1,249,000 dinars of imports and 15,000 dinars of exports were machines and instruments; 10,495,000 dinars of imports and 1,117,000 dinars of exports were cotton and linen goods; 808,000 dinars of imports were silks; 1,105,000 dinars of imports were hardware; 3,036,000 dinars of imports and 23,000 dinars of exports were garments and millinery; and 3,000 dinars of imports and 75,000 dinars of exports were fertilizers. Of the total imports 25,501,000 dinars were received from Austria-Hungary, and of the exports 49,146,000 dinars went to that destination.

Communications.—There were 377 miles of railroad in operation in 1898. The telegraphs in 1897 had a length of 2,521 miles, with 5,034 miles of wire. The number of dispatches in 1897 was 137,870, of which 115,300 were internal, 12,250 international, and 10,320 in transit.

Political Affairs.—Ex-King Milan, after remaining abroad for many years an involuntary exile, returned in 1897 on his son's invitation, and as the King's adviser sought to counteract the aims of the Radical party and the influence of Queen Nathalie, from whom he had obtained a divorce, but who, by its annulment, was restored to her station. In January, 1898, Milan was appointed commander-in-chief of the Servian army. In May the Radical leader Pasich was tried for *lèse-majesté*, but was acquitted. The unsettled state of Macedonia, where Bulgarian and Servian intrigues were on foot, caused the Servian Government to complain to the Porte of vexatious acts committed by Albanians upon Servians in the vilayet of Kossovo. The general elections, which took place at the beginning of June, resulted in a decisive victory for the Government. The Liberals obtained 112 seats; the Progressists, 62; neutrals, 19; the Radicals, only 1 seat. On Dec. 9 Minister Popovich retired, and Vukasin Petrovich took the portfolio of Finance. The new minister, though he regarded the financial position as difficult, proposed to deal with it by reorganizing the administration instead of imposing new taxes.

SETTLEMENTS, SOCIAL. Although Arnold Toynbee (born in 1852, died in 1883) merely suggested by his manner of life the work that has taken definite form in the settlements which are ameliorating the conditions of the poor, they virtually owe their existence to him. As applied to philanthropic work, the word is comparatively new. Toynbee was a young Englishman, a graduate of Oxford, and a profound student of political economy. When he came to apply the results of his study to life as he saw it in London, he was impressed with the idea that the laws of political economy must be associated with ethical principles. Neither civic nor national progress could be made among a people who were without hope or ambition other than to secure merely food and shelter by labor or craft. Partly to study social conditions from within, partly to improve them, Toynbee went to live among the lowest of the London poor. Learning, as all must whose attention is directed that way, the amount of remediable misery among the ignorant poor, he strove by both precept and example to alleviate it. He founded nothing, formulated nothing, but simply gave his life to the people who most needed it, and died among them at the age of thirty-one. His work was not unobserved, and there were many converts

to his belief that to help the people did not consist in the giving of alms to the East End by the affluence of the West End; but that brotherly love and intimate association were the only things that could soften the hard resistance of vice and ignorance. This is the basic idea of the settlement, that those who have gifts of money or education shall use them for the benefit of the less fortunate; not in charity, not as alms, but that all classes may more thoroughly understand one another, and that they may feel the spirit of universal brotherhood. Thus is bitterness and a sense of injustice and rebellion taken from the hearts of the oppressed, and the nation thereby bettered; for brotherhood and politics may be closely allied.

Toynbee Hall was built in the Whitechapel district of London in 1885, shortly after the death of the man for whom it was named, and thus was settlement work begun. Because Toynbee and the early workers were university men, studying sociological problems even while they practiced altruism, the first buildings used for their work were called university settlements; but now there are many having no college connection, and their names are various. The University Settlement, begun two years later than Toynbee Hall, is the first one founded in America. Its beginning was small; an emulation of Old World methods of philanthropy in that part of New York where the residents are mostly Europeans. After four years of improper housing, the society got possession of an old dwelling house on Delancey Street, which was adapted to their uses; but the needs far outgrew the capacity of the house, and funds were accumulated which would warrant building a large structure at Eldridge and Rivington Streets. College graduates were the workers in the new philanthropy, and these were for the most part men who wished both to study sociological problems and to relieve those who suffered under them. Now the work is so extensive that visiting workers and assistants are employed who are not of necessity college men, and a woman's auxiliary has been formed which is open to any efficient women workers.

In pursuance of Toynbee's plan, a residence is made among the people whom it is designed to help. The chief workers make their homes in the settlement house, or even live in tenements in the neighborhood. The manner of their living shows by example how it is possible to live in quarters identical with those of the poorest, and yet to keep the surroundings clean and attractive. As the conditions of the East Side home are not always susceptible of much improvement, because of the overcrowding, the energies are directed toward making the settlement house the real home of the neighborhood. Home life, as it is understood in the phrase, "The home makes the nation," is unknown where floor space is too limited for the occupants to sleep on beds. Where home means unremitting noise, absence of privacy, and the outbreaks of temper which these induce, its occupants seek other places for rest and pleasure. The neighborhood is filled with saloons and dance halls for their enticement, and in these places every form of evil is cultivated. It is the object of the settlement to supply to those of the crowded neighborhood all the pleasures they need, and at the same time to give them mental stimulus and inspire them with brotherly love.

To this end the settlement house is usually divided thus: The first and fourth floors are given up to public rooms, and the other floors are the home of the resident workers. One of the public rooms is fitted with the appliances of a gymnasium, but is also arranged for use as an audience hall for lectures, concerts, debates, etc. It is also used for dances, it having been found that the dance hall

proved too great a temptation to young boys and girls, unless they could have dancing at the settlement. Good music is provided, for which the dancers pay a small sum. Apart from the example set by the residents of the settlement, the neighborhood is benefited through the active means of classes and clubs. The former have teachers regularly fitted for the work, whose salary is paid by the society. There is a kindergarten for the very young children who are crowded out of public schools or kindergartens, and whose education is doubly important from the fact that it is mainly through these little ones that their elders are reached. There are districts in our largest cities filled with unamalgamated foreigners, whose language and religion insulate them, and it is a sociological fact that these people are only to be lifted from their state of semibarbarism through the children. In the kindergarten the children learn cleanliness, morality, and the English language; therefore the settlement regards the kindergarten as one of its most important departments. Classes in music and dancing rank next in the average of attendance. The music includes choral practice and sight reading, which has proved a great attraction. Instruction in some cases is given on small musical instruments, such as the mandolin or the guitar; and musical literature is studied by those whose interests lie that way. The settlement, whose work is carried on under university auspices, feels that much evil is prevented by the dancing classes. Low dancing halls are found in every poor neighborhood, and their influence is most pernicious. It is also recognized that the young, especially those whose lives are sordid and oppressed, need the gayety of social commingling. Therefore the settlement endeavors to supply this gayety, at the same time eliminating from it the objectionable features. The gatherings and classes are attended by both young men and young women, as well as by children, at suitable hours.

Classes in city history are formed for boys and men, the object of which is to inculcate the principles of self-government and cultivate an interest in civics, to the end that intelligent voters may be made. The politics of Europe are so different from ours, and the political education of the lower classes so meager, it is deemed a good work to instill into the minds of voters the principles of government on which our nation rests.

Classes of women and girls are taught sewing, of which the lowest strata of society are lamentably ignorant. When clothing is bought for the family it is purchased ready-made of the sidewalk vender; and when the women sew in sweatshops or factories the work is so specialized that each worker has only a portion of each garment to do, and thus never learns how to construct an entire garment alone, unless the sewing class gives the instruction. Another class for women and girls is the cooking class, which has its special teacher and descends into the kitchen for lessons, unless it is furnished with a room supplied with gas stoves and other appurtenances. It is a discouraging fact to the settlement worker that the attendance is small in these two departments of women's labor—cooking and sewing. Other classes give instruction in drawing, German, kitchen gardening, first aid to the injured, and in gymnasium, work the latter having by far the highest attendance of any except musical, dancing, political history, or kindergarten classes.

Even more important than the classes in settlement work are the innumerable clubs, the basis of which is always social. These are largely managed by the members themselves, and the hand of the settlement worker only guides invisibly. When the doors of a newly established settlement house

are thrown open to the neighborhood, an unruly and curious crowd swarms in the rooms; some coming to make disturbance, others in search of a free treat, and still others from the instincts of gregariousness. To interest and to co-ordinate this mass of raw material it is divided according to its tastes, sex, or age; and thus are formed the numerous clubs, which bind the members to the house, keep them from low resorts or the demoralizing influence of the streets, and gradually raise their standards of education and morality. In the boys' club the election of officers is a time of conflict, and all business meetings are attended with some heat; but order is always preserved, and the boys learn the valuable lesson of self-control. Besides this, they learn how to conduct a public meeting with parliamentary rules, a necessary accomplishment in a country where politics bring the humble into prominence. Boys' clubs run to two varieties—those which have to do with education, such as the various literary, civic, and musical clubs, and those which favor athletics, both indoors and out. Girls' clubs meet mainly for the social pleasure of gathering amid pleasant surroundings to practice the more purely feminine arts. Clubs for women are formed and are found to be a great help and pleasure to the mothers of children interested in the settlement. Men's clubs are devoted mainly to the study of politics, civics, and sociology. It is a significant fact that the saloon hotels of the neighborhood offer free accommodations to all clubs, hoping thus to lure this large number of persons to patronize them; but so much confidence is felt in the settlement that its beneficiaries will not be drawn away from its protection.

Under the head of clubs fall two important settlement institutions. These are the library and the penny provident bank. From the library of the University Settlement of New York as many as 46,500 books a year are drawn. Reports show a large demand for history, especially United States history, and this is particularly desired by the children of foreigners. It is easy to see that patriotism for the adopted country is augmented by the literature which the settlement library furnishes. The children of crowded city districts receive but little moral and mental stimulus at home, and so must find it in books, and in them also learn ideals of civic morality. The experiment has been tried of sending books to boys who are in city prisons, and, contrary to expectations, the books have been neither destroyed nor mutilated, but some of them returned accompanied with notes of gratitude. The penny provident bank is conducted on the principles governing this institution everywhere, and is liberally patronized. As many as 1,500 depositors, half of whom deposit twice a week, are on the books of some of these institutions. The pawnshop has also been found a satisfactory adjunct to settlement philanthropy.

Work outside the settlement house is courageously undertaken by the workers, both resident and visiting. Primarily this consists of becoming acquainted, in a way of friendly equality, with as many families of the neighborhood as possible. Their confidence once won, their distresses and wrongs become known, and these the worker seeks to alleviate. Possibly he has to educate the people in sanitary laws, to change their resistance of the Board of Health into co-operation with that body. That this is an important detail in civics may be known from the experiences in the East Side of New York during the time when the separation of garbage, ashes, and paper was made imperative under Col. Waring's orders. Police force was necessary to secure this separation, for the tenants of the East Side had not sufficient intelligence to keep

the three kinds of waste in separate receptacles, but would mix them all and refuse to sort except on penalty of arrest. The men of the district rebelled at the unpleasant task put upon their wives, and showed it by voting in thousands against the officers of the Department of Street Cleaning. The work of the settlement is to educate the people to an understanding of the laws, and thus inspire co-operation instead of an opposition bitter through ignorance.

The class of people who come most to the settlement houses, to take advantage of what they offer in the way of education and amusement, are not those who need outside help; for the same ambition and energy that impels them to attend the clubs and libraries expresses itself in their daily work, and their home affairs rarely need the adjusting hand of the outsider. But there is a class who through thriftlessness or misfortune require relief, principally in the matter of rent, for rent paying is the greatest burden of the very poor in cities, especially in New York, where real estate is so valuable. A mediator is often needed between landlord and tenant to prevent loss of rent by the one and loss of shelter by the other. The settlement worker informs himself thoroughly on both sides, and gives the required help. During strikes, or times of great financial depression, actual pecuniary assistance is necessary, and to save the misery of dispossession, the settlement furnishes such relief. Work in this line shows that it is better to require labor in return for money than to lend money, for in the latter case it is rarely repaid. Arrangement is sometimes made with street-cleaning departments to take heads of distressed families on the force, letting the settlement pay the bill through the department. Rent dodging is becoming more and more popular, and after studying carefully into its cause and prevention, the settlements are doing their best to diminish it by showing that it is not the rich landlord who suffers, but the honest tenant, whose rent is raised to cover the losses caused by rent dodgers.

Another department of outside work is that of nursing. The economy of the poor in matters of physical health is notorious, and much unnecessary suffering is caused thereby. A physician is not summoned until so late that his services may not avail, and intelligent nursing to follow out his directions is wanting. To help these matters, the trained nurse offers her services to the settlement. In New York is a trained-nurse settlement, where minor accidents are treated in the house, and whence nurses go to attend the sick poor in their homes. The work of this society is confessedly to relieve the sick; yet its ministrations do not stop there, for the nurse becomes the friend and confidant of the relieved family and sees a wide opportunity for giving moral help as well as physical.

Entertainments at the settlement are powerful in interesting the people of the neighborhood in its work, and these are given throughout the year at least once a week. The basis of all the clubs is social, so that each club meeting is in the way of an entertainment; but apart from these are lectures, sociables, concerts, and even fairs; while certain holidays are kept with feasting, especially at Christmas. As far as possible, these entertainments depend for support upon the efforts of the people they benefit. Everything possible is done to encourage a mutually helpful spirit and abolish class hatred. In summer there are various outings for boys and girls and mothers. A camp is established beside a lake or a river, and the boys who are fortunate enough to go there have a season of happiness and instruction. Sometimes a hundred or more children are taken to the circus or to some similar entertain-

ment. By arrangements with the Department of Public Charities or smaller institutions, the children of the settlement can have a day's relief from the scorching city streets on a barge.

We have in our country a mass of people that do not amalgamate with the others, that the nation can not assimilate; a solid block of Europe's lowest population, who refuse to accept our language, our customs, and the spirit of our laws. Besides this class, we have the one with which we are more familiar, the criminal and ignorant of the English-speaking poor. All these people are an expense and a menace to the cities they inhabit. Except through the settlement workers, these people can not be reached; but through them they are receiving lessons that will ultimately make good citizens of them, and especially of their children.

Money for this work is supplied by voluntary contributions of private individuals whose interest has been excited, and from small receipts of clubs, kindergarten, and library. In the case of the University Settlement in New York, the city contributed nearly \$2,000 for the library. Regular subscribers to settlement societies are styled fellows, associates, and members, who give annually from \$5 to \$100 each.

The number of settlements in the United States is 80, 16 of these being in New York; some are independent, while others are connected with churches. The Riverside Settlement and Hartley House are both established and maintained through the donations of the founders and their families. The College Settlement Association is an organization of college women, and has houses in New York, Philadelphia, and Boston. It is the hope of this association to pay their teachers through the fees of the pupils, instead of through donations. Hull House, in Chicago, is known all over the philanthropic world. Its influence is recognized on questions affecting the sanitary conditions of the ward in which it is located and in its relation to the civic life of the people. The improvement of the neighborhood is so marked since this settlement began its work that the Mayor of Chicago has made a Hull House resident chief garbage inspector of the city.

The whole idea of the settlement is brotherly love; not the charity which dispenses alms, but the altruism which prompts men and women to regard their own gifts and opportunities merely as happy instruments for leading others from misery and crime, a charity which is humble enough to value friendship without regard to class distinction; in short, a combination of political economy and love for fellow man.

SHAFTER, WILLIAM RUFUS, an American soldier, born in Kalamazoo County, Michigan, Oct. 16, 1835. His childhood and youth were passed amid agricultural surroundings. An old army comrade, who knew him in his earlier years, once said: "He was only a farmer's boy, tough and lean as hickory, following the scythe barefooted, in harvest, to bundle up the wheat that was to go into the shock that was to go into the stack." When the civil war broke out, young Shafter was appointed first lieutenant in the Seventh Michigan Infantry, on Aug. 22, 1861. Brig.-Gen. Napoleon J. T. Dana, in his official report of the battle of Fair Oaks, in describing the operations of his brigade when in the first line of battle, said: "Lieut. Shafter, Seventh Michigan Volunteers, in charge of the pioneers, who was slightly wounded but kept the field, furnished beautiful exhibitions of gallant conduct and intelligent activity."

Lieut. Shafter was honorably mustered out of service on Aug. 22, 1862, and two weeks later he became major of the Nineteenth Michigan Infantry. When serving with this regiment, which formed a

part of Col. Coburn's command, he was captured by Confederate cavalry under Gen. Joseph Wheeler, and was taken to Libby Prison. His exchange was effected about sixty days later. Coburn's brigade, at the time of the capture, was on a foraging expedition, and fell into the hands of Wheeler's flying squadron. Brig.-Gen. Absalom Baird, commanding the third division of the Army of Kentucky, in a dispatch from his headquarters at Franklin, Tenn., dated March 11, 1863, said, in reporting the capture of Col. Coburn's command at Thompson's Station:

WILLIAM RUFUS SHAFTER.

"The bravery of the little band surrounded and captured was so conspicuous as to elicit the applause of the enemy himself, and we are informed that Cols. Coburn and Gilbert and Major Shafter were permitted on this account to retain their horses and side arms." Col. Coburn, in his official report on the affair, refers to Major Shafter as one of the officers "at their posts, bravely doing their duty." About a month after Major Shafter's exchange, in June, 1863, he was promoted to a lieutenant colonelcy, and on April 18, 1864, he was again honorably mustered out. The following day, however, he was made colonel of the Seventeenth United States (colored) Infantry. His promotion to brevet brigadier general was dated March 13, 1865.

In July, 1866, while still in the volunteer service, Brig.-Gen. Shafter was made lieutenant colonel of the Forty-first Regiment of regular infantry. He was mustered out of the volunteer service for the third time on Nov. 2, 1866. On the reorganization of the army, in 1869, he was transferred to the Twenty-fourth Infantry, having received in the meantime the brevet of colonel for gallant and meritorious services in the battle of Fair Oaks, Virginia. He became colonel of the First Infantry on March 4, 1879.

As a regimental commanding officer, Col. Shafter became noted for his discipline. The officers and men under his command were marked for their efficiency, including an excellent appearance on parade and general good behavior. As lieutenant colonel of the Twenty-fourth Infantry, he served with distinction, subsequent to the civil war, in the Indian campaigns in Texas and New Mexico.

In May, 1897, Col. Shafter was made brigadier general, and shortly after the declaration of war with Spain, he was appointed major general of volunteers, to date from May 4, 1898. His record, and that of his command during the campaign in Cuba, is given in detail under UNITED STATES.

Major-Gen. Shafter arrived home from Cuba with the headquarters of his division on Sept. 1, 1898, and landed at Montauk Point, Long Island. He was afterward placed in command of the Department of the East. At the termination of the campaign, according to statistics made public by the War Department, the percentage of loss to his force from conflict with the Spaniards was infinitesimal when compared with results as shown in the records of the civil war and previous conflicts in which United States troops were engaged. Adj.-Gen. Corbin, when asked, shortly after the war with Spain began, why Shafter was selected to lead the campaign in Cuba, said: "On account of his rank and conceded ability, his vigor and good judgment. He is one of the men in the army who has been able to do what he was ordered to do; not a man to find out how things can't be done."

SIAM, an absolute monarchy in southeastern Asia. The reigning King is Chulalongkorn, born Sept. 21, 1853, who succeeded his father, Mongkut, Oct. 1, 1868. With an area of about 244,000 square miles, the country has a population of about 10,000,000. The official religion is Buddhism. There is a steady immigration of Chinese, of whom 37,475 came in 1896. Bangkok, the capital, has about 200,000 inhabitants, half of whom are Chinese. The imports in 1896 were valued at \$14,747,000, and the exports at \$27,505,000. The merchant marine numbers 18 vessels, of 5,238 tons, including 4 steamers, of 658 tons. There are 92 miles of railroad, and 1,810 miles of telegraph. The King has an army of 10,000 men, trained and commanded by European officers, which has been formed since the war with France, when he had only 3,000 troops, not half of them trained in any way. Of arms he has 10,000 Mannlicher repeating rifles and 40,000 Mausers. His fleet consists of 2 cruisers and 4 gunboats.

SOUTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution May 23, 1788; area, 3,750 square miles. The population, according to each decennial census, was 249,073 in 1790; 345,591 in 1800; 415,115 in 1810; 502,741 in 1820; 581,185 in 1830; 594,398 in 1840; 668,507 in 1850; 703,708 in 1860; 705,606 in 1870; 995,577 in 1880; and 1,151,149 in 1890. Capital, Columbia.

Government.—The following were the State officers during the year: Governor, W. H. Ellerbe; Lieutenant Governor, M. B. McSweeney; Secretary of State, D. H. Tompkins; Treasurer, W. H. Timmerman; Comptroller, L. P. Epton; Attorney-General, W. A. Barber; Adjutant General, J. G. Watts; Superintendent of Education, W. D. Mayfield; Phosphate Inspector, A. W. Jones; Chief Justice of the Supreme Court, Henry McIver; Associate Justices, Eugene B. Gary, Ira B. Jones, and Y. J. Pope; Clerk, U. R. Brooks. All are Democrats.

Finances.—The Governor in his message says the finances are still in an unsatisfactory condition; the Treasurer has been obliged to overdraw for small amounts upon various banks where the funds have been, in order to meet obligations. About \$500 of the old debt was funded this year, leaving \$350,208 outstanding Dec. 31, 1898. The amount of the interest-paying debt outstanding is \$6,494,657.47. The cash balance at the opening of the year was \$439,418.39; the amount received, \$2,407,283.88; the expenditures, \$2,396,025.21; leaving at the close of 1898, \$450,677.06, of which \$140,383.75 belongs to the general fund.

The total value of the assets of the cumulative phosphate royalty sinking fund is \$296,592.04. Of this amount, \$105,056.75 is lent to counties at a rate of 5 per cent. interest per annum. The sinking fund has permanently invested in State stocks \$35,728.56. There is invested in temporary loans to

banks, under the acts of Feb. 25, 1896, and Feb. 25, 1897, \$28,484.22. This leaves a balance, \$127,322.51, which has been deposited in banks, and which draws 4 per cent., payable monthly. The State received this year from the phosphate royalty \$23,522.64.

Education.—The total enrollment in the public schools was 275,889, of whom the majority, 150,787, were colored; it is an increase of 17,706 over that of the year preceding. The estimate of the number of children of school age in the State is 200,000 white and 350,000 colored.

During the past eight years 1,148 schoolhouses have been built at a cost of \$234,743.58; but every year there is necessity for using private houses for the overflow.

The cost of the schools was \$731,241.50, of which \$526,858.20 was for the schools for whites and \$204,383.30 for those for colored. The schools for whites were run an average of 4.82 months, and those for blacks 4.20 months. The expenditures of the whites exceed those for the blacks as follows: Salaries, \$275,128.47; rent, \$1,001.61; repairs, \$5,565.26; furniture, \$4,087.33; fuel and incidentals, \$4,125.58; maps, globes, and charts, \$14,470.83; library, \$634.83; sites, \$867.31; building, \$14,096.38; other purposes, \$2,747.44; aggregating a total of \$322,474.90. It will be seen that there was a little more than 2½ times as much spent on the white than on the black schools.

To the \$731,241.50 must be added some \$20,000 for the salaries of county superintendents and expenses of county boards of education, paid from the ordinary county funds, and also \$3,500 for this department, paid from the State treasury, the whole aggregating \$754,741.50, which is the total cost for the public schools for the year.

For the schools for whites there were 3,076 teachers, of whom 1,915 were women; and for the colored, 2,166, of whom 1,045 were women.

The trustees of the Peabody educational fund continue to allow the State 12 scholarships in the Nashville Peabody Normal College, each worth \$100, and traveling expenses for the recipients. For the first scholastic year they allow Winthrop Normal and Industrial College \$2,900, Claflin University \$700, and for teachers' institutes \$1,500; and \$850 has been given from the fund to the colored schools of Charleston.

In the past session 180 students were enrolled at the South Carolina College, of whom 92 were new students, 4 were graduates, 68 were in literary and classical courses, 27 in scientific courses, and 23 were studying law. At the June commencement 26 received diplomas.

The estimated expenses for the coming year were \$32,035, of which \$4,500 will be paid by the fees.

The preparatory department has been abandoned, and a plan made for admitting students on certificate from schools, conforming to certain regulations. Forty of the leading schools of the State have accepted the conditions, and are accredited schools of the college.

There was a disturbance in the Military Academy at the Citadel in April, which resulted in the dismissal of 64 cadets.

Winthrop Normal and Industrial School, at Rock Hill, admitted 463 girls at the last session, 344 in the college classes and 119 in the practice school. All the counties of the State are represented, and 4 other States have 8 in the college classes. It is found that 60 per cent. could not have attended college if Winthrop had not brought the opportunity within their reach. The number in the normal department is 177. The cost of maintenance is made smaller than it would otherwise be by the supplies from the farm of 144 acres attached to the college. The appropriation asked for is \$31,148.48.

The Institution for the Deaf and Blind is reported as in good condition.

Clemson College receives from the Hatch and Morrill funds, and other sources besides State appropriation, \$34,760. During the year the trustees set aside \$12,000 to build a textile training school. It is designed like a small cotton factory, and is to be equipped with specimen machinery for the work of all departments of such a factory, and students will be required to learn the use and construction of the machinery. It is intended to provide special instruction for those already working in mills at such times as will be convenient for them. Manufacturers have presented samples of the latest models of cotton machinery to the department to such an amount as to make the value of the property belonging to the Textile School almost double the amount that the State has expended on it. A class of 26 was graduated in February; more than 400 students were registered during the fall term.

There are in the State 61 high schools and academies for white students, and 7 for colored; and 24 colleges and universities for white students, and 4 for colored.

Charities and Corrections.—The State Hospital for the Insane had 933 inmates at the beginning of the year, and received 424. The daily average was 975. The number remaining at the close was 966. The total number under treatment was 126 greater than in 1897. The recoveries were 97, and the cases much improved 53. The last Legislature appropriated \$13,500 for the completion of the Parker Building, which was ready for occupancy in August; including the cost of the brick, which has been made by convict labor, it has cost about \$30,000; it will accommodate 400 patients. The total cost of maintenance was \$99,958. About 96 per cent. of the patients are maintained at the expense of the State.

There were 728 convicts in the Penitentiary Jan. 1; 280 were received and 14 who had escaped were recaptured. The sentences of 165 expired, 12 were pardoned, 31 died, 20 escaped, 3 were killed while trying to escape. There were 784 at the close of the year. The receipts for the year were \$70,009.91; the disbursements, \$65,205.47; the amounts collected Jan. 1, 1899, \$9,328.95. The balance on hand and to be collected was \$15,633.39, of which \$10,000 was ordered paid into the State treasury. The rains during the year cut down the cotton crop and affected the quality unfavorably, so that it is proposed to cut down the cotton acreage this year about one half.

The Governor was authorized to appoint a commission of 5 to investigate the workings of juvenile reformatories, and report on the advisability of establishing one in the State. Their conclusion was that such an institution should be established, but that for the present only negro youth should be committed, since there were but few white youthful criminals, and they could be sent at the cost of the State to reformatories in other States.

Military.—The State furnished about 2,500 men for the Spanish war. So many of these men were in the National Guard that the militia needs to be thoroughly reorganized.

The State pays annually \$100,000 in Confederate pensions.

Bills for furnishings for the volunteer troops were sent to Washington; but the Comptroller refused to pay them, on the ground that the State owes the Government about \$122,000 on some claims incident to the landscript legislation.

The Board of Health.—The Legislature appropriated \$1,500 for the use of the Board of Health, of which \$523 was paid for printing its report. There was an epidemic of smallpox this year, and

the State board took charge in localities where there were no local boards, but were hampered, in their work, the Governor says, by want of funds and of sufficient authority; and the epidemic had not been wholly conquered at the close of the year.

Industries and Resources.—During the cotton year ending Aug. 31, 1898, new spindles to the number of 211,532 were added to the factory facilities of the State, and new looms to the number of 7,950.

The cotton crop is given as 1,003,000 bales, and the corn crop as 17,500,000 bushels.

In an article on the resources of the State, the president of the Agricultural College for colored students, at Orangeburg, gives a partial list of the water powers, showing a total of 33,261 horse power developed and 74,617 undeveloped.

The report of the phosphate inspector says that the several companies lost in production about 8,000 tons by two disastrous storms—in August and October—and in all ways about 25,000 tons; but still the total production was 99,315 tons, an increase over 1897 of 23,002 tons. The total shipments were 94,098.24, a decrease of 1,138.96. The inspector urges a small appropriation to be used for examining for phosphate deposits the beds of the creeks intersecting the marsh lands of the State.

The Dispensary.—The Governor's message has a great deal on this subject, from which the following details are taken:

"This method of controlling the liquor traffic has now been in force for five and a half years, and the protracted and bitter struggle between its friends and its foes has reached a critical stage. At the last session of the Legislature the litigation instituted in the United States Circuit Court by Vandercook had reached the Supreme Court of the United States, on appeal from Judge Simonton's decision. For almost a year there had been absolute paralysis of the dispensary law, so far as its punitive features were concerned, and the constables had all been discharged. The dispensaries had been forced to fight free whisky on terms of absolute equality; yet, strange to say, they fought it successfully; for while the profits were reduced by this lawless competition, there was still enough business to make the dispensary self-supporting and leave a small margin of profit. In May last the Supreme Court at Washington handed down its decision, sustaining the constitutionality of the dispensary law in all its features, with the limitation only as to importation for personal use. The constabulary was reorganized and put to work, and from that time to this the force has been kept busy trying to destroy the unlawful traffic."

The report of the Board of Control says, in part:

"During Mr. Traxler's administration, covering a period of nineteen months, the net profits to the State, counties, and towns amounted to \$125,328.40. During the administration of Mr. Mixson, covering a period of fourteen months, the net profits to the State, counties, and towns amounted to \$313,974.08. Total profits for both of these periods, covering thirty-three months, \$439,302.48. During the incumbency of the State Board of Control, a period covering thirty-three months, the total net profits to the State, counties, and towns have amounted to \$853,219.95. This result has been obtained at a considerably reduced scale of profits and prices to consumers, with a volume of business increased but little."

Railroads.—The Railroad Commission says in its report:

"At the last session of the General Assembly an act was passed putting the express and telegraph companies under the supervision and control of the

Railroad Commission, and requiring this board to make rules for the government of, and rates of toll to be charged by, these companies on all business done in this State. Under this law the following tariff was issued, to be used by the express company of this State, which makes a considerable reduction in the express rates: The rate from 1 to 25 miles was reduced from 40 cents to 30 cents per hundred, and the 50-cent rate reduced to 40 cents, making a uniform tariff for all shippers."

Statistics are given of many of the roads. The Atlantic Coast Line of South Carolina has 928.91 miles operated in the State; its net income for the year ending June 30, 1898, was \$186,319.28, an increase of \$128,109.22 over 1897. The Southern Railway's income decreased from \$710,144.19 in 1897 to \$606,344.89 in 1898. The South Carolina and Georgia has been greatly improved since 1894. The Charleston and Savannah, 102 miles, with branch roads of over 40 miles, is in good condition and is constantly improving. The Florida Central and Peninsular has 103 miles of track in the State; its net income shows an increase over 1897 of \$19,344.49. The Columbia, Newberry and Laurent, having 75 miles, shows an increase of \$3,642.26. The Seaboard Air Line has 136½ miles in the State, and the net earnings show a slight increase. The Carolina and Northwestern had a net income in 1898 of \$10,554.37, an increase of \$282.93 over 1897. The Lancaster and Chester, 28 miles, has been improved under the present management. The Carolina Midland had in 1898 a net income of \$14,921.45, an increase of \$678.87. It is 72 miles long, 17 miles have been finished this year. The Georgetown and Western Carolina shows a falling off of \$439.18 in its net income. The Wilson and Summerton has 50.92 miles. Its net income for 1898 was \$14,907.68, an increase of \$204.81. The Blue Ridge, 34 miles long, is the only one in the State now in the hands of a receiver.

Signers of the Ordinance of Secession.—At the last session of the General Assembly permission was granted to a committee of ladies to place a mural tablet in the Statehouse commemorating the signers of the ordinance of secession; and the tablet was unveiled Dec. 20, the thirty-eighth anniversary of the signing.

Mob Law.—In a report giving the number of lynchings in each State in 1898, South Carolina was credited with 14 executions by mobs. In his message the Governor recommended that it should be made a crime for an officer to allow a prisoner to be taken from him by violence; that any county where a lynching has occurred should be liable to the heir of the victim in the sum of \$5,000; and that men convicted of participation in such an act should be disfranchised.

A most brutal and unprovoked murder was committed Feb. 22 by a mob at Lake City, Williamsburg County. A negro, Fraser Baker, was appointed postmaster of the town in July, 1897. There was nothing to be said against his character, but indignation was expressed at the appointment of a negro, and the United States Senators of the State and one of the members of Congress had asked, it is said, to have him removed. He had been fired at twice by concealed assassins, and on the night of Feb. 21-22 a mob surrounded his house, poured oil upon it, and set it on fire. When the family attempted to escape, the murderers opened fire upon them, killing the postmaster and his youngest child, two years old, and wounding his wife, son, and two daughters so that they are maimed for life. Six men were arrested at Lake City, June 28, by United States authorities, charged with being the leaders of the mob. They were taken to Charleston and bound over for trial after a preliminary

ary hearing. A seventh man had turned State's evidence and told the story of the planning of the crime.

On Feb. 12 an innocent negro was killed by a band of eight or ten white men who were looking for another negro who had been tried twice before a white jury on a charge of arson: the first jury could not agree, and the second acquitted him.

On Jan. 27 a negro who had killed a constable was lynched while trying to escape arrest in Florence County, by a mob said to number 200 to 250.

Three negroes were shot by a mob Oct. 25, at Edgefield. They were believed to be the murderers of Mrs. Atkinson, who was shot while driving with her husband, who was probably the intended victim.

An election riot took place Nov. 8 at Phoenix, near Greenwood. A Republican, R. R. Tolbert, who was a candidate for Congress in the district, had made arrangements to have a record kept of the votes of those who were rejected either for registration or at the polls. He had three forms of blanks prepared; the first was to be signed in autograph by every rejected voter who could both read and write, the second to be signed with a cross by every rejected voter who could read but not write, and the third to be signed by every rejected voter who could neither read nor write. He arranged to have these affidavits in the hands of a friend at each precinct, to be signed by the rejected voters in the presence of special witnesses and in the most public manner, and either sworn to on the spot before a notary or probated by the witness before the clerk of the County Court. These affidavits he intended to present in Congress as evidence that he would have been elected if the ballots of these men, or those who were qualified to vote, had not been rejected. While his brother was taking these affidavits, Boaz Etheridge, an election manager at a precinct two miles away, demanded the box in which they were kept. A quarrel and riot ensued in which Etheridge was killed, and T. P. Tolbert and all the negroes who had been helping him were wounded. A mob soon collected and surrounded Tolbert's house, and when his father, who was collector of the port of Charleston, drove up with his nephew he was fired upon and both were wounded. The elder Tolbert set out that night for Charleston, but was arrested at Chester. He was soon released, but was again arrested at Columbia, charged with inciting riot. He was committed to the Penitentiary, the authorities giving as a reason for not bringing him to court for examination that the First Regiment of South Carolina Volunteers were just about to be mustered out and might join a lynching party if one were proposed. Later in the month he was examined and discharged, no evidence being found to sustain the charge. R. R. Tolbert was obliged to leave his home and remove his family. During the early rioting several negroes are reported to have been killed; five more were tied to a log together and shot to death; and two more were found dead in a pasture. Others were killed before the end of the troubles, which lasted some days. Three white men were shot from ambush and wounded. A party of lynchers were dissuaded from going to kill T. P. Tolbert only on the representation that he was mortally wounded. The authorities at Washington made inquiry into the attack upon the collector of the port of Charleston, but as it appeared that he was not at the time engaged in the duties of his Federal office, it was decided that there was no ground for Government interference.

Legislative Session.—The annual session of the Legislature extended from Jan. 11 to Feb. 16. Lieut.-Gov. McSweeney presided in the Senate, and Speaker Frank B. Gary in the House.

John L. McLaurin, who was the choice of the people for United States Senator at the primaries, Aug. 31, 1897, was formally elected to the office. Chief-Justice McIver was re-elected, and the other officials chosen were:

John Pickens Derham, Comptroller General; Marion R. Cooper and J. O. Haselden, Members State Board of Control; W. O. Tatum and S. H. P. Garris, Members Penitentiary Directory.

The number of acts and resolutions passed was 206, the majority of which were of local interest only.

An act was passed requiring railroad companies to furnish separate first-class coaches or separate apartments divided by substantial partitions for white and colored passengers, providing that equal accommodations be supplied to all paying first-class fare. The penalty for violating the provisions of the act is a fine of \$300 to \$500. It does not apply to nurses on trains, nor to narrow-gauge roads, or to relief trains in case of accident, nor to through vestibule trains, nor to officers or guards transporting prisoners, nor to prisoners being so transported; and it is further required that a second-class car shall be attached to each train in which any person paying second-class fare may ride. Railroad companies were made liable to penalty for not posting schedules of rates. A lien on railroads for payment for labor and materials used in their construction was provided for.

The powers of the Railroad Commission were extended over telegraph and express companies, which are to pay a proportionate part of the salaries of the commissioners. Charges between points within the State are subject to regulation by the commission. Telephone companies may not discriminate unreasonably between their patrons in different localities.

An act to provide for taxation of telegraph, telephone, freight, car and express companies, copartnerships and corporations doing business in the State, provides that taxes shall be levied on that proportion of the total value of shares plus the mortgage indebtedness that the length of the line bears to its total length.

The insurance law was amended so that companies and associations transacting business in the State must have at least \$100,000 of surplus or capital, or file with the Comptroller General the certificates of securities worth at least that sum, or, in the absence of such capital deposit, then to deposit with the State Treasurer of South Carolina valid securities aggregating \$10,000, or a bond for said amount made by a solvent surety company, which bond shall be conditioned to pay any judgment entered up in any court of competent jurisdiction in this State upon a policy of insurance issued to any citizen of this State by any such company.

An act for regulating the government of counties changes the entire method in most of the counties; in some of them the method is already in use.

An act to regulate the rate of interest upon contracts arising in the State for the use of money or other commodity, provides that no greater interest than 7 per cent. shall be charged either by way of straight interest, discount or otherwise, except upon written contracts, wherein, by express agreement, a rate of interest not exceeding 8 per cent. may be charged.

To facilitate the settlement of estates, it was provided that executors or administrators may pay a legacy, after two years from the time it becomes due, to the judge of the probate court by whom the letters testamentary were granted, if they show to his satisfaction that they are unable to ascertain the whereabouts of the legatee. The amount so paid

shall be protected by the official bond of the judge, and shall be held for the legatee subject to the order of the probate court or any court of competent jurisdiction.

Other enactments were:

Allowing county auditors to destroy original tax returns after five years.

Allowing cities and towns to collect taxes in installments.

Requiring emigrant agents to pay \$500 annually for license to operate in any county.

Amending the laws relating to distress for rent.

Providing that contracts secured by mortgages on real property in the State must be governed by the laws of the State without regard to the place named for their execution.

Allowing only 25 cents a day for dieting prisoners in jail in Charleston and Aiken Counties.

Providing a penalty for the manufacture or sale of adulterated drugs, food, or drinks; the Board of Health may exempt articles and is to appoint inspectors and chemists to enforce the law.

Amending the law on fertilizers so that they are to be branded high, low, or standard grade, according to the percentage of certain ingredients contained.

Authorizing the Secretary of State to renew charters, except of railway, canal, and turnpike corporations, granted by special acts.

Amending the antitrust law so as to make it cover tariffs, tolls, rates, premiums, and prices, instead of prices only.

Making it unlawful to manufacture liquor within two miles of any church or school.

Giving power to the colleges of the State to confer the degree of licentiate of instruction for a course of study approved by the Board of Education, which shall entitle the student to a certificate as teacher for public schools.

Requiring (instead of empowering as heretofore) county boards of education to set aside not more than \$500 to provide text-books at cost. No educational institution receiving money from the Free School fund may use a text-book disapproved by the State board.

Setting aside the third Friday of November as Arbor Day.

Making the law relative to outlawing of liens on real estate apply also to mortgages executed prior to 1879.

Requiring jurors to be drawn publicly.

Providing that sheriffs and their deputies may arrest without warrant for violation of criminal laws, committed in their view, at the time of violation or immediately thereafter; and any person may arrest on view of a larceny committed.

Making the embezzlement of public funds a felony and prescribing a penalty.

Declaring June 3, the birthday of Jefferson Davis, a public holiday.

Political.—State officers were to be elected in November, but the interest centered in the Democratic primaries, which practically settled the whole result. In the first primary there were seven candidates for the nomination for Governor—Messrs. Ellerbe, Featherstone, Tillman, Schumpert, Watson, Archer, and Whitman. The contest in the second primary, Sept. 13, was between the two standing highest in the first—Gov. Ellerbe and C. C. Featherstone—and resulted in the choice of Gov. Ellerbe by a vote of 37,723 to 33,271. This was a victory for the dispensary system, which Gov. Ellerbe favors, Mr. Featherstone being in favor of prohibition. The other State officers placed upon the Democratic ticket by the result of the primaries were: Comptroller General, John P. Derham; Secretary of State, Marion R. Cooper; Adjutant General, J. W. Floyd;

Attorney-General, G. D. Billinger; Superintendent of Education, J. J. McMahan; Railroad Commissioner, C. W. Garriss. The Lieutenant Governor and the Treasurer were renominated without opposition.

All these officers were elected in November. The seven members of Congress from the State are all Democrats, as are all the members of the State Legislature except one member of the House, who is a Republican.

SOUTH DAKOTA, a Western State, admitted to the Union Nov. 3, 1889; area, 77,650 square miles; population, according to the census of 1890, 328,808. Capital, Pierre.

Government.—The following were the State officers during the year: Governor, Andrew E. Lee, Populist; Lieutenant Governor, Daniel T. Hindman, Republican; Secretary of State, William H. Roddle, Republican; Treasurer, K. G. Phillips, Republican; Auditor, Henry E. Mayhew, Republican; Attorney-General, Melvin Grigsby, Populist; Superintendent of Public Instruction, Frank Crane, Republican; Commissioner of Public Lands, John L. Lockhart; Railroad Commissioners, W. T. La Follette, Alexander Kirkpatrick, W. H. Tompkins; Insurance Commissioner, J. H. Kipp, succeeded temporarily in February by T. H. Ayers, and in March by L. C. Campbell; Oil Inspectors, Messrs. De Woody and Dowdell; Chief Justice of the Supreme Court, Dighton Corson, Republican; Associate Justices, Dick Haney and Howard G. Fuller, Republicans; Clerk, Miss Jessie Fuller.

Finances.—The State debt Jan. 1, 1897, was \$1,238,300; July 1, 1898, it was \$862,300. It was still further reduced by the end of the year.

The Legislature of 1897 made appropriations aggregating \$96,175 less than those of the preceding one; and the income from license, insurance, and oil-inspection fees was \$140,420 greater.

The tax levy this year was fixed at 3 mills. 2 for the general fund and 1 for the bond interest and sinking funds. A levy of 3.2 mills was made on telegraph, telephone, express, and sleeping-car companies, which is in lieu of all other taxes in the State.

Valuations.—The total valuation of the State for assessment was placed by the board in August at \$118,580,582, of which \$9,639,814 is corporation property. The number of cattle returned was an increase over the returns of 1897, as were also the numbers of horses and sheep; there was a small decrease in the number of hogs. The values of the different kinds of personal property by classes are: Cattle, \$6,923,678; horses, \$802,407; sheep, \$503,084; hogs, \$384,325; mules, \$71,412; vehicles, \$671,086; money and credits, \$726,170; household furniture, \$722,873; stocks and shares, \$1,202,854; all other, \$2,780,209. The valuation of corporation property is thus divided among the different classes: Railroads, \$328,053; telegraph, \$150,140; telephone, \$72,221; express companies, \$78,400; sleeping cars, \$11,000.

Military.—The strength of the National Guard of the State in April was 1,100. Under the first call for volunteers, the State's quota, as apportioned by the War Department, was 780; but it furnished a regiment of infantry and five companies of Grigsby's cowboy cavalry regiment—about 1,350 in all. The cost of raising and mobilizing the First Regiment was given as about \$14,000. The quota under the second call was 1,110. Men were already enrolled in twelve companies, a part of which were drilled and ready to respond to the call. The First Regiment was sent to Manila.

Banks.—At the close of business, Feb. 15, a statement of the condition of the 26 national banks showed that they had increased their loans and

discounts since December, while the individual deposits and the average reserve were decreased. The loans and discounts were \$3,322,287; the individual deposits, \$4,093,906; the average reserve, 32.17 per cent. The holdings of gold coin were \$304,955, an increase of \$17,000.

Industries and Products.—There are 145 creameries in the State, and the yearly output of butter from its dairies is worth about \$3,000,000.

The wool product was given as 2,060,484 pounds. The wheat product was estimated at about 36,000,000 bushels.

The gold output of the Black Hills region was estimated at \$8,000,000. The total earnings of the Homestake for the year ending June 1 were \$2,494,374.53.

A natural-gas well at Pierre has been taken by the city and steps have been taken for the sinking of another.

Public Lands.—The annual sale of school lands, completed in April, disposed of 15,457 acres at an average price of \$13 an acre. The total sales of school lands, including those of this year, are 161,142 acres, and the price averages a little less than \$14 an acre.

The forest reservations, which are permanently withdrawn from settlement for the purpose of preserving the timber and protecting the sources of the streams, cover 967,680 acres.

Charges against Officials.—The Governor removed the Insurance Commissioner in February, assigning as a reason that his deputy had been pursuing the methods of C. H. Anderson, former insurance examiner, and had collected money illegally from companies; and that the commissioner did not compel restitution and attempted to justify the action of his deputy. He refused to resign and the Supreme Court decided against him. The State has cases in court against ex-Auditor Hipple and Insurance Examiner Anderson.

In April the public examiner filed a report in regard to the case of Joseph Freudenfeld, who was treasurer of the Board of Regents of Education from 1891 to 1894, when he resigned, and declared that on account of the failure of the Farmers' and Merchants' Banks, of Plankinton, and the Chamberlain National Bank he could not turn in the funds due the State.

A settlement was effected by the board, in which \$3,900 was accepted from Freudenfeld and his bondsmen in full for a shortage of \$9,450. It has been lately charged that the losses by bank failures did not cover all the shortage. This called up the investigation, and the report shows a shortage of \$3,897 still remaining after bank shortages are accounted for.

From the investigations of the public examiner it appears that the State Treasurer, K. G. Phillips, who was the Republican candidate for Governor, has been receiving interest upon State funds deposited in banks which he has not turned into the State treasury. In his message the Governor estimates the total of the daily average balance of the State Treasurer in various banks the past two years at \$370,678.41, and computing the interest at 4 per cent., which is the rate received from the one bank which has been investigated, he says that the Treasurer is now in default to the State in the sum of \$52,653.86 on the interest deals. The matter was placed in the hands of the Attorney-General, with instructions to prosecute and secure the return of the interest to the State; but he reported that he found no law to cover the case.

Court Decisions.—The act of 1897 providing that decisions of the circuit court in actions to recover money or property less than \$75 shall be final, was declared unconstitutional by the State Supreme

Court, because it violates the article of the Constitution requiring that laws relative to courts shall be general and of uniform operation throughout the State. This law does not include in its provisions certain county courts having concurrent jurisdiction with circuit courts.

In a decision in October the same court held that personal taxes are a lien from the date of filing.

Political.—State officers were chosen at the November election, as well as the Legislature and the two members of Congress.

The State Central Committee of the People's party, in deciding upon the time and place for the State convention, considered a resolution to ask the Democrats and Free-Silver Republicans to hold their convention at the same time and place. This met with some opposition from the Middle-of-the-Road Populists, and it was finally modified so as to invite all opposed to the gold-standard and gold-worshipping Republican party to unite with the Populists in the campaign.

The Democratic State Committee appointed a convention at the same time and place, and passed the resolution: "It is hereby declared to be the sense of this committee that all the forces of the State opposed to the principles advocated by the Republican party as at present organized should co-operate in the next campaign."

The Free-Silver Republicans followed with the resolution:

"Whereas the State Central Committee of the People's party assembled at Huron invited co-operation, the Silver Republican party in the approaching campaign, in response to the same, hopes that co-operation of all forces supporting the reforms urged by the People's Democratic and Silver Republican parties in the campaign of 1896 may be secured."

The three conventions met, and agreed upon a plan of fusion.

The platforms were in accord, all favoring free coinage at 16 to 1, opposing bond issues, demanding the passage of the free-homes bill, favoring Government issue of all money, approving the war, denouncing injunctions by Federal courts, and calling for the initiative and referendum, the nomination of United States senators by convention, and public ownership of public utilities.

The platform of the Free-Silver Republicans said:

"We are opposed to the present pooling and trust-fostering policy of railroad management, whereby railroads charge exorbitant rates for transporting public necessities over public highways that should properly belong to Government, so that they may pay interest and dividends on a fictitious valuation annually increased by larger bonded capitalization.

"We heartily commend and indorse the reform forces in the recent Legislature for the enactment of the present railroad law, thus redeeming the pledge made in the campaign of 1896; and we indorse the course of the present Railroad Commission in the courageous struggle it is making for the establishment of a reasonable maximum freight and passenger rate, in conformity with the provisions of that law.

"We denounce the manipulators and managers of the Republican party for their evident sympathy and covert support of the trusts and combines which have been formed to control the price of nearly every article of human necessity. The toilers and producers of the nation under the present system are forced to sell their labor and their products in competition with the whole world, and at the same time to purchase their necessities at such prices as the trusts may mercilessly establish.

"We are in favor of Government postal savings banks, which will prevent unscrupulous banking

organizations from swindling honest depositors of their surplus earnings; and we also favor a Government postal telegraph system, which will prevent telegraph monopolies from controlling the transmission of commercial and public thought at extortionate rates."

The resolutions favored also a law making railroads and other corporations liable for injuries to employees resulting from negligence of their co-employees, a uniform system of text-books for public schools, and the purchase of supplies of State and county officers from dealers within the State.

The Populist platform had among its declarations the following:

"We regard the life-tenure system in our Federal judiciary as subversive of liberty, and we demand the election of members of the United States Supreme Court for stated terms by direct vote of the people.

"We recommend that at the State convention of the People's party to be held in 1900 a candidate for United States Senator be nominated, to be voted for by the Legislature elected by the party.

"We favor the State taking proper steps looking to the publication of all necessary school text-books, the same to be furnished school patrons at cost.

"We demand an equitable tax upon the franchises and property of railroad and other corporations, and we denounce the majority of the State Board of Equalization for its refusal to assess railroad property on the same basis as that of the citizens of the State."

Among the resolutions of the Democratic Convention were these:

"We congratulate the people of this State upon the splendid legislation for the control and regulation of freight and passenger tariffs enacted by the fusion forces in the last Legislature, and we commend the earnest and persistent efforts of our Board of Railroad Commissioners in upholding said law, and in seeking to enforce it. We arraign and denounce the Republican party in the State for its encouragement of the extreme and unreasonable methods resorted to by the railway companies to defeat the successful enforcement of this law.

"We favor the enactment of laws in behalf of laboring classes, regulating the employment of women and children, limiting the hours and days of labor, regulating labor contracts, providing for compulsory arbitration of labor disputes, the abolition of government by injunction, and compelling employers to take better precautions for the safety, health, and comfort of their employees. We favor the repeal as to railroad corporations of the fellow-servant rule as embodied in the statutes of this State.

"We are unalterably opposed to the convict labor of the State entering into competition with the paid labor of the State.

"We favor the enactment of a graded income tax so adjusted as to make those who are best able bear the expenses of government.

"We favor the establishment of Government savings bank under a properly regulated postal savings system.

"We favor the publication by the State at its own expense of all the text-books for use in its public schools, and the furnishing of such text-books to the school children free of charge.

"We heartily indorse the action of the Democratic minority in Congress in its firm stand against the policy of the Republican party in its effort toward imperialism through colonial expansion."

The ticket follows: For Governor, Andrew E. Lee; Lieutenant Governor, F. C. Robinson; Secretary of State, George Sparling; Treasurer, Maris Taylor; Attorney-General, C. S. Palmer; Auditor,

Hugh Smith; Superintendent of Public Instruction, L. F. Kintz; Land Commissioner, John Seolard; Railroad Commissioner, W. H. Tompkin; Representatives in Congress, John E. Kelley, Freeman Knowles.

The Republican State Convention met at Mitchell, Aug. 24. The platform declared in favor of protection and the gold standard, approved the annexation of Hawaii, urged the extension of civil service reform, declared against corporations and trusts, favored internal revenue to compel corporations to bear their share of taxation, postal savings banks and postal telegraph system, and the Nicaragua Canal, pledged the party's support to the Railroad Commission in carrying out the rate fight, and suggested that Republicans study the initiative and referendum. A resolution favoring the purchase of supplies from State institutions was adopted.

The candidates were: For Governor, Kirk G. Phillips; Lieutenant Governor, J. T. Kean; Secretary of State, W. H. Roddle; Treasurer, John Schamber; Superintendent of Schools, E. E. Collins; Auditor, J. D. Reeves; Land Commissioner, David Eastman; Attorney-General, John L. Pyle; Railroad Commissioner, William G. Smith; Members of Congress, R. J. Gamble and C. H. Burke.

The candidates of the Prohibition party were: For Governor, K. Lewis; Lieutenant Governor, F. J. Carlisle; Secretary of State, G. A. Grant; Treasurer, H. H. Curtis; Auditor, J. R. O'Neil; Superintendent of Public Instruction, Florence Alguire; Commissioner of Schools and Public Lands, Gust. A. Johnson; Railroad Commissioner, P. H. Olmson; Representatives in Congress, A. Jamison and M. D. Alexander.

The official count of the election returns showed that the fusion candidate for Governor, A. E. Lee, had been elected by 37,319, against 36,949 for K. G. Phillips, the Republican candidate, and 891 for Lewis, Prohibition. The remainder of the Republican State ticket had pluralities over the fusion candidates of 4,000 to 5,000. Both Representatives in Congress are Republicans, and the Legislature will stand: Republicans in the Senate 28, in the House 59; Fusionists in the Senate 17, in the House 28. Republican majority on joint ballot, 42.

Steps were taken toward a contest by the defeated candidate for the office of Governor, but apparently the contest was abandoned.

Constitutional Amendments.—Three proposed amendments to the State Constitution were submitted to vote at the election, and two of them were carried.

The first was to amend the section prescribing qualifications of voters by striking out the word "male," thus giving the ballot to women. It was rejected by 3,285 majority.

The second was to add an article to the Constitution as follows:

"ARTICLE XXVII, SECTION 1.—The manufacture and sale of intoxicating liquors shall be under exclusive State control, and shall be conducted by duly authorized agents of the State, who shall be paid by salary and not by commissions. All liquors sold shall be first examined by a State chemist and the purity thereof established.

"SEC. 2.—The Legislature shall by law prescribe regulations for the enforcement of the provisions of this article and provide suitable and adequate penalties for the violation thereof."

This is the system introduced a few years ago in South Carolina.

The amendment was carried by a majority of 1,643. The question arose whether the adoption of the amendment had the effect of repealing the license law; the Attorney General gave his opinion that it had not, but that the license law would con-

tinue in force till the Legislature should prescribe means for carrying the amendment into effect.

The third amendment was to make Section 1 of Article iii of the Constitution read as follows:

"The legislative power of the State shall be vested in a Legislature which shall consist of a Senate and House of Representatives, except that the people expressly reserve to themselves the right to propose measures, which measures the Legislature shall enact and submit to a vote of the electors of the State; and also the right to require that any laws which the Legislature may have enacted shall be submitted to a vote of the electors of the State before going into effect (except such laws as may be necessary for the immediate preservation of the public peace, health, or safety, or support of the State government and its existing public institutions. Provided, that not more than 5 per centum of the qualified electors of the State shall be required to invoke either the initiative or the referendum. This section shall not be construed so as to deprive the Legislature or any member thereof of the right to propose any measure. The veto power of the executive shall not be exercised as to measures referred to a vote of the people. The enacting clause of all laws approved by vote of the electors of the State shall be, 'Be it enacted by the people of South Dakota.' The Legislature shall make suitable provisions for carrying into effect the provisions of this section."

This amendment was carried by a majority of 7,333. It is the first attempt to establish the initiative and referendum as a part of the law-making process of a State.

SPAIN, a constitutional monarchy in southwestern Europe. The legislative power is vested in the Cortes, consisting of a Senate of 360 members and a Congress of 432 members. Of the Senators half are life and official members, including the royal princes, *grandees* of Spain, having an income of 60,000 pesetas, or francs, and the superior functionaries of state, and half are elected for five years by corporate bodies and the highest taxpayers. The members of the Congress, or Chamber of Deputies, are elected for five years by electoral colleges in the proportion of 1 deputy to 50,000 of population. All male Spaniards, twenty-five years of age or over, possess the electoral franchise.

The reigning King is Alfonso XIII, born May 17, 1886, who at his birth succeeded his father, Alfonso XII. During his minority his mother, Maria Christina, daughter of Karl Ferdinand, Archduke of Austria, acts as Regent.

The Cabinet of ministers, formed on Oct. 4, 1897, was composed as follows: President of the Council, Praxedes M. Sagasta; Minister of Foreign Affairs, Pio Gullon; Minister of Justice, C. Groizard; Minister of the Colonies, S. Moret y Prendergast; Minister of the Interior, F. R. Capdepon; Minister of War, Gen. M. Correa; Minister of Marine, Rear-Admiral Bermejo; Minister of Finance, Lopez Puigcerver; Minister of Public Works, Commerce, and Industry, Count Xiqueña.

Area and Population.—Spain has an area of 197,670 square miles. The population at the census of 1887 was 17,565,632, including 9,694 at the convict stations of Ceuta, Peñon de Velez, and Melilla, on the African coast.

Finances.—The ordinary revenue in 1896 was 766,231,751 pesetas, and the expenditure 788,200,758 pesetas. In the budget for 1899 the revenue is estimated at 865,816,890 pesetas, of which 297,360,810 pesetas come from direct taxes, 305,273,000 pesetas from customs and indirect taxes, 132,696,024 pesetas from stamps and *régie*, 24,787,056 pesetas from national property, and 105,700,000 pesetas from loans. The ordinary expenditures are estimated at

868,479,417 pesetas, of which 9,250,000 pesetas are for the civil list, 1,638,085 pesetas for the Cortes, 399,236,677 pesetas for the public debt, 1,614,651 pesetas for judicial expenses, 61,749,730 pesetas for indemnities and pensions, 980,833 pesetas for the presidency of the Council of Ministers, 54,748,649 pesetas for the Ministry of Pardons and Justice, 145,929,521 pesetas for the Ministry of War, 25,190,539 pesetas for the Ministry of Marine, 28,381,193 pesetas for the Ministry of the Interior, 80,728,570 pesetas for the Ministry of Public Works and of Public Instruction, 18,659,467 pesetas for the Ministry of Finance, 34,560,528 pesetas for the collection of revenue, and 875,000 pesetas for the colony of Fernando Po.

The extraordinary revenue for six years is estimated at 236,344,883 pesetas, of which 44,920,966 pesetas are required for repayments, 58,000,000 pesetas for the army, 71,175,678 pesetas for the navy, and 62,248,239 pesetas for railroads. In the revised budget the revenue was estimated at 866,014,869 pesetas from ordinary sources, and the expenditure at 865,508,774 pesetas.

The consolidated debt in 1897 amounted to £183,967,000 sterling, extinguishable debt to £66,225,000, Treasury loans to £14,574,000, and the floating debt to £18,280,000; total, £283,046,000. During the nine financial years ending with 1897, Treasury bills amounting to 464,812,000 pesetas were issued. For the expenses of suppressing the Cuban insurrection money was raised by means of Cuban bonds, customs bonds, and delegations to the amount of 1,900,000,000 pesetas, or £76,000,000.

The Army.—The continental army is divided into 8 corps d'armée, containing 15 divisions of infantry and 2 divisions and 4 brigades of cavalry. There are besides 2 divisions of infantry kept in the islands, 1 in the Balearic Isles and 1 in the Canaries, and 1 at Ceuta and 1 brigade at Melilla. The corps d'armée are composed of 56 regiments of infantry of 2 battalions, each battalion numbering 23 officers and 326 men in time of peace, and in time of war 27 officers and 1,000 men; 5 brigades of rifles, containing 20 battalions of 23 officers and 716 men, which number in war is increased to 27 officers and 1,001 men; 28 regiments of cavalry of 2 squadrons, the squadron numbering 5 officers and 100 men in peace or 150 in war; 17 regiments of field artillery, each of 4 mounted batteries of 6 pieces, the battery numbering 4 officers and from 71 to 98 men; 13 battalions of 3 companies of fortress artillery; 1 regiment of siege artillery; 4 regiments of sappers; 1 regiment of pontonniers; 1 battalion of railroad troops; 1 battalion of telegraphists; 1 brigade for topographical service; 1 section of laborers; 7 depots of artillery; 7 depots of engineers; 16 companies of administrative troops; and 16 companies of sanitary troops. Outside of the formations there are 1 regiment of field artillery and 4 batteries, containing 13 companies, of fortress artillery.

The effectives of the continental army according to the decree of July 9, 1898, were 63,991 infantry, 14,386 cavalry, 12,063 artillery, 5,539 engineers, 1,500 administrative troops, 901 sanitary troops, 1,296 royal guards, etc., 14,697 gendarmes, and 14,186 customs guards; total, 128,559. The war strength was estimated at 132,000 infantry, 17,156 cavalry, 12,166 artillery, 11,027 engineers, 11,140 administrative troops, and 483 sanitary troops; total, 183,972 men, with 14,250 horses and mules and 590 guns.

The Navy.—The ironclad fleet in 1898, after the conclusion of the American war (see UNITED STATES), consisted of 1 turret ship, the "Pelayo," of 9,900 tons; 3 armored cruisers, the "Cardenal Cisneros," "Carlos V," and "Princesa de Asturias"; 2 old

frigates, the "Numancia" and "Vitoria"; and 1 monitor, the "Puigcerda." The unarmored vessels included 11 cruisers, the "Alfonso XII," "Alfonso XIII," "Aragon," "Conde de Venadito," "Infanta Isabel," "Isabel III," "Lepanto," "Marques de Ensenada," "Navarra," "Nueva España," and "Quiros"; 12 torpedo gunboats; 2 first-class gunboats; 3 torpedo-boat destroyers, the "Audax," "Osado," and "Proserpina"; and 11 first-class torpedo boats. There were under construction 1 ironclad, the "Pedro d'Aragon," of 6,840 tons and 13,000 horse power, with 40 guns and 2 torpedo tubes; 1 armored cruiser, the "Cataluna," of 7,000 tons and 15,000 horse power, with 24 guns and 7 torpedo tubes; 3 cruisers, the "Isabel la Catolica," "Reina Regente," and "Rio de la Plata"; and 1 torpedo gunboat.

Commerce.—The total value of the imports in 1896 was 909,589,000 pesetas, and of the exports 1,021,252,000 pesetas. The imports of cotton were 68,801,000 pesetas in value; coal, 50,830,000 pesetas; timber, 36,070,000 pesetas; tobacco, 32,840,000 pesetas; wheat, 35,616,000 pesetas; salt fish, 24,371,000 pesetas; animals, 23,192,000 pesetas; machinery, 26,885,000 pesetas; chemicals, 22,858,000 pesetas; hides and skins, 22,541,000 pesetas; sugar, 17,180,000 pesetas; iron, 22,127,000 pesetas; ships, 13,163,000 pesetas; coffee, 17,749,000 pesetas; wool, 12,879,000 pesetas; silks, 10,746,000 pesetas; woolen goods, 8,840,000 pesetas; cacao, 11,995,000 pesetas; linen yarn, 8,728,000 pesetas; petroleum, 7,187,000 pesetas; silk, 7,519,000 pesetas. The exports of wine were 144,459,000 pesetas in value; iron, 59,590,000 pesetas; lead, 49,829,000 pesetas; cotton goods, 53,123,000 pesetas; copper, 48,600,000 pesetas; oranges, 40,908,000 pesetas; boots and shoes, 24,309,000 pesetas; animals, 27,183,000 pesetas; cork, 31,564,000 pesetas; raisins, 14,966,000 pesetas; wool, 17,177,000 pesetas; wheat flour, 21,975,000 pesetas; almonds, 10,189,000 pesetas; hides and skins, 12,325,000 pesetas; grapes, 7,762,000 pesetas; paper, 9,659,000 pesetas; quicksilver, 8,413,000 pesetas; esparto grass, 6,954,000 pesetas.

The value, in pesetas, of the commerce with the different countries and colonies, in 1896, is shown in the following table:

COUNTRIES.	Imports.	Exports.
France	217,700,000	282,500,000
Great Britain	161,300,000	234,300,000
Germany	44,100,000	9,400,000
Belgium	40,500,000	17,700,000
Portugal	41,100,000	41,500,000
Sweden and Norway	22,900,000	2,700,000
Russia	43,500,000	900,000
Roumania	9,000,000	
Italy	21,500,000	10,100,000
Turkey	4,700,000	
Netherlands	4,300,000	10,400,000
United States	73,400,000	18,800,000
Cuba and Puerto Rico	140,000,000	299,000,000
Argentine Republic	8,700,000	10,100,000
Philippine Islands	23,000,000	41,300,000
Morocco	11,600,000	1,200,000
Other countries	42,300,000	43,400,000
Total	909,600,000	1,023,300,000

Of the total trade, excluding the precious metals, France had 25.4 per cent., Great Britain 23.9 per cent., Cuba 10 per cent., the United States 5.4 per cent., and all other countries 35.3 per cent. The imports from the United States consisted of lumber and cotton. After the lapse of the commercial treaties in 1892 the foreign trade went through great fluctuations, and when exports recovered from the loss of the old markets they were different and less beneficial to the producer. Owing to the colonial wars coined money was exported in large quantities. The chief exports in the order of their importance in 1896 were wine, 15 per cent. of the total value; silver money, 14.3 per cent.; minerals,

10.6 per cent.; metals, 9.6 per cent.; fruit, 8.8 per cent.; and cotton cloth, 5.4 per cent. Manufactured goods are of small importance compared with agricultural and mineral products. The chief imports are codfish, cacao, petroleum, wheat and other grains, spirits, sugar, coffee, and flour, which together produce 45 per cent. of the total duties on imports. The high tariff on raw materials prevented the growth of the manufacturing industries which would otherwise have been stimulated by the new import duties on manufactured goods. Practically all the textile goods exported went to the colonies, and this was approximately true of the boots and shoes and other manufactured goods.

Navigation.—In 1897 there were 9,668 Spanish vessels, of 6,612,378 tons, and 9,070 foreign vessels, of 7,622,876 tons, entered at Spanish ports, and 8,233 Spanish vessels, of 6,294,397 tons, and 9,119 foreign vessels, of 7,920,351 tons, cleared.

The merchant navy in 1898 numbered 1,145 sailing vessels, of 164,504 tons, and 436 steamers, of 341,951 tons.

Communications.—There were 8,020 miles of railroad in operation in 1897. The post office in 1896 carried in the internal service 83,068,000 letters, 768,000 post cards, 49,106,000 newspapers and circulars, and 165,000 money letters of the total value of 183,440,000 pesetas; in the international service, 20,863,000 letters, 462,000 post cards, 20,674,000 newspapers and circulars, and 44,000 money letters of the value of 14,680,000 pesetas; in transit, 244,000 letters and 53,000 newspapers and circulars. The receipts were 23,952,026 pesetas; expenses, 12,579,306 pesetas.

Bread Riots.—Although the wheat crop of 1897 was larger than the average, there was great scarcity of grain in the winter, when the heavy customs duties prevented the inflow of supplies from abroad. After the surcharge was imposed in 1895 the duty on wheat was 10.50 pesetas per 100 kilos and on flour 17.30 pesetas, yielding in that year and the next 17 per cent. of the whole customs revenue. Before the end of February bread riots occurred in Salamanca. When war broke out between Spain and the United States the food question disturbed the country more than the military danger. The sudden rise in the price of wheat occasioned desperate outbreaks in all parts of the country. In the beginning of May the Government prohibited the exportation of wheat, flour, rye, corn, and potatoes and suspended the import duties on those articles. The troops were employed in quelling bread riots at Talavera and Velazo, outbreaks of the fisherfolk of Gijon, striking workmen of Murcia, and coal miners of Oviedo, disturbances in Valencia, Caceres, and other places. The intermission and subsequent reduction of the corn duties did not suffice to check the rise in the price of flour or the growing distress and consequent unrest of the population. Disorders occurred at Cadiz, Jaen, and Albacete. At Martos and other places mobs of men and women destroyed the *octroi* offices. At Linares the police fired into tumultuous crowds, killing many persons.

Martial Law.—When the news came of the Spanish defeat in the Philippines, political dangers complicated the situation rendered difficult already by the lack of employment and dearth of food and the discontent of the people on account of the conscription of the young men, who for years had been drained from the country to perish of tropical diseases in Cuba and the Philippines, and were now taken in greater numbers to fight the Americans. Gen. Weyler attacked the Government for its reversal of his rigorous Cuban policy and assumed the lead of a party of Conservative malcontents who made revolutionary demonstrations in Madrid

and other cities in the company of the Carlists. These grew alert, active, and turbulent in Valencia and other places where they were numerous. The socialists and anarchists turned the bread riots into political demonstrations. The Republicans were ready to renounce their acceptance of the constitutional monarchy, and in the Cortes Señor Salmeron attributed all the evils from which Spain suffered to the policy of the monarchical parties, which spent millions to maintain an *efete régime* and had not the wherewithal to buy ironclads. On May 3 a state of siege was proclaimed in Madrid. Public meetings and street demonstrations were prohibited, and newspapers were forbidden to publish news regarding military operations without special permission. The governors of the various provinces were authorized to resign their powers into the hands of the military authorities whenever they judged it expedient, and the military commanders were ordered in such case to proclaim martial law at once. This was done at Jaen and Albacete, where bread riots occurred, on May 9, and on the following day at Valladolid and Cordova in consequence of similar disturbances. The state of siege was extended to the whole of Andalusia and Catalonia and to the provinces of Saragossa, Valladolid, Toledo, Coruña, and Madrid. At Logroña, on May 11, women armed with clubs and axes pillaged the provision and flour stores and repelled a charge of cavalry.

Elections to the Cortes.—The Cortes were dissolved by royal decree on Feb. 26 and the elections were fixed to take place for Deputies on March 27, and for Senators on April 10. Except at Bilbao and a few other mining and industrial centers the elections passed off without excitement. The people scarcely showed any interest, and the number of votes recorded was unprecedentedly small. The Government obtained, as usual, an overwhelming majority, electing more than 250 candidates to about 75 Conservatives, 10 followers of Romero Robledo, 25 Republicans, 5 Carlists, and a few independents. From Cuba 21 Autonomists and 9 Conservatives were returned. The senatorial elections resulted in the return of 140 Ministerialists out of 180 candidates.

Session of the Cortes.—When the Cortes assembled on April 25 there was no opposition to any measure necessary to strengthen the hands of the ministers in prosecuting the war. Only Gen. Weyler raised his voice against the bill of indemnity approving the act of the Government in granting autonomous institutions to Cuba. The financial necessities of the Government were the most urgent question. Showing a balance between ordinary revenue and expenditure, the Government obtained an extension for two years of the extraordinary budget established in 1896 and modified in 1897, only the special naval credit was raised from 18,000,000 to 90,000,000 pesetas. An issue of 100,000,000 pesetas of Treasury bonds was authorized in order to provide the money, and these were guaranteed by the Almaden quicksilver mines. To raise means for meeting the expenses of the war the Government was authorized to issue state rentes or Treasury bonds or any form of fresh securities that the military or naval authorities required; to issue new currency notes up to 2,500,000,000 pesetas, protected beyond the previous limit of 1,500,000,000 by a metallic reserve of 50 per cent. or of 66½ per cent. beyond 2,000,000,000 pesetas, though all restrictions were removed in case of extreme necessity; to negotiate for advances with the monopoly companies of matches, tobacco, minerals, and the like; to float a new issue of Treasury bonds bearing such interest as might be agreed upon between the Government and the Bank of Spain; and to convert the external debt held in Spain into internal

bonds, paying in francs from Oct. 1, 1898, only the coupons of bondholders who can prove that they are foreigners already domiciled abroad, all others being paid in ordinary Spanish currency. The Cortes declined to sanction a levy of a year's land and industrial taxes in advance, but authorized a surcharge of 20 per cent. on all taxes except customs duties. An indemnity bill was voted for the revision of the import duty on grain by the Government. Señor Moret, when assailed for his policy of concessions in Cuba and blamed for the military unpreparedness of the Government, said that no amount of foresight could affect the fact that the Americans outnumbered the population of Spain four to one and were fighting close to their base of operations, and that the Spaniards were a fatigued race who once marched over the world as conquerors and now exhibit their glorious cloak full of rents. To the Republicans and Carlists he addressed the following question: "If you do not reform men and ameliorate the social and political education, what could a change of institutions mean? Only one more revolution, one more cause of weakness to the shaken and exhausted body of our common country."

The Cortes, in order to relieve the industrial crisis in Catalonia, suspended the import duty on raw cotton, and in order to encourage blockade-running on the coast of Cuba abolished the differential duties on foreign ships trading between Spain and her colonies. Export duties were imposed on wool and silk to keep these raw materials for the supply of Spanish manufacturers and on minerals as a revenue measure. With the issue of new bank notes the premium on gold rose rapidly, and the people began to demand silver for notes and to draw out their deposits in silver until a serious currency crisis was produced. The rise in exchange had stimulated exportation of raw materials and thereby aggravated the economic crisis.

Reconstruction of the Cabinet.—Although the Cortes approved every war measure that the Cabinet proposed, recriminations for the breakdown of the national defense were unceasing. The attacks made both in the Cortes and outside on the Ministers of War and Marine, as well as on the Colonial Minister, rendered more and more difficult and precarious the tenure of the existing ministry, the members of which were at variance on the question of the ways and means of continuing the war and the advisability of invoking the intervention of the great powers. On May 16 Premier Sagasta tendered the resignation of the entire Cabinet to the Queen Regent, who commissioned him to organize a new ministry, retaining only those of his colleagues who were in favor of fighting out the war to the bitter end. The new Cabinet was announced on May 18, as follows: President of the Council of Ministers, Praxedes M. Sagasta; Minister of Foreign Affairs, F. Leon y Castillo; Minister of War, Lieut.-Gen. M. Correa; Minister of Marine, Capt. R. Añón; Minister of the Colonies, V. Romero Givon; Minister of Finance, Lopez Puigecerver; Minister of the Interior, F. R. Capdepon; Minister of Justice, C. Groizard; Minister of Public Works, Señor Gamazo. Señor Leon y Castillo suggested that he could serve his country better in his post as Spanish ambassador to Paris, and consequently the portfolio of Foreign Affairs was given on May 24 to J. M. Sanchez y Gutierrez de Castro. Duke de Almodovar del Río. Señor Gamazo, who had entered the Cabinet reluctantly, wanted to leave it when the Minister of Finance opposed an impost on the national debt. Señor Puigecerver declared that the finances of the nation were in a satisfactory condition, assuring payment of all expenses of the war, but affirmed the necessity of increasing all

taxation, including that on agriculture, at least 20 per cent. For the enforced conversion of external into internal bonds the holders were given as partial compensation a premium of 10 per cent. He proposed to convert the floating debt of 543,000,000 pesetas into Treasury bonds. The coupon of the external debt was duly paid in June. After the disaster to Spanish arms at Santiago de Cuba, the Government prepared the country for the eventual loss of the colony which had cost Spain 1,870,000,000 pesetas and more than 100,000 lives since the outbreak of the rebellion in February, 1895. Amid the storm stirred up by the Spanish defeat Señor Sagasta threatened to resign. Public opinion fluctuated so violently that the ministers could not venture either to enter into negotiations for peace or to demand of the nation further sacrifices. The cost of the war was estimated to have been 3,000,000,000 pesetas. When all hope of German, French, or Russian aid had to be abandoned, and when peace seemed the only means of averting internecine conflicts, the Government found sufficient support for the preliminary conditions of peace negotiated through the medium of the French ambassador in Washington. The Cortes were convoked on Sept. 5 to give the necessary constitutional sanction to the protocol before the meeting of the Peace Commission at Paris on Oct. 1. The meeting of the Chamber was attended with tumult and disorder beyond precedent. Not only Republicans and Carlists, but Conservatives and discontented Liberals threatened the ministers with personal violence. In the Senate charges of cowardice and incompetence were uttered against the army officers. Gen. Polavieja charged politicians of both parties with being the cause of the country's misfortunes; Señor Canelejas threw all the blame on the Ministers of War and Marine. The Republicans, Carlists, and followers of Romero Robledo withdrew from the Cortes as an act of protest against the determination of the majority to restrict discussion. The public at large regarded the protocol and the tempest in the Cortes with equal apathy. The press censorship and the suspension of constitutional guarantees were continued. The Senate and the Chamber adopted the peace protocol and authorized the cession of national territory, upon which the brief and stormy session was abruptly closed on Sept. 14. In consequence of scandals brought to light in connection with the administration of Andalusia, Señor Gamazo, on Oct. 23, resigned from the Cabinet and Señor Sagasta assumed temporarily the portfolio of Public Works.

STEEL BUILDINGS. The substitution of steel for stone and brick as a building material has been brought about gradually, being first introduced in large buildings in the lower floors in order to gain space for show windows, etc., which were otherwise restricted in size by the thickness and breadth of the columns of masonry required to support a tall building. Thus it became common to erect business buildings in which most of the stone or brick work began at the second story, being supported usually by columns of cast iron or steel and horizontal steel girders. As demands came to architects for higher buildings, they introduced more steel, and 1890 may be set as the period when American architects began to accept the skeleton steel construction as desirable for buildings more than 125 feet high. Chicago was the first city in which these buildings were received with favor, but New York shortly learned their merits, and within the past five years has outstripped all other cities by the size and number of its towerlike business structures. There are now in New York 6 business buildings that exceed 300 feet in height, 19 that exceed 200 feet, and probably 100 that exceed 125 feet. The list of the principal

ones, with the height in feet above the street level and the number of stories, follows: American Surety Company, 23 stories, 306 feet; American Tract Society, 23 stories, 306 feet; Bank of Commerce, 20 stories, 270 feet; Commercial Cable, 21 stories, 280 feet; Dun, 15 stories, 223 feet; Gillender, 16 stories, roof 219 feet, tower 273 feet; Home Life Insurance Company, 16 stories, roof 219 feet, tower 280 feet; Hudson Realty Company, 16 stories, 206 feet; Ivins Syndicate, 30 stories, roof 350 feet, tower 382 feet; Manhattan Life Insurance Company, 23 stories, roof 242 feet, tower 350 feet; Mutual Life Insurance Company, 15 stories, roof 210 feet, final 230 feet; Hotel Netherland, 17 stories, 220 feet; New York Life Insurance Company, 12 stories, front 188 feet, tower 270 feet; New York Realty Company, 15 stories, 204 feet; O. B. Potter Trust, 20 stories, 270 feet; Postal Telegraph Company, 13 stories, roof 179 feet, penthouse 193 feet; Pulitzer, 15 stories, final 309 feet; St. James, 16 stories, 204 feet; St. Paul, 26 stories, 337 feet; Washington Life Insurance Company, 19 stories, 273 feet.

The Masonic Temple is the largest steel building in Chicago, being 20 stories high and 274 feet above the sidewalk. In Philadelphia the tower of the Broad Street railway station is the tallest structure of the kind, reaching 240 feet. The Ames building in Boston is the tallest in New England, being 186 feet. Measurement above the sidewalk does not always give an adequate idea of the size of these great steel structures, as many of them extend from 50 to 80 feet below the sidewalk, in reaching a sure foundation. This means that several of these structures measure more than 450 feet in extreme height, and as the ground plan of several of the larger ones covers about 15,000 square feet, it will be seen that they are capable of containing populations as great as are found in some small cities. The Dun building is the largest in area, being 131 feet front by 608 feet deep, and having 15 stories, giving about 1,000,000 feet of floor space. It is so long that its height of 223 feet does not seem remarkable. The Ivins Syndicate building, 13 to 21 Park Row, is the tallest yet constructed, and the first to outrun the twenties in number of stories. It has a front of 104 feet and a depth of 154 feet.

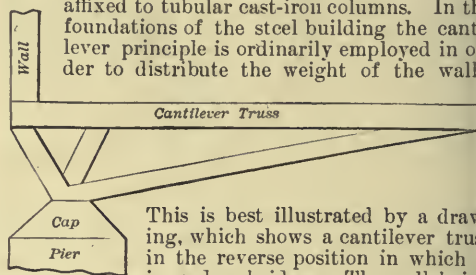

The rapid construction of so many great business buildings has been brought about by a combination of causes, the chief of which was a reduction in the cost of structural steel, and a demonstration that it added to the fireproof qualities of a building. When first introduced in buildings, steel was found to be a dangerous element in case of fire, because of its liability to warp when subjected to heat, such warpage tending to throw down any superstructure of stone, brick, etc., that rested on the steel. This danger has been diminished by covering the steel framework with terra cotta, brick, or some similar non-conductor of heat, thus protecting it in case of fire attacking the woodwork. When properly covered in this manner, the steel skeleton building becomes as fireproof as a building can be made with modern facilities. This was demonstrated in the Nassau Street fire on Feb. 11, 1898, when the Vanderbilt building, a 15-story steel skeleton structure, was exposed to the fire that broke out in the Nassau Chambers, 150 feet distant. The Vanderbilt building is one of the earlier of the steel buildings, and has not the latest fireproof appliances, yet the flames that curled about it and burned all the outer wooden cornices on the upper stories, and much of the interior woodwork also, failed to injure the main structure in any way. The heat was so great that the kalsomine fell, but the walls and floors did not warp, neither did the water that was poured in run through the floors.

Advantages.—A great advantage in the use of steel for construction is the space which is gained by the reduced thickness of the walls. Two feet saved in the thickness of a wall means nearly 600 feet of floor space gained in each of the lower stories of a building 50 by 100 feet. Increased light obtained by putting windows on all sides as the structure rises above its surroundings is another great advantage of the tall steel building, and with this come the advantages of more air and the view obtainable from upper stories. Another reason, not often considered, which has influenced the erection of the great office building, is that its very size and capacity invites tenants because it makes it possible for so many classes of business to find quarters under one roof. The average mammoth steel office building contains a restaurant, a cigar counter, a news stand, a barber shop, a telegraph and district messenger office, a typewriting bureau, stationer and printing office, and other conveniences—all under one roof and within easy reach of every tenant. Of course, the high value of land in the center of a great city does much to influence the erection of a tall building to increase the rental, but the advantage of affording tenants so many conveniences under one roof is probably the largest factor of their commercial success.

Designing.—The construction of the great steel office building requires, as a preliminary, designing by both an architect and a mechanical engineer or bridge engineer. The steel construction and foundation work is very similar to that of bridges, and calls for the same kind of experience as that gained by engineers in the designing of steel truss bridges. The work of the architect is so mixed in with that of the engineer that the two find it necessary to work together in the development of the plans. The size of the structure being determined, it is necessary to begin designing from the top and work downward, because in no other way can they certainly place the beams and girders so as to know that they are properly proportioned for the weight they are to carry. When the tower and superstructure are planned, their weight can be figured out, and the beams of the upper story figured of a size and number to support them properly. Each story, as the plans descend, has to be made a little stouter than the one above, because it has that much more weight to support. By the time the street level is reached, the weight, wind surface, and all such items can be computed. The designers, knowing just what they have to support and being made familiar with the nature of the soil on which the building is to stand, through borings made at numerous points to discover what is below, are in a proper position to decide what is the best character for the foundations. Among the duties of the engineer are the verifying of the actual size of the lot, which might differ slightly from the surveyor's measurements appearing in the deeds. Then he has to determine both the dead load and the live or moving load, the latter requiring twice as much strength of material as the dead load. The law in New York prescribes an allowance for live load which is greatly in excess of that which is actually found in office buildings, and this obliges stronger construction than is really necessary, thus increasing the factor of safety. The engineer must also calculate the wind pressure, usually at 30 pounds to the square foot, and make due allowance therefor in the bracing. He must locate the principal columns, girders, and beams so as to carry the strains according to his calculations, which must be verified at every step.

Construction.—The steel building consists of a skeleton of steel beams and girders made commonly with Z or I sections to resist bending, and riveted

together, knee braces being put in here and there to increase the resistance to wind pressure. Many of the upright members are made in two-story lengths, and the steel work is put up by means of an erecting plant which is usually elevated two stories at a time. From this erecting plant are operated cranes and other hoisting devices, and here are supported the forges used to heat the rivets, which are inserted red hot and fixed in place by pressure or hammering. Sometimes tubular columns of cast iron are preferred to steel columns. Cast iron is stronger than steel or wrought iron in compressional strength, though inferior in most other qualities. The cost of each is about the same. Where steel columns are preferred it is often because their Z or other angular section affords convenient space in which to carry pipes, wires, and the like, as well as giving better opportunity to bolt on or attach any small structures that are not so readily affixed to tubular cast-iron columns. In the foundations of the steel building the cantilever principle is ordinarily employed in order to distribute the weight of the walls.

This is best illustrated by a drawing, which shows a cantilever truss in the reverse position in which it is used on bridges. The wall being made to rest on the extreme edge of the truss, the weight is carried inward so that it centers on the large pier. If the weight were placed directly on the pier it would tend to tip it over; but by this arrangement the weight of a 2-foot wall may be distributed over piers 10 or 12 feet thick. Cantilever girders usually extend the entire width of a building, and some of the largest weigh 80 to 100 tons each. The piers may rest either on piles, on caissons, or on steel grillage. If the soil is hard sand or earth, much saturated with water, bundles of piles may be driven and tied together at the top by beds of cement, and on these the piers can be erected. A mud bottom usually requires a steel grillage which is made of long steel I beams crossed in a bed of cement that fixes the whole so that it becomes like one large plate on which the whole structure may rest. For very large buildings where the foundation rock is 50 to 70 feet below the street, and there is constant danger of undermining adjacent buildings—a condition frequently found on Manhattan Island—the caisson foundation is used. This construction is borrowed from the bridge builder and was first used in making the foundation for the Manhattan Life Insurance Company's building. A caisson or great steel box, open at the bottom and with a door in the top, is let down into the foundations by placing men inside to dig away the earth so that it gradually goes down as the excavation proceeds, with the very least disturbance to the surrounding soil, which is kept in place by the stout sides of the caisson. In this manner the caisson is worked down to the bed rock, which is leveled or stepped to receive it. When it is properly set the workmen withdraw and cement is poured in and allowed to harden, thus forming a great stone block incased in steel and as solid and level as is possible by any known means. A series of these caissons sunk in the foundations serve to support the piers from which the structure rises. As the steel framework is raised, the stone and terra cotta are built on, a common rule being that there shall be at least 8 inches of this on the outside and 4 inches inside to protect the steel. For about 75

fect above the street the stone or other exterior material is so constructed that its weight does not rest on the steel skeleton. To use a builder's phrase, it carries itself. Above the sixth story it becomes necessary to rest the stonework, etc., on the steel framework. The beams used in the floors are usually of I section, carrying between them flat arches of terra cotta. Partitions are made of terra cotta or hollow brick. The floors for halls, etc., are frequently covered with mosaic, the blocks being small stones often colored in patterns, and set in cement with the flat face upward.

Interior Mechanism.—A modern steel office or business building requires a steam plant and an electric plant, besides elaborate plumbing, wiring, and ventilating apparatus. Water tanks have to be provided to serve the upper stories, and these are usually built into the space at the top of the elevator in order to take advantage of the warm air that rises in the elevator shaft, and conduct it about the tank to prevent freezing. Sometimes, as in the American Tract Society building, a cold-water service is arranged by the introduction of a refrigerating plant which circulates cold about the water pipes. The elevators are run by steam power, though often an electric motor forms the actual connection between the steam engine and the operating wire ropes. This permits of the use of an electric storage battery to take the "peak" of the load—that is, serve to deliver additional power where a sudden increased demand is made on the elevators. The engines and dynamos are usually directly connected, and a dynamo is wound to 110 volts to give a current for incandescent light service. In the very latest practice a 220-volt current is used for the more powerful incandescent lamps built for such a voltage. The enormous amount of wiring in these structures may be inferred from the fact that the contracts for the Manhattan Life Insurance Company's building called for about 35 miles of wire. The pipes for gas, water, waste, and ventilation footed up a total of 10½ miles in the same building.

The cost of these structures varies with the elaboration of the details from 25 to 60 cents a cubic foot. In the case of the Pulitzer building the cost is given at \$1,500,000. The time in which such a building can be erected has been much reduced of late, and contracts are made requiring only twelve to twenty months for the completion of an entire mammoth steel building. Some tendency has been manifested by legislatures to restrict the height of these structures, noticeably in Massachusetts. Where they are unrestricted the tendency is to build them higher and higher. This is generally objected to by the owners of contiguous property, as their foundations are undermined and are liable to damage. Such liability has unquestionably been greatly reduced, however, by advances in methods of constructing the foundations.

SUNDAY-SCHOOL CONVENTION, THE WORLD'S. The World's Third Convention of Sunday-School Workers was held in London, beginning July 12. The first of the preceding conventions was held in London in 1889, and the second in St. Louis, Mo., in 1893. The present convention, which considerably exceeded the others in the number of delegates, was attended by about 2,300 members, 300 of whom were from London, 1,500 from the rest of the United Kingdom, 250 from the United States, 20 from Canada, 5 from Newfoundland, and 70 from the Continent of Europe. Addresses of welcome were made by the Marquis of Northampton, president of the British Sunday-School Union and the Ragged School Union, Mr. Edward Towers, and the Rev. John Clifford, D. D., president of the Federation of Free

Evangelical Churches. Mr. Edward Towers was chosen president of the convention. The reports of Sunday-school work in various parts of the world included accounts of Sunday-School Union missions on the Continent of Europe, a description of the work of the Foreign Sunday-School Union, and of the International Union of Primary Teachers organized for study in the United States; the report of a Sunday-school missionary in India, where an executive secretary and funds for a vernacular literature were wanted; a report of progress in Italy, where 15,000 children were gathered in Protestant Sunday schools; and accounts of the work of 901 Sunday schools in Japan, to which 4,000 pupils had been added during the past year. In Europe Sunday-school work was making real but slow progress, and in the countries from which special reports were made the number of pupils had increased 41,000 since 1893. The International Lesson Committee made a report, explaining the method of proceeding in arranging the lesson series, and mentioning some of the difficulties in the way of providing a system that should be satisfactory to every one and in the way of making changes in the system except slowly. The ensuing course of lessons was laid out for six years instead of seven and would present the biographical element in special prominence. About half of the available time would be devoted to a chronological life of Christ and other New Testament subjects. The International Bible-Reading Association was described in a paper relating to it as having 626,000 members and issuing cards in 29 languages. The subjects were considered, in papers read and otherwise, of teachers' private Bible study; the history of training classes for teachers from their beginning in 1848 to the present time; normal classes; a special "dedication service," in which teachers sign a written covenant faithfully to perform certain duties; the "Home Department," in which persons not able to attend Sunday school pursue at home courses of lessons which are marked out for them, and make stated reports of their progress; and grading and management.

SWEDEN AND NORWAY, two kingdoms in northern Europe, united in the person of the sovereign. The throne in both monarchies descends to the heirs of the house of Bernadotte. Affairs common to both are referred to a mixed Council of State. The King is Oscar II, born Jan. 21, 1829, who succeeded Carl XV, his brother, Sept. 18, 1872.

Sweden.—The legislative power is vested in the Riksdag, consisting of the First Chamber of 150 members elected for nine years by the provincial and municipal bodies, and the Second Chamber of 230 members elected for three years, 80 in the towns and 150 in the rural districts, by natives of Sweden who own or farm land of a certain value or pay taxes on 800 kronor of income. The Council of State at the beginning of 1898 was composed as follows: Minister of State, Erik Gustaf Boström; Minister of Foreign Affairs, Count Ludvig V. A. Douglas; Minister of Justice, Per Samuel Ludvig Annerstedt; Minister of War, Baron Axel Emil Rappe; Minister of Marine, Jarl Casimir Eugene Christerson; Minister of the Interior, Julius Edward von Krusenstjerna; Minister of Finance, Count Hans Haaanson Wachtmeister; Minister of Education and Ecclesiastical Affairs, Gustaf Fredrik Gilljam; Councilors of State, Baron Albert Lars Evert Akerhielm and Sven Herman Wikblad.

Area and Population.—The area of Sweden is 172,876 square miles. The population was computed to be 5,009,632 on Dec. 31, 1897, 2,437,926 males and 2,571,706 females. The number of marriages in 1896 was 29,376; of births, 137,833; of deaths, 80,784; excess of births, 57,049. The emigration was 19,551.

and the immigration 7,807. Stockholm, the capital, at the end of 1897 had 288,602 inhabitants; Göteborg, 20,522.

Finances.—In the budget for 1899 the total revenue is estimated at 123,393,000 kronor (1 krone = 28.6 cents). In this sum is included the balance from preceding budgets, amounting to 12,615,000 kronor. The receipts classed as ordinary amount to 22,603,000 kronor, of which 1,694,000 kronor are land taxes, 1,400,000 kronor tonnage dues, 2,200,000 kronor rent of domains, 665,000 kronor personal tax, 10,000,000 kronor railroad profits, 1,510,000 kronor telegraph revenue, 4,000,000 kronor receipts from forests, and 1,134,000 kronor various receipts. The extraordinary sources of revenue yield 80,175,000 kronor, of which 41,000,000 kronor are receipts from customs, 9,925,000 kronor from the post office, 4,400,000 kronor from stamps, 15,500,000 kronor from the spirit duty, 9,000,000 kronor from the sugar duty, 5,600,000 kronor from the income tax, and 750,000 kronor from various sources. The state bank pays out of its profits 2,000,000 kronor.

The total expenditures for 1899 are estimated at 123,393,000 kronor, the same as the revenue. Of these 82,089,724 kronor are ordinary and 28,024,076 kronor extraordinary expenditures. Of those classed as ordinary 1,320,000 kronor are for the royal household, 3,842,450 kronor for justice, 606,750 kronor for foreign affairs, 26,528,460 kronor for the army, 7,164,965 kronor for the navy, 5,756,200 kronor for the interior, 14,222,099 kronor for worship and education, 3,429,450 kronor for pensions, and 19,219,350 kronor for finance, including 2,713,000 kronor for the customhouse, 9,143,600 kronor for the post office, 450,000 kronor for control of excise, 1,510,000 kronor for telegraphs, 1,380,550 kronor for forests, and 4,022,200 kronor for other expenses. Of the extraordinary expenditures, 9,000,725 kronor are for the army and navy, and 19,023,351 kronor for other purposes. The expenses of the debt are 11,588,507 kronor, besides 1,650,000 kronor set aside as a fund for insuring workmen against accidents. The surplus remaining to be carried over to the next budget is 40,693 kronor.

The public debt in 1898 amounted to 238,723,944 kronor, of which 48,759,500 kronor represent an internal loan paying 3.6 per cent. interest, and the remainder foreign loans raised at various times, for the most part at $3\frac{1}{2}$ per cent. interest.

Defense.—The Swedish army is composed of 2 regiments of royal foot guards and 1 of horse guards, 5 regiments, 2 battalions of infantry and 1 battalion of rifles, 4 regiments of cavalry, and the artillery, engineers, and train, all enlisted troops except the line infantry, which contain Indelta troops; the Indelta, consisting of 19 regiments of infantry and 3 regiments of cavalry, the former supporting themselves on allotments of land, the latter paid and kept by the landowners; and conscripted troops, drawn from the whole male population to the number of about 24,000 a year. The men of the regular army are enlisted for two or three years. Its strength is 1,953 officers and 30,889 men, with 38,854 horses and 240 guns.

The navy, which is intended for coast defense only, contains 4 small ironclads of about 1,500 tons displacement, carrying 9.4-inch guns in two turrets; 3 of about 3,000 tons, having 10-inch guns in the turrets and a quick-firing armament; and 3 of 3,300 tons, 2 of them not yet completed, with a stronger secondary battery. There are also 9 gunboats, each carrying a 9.4-inch gun in the bow.

The fortifications on the coast are the fortress of Carlskrona, flanked by Westra Håsholmen and Kungsholmen, and works at Waxholm, and Oscar Fredriksborg defending Stockholm in its vicinity. A commission appointed in May, 1897, has perfect-

ed plans for extending the fortifications at Stockholm, completing those at Carlskrona and forts begun at Carlsberg and on the island of Gothland, fortifying Göteborg and building a fort on the neighboring Vesterberget, and erecting a fortress at Boden, in Norrland, the whole to be finished in ten years at a cost of 21,000,000 kronor.

Commerce.—The commerce in 1896 amounted to 358,315,000 kronor for imports and 340,283,000 kronor for exports. The value of coal imported was 32,581,000 kronor; coffee, 26,759,000 kronor; rye and wheat, 23,264,000 kronor; woolen goods, 16,039,000 kronor; hides and skins, 11,977,000 kronor; machinery, 16,553,000 kronor; woolen yarn, 9,914,000 kronor; iron manufactures, 13,716,000 kronor; cotton, 9,724,000 kronor; petroleum, 7,123,000 kronor; cotton goods, 7,309,000 kronor; tobacco, 7,227,000 kronor; fish, 7,073,000 kronor; wool, 4,422,000 kronor; vegetable oils, 6,156,000 kronor; wood manufactures, 4,512,000 kronor; pork products, 5,408,000 kronor; paper, 3,909,000 kronor; silks, 3,371,000 kronor; wine, 3,555,000 kronor; clothing, 3,087,000 kronor; iron, 3,253,000 kronor. The exports of timber amounted to 131,208,000 kronor; butter, 44,660,000 kronor; machinery, 7,617,000 kronor; iron, 42,187,000 kronor; wood pulp, 14,432,000 kronor; fish, 7,554,000 kronor; matches, 5,830,000 kronor; iron manufactures, 6,771,000 kronor; paper, 6,729,000 kronor; oats, 4,784,000 kronor; live animals, 6,630,000 kronor; glass, 5,100,000 kronor; cotton goods, 3,799,000 kronor.

The values of the trade in 1896 with the different countries are given in kronor in the following table:

COUNTRIES.	Imports.	Exports.
Norway	29,028,000	19,548,000
Russia and Finland.....	23,267,000	13,337,000
Denmark	45,898,000	42,293,000
Germany	117,516,000	43,894,000
Netherlands.....	8,777,000	20,140,000
Belgium	11,689,000	12,075,000
Great Britain.....	98,834,000	144,053,000
France	7,170,000	29,365,000
Portugal	1,994,000	929,000
Spain.....	1,214,000	2,489,000
Italy	1,425,000	358,000
Africa	183,000	9,318,000
United States.....	9,092,000	721,000
West Indies.....	86,000
Australia	805,000
Asia	197,000	97,000
Other countries.....	1,945,000	921,000
Total	358,315,000	340,283,000

Navigation.—There were entered during 1896 at Swedish ports 15,847 Swedish, 2,456 Norwegian, and 14,438 foreign vessels; total, 32,741 vessels, of 7,051,000 tons, of which 12,273, of 2,706,000 tons, were with cargoes. There were cleared 15,884 Swedish, 2,524 Norwegian, and 14,437 foreign vessels; total, 32,845 vessels, of 7,068,000 tons, of which 21,311, of 5,191,000 tons, carried cargoes. Among the vessels entered 15,163, of 5,659,000 tons, among those cleared 15,248, of 5,660,000 tons, were steamers.

The merchant marine on Jan. 1, 1897, numbered 2,013 sailing vessels, of 290,855 tons, and 756 steamers, of 205,964 tons.

Communications.—The State railroads at the end of 1897 had a total length of 2,282 miles and the lines belonging to companies a length of 4,066 miles.

The post office in 1896 transmitted 56,954,000 internal, 13,312,000 international, and 226,000 transit letters; 6,753,000 internal, 1,031,000 international, and 19,000 transit postal cards; 82,224,000 internal, 6,186,000 international, and 45,000 transit newspapers and circulars; and 3,315,000 internal and 342,000 international money letters and post-office orders of the respective values of 774,111,000 and 61,584,000 francs. The receipts were 13,607,303 francs; expenses, 12,191,481 francs.

The Government telegraph lines had a total length of 5,398 miles, with 15,414 miles of wire; the lines of companies had a length of 2,882 miles, with 10,164 miles of wire. The number of paid internal messages in 1897 was 1,095,091; of international messages, 766,055; forwarded in transit, 285,508; service messages, 123,063. The total receipts were 2,112,810 francs, while the expenses amounted to 1,859,756 francs.

Norway.—The legislative power is vested in the Storting, containing 114 members elected for three years, 38 by the towns and 76 by the rural districts. The Storting elects one fourth of its members to form the Lagthing, which has a veto power over the acts of the Odelsting, composed of the rest of the members. The Council of State in the beginning of 1898 was composed of the following members: Minister of State, Dr. G. F. Hagerup; Minister of Worship and Education, J. L. R. Sverdrup; Minister of the Interior, O. J. Olsen; Minister of Finance and Customs, B. Kildal; Minister of National Defense, Major-Gen. C. W. E. B. Olsson; Minister of Public Works, F. Stang-Lund; Secretary of State, H. Lehmann; Section of the Council of State sitting in Stockholm, G. W. W. Gram, Minister of State, and T. de W. Engelhart, Councilor of State.

Area and Population.—The area of Norway is 124,445 square miles. The population is 1,988,674. The number of marriages in 1896 was 13,952; of births, 63,308; of deaths, 31,574; excess of births, 31,734. The emigration was 6,679 in 1896 and 4,699 in 1897. Christiania, the capital, has 148,213 inhabitants.

Finances.—The revenue for the financial year 1896 was 76,729,900 kroner, including 453,400 kroner of local subscriptions for railroad building, 3,471,200 kroner of loans, and 7,682,800 kroner in the Treasury. The ordinary revenue was 65,122,500 kroner, of which 4,168,000 kroner came from direct taxes, 26,653,400 kroner from customs, 3,638,000 kroner from the spirit duties, 3,490,800 kroner from the malt duty, 888,400 kroner from stamps, 1,023,200 kroner from law courts, 563,100 kroner from succession duties, 1,524,700 kroner from state forests, domains, and mines, 2,090,400 kroner from active capital, 3,904,800 kroner from the post office, 1,521,000 kroner from telegraphs, 9,688,300 kroner from railroads, 1,946,500 kroner from universities, schools, and churches, 340,600 kroner from prisons, 991,500 kroner from hospitals and insane asylums, and 2,689,000 kroner from various sources. The ordinary expenditures were 63,032,600 kroner, and the extraordinary expenditures 13,697,300 kroner; total, 76,729,900 kroner. The ordinary expenditures were 352,700 kroner for the civil list and appanages, 652,600 kroner for the Storting, 1,353,100 kroner for the Council of State, 7,336,500 kroner for public instruction and worship, 6,084,900 kroner for police, justice, and sanitary service, 9,389,500 kroner for the Interior Department, including the postal and telegraph service, forests, fisheries, etc., 12,412,700 kroner for public works, of which 9,081,300 kroner were for operating railroads, 10,789,100 kroner for finance, including 1,642,100 kroner for the custom-house, 1,458,600 for amortization, 5,423,700 kroner for interest of debt, and 538,200 kroner for pensions, 9,508,200 kroner for the army, 4,367,700 kroner for the navy, 624,900 kroner for foreign affairs, and 160,700 kroner for accidental expenses.

The total debt on June 30, 1897, amounted to 181,338,700 kroner. The assets of the Government were valued at 177,230,100 kroner, comprising 41,277,900 kroner of active capital, 25,987,100 kroner of money in the Treasury and arrears to be collected, and 109,965,100 kroner invested in railroads. Most of the debt pays $3\frac{1}{2}$ per cent. interest.

Defense.—Obligatory service was introduced into Norway by the law of 1885, but it is not generally enforced except to train the recruits for forty-eight or fifty days in the infantry and mountain and fortress artillery, and seventy days in the cavalry and field artillery. About 1,700 officers and 18,000 men of the first ban are maintained in active service. The fleet contains 2 new armor clads of 3,500 tons displacement, carrying 20 guns each, 4 monitors, about 30 gunboats, and 20 torpedo craft of various sizes.

Commerce.—The total value of imports in 1897 was 263,718,000 kroner, and exports 167,697,000 kroner. The import of cereals was 38,200,000, of fermented liquors 6,800,000, of colonial produce 26,200,000, of fruits and vegetables 3,900,000, and of animals and animal products 13,500,000 kroner in value, giving a total of 88,600,000 kroner for articles of alimentation, while the exports of this class were valued at 57,200,000 kroner, of which animals and provisions represent 55,500,000 kroner. The imports of coal were 15,700,000, of metals 10,400,000, of hides and leather 8,300,000, of textile materials 6,400,000, of timber 7,000,000, and of minerals 6,600,000 kroner, a total of 54,400,000 kroner for crude articles, against an exportation of 54,700,000 kroner, timber making 42,300,000 and hides and leather 7,300,000 kroner of this total. The imports of metal goods were 19,400,000, of tissues 40,200,000, of paper, 2,900,000, of leather goods 2,400,000, and of wood manufactures 5,500,000 kroner, a total for manufactures of 70,400,000 kroner, against 40,400,000 kroner of exports, the items being 22,400,000 kroner for wood manufactures, 8,000,000 kroner for paper, 6,800,000 kroner for tissues, 3,000,000 for metal goods, and 200,000 kroner for leather goods. The imports of all other articles were valued at 50,300,000 kroner, including 11,900,000 kroner for oils, and the exports were 15,400,000 kroner, including 6,800,000 kroner for oils. The values in kroner of the imports from and exports to the various countries in 1897 are given in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain.....	67,560,000	65,387,000
Germany.....	71,348,000	21,919,000
Sweden.....	42,278,000	25,734,000
Russia and Finland.....	24,079,000	4,461,000
Denmark.....	13,205,000	7,203,000
France.....	4,055,000	7,359,000
Netherlands.....	9,624,000	8,934,000
Belgium.....	11,791,000	6,527,000
Spain.....	1,685,000	9,602,000
Portugal.....	896,000	718,000
Italy.....	2,001,000	2,790,000
United States.....	11,989,000	853,000
Other countries.....	3,964,000	6,220,000
Total.....	263,718,000	167,697,000

Navigation.—The merchant fleet on Jan. 1, 1897, numbered 6,230 sailing vessels, of 1,214,759 tons, and 962 steamers, of 351,799 tons. The number of vessels entered at the ports of Norway in the course of 1897 was 13,201, of 2,908,946 tons, of which 6,842, of 1,937,954 tons, were Norwegian and 6,359, of 970,992, tons were foreign. The total number cleared was 13,152, of 2,941,841 tons, of which 6,815, of 1,975,367 tons, were Norwegian, and 6,337, of 966,474 tons, were foreign. Of the vessels entered 6,583, of 1,891,116 tons, and of those cleared 11,746, of 2,374,395 tons, carried cargoes.

Communications.—The railroads in 1897 had a length of 1,211 miles. The state telegraphs had a length of 5,470 miles, with 14,996 miles of wire; those of railroad companies had a length of 1,170 miles, with 2,160 mile of wire. The number of internal messages in 1897 was 1,293,188; of international messages, 718,906; of messages connected with the service, 22,519. The receipts were 1,705,-

279 kroner; expenses, 1,668,489 kroner. The post office forwarded 30,859,400 internal and 10,636,900 foreign letters and postal cards, 44,326,600 internal and 4,647,200 external pieces of foreign printed matter, and 2,091,300 internal money letters, valued at 324,400,000 kroner, and 101,300 foreign ones, valued at 26,400,000 kroner. The receipts were 4,123,864 and expenses 3,024,118 kroner.

Political Events.—The constitutional conflict between Norway and Sweden entered upon a new and more serious phase in 1898. It has dragged along since Norway was forced into the union by conquest in 1814, and has its grounds in the essentially different social character of the two peoples and their political ideas and institutions. The differences between the old Radical party, led by Sverdrup and the extreme, almost Republican Radicals, inspired by Björnsterne Björnson, impelled the King to appoint the Conservative Ministry of Stang in 1888, which hung on in defiance of votes of no confidence until the Radicals united again on the consular question and forced Stang to retire in 1895. In 1896 the Storthing voted to adopt a Norwegian national flag without any symbol of union with Sweden. This decision King Oscar refused to sanction. A threatening counter agitation was excited in Sweden by the irreconcilable attitude of the Norwegian Left, so that when the Storthing voted exceptional army credits the Swedes increased the vote for contingent expenses. In the hope of averting a rupture by discovering a *modus vivendi* the Swedish Government proposed a joint commission, which was accordingly constituted of 5 Moderates and 2 Conservatives, appointed on the part of Sweden, and 4 Moderates and 3 Radicals as Norwegian representatives. Concluding its deliberations in January, 1898, the commission presented four different reports; a majority and a minority report for each nation. All the Swedish representatives were in favor of replacing the *Rikssakt* of 1815 with a new act of union, and this the Norwegians unitedly opposed. The Swedish commissioners were willing to give the maximum of liberty to each country consistent with the maintenance of the union, and to concede absolute equality of rights with regard to common institutions, even to the point of having a common Ministry of Foreign Affairs presided over by either a Swede or a Norwegian. They proposed that all questions of foreign policy be referred to the King in the presence of an equal number of ministers of each country, and that these consulting ministers and the common Foreign Minister be responsible to a common Supreme Court. The minority of the Swedish commissioners proposed that the Foreign Minister be responsible to a joint delegation of 30 members of the Swedish Riksdag and 30 members of the Storthing; the majority, that he should appear before the Parliament of each country separately. The Swedish commissioners admitted the justice of a preferential arrangement for Norway in regard to consular fees in recognition of the great preponderance of the Norwegian commercial marine, but would not agree to a separate consular service. They recommended that the King's civil list and the maintenance of the army and navy be made an equal charge on Norway and Sweden in proportion to their population; that for the defense of the two kingdoms a certain minimum force of Swedish and Norwegian regular troops should be created, which, together with the combined navies, would be at the King's disposal at the instant of mobilization. The Norwegian Storthing, overriding the royal veto, has been able to withdraw the forces of Norway from the obligation to serve in the common defense by organizing nearly the whole of them as *lande-vaernet*, or militia, which can not be counted as

troops of the line or used beyond the frontier, as is laid down in a paragraph of the Norwegian Constitution. The majority of the Swedish commissioners therefore demanded a guarantee that the King should be able to command the land forces of Norway in the same way that he can those of Sweden. The Norwegian Radical commissioners took the ground that no change in the act of union is necessary for their purposes, since the Storthing can now enact laws without the royal consent, and therefore erect a separate consular service and even a Norwegian Ministry of Foreign Affairs. They were willing to agree to a common Ministry of Foreign Affairs and a common Supreme Court, but they would require the consultative ministers still to answer to their respective Parliaments. A separate consular service they insisted upon, though they were willing to grant by a convention a certain degree of control over it to a common Ministry of Foreign Affairs, and to continue for fifteen years longer the common consular representation. The Swedish demand that any part of the Norwegian military forces should be held at the disposal of the King for the defense of Sweden against invasion they refused to consider, and in regard to the civil list they wanted the Storthing to retain the right to alter or withhold it without reference to Swedish action. The minority report of the Norwegian commissioners recommended a separate Foreign Minister and diplomatic service as well as separate consular representation for the two countries.

The hopeless divergence between the Swedish and Norwegian commissioners rendered the position of the ministry, which had striven for an agreement, untenable. The session of the Storthing was opened on Feb. 11, and the next morning the ministry resigned. M. Steen, the leader of the Extreme Radicals, was called upon to form a ministry, which was completed on Feb. 17, consisting of the following members: Minister of State, J. W. C. Steen; Minister of Worship and Public Instruction, V. A. Wexelsen; Minister of Justice and Police, O. A. Qvam; Minister of the Interior, P. T. Thilesen; Minister of Public Works, J. G. Lövlund; Minister of Finance and Customs, E. Sundé; Minister of National Defense, Col. P. T. Holst; Section sitting in Stockholm, O. A. Blehr, Minister of State, and H. H. T. Nyson and E. Löchen, Councilors of State.

The report of the commission on the act of union was presented to the Riksdag and the Storthing simultaneously on March 7. The Storthing debated, among other measures, a bill for the reorganization of the national school system. When it reassembled in the autumn it passed for the third time, with but one dissenting vote, a bill to introduce a purely Norwegian flag, without the emblem of union with Sweden. Once more the King refused to sanction this measure, though he was obliged to accept and promulgate it as law, having exhausted his power of veto. A loan of 20,000,000 kroner was raised for military purposes.

SWITZERLAND, a federal republic in central Europe. The Federal Assembly is made up of two bodies, a National Council of 147 members, elected by direct universal suffrage for three years, and a States Council of 44 members, elected by the cantons. In joint session the two bodies elect a Federal Council of 7 members, who preside over the executive departments. Any act of legislation can be vetoed or any amendment to the Constitution can be enacted by a referendum decided by popular vote whenever it is demanded by 30,000 citizens or by 8 cantons. The Federal Council in 1898 was composed of the following members: President and Chief of the Department of Foreign Affairs, Dr. A. Deucher, of Thurgun; Vice-President and Chief of

the Department of the Interior, Eugène Ruffy, of Vaud; Military Affairs, E. Müller, of Bern; Justice and Police, Dr. E. Brenner, of Basel; Commerce, Industry, and Agriculture, A. Lachenal, of Geneva; Finance and Tolls, W. Hauser, of Zurich; Posts and Railroads, Dr. J. Zemp, of Luzern. The Federal Assembly, on Dec. 15, 1898, elected M. Müller President of the Confederation for the ensuing year, and M. Hauser Vice-President.

Area and Population.—Switzerland has an area of 15,976 square miles, and a population of 2,917,754. The number of marriages in 1897 was 25,297; of births, 95,540; of deaths, 60,116; excess of births, 33,424. The population of the town of Zurich in 1898 was 146,517; of Basel, 98,117; of Geneva, 82,120; of Bern, 54,577.

Finances.—The revenue of the Federal Government in 1897 was 91,556,543 francs, of which 530,649 francs were derived from real property, 2,144,615 francs from invested capital, 66,570 francs from the general administration, 31,075 francs from the Department of Foreign Affairs, 384,683 francs from Justice and Police, 2,663,103 francs from the Military Department, 48,105,863 francs from Finance and Customs, 224,481 francs from Industries and Agriculture, 29,117,203 francs from the post office, 7,887,189 francs from telegraphs and telephones, 368,146 francs from railroads, and 32,966 francs from various sources. The total expenditures were 87,317,364 francs, of which 4,649,782 francs were for interest and amortization, 1,169,786 francs for general administration, 611,694 francs for the Political Department, 12,688,675 francs for the Interior, 385,350 francs for Justice and Police, 24,433,748 francs for the Military Department, 4,286,194 francs for Finance and Customs, 3,356,987 francs for Industry and Agriculture, 27,464,177 francs for the postal service, 7,887,189 francs for telegraphs and telephones, 304,993 francs for railroads, and 78,789 francs for unforeseen expenses. The indebtedness of the Confederation amounted on Jan. 1, 1898, to 83,891,688 francs, the assets to 188,063,126 francs.

Commerce.—The total value of the imports in 1897 was 1,114,442,000 francs, and of the exports 747,436,000 francs. These figures include 83,223,000 francs of coin and bullion imported and 54,263,000 francs exported. The special imports of grain and flour were 124,500,000 francs; raw silk, 116,400,000 francs; animals, 52,100,000 francs; woollens, 44,500,000 francs; coal, 43,800,000 francs; wine, 37,700,000 francs; iron, 35,900,000 francs; cotton goods, 33,300,000 francs; chemicals, 33,200,000 francs; machinery, 27,700,000 francs; raw cotton, 26,700,000 francs; timber, 24,400,000 francs; iron manufactures, 23,600,000 francs; sugar, 19,700,000 francs; leather, 16,500,000 francs; coffee, 16,100,000 francs; barley, malt, and hops, 15,600,000 francs; silks, 13,600,000 francs; wool, 12,500,000 francs; structural materials, 11,800,000 francs; books, 11,700,000 francs; tobacco, 10,700,000 francs; linens, 9,700,000 francs; eggs, 9,300,000 francs. The exports of silks were 135,200,000 francs; cotton goods, 108,700,000 francs; watches, 103,800,000 francs; cheese, 38,400,000 francs; raw silk, 36,700,000 francs; silk thread, 34,700,000 francs; machinery, 34,000,000 francs; chemicals, 25,800,000 francs; milk, 20,100,000 francs; cotton thread, 16,600,000 francs;

animals, 15,800,000 francs; straw goods, 11,600,000 francs; hides and skins, 9,200,000 francs; woollen yarn, 8,900,000 francs; woollens, 8,000,000 francs.

The special commerce was distributed among foreign countries according to the following table, giving values of imports and exports for 1897 in francs:

COUNTRIES.	Imports.	Exports.
Germany	306,371,000	175,567,000
France	192,416,000	83,648,000
Italy	149,841,000	38,975,000
Austria-Hungary	66,848,000	41,274,000
Great Britain	54,044,000	146,071,000
Netherlands	3,123,000	4,876,000
Belgium	24,561,000	13,048,000
Spain	16,304,000	11,582,000
Russia	66,915,000	24,451,000
Rest of Europe	17,396,000	21,067,000
United States	51,688,000	70,988,000
Rest of America	25,313,000	19,412,000
Asia	38,480,000	22,916,000
Africa	12,895,000	6,021,000
Australasia	5,024,000	2,931,000
Other countries	3,346,000
Total	1,031,219,000	693,173,000

Communications.—The railroads in 1897 had a total length of 2,351 miles. Their cost up to the end of 1895 was 1,134,493,000 francs. The receipts for 1895 were 111,544,765 francs; expenses, 66,193,333 francs. In 1896 the receipts from 43,015,131 passengers and 11,896,393 tons of freight were 106,298,896 francs.

The length of the state telegraphs in 1897 was 4,435 miles, with 12,608 miles of wire. The number of messages sent in 1897 was 3,882,337, of which 1,665,333 were internal, 1,487,793 international, 576,068 in transit, and 153,143 service dispatches. The post office carried 88,929,000 domestic and 39,603,000 foreign letters, 18,595,000 domestic and 15,975,000 foreign postal cards, 31,075,000 domestic and 22,181,000 foreign newspapers and circulars, 4,748,000 domestic postal remittances amounting to 521,948,000 francs, and 1,015,000 foreign ones for 44,868,000 francs.

Legislation.—The Federal Assembly voted on June 30, 1898, for a revision of the Constitution in the direction of co-ordinating the civil and penal law, and this decision was ratified by a popular vote taken in November. The Assembly agreed to guarantee the bonds of the company and to pay a subsidy for the Simplon tunnel, which was authorized to be begun in August. The Government proposed to open a short route from Thun to Brieg and the Simplon by piercing the Lötschenberg. This tunnel, which is to be completed by the beginning of 1904, will be 2,312 feet above the sea level, or only three fifths of the altitude of the St. Gothard, and with easy approaches on the Swiss side it will afford the most direct route from Bern, Lausanne, and Geneva to Milan and the north of Italy. The tunnel will be 12½ miles long, and the cost is estimated at 70,000,000 francs.

Following the example of the German Government, the Federal Council issued a decree in July prohibiting the importation of American fruits, with the object of preserving Swiss orchards from infection by the San José scale insect.

T

TELEGRAPHY, WIRELESS. The transmission of electric telegraphic signals through space without the use of any wires that run directly from the transmitting to the receiving instrument; also

called more properly "space telegraphy," as one system at least makes extensive use of wires. The name is not applied to any of the optical or other non-electric signaling systems.

Telegraphy by Earth or Water Conduction.—The earliest experimenters on telegraphy without connecting wires endeavored to utilize the conductivity of water or earth. As early as 1842 experiments along this line, due to S. F. B. Morse, were carried out by Gale on the Susquehanna river.

In 1854 James Bowman Lindsay, a teacher of Dundee, Scotland, patented a device for establishing electrical communication through water without connecting wires (see Fig. 1), and in the same

FIG. 1.

year he thus telegraphed across a body of water 500 yards wide, at Portsmouth, England. In 1859 he telegraphed across the Tay at Glencarse, where it is half a mile wide. Since Lindsay's time similar results have been obtained elsewhere, and numerous patents have been taken out in various countries. In England the Solent was traversed by messages in 1882, and in 1896 the English postal telegraph communicated with Fastnet light by a conduction method due to Willoughby Smith. In India practical communication has been kept up across rivers by a system devised by Melhuish. In France some experiments by Abbé Michel have successfully utilized the conductivity of moist earth, using telephones as receivers and transmitters. These methods, however, do not promise success at considerable distances, and are much interfered with in cities by leakage currents, and by short circuiting due to pipes and rails. An application of this method to signaling between ships seems to offer a chance of success. In the patent granted in Germany to Somzee in 1888, "each ship carries a pair of plates submerged in the water, one at the bow, the other at the stern, the plates being connected by wires which include a signal-receiving instrument, such as a telephone or a galvanometer. Shoals may be indicated by suitable stationary plates, the current from which is diverted into the receiving circuit on the ship whenever the vessel approaches shallow water." Similar methods have been patented in Great Britain by Stevenson in 1892, and in the United States by Blake in 1894. In a report to the General Electric Society, Rathenau ("Elektrotechnische Zeitschrift," Nov 8, 1894) suggested that a telephone receiver be used to receive the signals. "The metallic diaphragm of the telephone would be replaced by a light tongue, which should be tuned to respond to the predetermined rate of vibration of the transmitting circuit. This rate would be imposed upon the circuit by a suitable tuning fork operating a circuit breaker." The investigator stated that communication had been effected over a distance of 3 miles. (See also "Uses and Limitations," at the end of this article.) That wireless telegraphy by conduction through earth may have possibilities before it is shown by an accident that occurred in the Ferranti electric-light-

ing station at Deptford, London, about 1888. One of the dynamos became connected to earth at night, with the result that every telegraph in South London became unworkable, and the effect on electrical apparatus was detected in the central counties of England, and even as far away as Paris. Prof. Thompson, discussing this accident, concludes that "it is obvious that by proper forethought and due expenditure of money on the requisite machinery a telegraph without wires might be established between London and Paris, or for that matter between any two places. It is believed by Nikola Tesla that by properly disturbing the earth's electric charge, signals can be transmitted to any point on the earth's surface, and he claims to have obtained experimental evidence of this; but other electricians believe this result to be beyond the power of any apparatus yet invented, and explain his experiments differently.

The same electrician has patented a method of transmitting electric energy by conduction through the upper air, which becomes a conductor when sufficiently rarified, and for oscillatory currents of very high frequency. He believes that great quantities of energy can thus be transmitted, and proposes to operate automobile torpedoes without connecting wires; but it does not appear that his inventions have reached the practical stage. The experiments of Prof. John Trowbridge, of Harvard, support his theory of the conductivity of the upper air; but Prof. Trowbridge believes that it would be impossible to avoid vertical leakage to the earth.

But the greatest success in long-distance electric telegraphy without direct wires has been obtained not by conduction but by induction. The earliest form of wireless induction telegraphy was probably that employed in signaling to a moving train. The first patent to describe such a method was issued to Smith (No. 247,127, Sept. 13, 1881), and numerous others followed, including one to Edison (486,634, Nov. 22, 1892). In Smith's method (see an article by William Bissing, "Electrical World," Jan. 21, 1899) "the metallic roof of the car, which should be insulated, is connected to a wire which leads to one terminal of a telephone receiver, the other terminal of the receiver being grounded through the wheels and rails. A telegraph line is strung along the track in closer proximity to the car than is customary for Morse signaling. On telephoning over the line from a station on the road the car roof is affected inductively, and a current is produced in the receiver on the car, the line and the roof forming the two plates of a condenser. An advantage of this method of transmitting signals is that the line wire along the track may be used for telegraphing according to the ordinary Morse system, without disturbing the telephonic signals. The current induced in the car circuit in this patent is probably due to both electro-magnetic and electrostatic induction."

Successive improvements have been made in these methods, which are mentioned here only on account of their historical interest in connection with wireless telegraphy. Of experiments in space telegraphy proper, the earliest methods have used dynamic and the latest static electricity.

Telegraphy by Dynamic Induction.—The fact that an electric current passing through a wire creates a magnetic field around it has been known since the time of Ampère, and the fact that an electric current is set up in a second neighboring wire by any variation in the field, due to motion of either wire or to variation of the current, has been known since Faraday's researches in 1831. It was scarcely realized to what a distance such a magnetic field might extend until the invention of the telephone gave a means of detecting very slight varia-

tions in it. It was then found that induction was a very serious source of annoyance. In one early case in England it was found, for instance, that telephone wires were disturbed on the top of houses 80 feet high by telegraph wires running parallel to them under ground. In 1885-'87 experiments near Newcastle-on-Tyne, England, under the direction of W. H. Preece, the head of the British Postal Telegraph, showed that one wire was affected by disturbances in a parallel wire a quarter of a mile distant. At Swarland Park in August, 1886, speech was carried on by telephone between two parallel horizontal squares of insulated wire a quarter of a mile apart, the side of each square being also a quarter of a mile. At Broomhill colliery, shortly afterward, similar communication was held between a triangle of insulated wire with side of three quarters of a mile, laid out in the underground galleries of the colliery, and a similar triangle 360 feet above on the surface of the ground, showing that rock was not opaque to the inductive effect. In Bristol Channel Mr. Preece sent messages from Penarth to Flat Holm, a distance of three miles, and he obtained evidences of sound as far as Steep Holm, over five miles. His system is now in regular practical operation, being used by the British War Department between Lavernock Fort and the neighboring fort on the island of Flat Holm.

In 1894 Charles A. Stevenson communicated to the Edinburgh Royal Society the results of experiments in signaling from Burra-fiord lighthouse, Scotland, to North Unst lighthouse on the island of Muckle Hagg, a distance of three miles; but of this only half a mile of sea channel was worked by induction, the remainder being covered by ordinary conducting line wire. On each side of the half-mile break was a coil of nine turns of wire, inclosing a circle 200 yards in diameter. Mr. Stevenson did not use alternating currents as Mr. Preece did, but listened for the make-and-break ticks caused by a battery and key. Mr. Stevenson states that he could read by induction messages passing between Edinburgh and Glasgow; but this is doubted by Dr. Oliver Lodge.

Simple induction telegraphy is illustrated by the accompanying diagram of Preece's method (Fig. 2), in which A is a source of electricity, B a Morse key, C a "buzzer" of the kind used in field telegraphy, D and E rolls of insulated wire about 150 yards long, and F a telephone trumpet. In practice, of course, the coils are strung out, and instead of being close together are half a mile or so apart.

Messrs. Evershed and Cox have devised a receiver consisting of a vibrating loop of wire tuned to the sending circuit, and suspended in a powerful magnetic field. This is said to be very sensitive. With this they have made important experiments in sending signals to lightships off the coast.

Dr. Oliver Lodge, who has made a close study of the whole subject, has developed a system of magnetic-induction telegraphy in which he uses at both the sending and the receiving station a large horizontal coil of wire, including a condenser of considerable capacity. These circuits are synchronized or "tuned" so that each has the same natural electric vibration frequency, and hence a disturbance in one acts by the principle of resonance to cause a much more intense disturbance in the other than would be caused by simple induction. The frequency is lowered to that of sound, so that a telephone can be used at the receiver to detect the

disturbance. Some alternating or intermitting machine of considerable power is used as the sending appliance; and its fluctuating current is broken into long and short "spells," so that the Morse alphabet can be used for signaling. Dr. Lodge has also sometimes dispensed with the condensers, and used the coils alone; but the results were not so satisfactory. Dr. Lodge believes that he has shown mathematically that "no unaided simple induction process can work satisfactorily over really big distances, unless an altogether prohibitive amount of wire or an extravagant amount of power is used." The hearing distance with simple induction is as the two-thirds power of the diameter of one of the coils: so that both coils must be nearly doubled if the distance is to be doubled.

There are, as has been seen, two practicable ways of building the inductive circuits in this variety of space telegraphy; in that devised by Preece they are in vertical planes, and consist half of line-wire and half of the return-earth circuit. In Lodge's method they are horizontal. In horizontal circuits there is a loss of one half the mutual induction, which, however, can be compensated for by increasing the area, and more wire is necessary. On the other hand, horizontal circuits, especially in the form of coils, possess manifest advantages. "In every instance in which communication has been carried on by magnetic induction, or by earth leakage, the ordinary Bell telephone has been used as a 'sounder.' It is well adapted for the purpose, as it enables exceedingly minute currents to be detected. This sensitiveness does not arise so much from the efficiency of the telephone as a current detector as from the marvelous delicacy of the human ear, which is able to distinguish sound waves produced by motions so exceedingly small as to be absolutely invisible even when magnified many times." (S. Evershed, *Inst. Elec. Engineers*, Dec. 22.) Mr. S. Evershed has made careful measurements of the magnetic and electrical quantities involved in the telephone, but up to the present he reports that he has been unable to devise adequate means for measuring what fraction of the electrical power supplied is converted into mechanical power. This conversion can be estimated for any given amplitude of the diaphragm from a knowledge of the change in induction threading the coils for different displacements of the diaphragm; but the difficulty

FIG. 2.—MR. PREECE'S INDUCTION METHOD.

remains of determining the amplitude when an alternate current is flowing in the coils.

In all the induction experiments that have been described, the message was carried through space from transmitter to receiver by low-frequency electric waves. In the method now to be described high-frequency Hertzian waves are employed.

Telegraphy by Hertzian Waves.—The discovery of electric waves by Heinrich Hertz (see yearly articles on *PHYSICS* in "Annual Cyclopædia") gave a great impulse to wireless telegraphy. Every

experiment on these waves was practically a demonstration that they could be used for the transmission of signals; for in every such experiment a device was used for generating the waves and another for detecting them at a distance, often with solid objects intervening. The development of a practical method, however, has depended largely on the use of the "coherer" as a receiver. This device, as developed by Branly in France (1890), Lodge in England, and Onesti and Righi in Italy, depends on the principle that a loose aggregation of metal particles becomes a conductor under the influence of an electric wave, because, or at any rate as if, the electric influence causes the particles to cohere continuously. Mechanical disturbance causes them to "decohere" and become again non-conducting. At Oxford, in 1894, Dr. Lodge showed how coherers could be used, and proposed to apply a mechanical tapper or an electric trembler to effect decoherence.

The perfection of this device and of other devices used in this kind of space telegraphy is due largely to Marconi, an Italian, who was "the first to con-

ringing the bell or actuating the Morse inker. At the same time the electro-magnetic device E operates the tapper N, which strikes the glass tube, causing the filings to decohere, and thus preparing the coherer for a second signal. The sensitive relay H is used to throw into circuit the current from a battery strong enough to operate the decoherer and the bell or inker; since the current that passes through the coherer is usually not of sufficient strength to do this work. The wave, then, affects the coherer, which starts the relay, which in turn does the signaling. The "wings" C and D are strips of copper or brass about 1 by 12 inches, whose duty is to assist in intercepting the electric wave and conducting it to the filings in the coherer. The wave sets up electric oscillations in these wings, which must accordingly be so adjusted in length as to respond most effectively to the transmitter. The filings in the coherer used in this case are 96 per cent. hard nickel and 4 per cent. silver, with a trace of mercury. The sensitiveness is increased by increasing the proportion of silver. The filings are rather

coarse and must be of uniform size. They are contained in a glass tube 2 inches long, into the ends of which enter wires so connected that if they were in electrical contact the circuit containing battery, relay, and bell would be completed. The ends terminate in silver blocks $\frac{1}{8}$ of an inch apart, which fit closely in the tube; and the circuit is therefore complete only when the filings in the gap are in a condition to allow the current to pass. The gap is not packed with filings, but filled loosely, so that the tapper N readily knocks them apart.

To prevent the high-frequency oscillations set up in the receiver by the electric waves from running around the local battery wires, thereby interfering with the working of the instrument, Marconi uses "choking coils" (T T), which are small coils having great self-induction, formed by winding about a yard of thin, well-insulated wire around a core 2 or 3 inches long.

In another form of receiver, devised by Dr. Oliver Lodge, and now made in essentially the same form under the name of "Miller and Woods's receiver," the coherer is a small ebonite cup containing nickel filings into which two supporting wires pass. The decohering apparatus consists of two small rods with a screw thread on them which, when actuated by the signal bell, rub across the wires of the coherer.

The apparatus is very compact, occupying less than one cubic foot.

The Marconi apparatus has undergone some important modifications at the hands of an American engineer, W. J. Clark. Mr. Clark employs for emitting and absorbing the electric waves metal plates, which must be of proper size and perfectly parallel in order to get the best results.

Wehnelt has recently devised a new form of contact-breaker that enables oscillations to be obtained at the rate of over 1,000 a second, and sends out trains of waves that follow each other with practically no interval. It is electrolytic in principle, and consists of a glass vessel partly filled with dilute sulphuric acid and having a negative electrode of lead and a positive of platinum wire projecting from an insulating glass tube. When put in a circuit at a pressure of 100 volts, together with an induction coil, there is formed in the liquid between the two electrodes a voltaic arc which is very

FIG. 3.—THE TRANSMITTER.

ceive and to patent the application of Hertzian waves to telegraphy, apart from mere signaling," and whose name is perhaps the most familiar one before the public in connection with the whole subject. The transmitting apparatus now used by Marconi is simply a device for generating Hertz waves, consisting of a battery, A (Fig. 3), an intensity coil, B, giving a 6-inch spark in air, and a pair of brass knobs, C. When the current is made, sparks pass between these knobs and give rise to the desired electric wave disturbance, which travels outward in all directions with the velocity of light. For long-distance work four knobs are used, of which the two inner are half immersed in vaseline oil, giving greater energy to the spark and to the

FIG. 4.—THE RECEIVER.

waves. The receiving apparatus (Fig. 4) consists of a delicate coherer attached to a glass rod, A B, a decoherer, N E, a battery, G, a separate cell, F, wings, C and D, and a relay, H, to which may be attached a bell, K, or a Morse inker. Whenever the current is switched on at the transmitting station, which may be miles away, the electric wave that results strikes almost instantly against the coherer in the receiving apparatus, causing it to conduct and thus closing the circuit and

rapidly broken and reformed, with a shrieking noise. This device will work only on an inductive circuit, and its action has not yet been fully explained. Its value for wireless telegraphy and for skiagraphy lies in the facts that it can be used with the ordinary street main, and that it gives out absolutely continuous trains of waves. It is likely to play an important part in the development of space signaling. (See "Engineering," London, March 17, 1899.)

Among Signor Marconi's first achievements with his apparatus was the sending of messages across Bristol Channel, more than 9 miles. Later, in Italy, he telegraphed from the fortress of San Bartolomeo to the warship "San Martino," 12 miles out at sea. In this case, although the receiver was in the engine room, surrounded by tons of steel, messages were recorded accurately. Afterward Marconi signaled from Needles Hotel, Alum Bay, Isle of Wight, to Swanage on the mainland, 17½ miles distant, the receiver being on board a moving steamer, and the weather being stormy. After this feat regular communication was kept up between Alum Bay and Bournemouth, 14½ miles, and the second station was removed in September, 1898, to Poole, 18 miles away. An average of 1,000 words daily have been transmitted between these points. Stations intended for permanent service have been established also at Durlston Castle and elsewhere.

In May, 1898, signals were sent between Ballycastle and Rathlin island, in the north of Ireland, 7½ miles, and in July the progress of a yacht race (the Kingstown regatta) was reported for the "Dublin Express" from a steamer that followed the yachts, whose distance from the receiving station on land at Kingstown was sometimes as great as 10 miles. The vertical wire on the steamer was 75 feet high, and was attached to the mast. Later, in August, messages were sent from the Prince of Wales's yacht "Osborne" in Cowes Bay to the Queen at Osborne House. In one case communication was kept up until the yacht was 7 miles away. During the winter of 1898 messages were sent regularly between South Foreland lighthouse and the lightship "East Goodwin," 12 miles distant. The system worked admirably, as reported by Signor Marconi, through the severest winter storms. On March 27, 1899, messages were sent across the English Channel from the vicinity of Boulogne, France, to the South Foreland, England, a distance of 32 miles. The Morse code was used, and the results are said to have been satisfactory.

Dr. Slaby, of Charlottenburg, Germany (see "Century Magazine," April), has sent signals by space telegraphy on the Marconi system between Schöneberg, near Berlin, and Rangsdorf, a distance of 21 kilometres (13 miles), assisted by the German army balloon corps. Balloons anchored at the two stations held lengths of copper wire 250 metres long, which hung to the ground. Balloons or kites can thus be used in space telegraphy either by land or by sea.

Dr. Strecker, in a paper before the Berlin Elektrotechnischer Verein, describes experiments on the use of long horizontal wires in place of vertical ones. Dr. Slaby, by using wires 100 metres long, 2 metres above the surface of the ground, had transmitted signals 3 kilometres. In Strecker's experiments, the wires connected to the transmitting and receiving apparatus were also 100 metres long and parallel to one another, but the distance between them was 5.7 kilometres. Bronze wire, supported on ordinary telegraph poles and insulators, was employed. In spite of wet weather the experiments, which were continued for some weeks, were on the whole successful, distinct signals being received; but the Morse signals were long, and the

transmission was therefore very slow. Modifications made by putting the coherer in the middle instead of at the end of the line, and increasing the length of the receiving line to 300 metres, did not cause marked improvement. Strecker concludes that employing ordinary telegraph stores, and horizontal in place of vertical wires, signals can be transmitted through a distance over 50 times the length of the wires.

Uses and Limitations.—The limitations of space telegraphy are thus stated by Rollo Appleyard in "Nature," Jan. 12, 1899:

"It is very generally admitted that space telegraphy will replace metallic-circuit systems only under conditions where metallic circuits are impracticable. The fact that metallic circuits have been laid over the Andes may be taken as proof that there are remarkably few land areas that can not be spanned by wires. For communication between *fixed* points on rough coasts a wire suitably protected is still the right and the best thing. . . . The great advantage of a metallic-circuit system is the consequent privacy of the messages, the simplicity of the apparatus, the speed of transmission, and the possibility the system offers for working by telephone, and in other ways avoiding the expense of skilled operators. Space telegraphy is at present limited to comparatively short distances, and its usefulness is confined to spanning estuaries, skirting seaboard, and for such purposes as that to which it was applied by Mr. Preece between Oban and Mull in 1895. But, except in rare instances, it is only likely to replace submarine cables between moored vessels and the shore, e. g. between lightships and the coastguard stations. The point of failure in submarine-cable communication thus happens to coincide with the point of favor of space telegraphy. The present object of those working at space telegraphy should therefore be to supplement the cable system of coast telegraphs, so that all the light vessels and lighthouses of our coasts may be brought into communication with one another and with the lifeboat stations."

One of the weak points of space telegraphy, as pointed out by A. V. Abbott in a recent lecture ("Western Electrician," Chicago, December) is that there is necessarily a waste of energy, the sending of a message to a distance of one mile involving the filling with electric waves of a sphere two miles in diameter, of which the transmitting instrument is the center and the receiver but a point on the surface. "Applied to transmission over long distances, such an expenditure of energy becomes commercially appalling." In ordinary telegraphy, although the actual energy is now believed to travel through space, it is directed by the wire. For this reason the use of the new method must probably remain restricted to cases where direct wire connection is impossible or impracticable. In an effort to overcome this objection, Prof. Ziekler, of Brunn, Germany ("Elektrotechnische Rundschau," Nov. 21, 1898) has devised a method of using a beam of ultraviolet light to actuate his receiving instrument. He employs a powerful arc lamp as his transmitter, using a screen of glass to produce intermittent flashes of the ultraviolet beam, which embody themselves as dot and dash signals on his receiver. The receiver is an air gap in a circuit containing an induction coil regulated to an electromotive force just below the sparking point at the air gap. As Hertz showed, a beam of ultraviolet light falling on the cathode of a strained air gap, near its breaking-down point, provokes a discharge. Ziekler started by producing this effect over a distance of two metres. Then, by improving the shape and material of his electrodes, and inclosing them in a chamber of compressed air, he was able

to increase this distance to 200 metres. This is a remarkable result, and extremely interesting to physicists, but of course its limitation to such small distances precludes its practical use in space telegraphy. Efforts to concentrate and direct the electric radiation by reflectors have also been made by Marconi and others; and Marconi states that he has signaled two miles with reflectors. Of course, the long vertical wire can not be used in this case. The necessity of "tuning," or mutually adjusting transmitter and receiver has also been considered by some as a disadvantage of space telegraphy, but so long as no means of directing the waves to a specific point have been discovered, it is rather an advantage, since it guarantees a certain amount of secrecy. A message will now reach all receivers within a sphere of a certain radius from the transmitter, but they will respond to it only in case they have been accurately tuned with the latter.

Regarding the relative merits of the two chief methods of space telegraphy detailed in this article—which may be called the low-frequency and high-frequency systems, or the dynamic and static systems, or the induction and Hertzian-wave systems, or perhaps the Preece and Marconi systems—Dr. Lodge has been quoted above in an adverse opinion on the former method; but Appleyard, in the review of the subject already noticed, believes that is the most likely to survive in practical use. He says: "Whether the later more elaborate methods of syntony for 'coherer' systems, proposed by Dr. Lodge, have justified themselves in practice is not yet known, but it is a significant fact that Dr. Lodge's most recent paper on the subject of space telegraphy makes a distinct departure from the 'coherer' system, and contains no account of experiments in the direction of syntonized receivers used in this particular way."

Mr. Preece reports that the Marconi system is able to traverse a distance of twenty-five miles, but he also says that there would be no difficulty in communicating by the alternate-current inductor system over a similar distance. The speed of signaling by the Marconi system is said by Appleyard to be limited to about twelve words a minute, and he concludes that this handicaps the method. In the Channel tests fifteen words a minute are reported to have been sent. Appleyard believes also that "coherer" systems "are at present too susceptible to mechanical and fortuitous electrical tremors for the ordeal of a telegraph office. Keeping in mind," he says, finally, "that we are here concerned with a practical question for engineers, rather than with the scientific aspect of space telegraphy, it would seem that the 'coherer' systems as a whole are about to be cast aside, and that preference is to be given to alternate-current inductor systems for coast telegraphs. If this is indeed to be the case, the problem is greatly simplified, and experiment resolves itself into the single task of finding the best design of apparatus for communicating between a moored lightship and the shore by means of inductor coils." See, besides the various papers quoted, a review of the literature of the subject by Prof. S. P. Thompson in the "Journal of the Society of Arts," London, April 1, 1898; "Telegraphing without Line Wires," by William Bissing in "The Electrical World," Jan. 14, 1899, *et seq.*; "Wireless Telegraphy," a paper read by G. Marconi before the Institution of Electrical Engineers, March 2, 1899; and "Wireless Telegraphy popularly Explained," by Richard Kerr (New York, 1898).

TENNESSEE, a Southern State, admitted to the Union June 1, 1796; area, 42,050 square miles. The population, according to each decennial census since admission, was 103,602 in 1800; 261,727 in 1810; 422,771 in 1820; 681,904 in 1830; 829,210 in 1840;

1,002,717 in 1850; 1,109,801 in 1860; 1,258,520 in 1870; 1,542,369 in 1880; and 1,767,518 in 1890. Capital, Nashville.

Government.—The following were the State officers during the year: Governor, Robert L. Taylor; Secretary of State, William S. Morgan; Treasurer, Edward B. Craig; Comptroller, James A. Harris; Attorney-General, G. W. Pickle; Superintendent of Instruction, Price Thomas; Adjutant General, Charles Sykes; Commissioner of Agriculture, John T. Essary; Railroad Commissioners, E. L. Bullock, F. M. Thompson, and N. H. White; Labor Commissioner, A. H. Wood; Geologist, J. M. Safford; Chief Justice of the Supreme Court, David L. Snodgrass; Associate Justices, W. C. Caldwell, John S. Wilkes, W. K. McAllister, and W. D. Beard; Justices of the Court of Chancery Appeals, M. M. Neil, S. F. Wilson, and R. M. Barton; Clerk, A. W. McMillan. All the above are Democrats.

Finances.—The biennial report of the Treasurer gives the following statement: "Balance in treasury Dec. 20, 1896, \$271,251.54; received from Dec. 20, 1896, to close of business Dec. 19, 1898 (both inclusive), \$4,416,802.49; total, \$4,688,054.03; paid out on Comptroller's warrants from Dec. 19, 1896, to Dec. 20, 1898, \$4,602,982.62; balance at close of business Dec. 19, 1898, \$85,071.41."

"Included in the totals of receipts and disbursements shown above are amounts credited and charged to loan account. These amounts are neither a part of the State's revenue from usual sources, nor of its disbursements for current expenses, as they consist alone of money borrowed on notes of the Funding Board and the payment of same. We have received from this source \$1,250,000 and have paid out \$625,000, leaving a balance of \$625,000."

"This balance of \$625,000 represents the amount of the notes of the Funding Board outstanding at this date. During the year 1897 we were still working under the revenue law of 1895, with a two-mill rate; besides this a large amount of anticipated collections went into the treasury during December, 1896, which would ordinarily not have been received until January, 1897."

"During 1898 we have been under the restored tax rate. Receipts for the year 1898, less borrowed money, \$1,918,053.79; disbursements for same period, less borrowed money and the amount paid out on new Penitentiary, \$1,910,660.99. A three-mill rate barely paid the expenses of the State in a year when there was no regular session of the Legislature. By the Jarvis law (affecting the cost of criminal trials) we shall save not less than \$50,000 a year. The greater saving under this law is to the counties."

"Tennessee owes a bonded debt of \$16,455,200, upon which we pay annually \$542,426 of interest. The greater part of this debt consists of the 3-percent. settlement bonds of 1883, due in 1913, but now subject to call."

"On Jan. 1, 1899, we shall owe a floating debt of \$850,000."

Education.—In 1896 the State had 7,882 schools and 9,135 teachers. The school fund, on which 6 per cent. interest is paid, is \$2,512,000. In addition a tax is levied of 15 cents on the \$100 worth of property, and counties and cities are empowered to impose a similar school tax. The poll taxes also are turned into the school fund. The expenditure for schools is about \$2,000,000 a year.

Crime and Convicts.—The receipts from the Penitentiary and the disbursements to it for the past biennial term were: Receipts in 1897, \$130,097.92; disbursements in 1897, \$173,824.63; loss in 1897, \$43,726.71; receipts in 1898, \$229,517.42; disbursements in 1898, \$219,073.90; profit in 1898, \$10,444.52.

To this profit for 1898 should be added \$25,000. The extra session of 1898 appropriated this sum for the erection of the workshops, etc., but decided that it should be paid out of the receipts from the labor of the convicts, which has been done.

The Governor says: "I congratulate the people of Tennessee that the penitentiary system, so long a source of perplexity and expense, is at last a self-supporting and profit-paying institution; and that by the employment of the convicts within the walls and within the mines, they have been removed as nearly as is possible from competition with free labor. I beg to call your attention also to the fact that our courts are constantly sending children of tender age as convicts to the Penitentiary. I do not believe that such a system is in keeping with civilization, and therefore in the name of our common humanity I urge the inauguration of a reformatory school for criminal children."

The new prison is now the main one and had in February about 600 inmates, while the old building, now the branch prison, had about 200.

In regard to criminal costs the Comptroller says that before the enactment of remedial measures by the last Legislature criminal costs averaged \$227,000 annually. Since their enactment the average has been, not including Attorneys'-General salaries, \$156,000 annually. For the two years the entire amount paid out was \$392,000, but \$80,000 of this had accrued under the old law and was actually paid before the criminal cost legislation of the last session was enacted. Gov. Taylor granted 693 pardons, commutations, and respites during his two years in office.

Tennessee is charged with six lynchings this year. In May a negro brakeman accused of pushing a white boy from a moving train, causing his death, was lynched by a mob at Rives. The lynching of a colored man at Mine Lick, in June, for assault on a woman, was witnessed, according to a dispatch, by 3,000 persons. A man who murdered his wife in a quarrel was lynched by a mob near Old Town in July. A negro who confessed having entered a house and attempted an assault on a young girl was hanged at Ripley, Aug. 6. At Mountain City, Sept. 26, a negro was taken from the county jail by a mob of 100 men and hanged for assault on a woman and seriously wounding a citizen.

Military.—Under the first call for troops for the Spanish war the quota of the State was three regiments, which the Government wished to have furnished from the militia, and most of the men in that service volunteered, making about 3,800. Of these, 600 were rejected by the surgeons before they left the first camps at three points in the State, and about 1,200 more by Government surgeons after all who were at first accepted had been concentrated at Nashville. On the second call a fourth regiment was recruited for the service. The State has paid out on account of the troops \$9,839.68, and the amount contracted and still unpaid is \$27,578.39.

In a case appealed to the Supreme Court, decision was given that members of the National Guard are exempt from road and jury duty.

Industries and Products.—The cotton crop for the year amounted to 268,635 commercial bales. In 1896 there were 26 mills in the State, with 95,836 spindles, and using 29,915 bales of cotton.

Nashville is the center of a large hard-wood producing region. An article in the "American" says that it has the entire control of what is known as the "Cumberland river poplar." It has had for the past few years access to the cedar timber groves of Middle and East Tennessee; while oak, tight-bark hickory, ash, cypress, chestnut, etc., abound in the forests to which it looks for its supply. Walnut is handled by the Nashville firms, but it does not com-

pare in volume with what it was ten or fifteen years ago. Of all grades and classes of lumber, walnut is the most scarce of all. From 750,000 to 1,000,000 feet are sold every year, and most of it is exported. When all the sawmills of Nashville are running on full time, which is the case when they can secure the logs, the number of men employed in the lumber business is about 2,000. The average for this year is 1,700. A close estimate of the money represented in all branches of the lumber and wood-working interests of the city is \$1,750,000. "Nashville is also the headquarters of the Concatenated Order of Hoo-Hoo, the lumbermen's fraternity. This organization, which has only been in existence about five years, has a membership among the lumber, newspaper, and railroad men of over 7,000."

As a winter-wheat flour market, Nashville stands second only to St. Louis. The number of barrels of flour made there in 1897 was 832,222, and the total output for 1898 was 963,140 barrels, making an increase of 12½ per cent. in 1898 over 1897. The sales of the flour mills of the city for 1897 aggregated \$3,695,029.22; the sales for 1898 were \$4,852,736.41.

The following is a detailed statement of the aggregate quantity of the different kinds of manufactured tobacco produced in Tennessee during the calendar year ending Dec. 31, 1898: Plugs, pounds, 2,273,969; smoking, 189,906; snuff, 2,524,834; total, 4,988,709.

Government reports show that 2,888,000 tons of coal were produced in the State in 1897.

Insurance.—The Treasurer says: "Particular attention is called to the showing of the last two years, by reference to which it will be seen that the collections exceeded those of the same period six years ago by nearly 50 per cent., and the collections are now nearly 5 times as large as they were in 1881 and 1882. Of the amount collected in the last two years, about \$10,000 was back taxes, due to the State by reason of the failure of the companies to report overhead business. This was ascertained by an investigation of the companies' books, and the entire tax, together with 6 per cent. interest, has been covered into the treasury without any cost to the State. These investigations will be continued until all companies have been investigated, and it is confidently expected that a very considerable sum will be realized for the State. The following figures will show what was collected for the periods mentioned above: Total receipts for biennial period ending Dec. 20, 1882, \$55,506.72; total receipts for biennial period ending Dec. 20, 1892, \$173,776.75; total receipts for biennial period ending Dec. 20, 1898, \$246,932.80."

Tax Liens.—The Comptroller says in regard to litigation on this subject: "In the summer of 1897 it was held by the honorable Court of Chancery Appeals, in the case of Dunn vs. Dunn, appealed from Hamilton County, that the lien of a mortgage on real estate covered by his mortgage, was superior to the State's lien for taxes, wherever the taxes were assessed against the property after the registration of the mortgage. It was also held by said court, in the same case, that the mortgagee might foreclose his mortgage in the courts of the State, and appropriate the entire proceeds of the sale to the payment of his debt, interest, and costs, to the exclusion of all taxes assessed against the property after the registration of the mortgage. As soon as this decision was published and became generally known, the payment of delinquent taxes as to a very large per cent of the mortgaged property within the State practically ceased. There was a very large amount of delinquent taxes due upon the mortgaged property throughout the State, which it was utterly impossible to collect if this decision stood as the law. Both Judges Clark and Hammond, of the United States Court, as well as many chancellors of

the State, were following the holding of the Court of Chancery Appeals in the Dunn case as a precedent, and were knocking out the taxes in all foreclosure suits where the proceeds of sale did not exceed the amount of the debt, interest, and costs."

The mortgagor in the case had, however, appealed, and the State engaged counsel, with the result that the Supreme Court reversed the decision of the Court of Chancery Appeals.

Legislative Session.—The General Assembly met in special session Jan. 17, and adjourned Feb. 5. In the Governor's call 18 subjects for legislation were specified. The first five related to the city of Memphis, whose citizens desired the passing of acts that would enable them to place their city in better sanitary condition, and so guard against the reappearance of yellow fever, and therefore asked for the special session. The measures were: To extend the city limits; authorize issues of bonds for waterworks and for sewerage, and for building school-houses in the territory annexed; to grant power for improving roads and to enlarge the taxing powers of the city. The bills were accordingly passed embodying the desired provisions. The bills providing for waterworks within the annexed territory were amended after their introduction, so as to provide that the bonds issued for the purpose should be payable in any legal tender, instead of in gold; and that before the \$2,000,000 of bonds were issued the question should be submitted to vote of the people. An amendment to submit the question of annexation to vote of the people of the territory to be annexed was defeated. But in June the Supreme Court decided that the act of annexation, which would have added 12 square miles of suburbs to the city and about 25,000 inhabitants, was unconstitutional.

Another subject mentioned in the call was the assessment for taxation of railroad, telegraph, and telephone properties—"to provide for back taxing and back assessing railroad, telegraph, and telephone property for State, county, and municipal purposes, and to provide the means and manner," to remedy defects in existing statutes for such taxation; to remedy defects in the assessments for 1897-'98, and validate the assessments for those years; "to enact such laws, prospective or retrospective, as may be needful to prevent taxpayers from enjoining, hindering, and delaying making assessments." The occasion for this legislation was the decision by Judge Clark of the Federal Court that the valuations of railroad property made by the Railroad Commission and adopted by the Board of Equalizers were too high, and the granting of an injunction against the collection of taxes assessed on that basis. Bills with the provisions named by the Governor were introduced, but only one relative to railroad assessments was passed. It only confirms an act already passed, ratifying the provision conferring power on the Railroad Commission to levy assessments.

Other objects mentioned in the call were: To consider the imposing of privilege taxes on certain kinds of business; to authorize municipal corporations to provide parks and maintain them, and to authorize an amendment to the charters of street railway companies enabling them to aid in securing and maintaining parks; to appropriate money for paying expenses of the session and carrying its legislation into effect; to amend the charter of Bolivar and to abolish that of Martin and reincorporate that town.

Acts were passed in accordance with these recommendations. Three bills were passed relative to the organization of park associations and the maintenance of parks near cities by the cities. These bills have reference to the plan to make a park of the Centennial site at Nashville. They authorize the

City Council to appropriate an amount not to exceed \$5,000 per year to maintain the park; authorize the city of Nashville to furnish the park with light and water; and authorize street car companies, whose lines run near such a park, to guarantee the payment of interest on bonds issued by park associations.

Another act relieves general merchants of the cigar- and fruit-stand tax, and graduates the privilege tax on circuses from \$200 in the larger counties to less amounts in the smaller counties.

The election of a United States Senator to fill the unexpired term of the late Isham G. Harris devolved upon the Legislature at this session. The candidates before the Democratic caucus were Thomas B. Turley, who had been appointed by the Governor to fill the vacancy until the Legislature should elect; Benton McMillin, member of Congress; and Gov. Robert L. Taylor. After a long deadlock it became evident that Gov. Taylor could not be nominated, and a majority of his supporters went to Mr. Turley, who was nominated on the one hundred and forty-fifth ballot, and was accordingly elected in joint session, receiving 91 votes to 38 for J. W. Baker, the Republican candidate.

The cost of the session was given as about \$20,000.

Just before the close a resolution was introduced in the House providing for the appointment of a joint committee to investigate certain alleged attempts to bribe members of the Legislature. It was amended so as to include investigation of any attempts at bribery during the regular session, and passed. The alleged attempts at bribery were in connection with the cigarette bill. The decision of the committee was that the charges were not sustained by the evidence.

Judicial.—A decision in January against members of an ice trust and the imposition of a fine of \$1,000 serve to show that the law against trusts can be enforced.

The Supreme Court rendered a decision in December sustaining the anticigarette law passed by the last Legislature, forbidding the importation and sale of cigarettes in Tennessee. The court says that cigarettes are not legitimate articles of commerce, and therefore are not within the provisions of the Federal Constitution regarding trade.

The United States Supreme Court declared in December against the validity of the State law of 1877, in as far as it gives resident creditors of a foreign corporation doing business in the State a preference in the distribution of assets, in the case of failure, over outside creditors; but in the case of a corporation which was a creditor in the same case the court held that the second section of the fourth article of the Constitution did not apply to the corporation as it did to individuals—that corporations were not citizens of States in the sense that they shall be entitled to all privileges and immunities of citizens in the several States.

Political.—The only State officers to be elected this year were the Governor and the three Railroad Commissioners.

At the State convention of Democrats at Chattanooga, June 29-30, resolutions were adopted calling for free coinage of silver, repeal of the law for 10-per-cent. tax on the issue of State banks, imposition of an income tax, and Federal taxation only for revenue for the support of an economically administered Government. They approved the war with Spain, and on State affairs expressed approval of the laws passed in the interest of labor and those for the reduction of criminal costs, and the creation of the Railroad Commission; also, of the State administration and the course of the State's members of Congress; they favored liberality in providing

for the public schools and the charitable institutions, and the compensation of coal-oil inspectors otherwise than by fees; and expressed sorrow at the death of Senator Harris, "the tallest, strongest oak in the Democratic forest of Tennessee."

Benton McMillin was made candidate for Governor by acclamation, no other name being mentioned.

The convention refused to approve the course of the Railroad Commissioners by resolution or by renomination. The candidates chosen were: N. W. Baptist, J. N. McKenzie, and Thomas L. Williams.

A Populist State Convention met at Nashville, July 6, and adopted resolutions declaring allegiance to the Omaha platform and opposing fusion of the national party, recommending that the next national convention be held at least thirty days before either the Democratic or the Republican. They favored the enactment into laws of ten measures of reform which were formulated by the State Committee in May and approved by a subcommittee appointed by the Democratic State Committee. These were:

"1. To restrict the operation of the Dortch law to the four largest counties, viz.: Davidson, Shelby, Hamilton, and Knox.

"2. Take the authority to appoint the election commissioners from the Governor, and require the Legislature to elect a State board of three election commissioners, one of whom shall be selected by the State executive committees of each of the three most prominent political parties in the State, to serve without compensation. Said board to be empowered and required to appoint three election commissioners from each county, each State commissioner naming one.

"3. It shall be made a felony for any person or persons to print, send, or cause to be sent out, or distributed any fraudulent ballots for any purpose whatsoever.

"4. To so redistrict the State that the number of circuit judges may be reduced not less than four and chancellors not less than two.

"5. The duties of Adjutant-General and Governor's private secretary shall be performed by same person, allowing only one stenographer.

"6. Clerical force at the Capitol be reduced at least 25 per cent.

"7. The further abolition of fee system and its abuses.

"8. Reduce fees of clerks and assistants of both branches of the Legislature.

"9. Each State official shall be required to make all contracts for printing, on State's account, for his office, and publish same, after verifying them to Comptroller.

"10. All visiting committees appointed by the Legislature shall be required to make to the Comptroller an itemized statement of all their expenses while actually on duty, and same shall be published."

Other demands were for revision of the assessment laws, reduction of official salaries, county local option as regards road building, and the requirement of receipts for all taxes as a prerequisite to voting, not of poll-tax receipts alone. The Democratic party was condemned for refusing to insert in its platform demand for the ten measures agreed upon by committees as stated above, and the Legislature for issuing bonds and creating unnecessary offices.

A motion to nominate a candidate for Governor was at first voted down, but on reconsideration it prevailed, and Robert N. Richardson was nominated.

The Prohibitionists met in State convention at Nashville, July 7. The resolutions declared allegiance to the principles of the party; and after

declaring that the organization sustained President McKinley's policy in the war for Cuban independence, said further:

"But it points with alarm to the total official indifference to, and complicity in, our legalized liquor traffic, that is daily more destructive to life and property.

"It looks with amazement and indignation upon the army canteen, when our brothers and sons, enlisted to serve their country, are detailed to do duty as bartenders; debauching their own moral sense and debasing the noble young men and boys that have gone out from our homes in the interests of humanity.

"It protests against official corruption growing out of frauds at the ballot box;" and further: "We heartily indorse the activity of the New York 'Voice' in investigating and exposing the saloon attachments to various eminent educational institutions in our land; and we would enter our most emphatic protest against any system of education which sanctions or suffers the presence of the bar-room or pool room in or about any educational institution of the land, or about the camp at Chickamauga Park."

W. D. Turnley was nominated for Governor.

The State Republican Convention met at Nashville, Aug. 17. The resolutions were mainly devoted to State issues. They recommended changes in the Constitution in regard to the courts; abolition of the poll tax as a requisite for voting; prohibition of direct or indirect double taxation; a non-partisan Board of Pardons; election of the Secretary of State, Treasurer, and Comptroller by the people at the same time with the Governor, and of the Attorney-General and reporter at the same time with the Justices of the Supreme Court; modifications of the registration laws; changes in the official ballot; restoration of the power of appointing election officers to county authorities, and other modifications of the election laws; abolition of the fee system; a non-partisan Railroad Commission; the withdrawal of convicts from the coal-mining business; a non-partisan jury commission in each county; repeal of laws depriving towns and cities of local self-government; publication of printing accounts of State officers, and of itemized statements of expenses of legislative visiting committees; and a law providing for the adoption of a better system of accounting by the various officers who collect or receive the public revenue, under which prompt periodical returns shall be made under oath, and under which, by reason of checks and counterchecks, it shall be impossible for any officer to steal from the people and conceal the fact for years, and then go unwhipped of justice." Resolutions were passed also declaring for the repeal of the civil-service law, and in favor of the appointment of Capt. J. W. Baker as commissioner to the Paris Exposition.

The nominations were: For Governor, James A. Fowler; Railroad Commissioners, Zack Taylor, R. A. Haggard, and James A. Greer.

The official count of the election gave the following figures of the vote for Governor: McMillin, Democrat, 105,640; Fowler, Republican, 72,611; Turnley, Prohibitionist, 2,411; Richardson, Populist, 1,722. N. W. Baptist received the highest vote for Railroad Commissioner, and is therefore elected for the term of six years; J. N. McKenzie came next and will hold the four years' term; and Thomas L. Williams will serve for two years.

The delegation in the House of Representatives of the Fifty-sixth Congress will stand 8 Democrats and 2 Republicans; and the State Legislature, 28 Democrats in the Senate and 77 in the House; 5 Republicans in the Senate and 22 in the House.

TEXAS, a Southern State, admitted to the Union Dec. 29, 1845; area, 265,780 square miles. The population, according to each decennial census since admission, was 212,592 in 1850; 604,215 in 1860; 818,759 in 1870; 1,591,749 in 1880; and 2,235,523 in 1890. Capital, Austin.

Government.—The following were the State officers in 1897: Governor, Charles A. Culberson; Lieutenant Governor, George T. Jester; Secretary of State, J. W. Madden; Treasurer, W. B. Wortham;

JOSEPH DRAPER SAYERS,
GOVERNOR OF TEXAS.

Comptroller, R. W. Finley; Superintendent of Public Instruction, James M. Carlisle; Commissioner of the Land Office, Andrew J. Baker; Commissioner of Agriculture and Insurance, Jefferson Johnson; Attorney-General, Martin M. Crane; Adjutant General, Woodford H. Mabry, who died Jan. 4, 1899; Health Officer, R. M. Swearingen, who died Aug. 7, and was succeeded by Walter

F. Blunt; Chairman of the Railroad Commission, John H. Reagan; Chief Justice of the Supreme Court, Reuben R. Gaines; Associate Justices, Leroy G. Denman and Thomas J. Brown; Clerk, Charles S. Morse. All are Democrats.

Finances.—The outstanding bonds of the State aggregate \$3,992,030, of which \$3,254,040 are held by special funds and \$737,990 by individuals. These latter bonds consist of \$1,790, \$663,200, and \$73,000, bear 4, 5, and 7 per cent. interest, and are due in 1899, 1909, and 1904, respectively.

The Comptroller's report shows \$677,086.23 collected as occupation taxes by the State for the year ending April 30, 1898; and the total of occupation taxes collected in the counties was \$941,701.08.

The receipts of the Department of State for the year were \$62,833.

A decision of the Supreme Court in January sustains the validity of the courthouse, jail, road, and bridge bonds issued by the counties, holding that it is not necessary for a county commissioners' court to make provision for the levy of a tax to pay interest and establish a sinking fund for such bonds at the time they are issued. A constitutional amendment seeking to validate such bonds held by the school fund was voted down by the people in August, 1897. The decision of the court validates them by whomsoever held.

Education.—The law limits the School Board to investments of the fund in county bonds bearing not less than 5 per cent. interest. The Comptroller's report says that \$1,134,247 was in the treasury Dec. 1 to the credit of the permanent school fund, and that it could not be invested because the board could not buy 5-per-cent. county bonds at par, and the amount of this class of securities held for the fund has decreased \$344,491 the past year.

Of the 75,916,277 acres of unlocated public domain, including the bays that were in the State at the time of the adoption of the present Constitution, half was to be made a part of the perpetual school fund. But this fund has received only 23,970,000 acres and the proceeds of the sale of 4,131,617 acres, leaving over 9,800,000 acres still due; while 44,006,966 acres have been alienated for other

purposes, leaving only about 3,800,000 acres that may be turned into the school fund. This state of affairs threatens to unsettle the titles of many who have acquired land under the homestead law and in other ways.

A dispatch from Dallas, Oct. 18, said: "The grand jury of Webb County has found nearly 20 indictments against men for school-census frauds. More than 1,000 fraudulent names have been discovered on the rolls of the public schools of Laredo, the result of importing Mexican children across the Rio Grande. These indictments are the result of charges by the Populist candidate for Governor, that during the last seven years more than \$3,000,000 of State school funds had been paid to southwestern Texas politicians by the school-census padding plan." The school population of 1897 was given as 775,933.

The regents of the State University report pressing need of more room. An increase is reported in the income from university lands which has made possible the construction of the east wing of the main building, at a cost of \$38,642.50, and the repair of the foundation and walls of the auditorium.

The Agricultural and Mechanical College had an attendance of 391 in 1898, and some applicants were turned away on account of lack of room. Special appropriations, amounting to \$106,500 for buildings and improvements, are asked for the coming biennium.

Charities and Corrections.—The insane asylums are not only filled, but it is estimated that there are 1,000 lunatics in the jails, upon the poor farms, and under private care and restraint in the State.

The State School for the Deaf has about 180 pupils, the Institute for Deaf and Blind Colored Children about 75, and the State Orphans' Home about 350.

The Confederate Soldiers' Home seems not to be very liberally supported. The deficit for two years was given as about \$8,000, and many qualified applicants are refused admission on account of lack of funds.

At the close of November there were 4,483 penitentiary convicts, distributed as follows: Contract forces, 1,667; share forces, 640; railroad forces, 334; Harlem State farm, 189; Rusk Penitentiary, 781; Huntsville Penitentiary, 872.

In regard to the cost the Governor says:

"An examination of the official reports shows that for eight years past each of the penitentiaries has been, and is now, from a financial standpoint, a losing institution, the one at Rusk being by far the greater loser. Had it not been for the State and share farms, the contract farms, and the railroad forces, it would have been necessary to draw very heavily on the treasury every year to supply the deficit at both penitentiaries. According to the reports of those in charge of the system for the two years ending Oct. 31, 1898, the receipts were \$1,413,865.78, and the expenditures \$1,371,185.77.

Military.—The strength of the organized militia in April was 2,958. The quota under the first call for volunteers was 4,229. Five regiments were furnished by the State for the war.

Collections were made in the Sunday schools of the State for the purpose of giving a Bible and a sword to Capt. Philip, of the battle ship "Texas."

The battlefield of San Jacinto is to be converted into a park, and condemnation proceedings were instituted this year for securing the land. About 250 acres will be secured soon, unless the owners resist by appeal to higher courts.

Railroads.—During the first six months of the year, 63.08 miles of railroad were built in the State. The El Paso and Northeastern, which is to run

from El Paso, Texas, northeast 165 miles to White Oaks, New Mexico, will tap a fine coal country and furnish connections with new roads now building in western Mexico. The Pecos and Northern has been completed. The State has now about 10,000 miles of road.

On Feb. 28 the Supreme Court affirmed a decision against the Houston and Texas Central and Galveston, Harrisburg and San Antonio Railroads. These cases were tried in the district court and a judgment for \$673,109.56 was rendered against the Houston and Texas Central and \$447,567 against the Galveston, Harrisburg and San Antonio Railway Companies. The cases were taken to the court of civil appeals and affirmed. They were then taken to the Supreme Court, with this result. They had been brought by the State to recover the amounts claimed to be due by defendant companies to the State for indebtedness, which was paid during the civil war to the State in Confederate money. The money being worthless, the Attorney-General sued for payment of the debt.

The bondholders of Texas railroads procured an injunction in October against the Railroad Commission and the Attorney-General to prevent them from enforcing the tariff of cotton rates that the Commissioner had fixed; and, Dec. 1, the same United States court enjoined the railroads, the State Railway Commission, the Attorney-General of Texas, and all other persons from enforcing or using any rate made by the State Railway Commission since Aug. 10, 1894.

Products.—In an address by ex-Gov. Hubbard at the Omaha Exposition, he said: "Texas supplements her cotton by rapidly developing sugar culture, with an area larger by far than all the sugar lands of Louisiana. Our fruit culture in eastern Texas, with our early vegetable crops of the garden, amounts this year to \$5,000,000, and yet we are at the beginning of this industry. Our butter amounts to \$3,000,000 annually. Our vast cattle ranges of the West graze to-day 3,500,000 head of cattle, and their annual increase of calves is put down in the official reports at 1,220,612. This property is valued now and assessed at \$30,000,000. Our sheep industry brings us next to Ohio, with, in round numbers, 3,000,000, with an annual increase of 700,000 lambs."

The cotton crop this year was 3,075,000 bales, according to Secretary Hester's report. The wool clip was 16,380,442 pounds. There are 4 cotton mills with 29,160 spindles, which used 12,090 bales in the year ending Oct. 1, 1897.

The gold product in 1898 was \$7,500.

Galveston.—The year was one of unusual prosperity in Galveston, due chiefly to these causes: The increased business of the port, the completion of the jetties, and negotiations with the Southern Pacific. A percentage of this increased business was due to diversification of crops. Farmers have found a market through Galveston for products which they could not before raise to advantage. They have not decreased the amount of cotton raised, but in growing their home supplies they have planted more than enough for home consumption, and it was such surplus that for the first time in 1898 began to seek a market through Galveston.

The increase in the number of vessels entered and cleared at Galveston the past year reflects the growth of the business of the port. The average size of the vessels has increased from 1,491 tons to 1,644 tons. The tonnage of vessels cleared at Galveston the past three years in the foreign trade was as follows: 1896, 505,105 tons; 1897, 699,311 tons; 1898, 899,403 tons. During 1898 there were 530 vessels entered and 555 cleared at Galveston in

the foreign trade. The value of Galveston's foreign imports for 1898 was \$2,297,169. The value of Galveston's foreign imports for the years 1895, 1896, and 1897 combined was \$1,776,323. Work on the jetties has completed last January. Deep water at Galveston has cost \$8,700,000. The depth of water is increasing gradually all the time, from the action of the tides and winds. There was an increase of the depth of water in the channel of about 6 inches during the past year.

The amount expended on public and private building improvements in Galveston during the year was \$460,000. The Government has spent and is spending \$932,000 in the construction of coast fortifications at Galveston and equipment for them. Jetty and harbor improvements for the year amounted to \$375,000. Wharf improvements amounted to \$100,000. Public improvements not classed as building amounted to \$142,000.

Mob Violence.—Three lynchings are charged to the State in 1898. The Governor says that White Cap outrages have become alarmingly frequent, and recommends prompt action by the Legislature to suppress them. In the neighborhood of Mount Pleasant many negroes were frightened into leaving the State in August by notices posted in the cotton fields warning negro cotton pickers to leave the country.

Two men were killed and 6 wounded in wharf riots at Galveston, Aug. 31.

Trouble over politics brought on a fight between whites and blacks at Fort Worth, Oct. 21, in which the independent candidate for sheriff, who was the leader of the independent movement against the White Men's Union Association, was shot and killed.

Affrays took place in various parts of the State on election day, the most serious of which was at Hubbard, Stephens County, where 3 were killed and 2 wounded, probably mortally. At Steuben, Hopkins County, 2 were killed; at Aubrey, Denton County, the sheriff was dangerously wounded by a man whom he shot; and at Sheffield, Trinity County, 1 man was killed and another fatally wounded.

At Dallas, Dec. 25, an affray took place which looked for a time like the opening of a "race war," but it was checked by the action of the police in making prompt arrests. One negro was killed, another seriously wounded, 1 white man died as a result of the affray, and about a dozen others, white and colored, sustained slight injuries.

Political.—State officers, members of Congress, and a State Legislature were to be elected this year, as well as county officers; and two proposed amendments to the Constitution were to be voted upon. Through carelessness in drafting the resolutions it was provided that the amendments should be submitted to vote the first Tuesday in November; and as November came in on Tuesday this was not the day for the general State election. The Attorney-General decided that the amendments must be voted upon at the time named in the Legislature's resolution, and therefore two elections were held.

Only two State tickets were in the field—Democratic and Populist.

The Populists were in convention at Austin, July 27-28.

On national issues, the resolutions demanded the construction of the Nicaragua Canal, opposed the issuing of Government bonds, and approved the war so long as it should be carried on for its avowed humane object and not for conquest. On State affairs they arraigned the administration for failure to carry out the platform pledges of the party, naming among the broken pledges the following: To reduce the number of district judges, which, on the contrary, had been increased; to protect the

interests of shippers; to give 500,000 acres of land for colored school purposes; to insure honest elections; to provide for six months' school during the year; to economize; to reserve the public domain for actual settlers; to reduce official fees and salaries; to prevent discrimination against any kind of lawful money; to work for free silver. Among the demands made were: Construction of a State railroad from the Red river to the Gulf; enactment of laws for the initiative and referendum, and the imperative mandate; no increase of interest-bearing debt without consent of electors; reduction of fees and salaries of officials to correspond with the price of labor and its products; efficient public schools—those for each race to be managed by trustees of their own color; no property qualification for voters; no railroad passes for officials, except sheriffs and constables; and a constitutional amendment repealing the amendment by which 1 per cent of the permanent school fund may be transferred annually to the available fund, and investment of the permanent school fund at not less than 4 per cent. Further, they condemned the system of seven appellate courts as cumbrous and inefficient; criticised the management of the Soldiers' Home; and demanded repeal of the occupation-tax laws.

The ticket follows: For Governor, Barnett Gibbs; Lieutenant Governor, E. W. Kirkpatrick; Attorney-General, J. H. Davis; Comptroller, E. P. Alsbury; Land Commissioner, H. L. Bentley; Treasurer, J. B. Barry; Superintendent of Education, V. A. Collins; Railroad Commissioner, Jack Farley; Associate Justice of Supreme Court, T. J. McMinn; Justice of Criminal Court, J. D. Todd; State Chairman, J. S. Bradley.

The Democrats met in State convention at Galveston, Aug. 2. J. W. Blake was permanent chairman. There were two reports from the Resolutions Committee, the members differing on the question of expansion. The minority resolutions said on this subject:

"We believe that a colonial policy is contrary to the theory of this Government; and we are opposed to the acquisition of any territory inhabited by a people who are incapable of self-government, because we hold the right of self-government to be the best principle of our republic.

"We are opposed also to the acquisition of any territory, the government or control of which will necessitate an increase in the standing army of the United States.

"We reaffirm the declaration of Thomas Jefferson that all governments derive their just powers from the consent of the governed, and we are opposed to the establishment of any government by the United States without the consent of the people to be governed."

This report was tabled by a vote of 721 to 334. The majority report, which was adopted, had this to say on expansion:

"We favor the carrying out of the letter and spirit of the resolutions under which we intervened in Cuba, and we insist that the Cubans shall be permitted to establish an independent Government of their own; but in the event that the people of that island shall hereafter desire to be annexed to this country, and the terms of annexation can be satisfactorily arranged between the two Governments, we will welcome Cuba as a part of the territory of the United States.

"We favor the acquisition of Porto Rico and all other Spanish possessions in the Western Hemisphere.

"We reaffirm our faith in the Monroe doctrine and oppose the annexation or continued retention of the Philippine Islands or any territory upon the Eastern Hemisphere."

Further, the resolutions called for free coinage of silver and an income tax; denounced the revenue bill and the Dingley tariff; favored Government construction of the Nicaragua Canal; favored development of the navy and opposed increase of the standing army; and pledged support to William J. Bryan for renomination. They commended the several departments of the State administration, opposed free railroad passes, favored liberal appropriations to State institutions, declared that all public work should be done within the State when possible, and demanded that the Legislature make appropriations to enable the Railroad Commission to employ experts to examine into the traffic affairs of the railroad companies; and they called for a committee composed of State officers to formulate measures for tax reform and for guarding the State funds; also for repeal of the amendment allowing transfer of part of the permanent school fund to the available fund.

Resolutions were adopted favoring the holding of primaries for State officers on the same day, and denouncing mob law and White-Capism.

The candidates named were: For Governor, Joseph D. Sayers; Lieutenant-Governor, J. N. Browning; Attorney-General, Thomas S. Smith; Comptroller, R. W. Finley; Land Commissioner, George W. Finger; Treasurer, John W. Robbins; Railroad Commissioner, Allison Mayfield; Superintendent of Public Instruction, J. S. Kendall; Associate Justice of the Supreme Court, Thomas J. Brown; Judge of the Court of Criminal Appeals, M. M. Brooks; State Chairman, Charles K. Bell.

At the Republican Convention at Fort Worth, Aug. 16-18, E. H. R. Green was re-elected chairman of the State Committee. The resolutions adopted approved the national Administration and the conduct of the war; favored annexation of Porto Rico and Hawaii; increase of the army and navy; construction of the Nicaragua Canal; and the proposed deep-water improvements in Texas recommended by United States engineers. They accused the Democratic platform of inconsistency, and on State issues they disapproved the course of the Railroad Commission and the management of the school fund, and opposed the repeal of the amendment regarding the use of a part of the fund. They demanded a constitutional amendment to give to cities and towns exclusive and original jurisdiction in criminal matters within their limits, and recommended the constitutional amendment on pensions, denounced the fee bill, denounced mob violence, and said in conclusion:

"We believe that the efforts of the Republican party of Texas at the coming election should be confined to the election of representatives to Congress, and we therefore recommend that no State ticket be placed in the field this year, leaving to the respective counties and senatorial districts the option of placing representatives in the field in said counties and senatorial districts as may seem best to the interests of such organizations." Accordingly, no nominations were made for State offices.

The two constitutional amendments were voted upon Nov. 1. The one limiting compensation of members of the Legislature to \$5 a day for first 100 (formerly 60) days of session, and \$3 (formerly \$2) a day for the remainder of the session, was rejected by 255,121 against to 35,901 in favor. The other, permitting the pensioning of indigent and disabled Confederate soldiers and sailors and their widows, at not more than \$8 a month, the total expenditure not to exceed \$250,000 a year, was adopted by 56,074 in favor to 53,074 opposed.

At the election, Nov. 8, all the Democratic candidates were elected. The vote for Governor stood: Sayers, 285,074; Gibbs, 132,348. One Republican

was elected to Congress in Galveston; the other 12 are Democrats. The Legislature will stand: 148 Democrats, 2 Republicans, 7 Populists, and 2 Independents.

Judicial.—The Supreme Court gave decision on a law of 1875, providing that the purchaser of property sold for taxes should receive a deed from the assessor and the collector; the court held that it was unconstitutional, in so far as it requires the payment of taxes before making a defense against a void claim of title under an illegal tax sale.

TURKEY.—An absolute monarchy in eastern Europe, western Asia, and northern Africa. The Sultan is the eldest prince of the line of Osman. Abdul Hamed II, born Sept. 21, 1842, the thirty-fourth Sultan of the Osmanli dynasty, succeeded his brother Murad V, who was deposed on Aug. 31, 1876, on the ground of insanity. The Sultan is recognized throughout most of the Mohammedan world as the Khalif, or temporal chief of Islam. In matters of religion and law he is advised by the Sheikh-ul-Islam and guided by the decisions of the Ulema, a body of eminent expounders of the sacred books, which sits in Constantinople. In civil and political matters the Sadvazzam, or Grand Vizier, is the chief executive officer under the Sultan. These two functionaries form with the ministers at the head of the several departments of state the Privy Council or Cabinet of the Sultan. This was composed in the beginning of 1898 as follows: Grand Vizier, Halil Rifat Pasha; Sheikh-ul-Islam, Jemaladdin Effendi; Minister of War, Riza Pasha; Minister of Justice and Religious Affairs, Abdurrahman Pasha; Minister of Foreign Affairs, Ahmed Tewfik Pasha; Minister of Marine, Hassan Pasha, Minister of the Interior, Memduh Pasha; Minister of Finance, Nazif Pasha; President of the Council, Said Pasha; Grand Master of Artillery, Zeki Pasha, Intendent of Religious Endowments, Galib Pasha; Minister of Public Instruction, Zuhdi Pasha, Minister of Commerce and Public Works, Mahmud Pasha.

Area and Population.—The immediate possessions of the Sultan have an area of 1,147,578 square miles, with a population estimated at 24,535,700. The European vilayets, with an area of 65,909 square miles, have 5,812,300 inhabitants; Crete, area 2,949 square miles, 294,192; Asia Minor, area 209,669 square miles, 9,238,900; Anatolia, area 89,264 square miles, 2,472,400; Syria and Mesopotamia, area 215,349 square miles, 4,667,400; Arabia, area 173,700 square miles, 1,050,000; Tripoli, are 398,738 square miles, about 1,000,000. The vilayets of Bosnia and Herzegovina and the sandjak of Novi Bazar, occupied and administered by Austria-Hungary by virtue of the treaty of Berlin; Cyprus, administered by Great Britain under the Anglo-Turkish convention of June 4, 1878; the tributary principality of Bulgaria and the autonomous province of Eastern Roumelia united with it since 1886; as well as Egypt, which obtained autonomy in 1841 and is now occupied by British troops, are all integral parts of the Ottoman Empire by public law, although they have been removed from Turkish administration and jurisdiction. The European provinces in this position have an area of 75,010 square miles, with 5,304,981 inhabitants; Egypt an area of 10,698 square miles, with 9,811,544 inhabitants. The tributary principality of Samos, area 180 square miles, has 51,745 inhabitants. Including all the provinces in which the suzerainty of the Sultan is still recognized, the area of the Turkish Empire is 1,623,000 square miles and the estimated population 39,652,000.

Finances.—The Turkish debt on June 30, 1898, amounted to £ T. 144,127,899, not including £ T. 24,513,000 of war indemnity due to Russia and a huge floating debt of unknown amount. The loan of

1885, the defense loan of 1891, and the 34-per-cent. loan of 1894, amounting to £ T. 19,830,426, are guaranteed by the Egyptian tribute. For the other debts the indirect taxes on liquors, salt, silk, and fisheries, stamps, the tobacco régime, tobacco tithes, and customs duty on tumbeki, or Persian tobacco, and the Cyprus and Eastern Roumelian tributes are pledged and are administered by an international council, yielding in 1897 the sum of £ T. 2,165,188, less £ T. 95,973 expenses. In January the Porte negotiated with the Ottoman Bank, the Deutsche Bank, and the Anatolian Railroad Company, one an Anglo-French, the others German corporations, for advances of £ T. 600,000, £ T. 200,000, and £ T. 400,000 respectively at 7 per cent. interest, to be repaid out of the Greek war indemnity. The railroad company stipulated for the right to connect its line with the Aidin Railroad, and when the English promoters of the latter objected the Porte decided to refuse the concession of the coveted branch line to the Germans and to the English the promised right to extend their line to Afasin and Kara Hissar. The Russian Government demanded out of the war indemnity of £ T. 4,000,000 the payment of £ T. 1,250,000 arrears of the Turkish war indemnity and charges for maintaining prisoners. The Porte finally agreed to pay the arrears in five annual payments. France, Great Britain, and Italy claimed out of the indemnity compensation for damages sustained by their subjects in the Constantinople riots of August, 1896, to the total amount of £ T. 80,000. The Porte replied in July to the identical note of these powers disclaiming responsibility, pointing out that similar disorders had occurred in other countries without the Government concerned being called upon to pay any indemnity, and suggesting that the injured foreigners should proceed against the perpetrators of the crimes from which they had suffered. The Council of the Public Debt reported for 1898 a revenue exceeding that of the previous year by £ T. 50,000, notwithstanding a decrease of £ T. 67,000 in the receipts of the tobacco régime. The decline in the business of the régime company, attributed to the smuggling of Persian tobacco, was the subject of a complaint from the German Government. The Greek indemnity was received in installments running from May to July, and was paid out again to satisfy debts and claims and for quick-firing field guns and Mauser cartridges.

The Army.—The empire is divided into 7 Ordus, or military circumscriptions, outside of which are the division of Hedjaz, in Arabia, and the division of Tripoli. The Nizam, or troops of the line, number about 350,000; the Redif, or territorial army, 300,000; the Mustahfiz, or territorial army reserve, 250,000; total, 900,000 men, of whom 750,000 have received a thorough military training. The infantry is armed with Mauser rifles of 7.65 and 9.5 millimetres caliber, with magazines holding 5 cartridges. All Mohammedan Turks are liable to serve three years in the active army, but can purchase a furlough after five months. Christians pay a military tax in lieu of service.

The Navy.—The only vessels remaining in the Turkish navy are the casemated ironclads "Assar-i-Tewfik," "Hamidiye," and "Messudiye," the turret ships "Asisiye" and "Osmaniye," two old broadside ships, 1 monitor, 3 gunboats, 2 destroyers, and 15 first-class and 7 second-class torpedo boats.

Commerce.—The total value of the external commerce in 1895 was 2,407,549,000 piasters for imports and 1,375,331,000 piasters for exports (1 piaster = 4.4 cents). The import of cotton cloths was 207,700,000 piasters; cereals and flour, 166,200,000 piasters; sugar, 157,600,000 piasters; wool and cotton stuffs, 143,100,000 piasters; quilting, 136,700,

000 piasters; yarns, 125,200,000 piasters; coffee, 102,700,000 piasters; drugs and dyes, 99,100,000 piasters; rice, 78,800,000 piasters; leather and hides, 76,400,000 piasters; madapolams, 69,500,000 piasters; petroleum, 56,300,000 piasters; animals, 54,600,000 piasters; iron goods, 42,800,000 piasters; iron, 42,700,000 piasters; cashmeres, 41,800,000 piasters; timber, 37,500,000 piasters; butter and cheese, 34,000,000 piasters; haberdashery, 31,900,000 piasters; broadcloth, 31,500,000 piasters; paper, 28,800,000 piasters; silks, 27,700,000 piasters; coal, 27,000,000 piasters; carpets, 26,200,000 piasters; clothing, 24,500,000 piasters; glass, 22,700,000 piasters; linens, 22,200,000 piasters; fezes and hats, 21,000,000 piasters. The exportation of raw silk was 182,500,000 piasters; raisins, 177,500,000 piasters; grain, 113,600,000 piasters; figs, 67,800,000 piasters; mohair, 64,800,000 piasters; olive oil, 62,700,000 piasters; opium, 61,500,000 piasters; gall nuts, 57,800,000 piasters; cotton, 48,000,000 piasters; minerals, 47,100,000 piasters; wool, 46,900,000 piasters; hides, skins, and leather, 40,800,000 piasters; sesame, 31,900,000 piasters; coffee, 29,800,000 piasters; legumes, 24,500,000 piasters; carpets, 21,800,000 piasters; dates, 19,400,000 piasters; nuts, 17,700,000 piasters; animals, 17,300,000 piasters; seeds, 16,000,000 piasters; oranges and lemons, 13,600,000 piasters.

The values in piasters of the imports from and exports to various foreign countries in 1895 are given in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain.....	931,522,000	595,391,000
France.....	274,221,000	382,251,000
Belgium.....	66,415,000	4,955,000
Netherlands.....	16,868,000	33,077,000
Germany.....	30,713,000	27,751,000
Austria-Hungary.....	486,297,000	131,699,000
Italy.....	65,589,000	47,559,000
Greece.....	44,425,000	21,827,000
Bulgaria.....	103,353,000	38,095,000
Servia.....	5,859,000	7,358,000
Roumania.....	75,338,000	19,903,000
Russia.....	165,134,000	40,055,000
Sweden and Norway.....	5,846,000
Persia.....	70,377,000	1,344,000
Egypt.....	53,962,000
Tunis.....	1,894,000	25,000
United States.....	7,295,000	22,353,000
Other countries.....	2,441,000	1,738,000
Total.....	2,407,549,000	1,375,381,000

The Macedonian Question.—The appointment of Bulgarian bishops in Divra, Monastir, and Strumnitza encouraged the Bulgarians to put forth greater efforts in their national propaganda in Macedonia and awakened the jealousy of the Greeks, Servians, and Roumanians. The Greek and Servian communities regarded the appointment of Bulgarian bishops for Divra and Monastir as an encroachment on their own sphere, while at Uskub the Bulgarians protested against the presence of the Servian bishop, and refused to open their schools and churches. During the winter the Ottoman authorities conducted a search in the vilayet of Kossovo for arms furnished by Bulgarian revolutionists. Numerous Mohammedans had been murdered, but the authorities did not act until a prominent and wealthy man named Kiazin Bey was assassinated at Vinitza. Hundreds of Macedonians fled into Eastern Roumelia, carrying stories of outrages committed by the Turkish soldiers and of tortures inflicted on prisoners in the jails of Uskub and other towns. In response to remonstrances from the Russian and Austrian consuls, the Vali promised to stop such persecutions. The Bulgarian diplomatic agent presented a memorandum to the Grand Vizier, stating that 592 persons, among whom were school-teachers and priests, had been arrested. The Bul-

garian complaints instance the torturing of 52 persons, of whom 3 died, and the violation of 11 women and girls. The secret Macedonian revolutionary committee printed a manifesto calling upon the people to rise against their oppressors in the spring. The Bulgarians were angered by the filling of public offices with Albanians. In Monastir an Albanian national movement was started to compete with the Greek, Bulgarian, Servian, and Wallachian organizations. In Kossovo also the Albanians were charged with oppressing the Servians. The Government of Prince Ferdinand took effective measures to check revolutionary preparations in Eastern Roumelia, although the presence of 600 Macedonian fugitives rendered this a difficult task. The Turkish commissioner, Saadeddin Pasha, removed the immediate cause of excitement by releasing the Bulgarian prisoners at Uskub, except 10, who were held for criminal trial, and promising to punish officials who had committed abuses. His investigation, which the Bulgarians pronounced a sham, disclosed no evidence of the alleged tortures. Immediately after the prisoners were released the agitation of the revolutionists was renewed and fresh arrests were made by the authorities. In March an armed band crossed the Bulgarian frontier, but returned on finding the villages strongly guarded by Turkish outposts. The vindictive spirit animating the rival Bulgarian and Servian propaganda was shown by a number of assassinations of which Bulgarians were the victims. The Servians were as energetic in establishing new schools and in attracting pupils as were the Bulgarians, and the Roumanians held their own, but the Greek schools declined. The Vlachs, until the Roumanian propaganda was instituted, were accounted Greeks, and hence all those who were educated in the Vlach schools were lost to the Greek schools, which nevertheless still outnumbered those of the other nationalities combined. The total sum spent upon their schools in Macedonia by Bulgaria, Servia, Roumania, and Greece is not less than 5,000,000 francs a year, with a corresponding benefit to the Christian peasantry, who are advancing rapidly in intelligence, while their Mohammedan neighbors remain in a state of ignorance. The Autonomist agitators aimed to secure an organic statute for Macedonia, with a Christian governor selected from the population. The autonomous province would include the vilayets of Salonica, Monastir, Adrianople, and Kossovo, and the capital would be the city of Salonica. The Bulgarians, who assert that they are in a large majority compared with the other nationalities, seek the co-operation of all nationalities in the effort to obtain autonomy. They would have the officials in each district selected from the prevailing nationality, the military force of the province recruited from the population and placed under the command of the Governor General, and religious affairs administered by an ecclesiastical chief belonging to the predominant nationality. The provincial Senate should fix the amount of taxation, of which amount one fifth would be paid over to the Turkish Treasury and four fifths would be retained for provincial purposes.

Albanian Disturbances.—The ferment in Macedonia caused by the Cretan question spread into Albania, rousing among that nation of warring clans and hostile creeds aspirations for autonomous institutions, and also exciting anew the expansionist ambition of the Montenegrins. The Albanian Nationalists wished to have their separate nationality recognized by the Europeans in the same way as was the Greek, the Servian, or the Bulgarian nationality, and desired from the Porte the proclamation of administrative autonomy for the vilayets

of Scutari, Janina, Kossovo, and Monastir. An organic statute was deemed by them to be the only means of preventing the periodical occurrence of bloodshed due to the intrigues of Greece, Servia, and Montenegro. A feud between the Mohammedans and Christians of northern Albania gave occasion for diplomatic representations on the part of Montenegro. It began with the murder of a Christian notable in Berane. The Christians avenged his death by killing a number of Moslems suspected of being concerned in the crime. The Mussulmans, calling friends from other districts to their aid, attacked the Christian villages and after much fighting robbed and burned them, the inhabitants fleeing over the Montenegrin border with what cattle they could save. The Montenegrins had supplied both parties with rifles. The Sultan sent troops into the disturbed district to restore order and ordered Saadeddin Pasha, who had recently finished his Macedonian investigation, to find out the cause of the troubles, which were renewed in June with greater violence and ferocity. Many Christians were killed and hundreds of houses were destroyed. The Montenegrin Government complained that Mohammedans pursued Christian fugitives beyond the frontier, and made a demand for the restitution of the latter to their lands and for the rebuilding of their burned houses at the cost of the Turkish Government. The Porte dispatched troops once more to the scene and ordered that the villages should be rebuilt, charging the Montenegrins, however, with having instigated the murders and pillage that drew forth the vengeance of the Mussulmans. In September Saadeddin Pasha returned to pacify the Berane district once more. Mohammedan mountaineers were again ravaging the plains and plundering the unarmed rayahs, causing excitement among their warlike Montenegrin neighbors.

Armenian Grievances.—The Huntchak committee in London endeavored at the beginning of 1898 to raise anew the Armenian question by peti-

tioning the powers to insist on the execution of the promised reforms. The Turkish authorities in Asia were accused of persecuting Armenians. The Russian Government requested the Porte to keep the Hamidich cavalry under better control and to withdraw the unruly forces from the frontier. There were 56 of these Kurdish regiments formed under the command of the tribal chiefs. In Van, where a revolutionist from the Caucasus named Deroyan was secretly active, the police searched every house and expelled several thousand Armenian refugees whom they found. A military tribunal tried 33 Armenians and sentenced several to death. There was an Armenian Kaimakan at Van, and when in February the Porte removed the Governor of Zeitun the British ambassador pressed for the appointment of a Christian in his place. The Sultan promised the Armenian patriarch to comply with many of the national demands. In the beginning of June the Russian ambassador urged the Porte to restore to their homes 40,000 destitute Armenians who were living on charity in the Caucasus. The Grand Vizier raised difficulties, stating especially that the property that was abandoned by these fugitives had been divided among the Turks. The Russian Government repeated the demand until the Porte finally gave way months later and provided for their repatriation. In the beginning of August the Kurds were reported to be pillaging Armenian villages in the district of Ahlat, in the vilayet of Bitlis, where the Vali had been guilty of torturing Armenians in searching for revolutionists and hidden arms.

Revolt in Yemen.—The chronically discontented Arabs of Yemen, suffering in the spring of 1898 from a partial famine, rose in rebellion against their Turkish masters, whom they accused of injustice and extortion. The Sheikh Hamideddin headed the rising, which was quelled finally by the conciliatory policy of the new Vali, Hussein Hilmi Effendi, rather than by the 16,000 troops that were dispatched to the disturbed region.

U

UNITARIANS. The Unitarian churches in the United States returned for 1898 551 ministers, 454 churches, and 75,000 members. The numbers show an increase during the year of 16 ministers and 5,000 members, and a decrease of 1 church.

The annual meeting of the American Unitarian Association was held in Boston, Mass., in May. The Hon. Carroll D. Wright presided. The treasurer reported that his total receipts had been nearly \$73,000, and that a balance remained of \$11,000. The secretary represented that the necessity resting upon the association not to spend more money than the churches contributed had required the temporary abandonment of a business organization with a system of local superintendents for aggressive work which had been carefully planned by the National Conference and had achieved good results. The year had been signalized by the application for the first time of the budget system in making appropriations, under which the expenditures of the association were divided among the four departments of maintenance, publication, foreign missions, and home missions. The plan had worked well and had produced the most satisfactory financial record the association had been able to make for many years. The bequests received during the year, amounting to \$7,297, had been used to increase the general fund, which now amounted to \$58,067. A resolution had been passed by the board ordering that

the general and special funds of the association, with certain defined exceptions, be collectively invested, and that at the close of the financial year the income from the securities thus held shall be credited to the various funds according to the amount of their capital. In connection with the Japanese mission a union had been brought about between the Unitarian magazine "Shukyo" and the chief organ of liberal orthodoxy in Japan, "Rikugo Zasshi." The new magazine was to be called by the latter name and to be published by the Japan Unitarian Association. The educational institution in Japan, the Senshu Gakuin, would cease to be a normal school and become more a center for university extension work, and the activity of the mission would be more concentrated on church extension, the new magazine, the post-office mission, and publication work. The beginning of this mission was spoken of as "a frank departure from the customary aim and method of foreign missionary work. It was commissioned 'not to convert, but to confer,'" had proclaimed a new missionary motive, seeking to discover the good in all existing forms of faith, and had "recognized the underlying sympathy in all religions, and emphasized unities rather than diversities." The cost of conducting the experiment that had been made in this direction had diminished more rapidly than was usually the case with the home-mission work,

and would be defrayed in the ensuing year by the income of the Hayward fund. The association was enjoying close co-operation with other missionary bodies of the Unitarian fellowship, including the Western Missionary Council, the Women's National Alliance, the Young People's Religious Union, the Sunday-School Society, the Ladies' Commission, the trustees of the Church Building Loan fund, the Ministerial Union, and the Ministers' League, through the last two of which churches and ministers desiring settlement were brought into communication. In New England, the association had contributed \$11,627 to the support of 41 churches or missionary enterprises, of which 12 were "historic" churches in towns of stationary or declining population, kept alive for the sake of their associations and because they are needed by populations unable to support them; and 29 were new or revived churches which had not yet attained self-support. Eleven churches were aided in the Middle States at a cost of \$7,650. Most of these churches were growing steadily toward self-support. In the Southern States \$2,912 were expended in aid of 5 churches. The church at Charleston, S. C., was the only self-supporting church in this department. In the Western States 11 churches, 4 of which were in college towns, were aided, 3 missionaries were supported among the Scandinavians, and 2 special enterprises, 1 in Illinois and 1 in Wisconsin, were aided; all at a cost of \$11,943. Twelve churches on the Pacific coast, one in a college town, and all planted within recent years, were maintained with an expenditure of \$4,500. In all, 85 churches and 78 ministers were wholly or partly supported by the association, 22 of the churches holding loans from the Church Building Loan fund.

Unitarians in Great Britain.—A special meeting of the Unitarian (English) National Conference was held in London, May 31, to consider propositions for conferring certain new powers on the body which had been postponed from the regular meeting of the previous year at Sheffield. After consultation and the consideration of proposed amendments, a resolution was adopted instructing the committee of the triennial Conference to hold regular meetings "to consult and, when considered advisable, to take action in matters affecting the well-being and interests of the congregations which form the Conference, as by directing attention, suggesting plans, organizing expressions of opinion, raising funds to carry out the foregoing objects, or summoning, if it deem it needful, a special meeting of the Conference. Further, that the committee shall present to each Conference a full report of its proceedings and the action it has taken for the approval or otherwise of the Conference."

The annual meeting of the British and Foreign Unitarian Association was held in London, beginning June 1. Mr. T. Grosvenor Lee presided. The general report included reports of the Book and Tract Committee of grants during the year of 1,637 books and 113,286 tracts; of the Scottish Committee concerning efforts to develop the churches especially at Paisley, Kirkcaldy, and Aberdeen; of the Indian Committee, describing the rise and present condition of Unitarian work in India, which was still on a modest scale. The annual subscriptions had fallen off, but the chapel collections were the largest recorded. Legacies amounting to £6,000 had been left to the association. In an address defining the term "freedom" as used by Unitarians, the president maintained that while they were free it was not the freedom that united them, but the truths to which it led them. Prof. J. Estlin Carpenter maintained that the liberty held by Manchester College, which he represented, was within limits that presupposed the reality of theology. A paper

by the Rev. Alexander Webster on "Our Church Work in Spreading Religious Truth" was read in the absence of its author. The report of the Temperance Association showed a slight increase in the number of local societies. The report of the Postal Mission and Workers' Union was illustrated by the citation of inquiries sent in for religious literature, and insisted upon the efficiency of the work done by the mission. The Sunday-School Association reported that its receipts had amounted to £1,354.

UNITED EVANGELICAL CHURCH. The second General Conference of the United Evangelical Church met at Johnstown, Pa., Oct. 10. The statistical reports showed that the number of members was 59,190, and indicated a net gain of 8,950 in three years, or since 1895 when the previous General Conference met; with 426 itinerant and 214 local preachers; 5,234 adults and 8,165 infants baptized during the three years; 784 Sunday schools, with 10,602 officers and teachers and 74,651 pupils; and 24,507 members of the Keystone League of Christian Endeavor. The missionary treasurer reported that there had been an annual increase of contributions to the general treasury, and that the receipts for the past year had been more than \$11,000. The entire amount of missionary money raised and expended in the conference societies and the general society during the past year had been: Received, \$87,347; expended, \$76,493. The Foreign fund accumulated by the Woman's Missionary Society was about \$10,000. The amounts of collections for Church objects had been: For Conference treasury, \$9,516; for the Sunday-School and Tract Union, \$1,291; for educational purposes, \$18,223; for Church extension, \$5,491; for missions, \$106,267; for building and repairing churches and parsonages, \$355,975; for the Charitable Society, \$1,094. The Rev. Dr. I. L. Klephart attended the Conference as a fraternal delegate from the United Brethren Church, and spoke in his address of the unity in doctrine and spirit of the two Churches. The Board of Missions was instructed by the Conference to begin the necessary preliminary arrangements for establishing a mission in some foreign field, with recognition of the principle of the comity of missions; the location of the mission and the time for opening the same being left to its judgment. It was also directed to send out no more missionaries than the income would assure support for; and to assign the support of a definite part of the work to the Woman's Missionary Society. The Rev. T. W. Woodside, a minister of the United Evangelical Church, but a missionary in Africa in the service of the American Board, made a proposition to open a new station in West Central Africa, to be supplied and supported by this Church, but to be conducted under the supervision and control of the American Board. The Conference, while it expressed itself as preferring to direct and manage its own missions, not being yet ready for that, authorized the Board of Missions to make an arrangement with the American Board. A "twentieth-century celebration" was determined upon, to be held in the year 1900, under a programme to be prepared by the Board of Missions. Resolutions were passed discountenancing the "unevangelical practice" of not kneeling in public worship; emphasizing the duty of Conference trustees to report their transactions to the Annual Conference; urging the importance of the quarterly conference and the duty of official members to support and attend it; commending the itinerancy as the best safeguard to the original genius, life, and distinctive features of the Church, and pledging fidelity to it; condemning the license system for the sale of intoxicating liquors; commending the National Anti-Saloon League, to whose convention delegates were

appointed; advising the total refraining from such amusements as can not be taken in the name of the Lord Jesus, and condemnation of them; and disapproving of questionable methods (by fairs, raffles, etc.) of raising money for the Church. Reports were received from Albright College, Pennsylvania, Central Pennsylvania College, and Lafayette College, Oregon. The establishment of theological departments was recommended to all the higher institutions of learning. An invitation to take part in the Ecumenical Conference of Methodism to be held in 1899 was accepted, and provision was made for the representation of the United Evangelical Church on the Committee of Arrangements for the same and in the Conference.

UNITED STATES OF AMERICA, a federal republic in North America. The legislative power is vested in the Congress, consisting of the Senate and the House of Representatives. There are 90 Senators, 2 from each State, elected by the State Legislatures for six years, one third being renewed every two years. The House of Representatives has 357 members, elected by the ballots of all the qualified voters of the several States, which are divided into congressional districts, containing each approximately 173,900 inhabitants at the census of 1890. The executive power is vested in the President, who is commander-in-chief of the military and naval forces, and has a power of veto over acts of Congress which can be overcome by a two-thirds vote of both houses. The Vice-President is president of the Senate, and in case of the death, removal, or resignation of the President he succeeds the latter for the remainder of the term. In case of the death or disability of both President and Vice-President, the Secretary of State becomes acting President, and after him the other members of the Cabinet in their order. The Senate can remove the President after a trial on articles of impeachment presented by the House of Representatives, and other executive officers can be removed for unconstitutional actions by the same procedure. The President nominates the officers of the Cabinet, who are the heads of the eight administrative departments, and all other superior officials, but his appointments must be confirmed by the Senate. The President and Vice-President are elected by a college of electors chosen in each State in the manner that the Legislature prescribes, which is in almost every State by popular suffrage, their number being equal to the sum of the Senators and Representatives of the State. It is the custom of political parties to nominate in national convention their candidates for the presidency and vice-presidency and for the electors, who are chosen by each State on a collective ticket, to vote solidly for the candidates designated by their party beforehand. Thus the election of the President and Vice-President has come to be in fact, though not in form, by the direct vote of the nation. The term of the presidency is four years, and elections are held on the Tuesday following the first Monday in November. The President-elect is sworn on March 4. The President for the term ending March 4, 1901, is William McKinley, of Ohio, and the Vice-President is Garret A. Hobart, of New Jersey. The Cabinet at the beginning of 1898 was composed as follows: Secretary of State, John Sherman, of Ohio; Secretary of the Treasury, Lyman J. Gage, of Illinois; Secretary of War, Russell A. Alger, of Michigan; Attorney-General, Joseph McKenna, of California; Postmaster-General, James A. Gary, of Maryland; Secretary of the Navy, John D. Long, of Massachusetts; Secretary of the Interior, Cornelius N. Bliss, of New York; Secretary of Agriculture, James Wilson, of Iowa.

Upon the resignation of John Sherman, the

President, on April 26, nominated William R. Day, of Ohio, to be Secretary of State.

William Rufus Day was born in Ravenna, Ohio, April 17, 1849. He was the son of a lawyer of note, a judge of the Supreme Court of Ohio. After completing his collegiate course in the University of Michigan in 1870 he studied in the law school at Ann Harbor, and in 1872 began practice at Canton. His firm, which he usually represented in the courts, became known in a short time through the length and breadth of Ohio. He was a zealous Republican politician, but neither sought nor accepted office for himself until he was nominated by both Republicans and Democrats to a judgeship in the Court of Common Pleas in 1886. After a brief while he resigned from the bench to return to general practice. In 1889 he declined, on account of failing health, the appointment of judge of the United States district court. When President McKinley made up his Cabinet he appointed Judge Day Assistant Secretary of State.

John Hay was born in Indiana in 1838. He was graduated at Brown University, and studied law in Springfield, Ill. He was assistant secretary to President Lincoln through his term of office, and served for a time as assistant adjutant general with Gens. Hunter and Gillmore. He was secretary of legation at Paris in 1865-'67, and *chargé*

JOHN HAY, SECRETARY OF STATE.

d'affaires at Vienna in 1867-'68. Afterward he was secretary of legation at Madrid a year, and then for five years was an editorial writer on the "New York Tribune." In the administration of President Hayes he was First Assistant Secretary of State, and in 1881 he was president of the International Sanitary Congress in Washington. When President McKinley assumed office, Col. Hay was appointed ambassador to the Court of St. James, from which post he was called to succeed Judge Day as Secretary of State. He has published "Castilian Days," a biography of Abraham Lincoln (with John G. Nicolay), and a volume of poems.

James Albert Gary retired from the postmaster-generalship in April, and Charles Emory Smith, of Pennsylvania, was immediately appointed his successor.

Charles Emory Smith conducted the Philadelphia "Press" from 1880 till 1890, when he was appointed United States minister to Russia. After his return from St. Petersburg in 1892 he resumed his editorship.

Cornelius Newton Bliss retired from the Cabinet, and Ethan Allen Hitchcock, of Missouri, was appointed to succeed him as Secretary of the Interior on Dec. 21, 1898.

CHARLES EMORY SMITH, POSTMASTER-GENERAL.

Ethan Allen Hitchcock was the founder of a large glass-manufacturing company in Crystal City, Mo., and has taken an active part in building up the commerce of St. Louis. President McKinley appointed him minister to Russia on Aug. 6, 1897, and on Feb. 11, 1898, his rank was raised to that of ambassador.

ETHAN ALLEN HITCHCOCK, SECRETARY OF THE INTERIOR.

Area and Population.—The total area of the United States, including 3 Territories represented by Delegates in Congress and the Indian Territory, is 3,025,600 square miles, of which 55,600 square miles are covered by water. Alaska has an estimated area of 531,400 square miles. At the census of 1890 the population of the United States was 62,831,900, including 179,321 in the Indian Territory and 30,329 in Alaska. The estimated population of all the States and Territories, including Alaska, on Dec. 31, 1898, was 77,803,000.

By the annexation of Hawaii territory of 6,640 square miles, with 109,020 inhabitants in 1896, was added to the dominions of the United States; by the cession of Puerto Rico in the preliminary

treaty with Spain a territory of 3,670 square miles, with a population of 798,566 by the census of 1887; and by the accession of the Philippine Islands, ceded in the final treaty of peace, a territory of 52,650 square miles, with about 7,670,000 inhabitants. The Ladrone or Mariana Islands add 420 square miles, with 10,172 inhabitants.

Immigration.—The number of immigrants that arrived in the United States during the year ending June 30, 1898, was 229,299, a decrease of 1,533 as compared with 1897. Of the whole number, 135,775 were males and 93,524 females. The number entering the United States through Canada was 10,737. During the year 3,050 were debarred, 2,261 of these being paupers or persons likely to become a public charge, 417 contract laborers, 258 diseased, 79 assisted emigrants, 13 mentally defective, and 2 convicts. There were 199 more returned within a year after landing. Of the total number of immigrants over fourteen years of age, 43,057 could neither read nor write; of those over twenty years of age, 27,608 had \$30 or more, and 96,203 had less. Of the total number arriving, 52,531 were laborers, 23,656 servants, 16,243 farmers, 4,492 merchants, 3,826 tailors, and 3,229 shoemakers.

The Army.—By the act of Congress approved on March 8, 1898, the artillery force of the regular army was increased by two regiments, and by the act of April 26 the whole line was raised to the war strength of 200 men for each battery of heavy artillery, 176 for the light batteries, 100 for a troop of cavalry, and 106 for an infantry company, with an additional major to each regiment of infantry, and an additional second lieutenant to each battery. The total authorized strength on the war footing was 62,597 officers and men. The effectives on Sept. 1, 1898, were as follow:

TROOPS.	Officers.	Enlisted men.	Total.
Cavalry, 10 regiments	419	11,594	12,013
Artillery, 7 regiments	369	12,454	12,823
Infantry, 25 regiments	987	22,458	23,445
General officers, staffs, and administration	548	7,980	8,528
Engineers, hospital corps, etc	1,879	1,879
Total	2,323	56,365	58,688

The President on April 23 issued a call for 125,000 volunteers, and on May 25 for 75,000 more.

The Navy.—The United States navy at the beginning of 1898 contained the battle ship "Iowa," of 11,410 tons displacement, 11,000 horse power, 16 knots speed, carrying 4 12-inch, 8 8-inch, and 6 quick-firing 4-inch guns; the battle ships "Indiana," "Massachusetts," and "Oregon," of 10,288 tons displacement, engines of 9,738 horse power for the first, giving a speed of 15.5 knots, 10,403 horse power for the second, making 16.2 knots, and 11,111 horse power for the third, making 16.7 knots, each having an armament of 4 13-inch, 8 8-inch, and 4 quick-firing 4-inch guns; the armored cruiser "Brooklyn," of 9,250 tons displacement, 18,769 horse power, a speed of 21.9 knots, and an armament of 8 8-inch guns and 12 5-inch quick firers; the armored cruiser "New York," of 8,200 tons displacement, 17,401 horse power, giving a speed of 21 knots, and an armament of 6 8-inch guns and 12 4-inch quick firers; the armored cruiser "Texas," of 6,315 tons displacement, 8,000 horse power, giving 21 knots speed, and an armament of 2 12-inch guns and 8 6-inch quick firers; the cruiser "Columbia," of 7,375 tons displacement, engines of 18,509 horse power, making a speed of 22.8 knots, armed with 1 8-inch, 2 6-inch, and 8 quick-firing 4-inch guns; the "Minneapolis," of the same size, as the foregoing and carrying the

same armament, with engines of 20,862 horse power, making 23 knots; the "Olympia," of 5,800 tons displacement, engines of 17,313 horse power, a speed of 21.5 knots, and an armament of 4 8-inch and 10 quick-firing 5-inch guns; the "Baltimore," of 4,413 tons displacement, 10,000 horse power, 20 knots speed, and an armament of 4 8-inch and 6 quick-firing 6-inch guns; the "Philadelphia," "San Francisco," and "Newark," one of 4,324, the others of 4,098 tons displacement, each armed with 12 6-inch guns, and having engines developing 8,815 horse power for the first, giving 19.5 knots speed, 9,913 horse power for the second, giving the same rate, and 8,862 horse power for the third, giving 19 knots; the "Charleston," of 3,730 tons displacement, carrying 2 8-inch and 6 6-inch guns, and making 18.2 knots with engines of 8,650 horse power; the "Raleigh" and "Cincinnati," of 3,183 tons displacement, armed with 1 6-inch and 10 5-inch quick-firing guns, and making 19 knots with engines of 10,000 horse power; the "Atlanta" and "Boston," of 3,000 tons displacement, with 4,030-horse engines, making 15.6 knots, armed with 2 8-inch and 6 6-inch guns; the "Chicago," of 4,500 tons displacement, with engines of 5,080 horse power, making 15 knots, carrying 4 8-inch and 8 6-inch guns; the "Detroit," "Marblehead," and "Montgomery," of 2,080 tons displacement, one of 5,227 horse and one of 5,480 horse power—each making 18.5 knots—the third, of 5,580 horse power, making 19 knots, and all armed with 95-inch quick firers; the "Bennington," "Concord," and "Yorktown," of 1,700 tons, 3,436 horse, 3,408 horse, and 3,392 horse power, giving respectively 17.5, 16.8, and 16 knots, each vessel carrying 6 6-inch guns; and the "Nashville," "Wilmington," and "Helena," of 1,370 tons displacement, the first having a speed of 14 knots, with 1,750 horse power, the others 13 knots, with 1,600 horse power, each of them armed with 3 4-inch quick firers.

The four battle ships carry their heaviest guns in turrets fore and aft protected with 15-inch armor, their other heavy guns in turrets on each beam plated with 8-inch to 6-inch armor. The "Iowa" has 14-inch, the others 18-inch side armor, three fifths of their length, with vertical armor projecting above up to the armored deck of 3-inch steel and bulkheads fore and aft, 12 inches thick in the "Iowa," 17 inches in the others. The "Texas" has a vertical 12-inch belt extending two thirds of her length, a 3-inch deck, and 12-inch bulkheads, and carries her heavy guns in turrets protected with 12-inch plates. The "Brooklyn" and "New York" have a steel belt over their vital parts varying from 3 to 8 inches, and a deck varying from 2.5 to 6 inches, and carry their armored guns in armored barbettes. All the other cruisers are deck-protected, the thickness of the deck varying with the size of the vessel. The heavier vessels have their guns protected by shields, and the ammunition hoists by tubes of steel. The monitors are old vessels refitted, carrying heavy guns and having good protection, but slow and unwieldy of movement, the "Puritan" displacing 6,000 tons, the "Miantonomoh," "Terror," and "Monadnock" 4,000 tons. The "Monterey" and the ram "Katahdin" are not more efficient for offensive operations, and the earlier monitors, the "Catskill," "Lehigh," "Jason," "Nahant," and "Montauk," carrying 15-inch smooth-bores in armored turrets, are fit only for harbor defense. Three more of this class were newly engined early in the year. The torpedo flotilla consisted of the "Dupont," "Cushing," "Ericsson," "Foote," "Porter," "Rodgers," and "Winslow," from 140 to 170 feet long, having a nominal speed of 23 knots, and the smaller "Gwynn" and "Talbot."

Just before the war with Spain the new English-built Brazilian cruisers "Admiral Abreu" and "Amazonas" were secured for the navy and renamed "New Orleans" and "Albany," each having a displacement of 3,600 tons, 7,500 horse power, a speed of 20 knots, and an armament of 6 6-inch and 4 4.7-inch quick firers.

During the progress of the war the Navy Department contracted for 16 torpedo-boat destroyers, to be completed within a year and a half, to have a displacement of 400 tons each, with two quadruple-expansion engines of 11,000 horse power and twin screws, giving a speed of 28 knots, to be protected with 2 inches of inclined nickel steel armor over cellulose, to carry 100 tons of coal, and have a steaming radius of 5,000 miles, and to be equipped with 3 12-pounders, one of them on the conning tower, 5 6-pounders, and 2 torpedo tubes in the bow. The "Kearsarge" and "Kentucky," battle ships of 12,000 tons and 10,000 horse power, were laid down before the war began. In these vessels turrets for the 8-inch guns are placed above those for the 13-inch guns, instead of beside them, as in the "Oregon," saving the weight of two smaller turrets, while increasing the power of the fore and aft batteries, at the same time enabling them to carry 14 5-inch rapid firers in the broadside battery where the "Oregon" carries 4 6-inch guns. The "Alabama," "Illinois," and "Wisconsin" are of equal size, with a speed of 16 or 17 knots, the greatest possible cruising radius, and a secondary armament of 14 6-inch rapid firers, without any 8-inch guns. The naval programme authorized by the act of May 4, 1898, provided for 3 first-class battle ships, 4 coast-defense monitors, 12 torpedo boats, and 16 destroyers. The battle ships will be of 13,500 tons displacement, and will cost, exclusive of armor and armament, \$3,000,000 each. They were contracted for in September, to have a speed of 18½ knots, 2,000 tons coal capacity, and a radius of 10,000 miles at 10 knots, and have been named the "Maine," the "Ohio," and the "Missouri." The coast-defense vessels "Arkansas," "Connecticut," "Florida," and "Wyoming," to be completed in two years at a cost not exceeding \$1,500,000 for each one, will be built of steel, with double bottom and water-tight divisions, displacing 2,700 tons, with coal capacity for 200 tons, and will carry 2 12-inch guns in a turret forward, 4 4-inch rapid-firers, and in the secondary battery 3 6-pounder rapid-fire and 4 1-pounder automatic rifles; the side armor will be 11 inches in the thickest part, tapering down to 5 inches. The programme presented to Congress in December, 1898, includes, besides three battle ships, 3 heavily armored cruisers of 12,000 tons, costing \$4,000,000 each; 3 protected cruisers of 6,000 tons, costing \$2,150,000 each; and 6 unarmored cruisers of 2,500 tons, costing \$1,141,800 each.

Pensions.—The total number of pensioners on the roll on June 30, 1898, was 993,714, showing an increase in the year of 17,700. There were 327,080 invalids, 655 nurses, and 92,557 widows and dependents drawing army pensions and 4,833 invalids and 2,300 widows and dependents drawing naval pensions under the general law; and 399,366 invalids and 119,785 widows and dependents connected with the army and 14,543 invalids and 5,944 widows and dependents connected with the navy were receiving pensions under the act of June 27, 1890. The number of claims allowed during 1898 was 52,648, making a total of 1,579,324 since 1861. The disbursements for the year were \$145,748,865.

Public Lands.—The number of homestead entries during the year ending June 30, 1898, embraced 6,206,557 acres; entries under the timber-culture act, 160 acres. The area of public lands remaining vacant and subject to entry and settle-

ment on July 1, 1898, was 579,368,274 acres, of which 316,716,303 acres had been surveyed.

The Patent Office.—The number of applications for patents during the calendar year 1897 was 45,661; for design patents, 2,150; for reissues, 94; for registration of trade-marks, 1,946; for registration of labels, 66; for prints, 26; number of caveats filed, 2,176; total, 52,119. The number of patents granted, including designs and reissues, was 23,794; of trade-marks registered, 1,671; of labels, 14; of prints, 16; total, 25,495. There were 4,891 patents withheld for non-payment of fees. The number of patents that expired was 12,926. The total number of applications since 1837 was 1,040,035, and the number of caveats filed was 107,415, while the total number of original patents granted was 602,268, including designs. The receipts of the Patent Office up to the end of 1897 were \$34,309,331; expenses, \$29,293,672.

Commerce.—The total values of the imports and exports of merchandise for a decade past have been for each successive financial year as follows:

YEAR.	Imports.	Exports.
1889.....	\$745,131,652	\$742,401,375
1890.....	789,310,409	857,828,684
1891.....	844,916,196	884,480,810
1892.....	827,402,462	1,030,278,148
1893.....	866,400,922	847,665,194
1894.....	654,994,622	892,140,572
1895.....	731,969,965	807,538,165
1896.....	779,724,674	882,606,938
1897.....	764,730,412	1,050,993,556
1898.....	616,049,654	1,210,291,913

The total volume of trade was \$1,826,341,467, previously exceeded only in 1892, when it amounted to \$1,857,680,610. The excess of merchandise exports over imports attained the sum of \$594,242,259, having grown from \$75,568,200 in 1895 to \$102,882,264 in 1896, then to \$286,263,144 in 1897, and in 1898 to the above extraordinary figure. Including specie, there was a net balance in favor of the United States of \$513,437,634 in 1898. In 1889, and again in 1893, there was a small excess of imports, reducing the average excess of exports for the last ten years to \$150,382,899. The excess of 1897 exceeded all previous records, the nearest to it being \$264,661,666 in 1879. The amount of the exports in 1898 not only exceeded by 16 per cent. those of 1897, the highest figure before achieved, but surpassed those of any other country, being 7 per cent. greater than the exports of Great Britain, whose export trade had never before been excelled by that of another nation. More remarkable than its amount was the character of the increase in exports. It was not due, in the main, to enhanced shipments of the great American staples; the increase was shared by a great variety of products. Breadstuffs reached a total of \$324,706,060, against \$191,090,341 in 1897; provisions, \$189,222,981, against \$162,203,832; cotton, \$225,789,143, against \$223,586,125, and mineral oil, \$55,171,001, against \$61,733,685. These together give a total of \$794,898,185, showing an increase of \$156,284,202, of which \$133,615,719 was in breadstuffs. Three fourths of the increase was due to the expansion of the trade in other commodities besides these, and three fourths of that to increased exports of manufactured goods. While the exports of this class have grown year by year, the imports have diminished, until, in 1898, the United States shipped abroad a greater value than the imports amounted to. American manufactured goods are ousting European manufacturers from the American market, are competing successfully in neutral markets, and are invading the European markets. Exports of agricultural implements have grown in ten years from \$2,600,000 to about \$6,000,000, locomotive engines from \$500,000 to \$4,000,000, bar

iron from 1,500,000 pounds to 10,000,000 pounds, builders' hardware from \$1,442,635 to \$4,152,836. The total value of exports of iron and steel has increased from \$17,763,000 to more than \$65,000,000, of leather and manufactures thereof from less than \$10,000,000 to more than \$20,000,000, of soap from 19,000,000 to 27,000,000 pounds, of glass and glassware from \$881,000 in value to \$1,208,187, of rubber manufactures from \$866,867 to \$1,807,145. Cotton manufactures and chemicals have each increased 50 per cent. Manufactures of brass have increased in value from \$308,104 to \$1,400,000, and manufactures of copper, including ingots and bars, from \$3,812,798 to \$31,621,125. The total exportation of manufactures, which amounted to \$130,300,087 in 1888, in 1898 exceeded \$290,000,000.

The values of the different classes of imports for the fiscal year 1898 are given as follow: Animals, \$4,674,125; art works, \$2,263,427; books, maps, and engravings, \$2,883,992; bristles, \$1,249,119; breadstuffs, \$3,152,067; chemicals, drugs, dyes, and medicines, \$41,471,291; cloaks and watches, \$966,422; coal, bituminous, \$3,401,301; coffee, \$65,067,631; cotton, and manufactures of, \$37,873,708; earthenware and china, \$6,687,360; fibers, vegetable, and manufactures of, \$35,345,980; fish, \$6,076,690; fruits and nuts, \$14,566,950; furs, and manufactures of, \$7,881,172; glass and glassware, \$3,782,617; hats and bonnets, materials for, \$2,244,349; hides and skins, \$37,068,932; hops, \$648,155; India rubber and gutta-percha, and manufactures of, \$26,011,635; iron and steel, and manufactures of, \$12,626,431; jewelry and precious stones, and manufactures of gold and silver, \$10,388,880; lead, and manufactures of, \$2,600,779; leather, and manufactures of, \$11,414,125; liquors, spirituous and malt, \$3,336,324; molasses, \$564,016; musical instruments, \$920,094; paints and colors, \$1,065,088; paper, and manufactures of, \$2,838,738; paper stock, \$2,870,323; salt, \$524,661; seeds, \$1,231,766; silk, manufactures of, \$23,523,665; silk, unmanufactured, \$32,110,066; spices, \$2,404,629; sugar, \$60,472,749; tea, \$10,054,283; tin, in bars, blocks, pigs, or grain, \$8,776,151; tobacco, and manufactures of, \$9,092,114; toys, \$2,214,482; wines, \$5,969,180; wood, and manufactures of, \$13,861,923; wool, and manufactures of, \$31,607,463; all other articles, \$62,264,801; total merchandise, \$616,049,654.

The values of the different classes of exports, the produce and manufacture of the United States, for the year ending June 30, 1898, are as follow: Agricultural implements, \$7,609,732; animals, \$46,243,406; books, maps, and engravings, \$2,434,325; breadstuffs, corn, \$74,196,850; breadstuffs, wheat, \$145,684,659; breadstuffs, wheat flour, \$69,263,718; carriages, horse and railroad cars, \$3,424,419; chemicals, drugs, dyes, and medicines, \$9,441,763; cloaks and watches, \$1,727,469; coal, anthracite, \$5,906,171; coal, bituminous, \$5,777,578; copper ore, \$824,165; copper manufactures, \$32,180,872; cotton, unmanufactured, \$230,442,215; cotton, manufactures of, \$17,024,092; cycles, and parts of, \$6,846,529; fibers, vegetable, and textile grasses, \$2,557,465; fish, \$4,674,659; fruits, apples, green or ripe, \$1,684,717; fruits and nuts, all other, \$7,328,593; furs and fur skins, \$2,986,970; hops, \$2,642,779; instruments for scientific purposes, \$2,770,803; iron and steel, manufactures of, \$70,406,885; leather, and manufactures of, \$21,113,640; musical instruments, \$1,388,867; naval stores, \$9,153,144; oil cake, oil-cake meal, \$12,581,534; oils, animal, \$6,502,332; oils, mineral, crude, \$4,343,262; oils, mineral, refined or manufactured, \$51,782,316; oils, vegetable, \$12,019,069; paper, and manufactures of, \$5,494,564; paraffin and paraffin wax, \$6,030,292; provisions, beef products, \$31,906,384; hog products, \$110,801,151; oleomargarine, \$8,290,

710; other meat products, \$7,246,956; dairy products, \$9,095,759; seeds, clover, \$1,892,101; seeds, all other, \$1,062,622; spirits, distilled, \$1,850,353; sugar, molasses, and sirup, \$1,061,929; sugar, refined, \$301,511; tobacco, unmanufactured, \$22,171,580; tobacco, manufactures of, \$4,818,493; vegetables, \$2,381,788; wood, and manufactures of, \$37,513,252; all other articles, \$98,256,999; total, \$1,210,291,913.

The imports of coal were 1,273,311 tons, all bituminous; exports, 1,326,582 tons of anthracite and 2,682,414 tons of bituminous. The imports of coffee were 870,514,455 pounds. Of hops, 2,375,922 pounds were imported and 17,161,669 pounds exported. The imports of sugar were 2,689,920,851 pounds: of molasses, 3,610,547 gallons; exports of refined sugar, 6,047,608 pounds; of molasses and sirup, 11,391,370 gallons. The imports of tea were 70,957,715 pounds. Of salt, 342,254,106 pounds were imported. The quantity of tin imported was 63,938,889 pounds. The exports of breadstuffs consisted of 208,744,939 bushels of corn, 148,231,261 bushels of wheat, and 15,349,943 barrels of flour. Of oil cake and meal, 355,934,022 pounds were exported. The exports of apples were 605,390 barrels. The provision exports included 439,525,984 pounds of beef, 1,659,996,202 pounds of pork products, and 136,907,813 pounds of oleomargarine. The exports of paraffin were 154,628,460 pounds. The exports of clover seed were 31,155,381 pounds. Of distilled spirits, 2,978,651 proof gallons were exported. The exports of raw cotton amounted to 3,850,264,295 pounds. Animal oil exports were 1,568,040 gallons; exports of crude mineral oil, 113,297,397 gallons. The exports of unmanufactured tobacco were 263,020,214 pounds.

The commerce of the year ending June 30, 1898, was distributed among foreign countries as shown in the table on this page.

The imports of coin and bullion for the fiscal year 1898 were \$120,391,674 of gold and \$30,927,781 of silver, making the total value of imports, including specie, \$767,365,909. The exports of gold coin and bullion were \$15,406,391 and of silver \$55,105,239, making the total value of exports, merchandise, and specie \$1,280,803,543.

From July to December the imports of merchandise continued to show a diminution compared with the preceding year, and the exports still increased. The total value of imports for the twelve months ending Dec. 31, 1898, was \$633,664,634, compared with \$742,595,229 for the calendar year 1897. Of the total \$267,797,915 represented free merchandise, compared with \$377,288,396 in 1897, and \$365,866,719 dutiable merchandise, compared with \$365,306,833. The total value of exports for the calendar year was \$1,254,925,169, compared with \$1,099,709,045 for 1897. Domestic exports were \$1,233,600,636, compared with \$1,079,834,296; foreign exports, \$21,324,533, compared with \$19,874,749. The balance of trade in favor of the United States was \$621,260,535, compared with \$357,113,816 in 1897. The exports of breadstuffs, provisions, cotton, and other agricultural products were larger than in any previous calendar year. The exports of products of the mines have been exceeded only twice, and were greater than those of 1897 by 25 per cent. The exports of iron and steel were a third greater than in 1897 and twice as great as in 1896, while the imports of this class of articles has declined one third. The exports of cotton cloths were 20,000,000 yards more than in 1897. Of mineral oils 1,000,000 gallons a month were shipped in excess of the exports of 1897. In the exports of agricultural implements the increase was 60 per cent., and in cars and carriages there was a large increase. In 1890 the imports of manufactures for the calendar year were \$375,899,342 in value, and the exports \$157,126,803. In 1898, although the population has in the meantime increased 20 per cent., the imports were only \$249,000,000, while the exports were \$306,000,000, having almost doubled in eight years. The imports of the principal classes of raw materials, in silk, rubber, fibers, and hides, were greater in 1898 than in any preceding year, indicating increased activity in the important

lines of manufacture. The aggregate imports of these four classes were \$110,000,000 in value, against \$97,000,000 in 1897, \$65,000,000 in 1896, \$97,000,000 in 1895, and \$69,000,000 in 1894. In the important group of manufactures comprising silks, cotton, wool, and other textile fabrics, leather, china, and glassware, iron and steel goods, and chemicals, the total imports for 1898 were \$40,000,000 below those of 1897, \$88,000,000 below those of 1895, and \$100,000,000 below those of 1890. The total imports of articles of food and live animals for the calendar year 1898 were about \$186,000,000; articles in a crude condition for domestic industry, \$199,000,000; manufactured articles for use in the mechanic arts, \$59,000,000; finished manufactures for consumption, \$106,000,000; articles of voluntary use, luxuries, etc., \$84,000,000. The approximate values of the different categories of domestic exports for the calendar year were \$355,000,000 for agricultural products, \$25,000,000 for mining products, \$39,000,000 for forest products, \$5,500,000 for fishery products, \$306,000,000 for manufactures, and \$3,500,000 for miscellaneous products.

The falling off shown in the import tables was due mainly to a fall in values, but there was also an actual decline in quantities. The imports of sugar were nearly 1,000,000 pounds less than in 1897, with a decrease in the value imported of nearly \$10,000,000. Of this and many other articles there had been in the early part of 1897 abnormally large importations in anticipation of the new tariff. The importation of coffee in 1898 was not less in quantity than in 1897, but the value was 25 per cent. less, being \$54,000,000, compared with \$80,000,000 in 1895 and \$96,000,000 in 1896, when the quantities imported were not as great by 20 per cent., the price having fallen to less than half what it was in those years. Tea imports were about two thirds of those of the preceding year, with a loss in value of \$3,000,000. There was a falling off of imports of articles in a crude condition for domestic manufacture, attributable principally to the importation of only 159,776,482 pounds of foreign wools, the anticipatory importation of 356,849,482 pounds in 1896, two years' supply, not having been exhausted. In the class of articles wholly or partly manufactured there was a decline of \$22,000,000, compared with the preceding year.

The imports of gold coin and bullion for the calendar year were \$158,036,252 and the exports \$16,194,954, leaving a net importation of \$141,841,298, against a net exportation of \$255,808 for 1897, an importation of \$46,474,369 for 1896, and an exportation for the years anterior to that of \$70,571,010 in 1895, \$80,499,128 in 1894, \$6,709,151 in 1893, \$59,081,110 in 1892, \$34,116,471 in 1891, \$3,832,984 in 1890, and \$38,928,828 in 1889. The imports of silver for the year ending Dec. 31, 1898, were \$29,029,724 and the exports \$53,797,104, giving a net exportation of \$24,767,380, against \$25,578,990 in 1897, \$33,777,001 in 1896, and \$42,547,146 in 1895.

Shipping.—During the fiscal year there were built 952 merchant vessels, of 180,458 tons, compared with 991 vessels, of 232,233 tons, during 1897. The decrease in construction was mostly on the Great Lakes, where the new tonnage amounted to 54,084 tons, compared with 116,937 tons in 1897. On the Pacific coast, where the Alaskan Pacific and river trade called for new vessels, there was an increase from 7,495 to 49,780 tons in the tonnage built. The number of vessels engaged in foreign trade belonging to the United States on June 30, 1898, was 1,084, of 726,213 tons, of which 303 were steamers, of 290,241 tons, and 738 were sailing vessels, of 424,950 tons, and 43 were barges, of 11,022 tons. There were 20,090 vessels, of 3,959,702 tons,

engaged in the coasting trade, of which 6,400 were steamers, of 2,077,859 tons, 11,406 were sailing vessels, of 1,350,877 tons, 660 were canal boats, of 74,640 tons, and 1,624 were barges of 456,326 tons. The total number of registered vessels was 22,705, of which 6,712 were steamers; aggregate tonnage, 4,749,738 tons.

Reciprocity with France.—An agreement between France and the United States was concluded under the third clause of the Dingley tariff in Washington on May 28. The French duty on manufactured and prepared pork products was fixed at 50 francs per 100 kilos, and on lard and its components at 25 francs, while table fruit, canned meats, dried or pressed fruits, logs, paving blocks, staves, and hops pay the minimum French rates. The reduced rates made in the American tariff in favor of France are 5 per cent. *ad valorem* for argols, \$1.75 a gallon for brandy and spirits, 15 per cent. *ad valorem* for works of art, and 35 cents a gallon for still wines and vermouth.

Anglo-American Commission.—Sir Wilfrid Laurier, going to Washington in December, 1897, advocated a conference for the settlement of all outstanding differences between the United States and Canada. Great Britain declined to suspend pelagic sealing pending negotiations, which were therefore dropped for the time, and Congress prohibited importation of sealskins taken in North Pacific waters. Negotiations were, however, resumed in April, and on May 30, 1898, an agreement to create a commission charged with the task of considering all subjects in controversy and framing a treaty to adjust all differences was concluded by Sir Julian Pauncefote and Sir Louis Davis, Canadian Minister of Marine, representing Great Britain, and John W. Foster and John A. Kasson, acting on behalf of the United States. A protocol referring all Canadian questions to an international commission of ten members was signed at Washington on June 21. One more member was added on each side in order to have Newfoundland represented. The commissioners met at Quebec on Aug. 25. Charles W. Fairbanks, Nelson Dingley, George Gray, John A. Kasson, John W. Foster, and T. Jefferson Coolidge represented the United States; Lord John Charlton Herschell, Sir Wilfrid Laurier, Sir Richard Cartwright, Sir Louis Davies, and Sir James Winter, of Newfoundland, were the British representatives. On the retirement of Senator Gray in September, he having been appointed on the Peace Commission in Paris, the President nominated in his place Charles James Faulkner. The seal fisheries, the Alaska boundary, and commercial reciprocity were the most important of the questions discussed. Other matters to be investigated were the transshipment of fish in bond from Canadian waters in the North Atlantic, protection of fisheries on the Great Lakes, the alien labor laws, and the transportation of the troops of either country through the territory of the other. On Oct. 10 the commission adjourned, to meet again in Washington on Nov. 1. The American commissioners asked that the Canadian Government set aside the preferential tariff rates of 25 per cent. in favor of Great Britain as a condition of commercial reciprocity. The Americans declined to make lumber free, though the duty on lumber might be reduced, also that on live animals. On the fisheries question Canada offered enlarged rights to American fishermen in return for the free admission of Canadian fish into the United States. The Canadians accepted the proposal of the United States that pelagic sealing should be prohibited altogether, the United States compensating the sealers by purchasing their vessels and outfits at an appraised value. The amount awarded to Canadian claimants on account of seizures in Bering Sea,

about \$473,000, had been paid to the British ambassador on June 16. The joint statement of conclusions signed by the United States, British, and Canadian delegates to the sealing conference afforded a basis for the discussion of the Bering Sea question. It was found that a notable decrease had been suffered by the herd on the Pribylov Islands during 1897, though the diminution of the herd was yet far from a stage which involves or threatens the actual extermination of the species, so long as it is protected in its haunts on land. The ratio of the pelagic catch of one year to that of the following has fallen more rapidly than the ratio of the breeding herd of one year to the breeding herd of the next, and in this greater reduction of the pelagic catch, compared with the gradual decrease of the herd, there is a tendency toward equilibrium, or a stage at which the numbers of the breeding herd would neither increase nor decrease. In 1898 only 28 vessels were engaged in pelagic sealing, and the reported catch of 10,000 seals was the smallest for many seasons. The Pribylov catch was 18,000, and on the Russian islands, which are protected by a zone of 30 miles, the lessees secured only 7,000 skins. The Alaska boundary question it was proposed to refer to an impartial tribunal. Another course suggested was to abandon the Russian treaty of 1825 and arrange a new conventional boundary in connection with an agreement for a neutral port at the head of the Lynn Canal and bonding privileges for both nations on the main routes to the Yukon and the Alaskan interior. The Canadians argued that the Portland Channel mentioned in the treaty was not the present Portland Channel, but either Clarence Straits or Behm's Canal, and that the line should be drawn ten leagues from the outer edge of the islands, not from the windings of the shore, except where there are summits nearer the shore than ten leagues from the outer rim of the archipelago, in which case the line should be deflected to pass through these summits. This would give to Canada various inlets and landing places which under the American reading fall to the United States, among them the Lynn Canal and the Tahko Inlet. In December the international commission adjourned till after March 4, 1899.

The Cuban Question.—The Republican platform of 1896 expressed deep interest in "the heroic battle of the Cuban patriots against cruelty and oppression," and recommended that the Government of the United States "actively use its influence and good offices to restore peace and give independence to the island," the Government of Spain having lost control of Cuba, and being unable to protect the property or lives of resident American citizens or to comply with its treaty obligations. From the beginning of the Cuban insurrection the Spanish Government feared the intervention of the United States, but so long as President Cleveland had the direction of affairs it was reassured by disavowals of any intention to invade the sovereignty of Spain. President McKinley from the first avoided all such assurances, and Gen. Woodford, soon after his arrival at Madrid, in September, 1897, let it be known that he had an important mission to carry out. In his first interview with the Duke of Tetuan, then Minister of Foreign Affairs, while assuring him that the President earnestly desired peace and friendship between Spain and the United States, he read extracts from his instructions that raised a distinct issue. He presented, on Sept. 23, a note in which he gave at length the American view that it was visionary for Spain to hope that Cuba, which had been the scene of sanguinary conflicts for thirteen years out of twenty-nine, would ever again, even if subjugated by sheer exhaustion, be of value

to Spain; that a recognition of Cuban belligerency was demanded in the United States; that if Spain would not of her own volition put a stop to the destructive war, and make proposals of settlement honorable to herself and just to the Cuban colony and mankind, it only remained for the United States, deeply disturbed and injured by the existence of a devastating internal conflict at its doors, to wait a reasonable time before alleging and acting upon the rights which they too possessed; that the President felt it his duty to help bring about results of peace and prosperity which should be in conformity alike with the feelings of the American people and the inherent rights of civilized man, and be of advantage both to Cuba and to Spain. All that was asked was that some lasting settlement be found that Spain could accept with self-respect, and for this the Government offered its kindly offices, hoping that during the coming month Spain might either be able to formulate some proposal under which this tender of good offices might become effective, or might give satisfactory assurances that peace in Cuba would by her own efforts be promptly assured.

The prospect of American intervention brought the Liberals into power in Spain, and caused the recall of Gen. Weyler, but without any thorough change in the military methods or any material improvement in the conditions in Cuba. Señor Gullon, the new Spanish Minister of Foreign Affairs, in replying to the American note, on Oct. 23, denied that indirect injuries inflicted on the United States by the prolonged disturbances in Cuba justified interference or intrusions, and gave an outline of the autonomous constitution for Cuba, which, he said, in combination with energetic military action, would speedily lead to pacification and prosperity and the complete re-establishment of the indestructible Spanish sovereignty. He proposed that "Spain should continue her military efforts, and at the same time announce such concessions as seemed to be opportune and adequate, while the United States should exercise within her borders the energy and vigilance necessary to prevent absolutely the furnishing of the resources with which, as from an inexhaustible arsenal, the Cuban insurrection has been supplying itself from the beginning." After alleging various infractions of the neutrality laws, he suggested their more stringent application as the most efficient means of friendly co-operation with Spain, and asserted that the situation in Cuba was immensely changed for the better, and that with the establishment of autonomous institutions the pretext for popular sympathies with the Cubans was taken away.

In the answer to this note, presented on Dec. 20, Gen. Woodford said: "The President understands that the reversal of all that had been done is no sudden growth, to spring up in a single night, and that the fair structure of a just and permanent and prosperous peace for Cuba is to be raised with thoughtful care and untiring devotion if Spain is to succeed in the accomplishment of this tremendous task upon which she has entered. He comprehends that the plan, however broadly outlined, must be wrought out in progressive detail, and that upon assured foundations, upon the rock of equity and not upon the shifting sands of selfish interest, must be builded, stone by stone, the enduring fabric of regenerated Cuba." Meanwhile an attitude of benevolent expectancy was promised on the part of the United States "until the near future should show whether the indispensable conditions of a righteous peace" were realizable from the autonomous system which Spain had proclaimed in Cuba, while rejecting the good offices that had been tendered by the President. The Spanish arraignment

of the United States was refuted by a description of the onerous and expensive measures adopted for the enforcement of the neutrality laws, amply sufficing to cover all international obligations. While regretting that the Spanish Government had not accepted the offer of good offices, but had recommended joint action of the two countries, each in its domestic sphere, Gen. Woodford promised that any progress toward a contented and recuperative peace attained through just and humane measures could not but be benevolently viewed, and that so long as the event invited and justified such a course the United States would persevere in the path of kindly expectancy.

Proposed Cuban Autonomy.—The measure of self-government proclaimed by the Spanish Crown on Nov. 25, 1897, was rejected in advance by the insurgents, while the Spanish Cubans who upheld Weyler's policy condemned any concessions. The remnant of the Autonomist party accepted it as an earnest of a better constitution to be obtained in the future, and applied themselves to the task of putting the autonomous system in operation, and the multitude of *pacíficos* who had taken no willing part in the hostilities on either side were inclined to accept any solution that promised to end the period of havoc and suffering and restore peace to the island. The autonomy act fell far short of the promises and professions of the Spanish Government. The Autonomous Legislature could enact no law without the approval of the Governor General. Even the fiscal independence that was promised was rendered nugatory by a clause providing that the Madrid Government should fix the amount to be paid by the colonial treasury for the maintenance of the rights of the Spanish Crown, and that the Cuban Chamber could not discuss the estimates for the colonial budget until this amount was voted. Another clause provided for perpetual preferential duties in favor of Spanish trade and manufactures.

The insurgents rejected the compromise of autonomy from the time the project was first mooted. The Minister of the Colonies repeatedly stated that autonomy was not given to the rebels, but to peaceful and loyal Cubans, so that the protest of the Spanish authorities that the failure of autonomy was due to the encouragement given to the rebels by the threatening attitude of the United States toward Spain was not well founded. The opposition shown to reforms by the military element had been a serious obstacle to peace. Conciliatory measures suggested by the leaders of the Autonomist party were not tried because of the opposition of the army. When it was proposed to disband the local Spanish volunteer regiments and substitute a force of Cuban militia drawn from the ranks of the insurgents, the volunteers obtained a promise from Gen. Blanco, which was afterward confirmed by the Madrid authorities, that in no case would their organization be disturbed. The proposal to treat with the Government of the Republic of Cuba, and endeavor to secure terms on which the rebels would accept the new constitution and lay down their arms, fell through because of the determined resistance of high military authorities both in Spain and in Cuba.

The autonomous system was formally inaugurated in Cuba in the beginning of January, 1898. The Autonomous Cuban ministry was composed of José María Galvez, Antonio Galvez, Rafael Montoro, Francesco Zayas, Señor Govin, Señor Giberga, and Señor Ambard. No sooner had it been constituted than serious differences arose between the members, caused by the sympathies of some toward the cause of Cuban liberty and the tendency of the others toward the restoration of the old colonial system.

Ministers Giberga and Ambard were accused of secretly treating with the Separatists and favoring the independence of Cuba. Antonio Govin, the Cuban Minister of Justice and Interior, was denounced by the Spaniards as a traitor. There were some hopeful signs in the beginning that the proposed autonomy might result in a peaceful compromise. Many refugees returned from the United States, and some insurgents of more or less prominence submitted to the authorities in accordance with Marshal Blanco's proclamation of amnesty. The first disturbing influence proceeded from the Spaniards in Cuba, who in the middle of January made riotous demonstrations against autonomy and threatened Americans in Havana. This impelled Consul-General Lee to request that an American war ship be sent to protect United States citizens.

The Military Situation in Cuba.—The proffer of more satisfactory and complete autonomy would not have induced the Cubans to lay down their arms, even if they had faith in the permanence of the Spanish concessions. The bitterness engendered by Gen. Weyler's policy divided the partisans of Spain from the Cuban patriots by an impassable gulf, and the rebels, exhausted and suffering though they were, believed that their relative position was stronger than ever. Though ill clad, often starving, and badly armed, they had made so stiff a resistance to the largest army that Spain could muster for transmarine service that the military and financial resources of the Spanish Government probably could not outlast one more campaign. The number of Spanish soldiers who had died from wounds or disease from the beginning of the war, in February, 1895, to January, 1898, was officially stated to be 52,000, while 47,000 had been sent back to Spain as invalids, and 42,000 were in hospital and unfit for duty. This reduced the effective strength of the active army to about 70,000 men, besides whom there were about 16,000 irregular cavalry under arms. In case of war the Spaniards could rely on about 150,000 men trained in the regular army then in Cuba, about 50,000 volunteers who had received some military training, and an indefinite number of irregular troops. The losses of the rebels from the number of men killed and disabled, and from sickness and lack of medical attendance, had been equally heavy. Still, they were able to maintain their position indefinitely without seeking to engage the Spanish forces; for, although they were better provided with arms and ammunition than they ever had been before, they had ceased their offensive tactics. Food was very scarce, especially in the country desolated by both armies and depopulated by the *bando* of reconcentration, embracing the provinces of Havana, Matanzas, Santa Clara, and Pinar del Rio, but the mobile insurgent groups could find everywhere enough to live upon. In January and February skirmishing went on as usual all over the country. The troops assailed the rebel positions in Pinar del Rio without inflicting any serious losses. In Puerto Principe the insurgents were well provided with necessities and were not disturbed by the troops. In Santiago de Cuba, the section known as Cuba Libre, the rebels lived in comparative security, raising crops and tending their cattle without interference, and preventing the sugar planters from grinding cane. Gen. Gomez and his forces were in Santa Clara in a position that the Spaniards did not venture to attack. An officer of the Cuban volunteers who went to the rebel camp to treat for peace in behalf of the Autonomous Government was tried and executed under the law handed down from the old war of independence, which ordained that any emissary of the Spaniards offering any terms except Cuban independence should be shot.

The de Lôme Incident.—The Sagasta Government, in response to the President's protest against Weyler and his policy, and his notice that the war must cease and proposals for a settlement be made within a reasonable time, recalled Gen. Weyler and sent out Gen. Blanco to introduce the system of autonomy. Before the end of 1897 it was seen that autonomy was foredoomed to failure. It was obnoxious to the Spaniards of Cuba, who made riotous demonstrations in Havana in favor of Weyler. The reconcentration *bando* was revoked by Capt.-Gen. Blanco, but the starving *reconcentrados* remained within the Spanish lines, as their homes, stock, and implements had been destroyed, and those who were allowed to return to the open country were killed by Spanish patrols as rebels; for, in spite of Gen. Blanco's orders, the army authorities were unwilling to forego the military advantages of Weyler's policy.

In January, 1898, a concentration of United States naval forces and the accumulation of war material, as well as expressions of impatience in the American press and in Congress, showed that the Cuban question was reaching an acute stage. At this time a private letter written by the Spanish ambassador, Dupuy de Lôme, to a Madrid editor who was visiting Havana, Señor Canalejas, fell into the hands of Cuban revolutionists, who gave it to the officials of the State Department and published the contents in the newspapers. On account of this letter, in which President McKinley was characterized as a vacillating and time-serving politician, Gen. Woodford was instructed on Feb. 9 to request the Minister of State at Madrid to recall Señor de Lôme. The ambassador had anticipated such action by cabling his resignation, which was accepted before the request for his recall arrived. Señor Polo y Bernabe was appointed his successor.

The Cubans.—As a result of Gen. Weyler's policy of extermination, fully 250,000 Cuban people perished from starvation and disease. Of the non-combatant population remaining, about 1,100,000 were Cubans and 150,000 Spaniards. The Republic of Cuba had for its President Gen. Bartolome Masso, and for Vice-President Domingo Mendez Capote, who was also Secretary of War. Andreas Moreno was Secretary of Foreign Affairs, Ernesto Font's Secretary of Finance, and Manuel Silva Secretary of the Interior. Gen. T. Estrada Palma was the chief representative of the republic in the United States and the head of the Cuban junta in New York. Each of the six provinces had a Governor and a Lieutenant Governor, and officers at the head of the numerous prefectures. The military organization, however, predominated over the civil administration and was more highly developed. The commander-in-chief of the army of liberation was Gen. Maximo Gomez, who was established in Santa Clara province, in the center of the island. The total strength of the army was reported to be 28,000 men, comprising 25,000 infantry, armed with 3,000 Mausers and more than 21,000 Remingtons; 2,000 cavalry, armed with Remington carbines; and several batteries of artillery, having 10 guns, mostly Hotchkiss 12-pounders and 2-pounders, besides 3 dynamite guns which had spread death and terror among the Spaniards for two years. The Cuban army was divided into 6 army corps. The first, second, and third corps, under the command of Major-Gen. Calixto Garcia, operated in the provinces of Puerto Principe and Santiago de Cuba, at the eastern end of the island. His command numbered 18,000 men, comprising 3 divisions under Gen. Pedro Perez, Gen. Jesus Rabi, and Gen. Armondo Menocal, each division consisting of 2 brigades. Major-Gen. Francisco Carrillo was in command of the fourth corps, consisting of one division,

with Gen. José Rodriguez as division commander and Brigadiers José Miguel Gomez, José Gonzales, and Hijinio Esquerro commanding the separate brigades. This corps operated in Santa Clara, while the fifth and sixth corps, under Major-Gen. José Maria Rodriguez, operated in Pinardel Rio, Havana, and Matanzas provinces, at the western end of the island. Of the fifth corps one division was commanded by Gen. Pedro Betancourt and one by Gen. Alexandro Rodriguez; of the sixth corps Gen. Pedro Vias commanded one and Gen. Juan Lorente the other.

Destruction of the "Maine."—In consequence of hostile demonstrations against Americans the consular representatives in Cuba urged the Government to send war vessels to Cuban waters. On Jan. 24, after a conference with the Spanish minister, in which the renewal of visits of American war ships to Spanish waters was discussed and accepted, the authorities in Madrid and Havana were advised of the purpose of the American Government to resume friendly naval visits to Cuban ports. The Spanish Government expressed appreciation of the friendly character of the intended visit of the cruiser "Maine" to Havana, and announced the intention of returning the courtesy by sending Spanish ships to the principal ports of the United States. Accordingly, after the Havana riots the United States cruiser "Maine" was sent on a friendly visit to Havana, to remain there in readiness to protect American lives and property in the event of dangerous disturbances. The "Maine" was anchored in a berth assigned by the naval authorities. It was the least-used buoy in the harbor, one that had not previously been occupied by a war vessel for many years. The Spaniards of Havana resented the presence of the American man-of-war, and dark threats were uttered against the ship and her crew. The "Maine" lay there at anchor three weeks. At nine o'clock and forty minutes in the evening of Feb. 15, while the men were asleep, a double explosion occurred forward, directly under their quarters, which rent the ship in two, causing her to sink almost instantly. Out of a complement of 360 men 2 officers and 264 men were drowned or killed, and 60 were taken out wounded. The first explosion lifted the forward part of the ship perceptibly. After a brief interval a second one occurred, more open and prolonged. The forward part of the vessel was completely demolished, whereas the after part was practically intact. The vessel was lying in about 6 fathoms of water. The discipline on board was excellent, and the temperature of the forward magazines had been reported normal at 8 o'clock, and the condition of the coal bunkers, storage compartments, and boilers precluded the hypothesis of spontaneous combustion or an internal explosion from any cause. Capt. Sigsbee, in his telegram to the Secretary of the Navy, said that public opinion should be suspended till further report. Marshal Blanco telegraphed to his Government that the explosion was undoubtedly due to an accident, probably caused by the bursting of the boiler of a dynamo engine. The authorities in Havana rendered whatever assistance they could in rescuing the survivors and caring for the wounded. The Madrid Government expressed regret at the catastrophe, especially in view of the fact that it occurred in Spanish waters. The Spanish cruiser "Vizcaya" was about to be anchored in New York harbor at the time as a counter demonstration to the dispatch of the "Maine" to Havana, and when she was anchored a vigilant patrol, though deprecated by Capt. Eulate, was kept to prevent any outrage being attempted in consequence of the excited state of public feeling in the United States.

The Spanish Government proposed a joint in-

vestigation into the cause of the "Maine" explosion; but the Government at Washington declined the proposition, being determined to investigate independently the destruction of the battle ship. The naval board of inquiry consisted of Capt. William T. Sampson, Capt. French E. Chadwick, Lieut.-Commander William P. Potter, and Lieut.-Commander Adolph Marix. When these officers examined the wreck they found the bottom plates bent upward, forming a great arch, and a portion of the forward keel blown through the body of the ship and protruding above the deck 36 feet in vertical distance from its original position. Under-

taken to imply that the report required such confirmation.

The findings of the American court of inquiry on the "Maine" explosion were communicated to the Spanish Government. In his message to Congress thereon the President said he did not permit himself to doubt that the sense of justice of the Spanish nation would dictate the course of action suggested by honor and by the friendly relations of the two governments. On March 26 Señor Gullon assured Minister Woodford that Spain would do all that the highest honor and justice required in the matter of the "Maine." On March

THE "MAINE" PASSING MORRO CASTLE, HAVANA, AS SHE ENTERED THE GATE OF DEATH.

neath the arch was a hole in the mud 15 feet in diameter and 7 feet deep. The outside bottom plating was doubled back upon itself. The conclusions of the court of inquiry were that the loss of the "Maine" was not in any respect due to fault or negligence on the part of any of the officers or crew; that the ship was destroyed by the explosion of a submarine mine underneath the port side, which caused the partial explosion of two of the forward magazines; and that no evidence had been obtainable fixing the responsibility upon any person or persons. The Spanish Government subsequently made an independent investigation, which resulted in conclusions attributing the catastrophe to an internal explosion in the forward storerooms, these containing other explosives than powder and shells of various kinds, and being surrounded on the starboard side by coal bunkers, which explosion those who witnessed it agreed in saying was due to a purely accidental cause. Respect for the extraterritoriality of a foreign man-of-war prevented the commission from ascertaining by inspection the origin of the disaster, but when it should become possible to float the vessel an examination of the hull, both outside and inside, would justify the correctness of the report, although this must not be

31 the Spanish Government proposed to submit to arbitration all differences that might arise in this matter, and in a note presented by the Spanish minister on April 10 Spain proposed, as to the question of fact springing from the diversity of views between the report of the American and Spanish boards, that the fact be ascertained by an impartial investigation by experts, whose decision Spain accepted in advance. To this no reply was given.

War Preparations.—At the time when the "Maine" was sent to Havana an American squadron assembled at Key West and the Tortugas Islands. The United States Government had already abandoned the attitude of benevolent expectancy in regard to the autonomy experiment, since it had proved a failure from the outset, and since the severities of the military policy, though ostensibly revoked, were in fact continued. Leave was obtained to distribute food among suffering Americans and the distressed *reconcentrados*, and a cruiser and a coast-defense vessel were detailed to convey the supplies to Cuba. On March 6 Señor Gullon informed Gen. Woodford that the Spanish Government desired the substitution of merchant vessels for the war ships, and also the recall of Gen. Lee,

United States consul-general at Havana. The Government at Washington declined to recall Gen. Lee in existing circumstances or to countermand the employment of naval vessels which were not fighting ships, whereupon Spain withdrew her suggestion. Meanwhile Spain was getting her navy in fighting condition as rapidly as possible, hurrying the work of construction, armament, and repair in the shipyards, and buying ships abroad. Agents of the United States navy were also busy in Europe negotiating for the purchase of any good modern cruisers that could be bought, while ordnance factories were turning out guns and disappearing carriages with all dispatch to mount on the unfinished war vessels and the shore batteries, and the work in hand was rushed in the Government arsenals. The bill authorizing the creation of two new regiments of artillery to man the harbor forts was passed on March 7, and \$50,000,000 was placed at the disposition of the President for national defense. The squadron concentrated at Key West drew from the Spanish Government a representation that the warlike preparations were likely to have a serious influence in encouraging the Cuban revolutionists just when the autonomy plan was to be put to the test in the Cuban elections, and thus endanger the success of the reforms that Spain was trying to inaugurate. The Spanish minister protested that war by the United States against Spain in such circumstances would be unjustifiable before the world, and a crime against humanity and civilization. The Secretary of State retorted by inquiring about the dispatch of a Spanish torpedo flotilla to Havana. The President asked for a bill providing for the contingent increase of the army to 100,000 men. The speeches of Senator Proctor and other members of Congress who had lately visited Cuba, asserting that 425,000 Cubans had died of starvation, and 200,000 more were in a starving condition, were followed on March 28 by the report of the naval commission on the "Maine" disaster.

The election of Cuban Deputies in the Spanish Cortes took place on March 27. It was a mere formality, 20 official candidates being selected to represent the majority and 10 as representatives of the minority the whole list submitted to the Governor General, and on receiving his approval declared elected. The military and other expenses of the Cuban Government went on at the rate of \$10,000,000 a month.

The Spanish soldiers of all ranks were eager for a war with the United States, hoping to redeem in regular operations the reputation of Spanish arms, which had suffered in the campaigns against the Cubans. Preparations for defense were pushed forward on the coast line in the vicinity of Havana, where sandbag protections were thrown up in front of the batteries and additional earthworks were constructed. The re-enforcements sent from Spain numbered 16,000 men, most of them raw recruits, a large proportion boys not seventeen years old. The regular infantry was made up entirely of Spanish conscripts who had no interest in Cuba, but were controlled by an excellent spirit of military discipline and subordination. The regular cavalry were soldiers of Spanish birth, mounted on ill-fed Texas ponies, and only capable of the duties of mounted infantry. The civil guard was a well-behaved body composed of the pick of the Spaniards in Cuba detailed for service in cities. The guerrilla cavalry was a force regularly recruited from among the Spanish residents and native Cubans, who fought the insurgents in their own fashion, came oftener in conflict with them than any of the other Spanish forces, and were usually killed without quarter when captured. The volunteers were organized and greatly fa-

vored by Gen. Weyler, being composed of the most ardent of the Spaniards in Cuba, who exercised a strong political influence, but had not often been called upon to prove their fighting abilities. The *mobilizados* were an irregular force of infantry, serving usually without pay, and only called out when occasion required to do guard duty in the blockhouse forts around each fortified town. The guard of public order was another irregular force summoned in emergencies for guard duty in the cities.

The American Ultimatum.—March 23, after the President had received the report of the court of inquiry on the destruction of the "Maine," which he withheld from Congress until he had endeavored to secure some satisfactory agreement with Spain that would avert war, Gen. Woodford presented a formal statement to the Spanish Minister of Foreign Affairs, warning him that, apart from the destruction of the vessel, unless an agreement assuring immediate and honorable peace in Cuba was reached within a very few days, the President would feel himself constrained to submit to the decision of Congress the whole question of the relations between the United States and Spain, including the "Maine" incident. The recall of Gen. Weyler and the creation of autonomous institutions, with the evident desire of the Spanish Government to effect a pacification, had awakened in the United States Government the hope that peace would be firmly and permanently established, but this hope had been disappointed. The winter was at an end, and peace was not yet in sight. The system of devastating the island so as to cut off all supplies from their opponents was still practiced both by the Spanish troops and by the insurgents. All the sufferings and horrors of civil war still continued, and the moment had arrived when, in the interests of humanity and for the sake of their own commercial, financial, and sanitary needs, the United States must demand that a satisfactory agreement be reached that would insure immediate peace in Cuba. The population of Cuba, decimated by famine, destitution, and disease, had sunk from 1,600,000 to 1,200,000, and the sanitary conditions were lamentable, so that the adjacent portions of the United States were threatened with an epidemic. The lucrative commerce with the United States had been interrupted, and many millions of American capital had been lost or jeopardized; but above all these considerations the controlling questions of humanity and civilization were to be considered. The Spanish minister replied on March 25, urging that the "Maine" report should not be sent to Congress, but should be made the subject of diplomatic adjustment between the two governments, and that the means of securing the pacification of Cuba should be left to the Insular Parliament, which was to meet on May 4. In reply, Gen. Woodford inquired whether the Spanish Government was willing to grant an immediate armistice. A few days later he asked for a conference with the President of the Council, the Minister of Foreign Affairs and the Ministry of the Colonies to be present also. At this meeting, which took place on March 29, he communicated a message from the President, premised with the declaration that the United States did not want Cuba, but did wish immediate peace in Cuba, requesting an immediate armistice lasting until Oct. 1, negotiations to be carried on in the meantime with a view to effecting peace between Spain and the insurgents through the kindly offices of the United States; and further requesting the immediate revocation of the reconcentration order so as to permit the people to return to their farms, and the needy to be relieved with provisions and supplies from the United States with the co-operation

of the Spanish authorities, so as to afford full relief. To this communication the Spanish Government replied, on March 31, that it was willing to submit to arbitration any differences of opinion that might arise as to the "Maine" disaster; that, being more interested than the Government of the United States in the establishment of an honorable and permanent peace in Cuba, it intended confiding this mission to the Insular Parliament, whose co-operation was absolutely necessary, it being understood, however, that the powers specially reserved by the constitution to the central Government were not to be in any way impaired or diminished; that there would be no objection to a suspension of hostilities meanwhile, provided the insurgents asked for one, to last during the pleasure of the commander-in-chief of the Spanish forces; that Gen. Blanco had already revoked the order of reconcentration, although the revocation could not have its full effect until military operations were concluded, and 3,000,000 pesetas had been placed at his disposal to enable the peasants to resume their usual vocations; that the Spanish authorities would nevertheless accept supplies that might be sent from the United States for necessitous Cubans under conditions to be agreed upon by the Secretary of State and the Spanish minister at Washington. Marshal Blanco, when he issued his decree rescinding the reconcentration *bando* for the western provinces, reported that these provinces were so far pacified that the *reconcentrados* could safely return to their farms. He announced that he would protect them in their agricultural operations, and would furnish them with tools and seed, and with food from public kitchens till the crops ripened, and also would give employment to the able-bodied on public works.

Offers of Mediation.—The Spanish reply of March 31 was regarded as final and as entirely unsatisfactory, and the President prepared a message to Congress covering the whole Cuban question. The Spanish Cabinet sent to the great powers a memorandum denying that there were torpedoes on the spot where the "Maine" was blown up, and asking for arbitration on the question, and in regard to the *reconcentrados* explaining that the country people had been required to inhabit the towns because they were all rebel spies; but that, after sickness had broken out among them, they had been permitted to return to their homes before the question was brought up by the United States. In reference to the demands of the President that the war must be brought to an end, it was declared that as soon as the rebels knew they would not be supported and provisioned from the United States they would capitulate.

Before the President's message was sent to Congress the Pope made an effort to avert war. With this object he took steps in a semi-official way to express to the governments in Madrid and Washington his ardent desire that peace should not be disturbed. Cardinal Rampolla, the Papal Secretary of State, telegraphed to the Spanish Government, asking what concessions it was prepared to make, and the Papal Nuncio urged an immediate suspension of hostilities between the Spanish troops and the insurgents. The Pope sounded the President by means of informal inquiries through Archbishop Ireland, and sought to induce the American Government to get the insurgents to accept an armistice. The Austrian Government encouraged the attempts at mediation, and received the backing of Russia, France, and Germany. To the first communication of the nuncio the Spanish Cabinet replied that it had nothing to offer beyond its former declarations. Urged by the representatives of the great powers, the Spanish ministers finally consented to accept the mediation of the Pope, giving

out that both governments had agreed to this proposition, which was represented as originating in overtures of President McKinley. The United States Government explained that the President had made no such proposal to the Vatican. In fact, the President rejected the offer of mediation, and through Minister Woodford urged the immediate granting of an armistice, which was offered by the Autonomist Government with the consent of the Madrid authorities.

The Cuban Autonomist Government sent an appeal to President McKinley to respect the will of the majority of the people of Cuba, who were represented as being in favor of home rule under Spanish sovereignty. The representatives of the six great powers called upon the President with an address appealing to his feelings of humanity and moderation, and expressing the hope that further negotiations would lead to an agreement securing the maintenance of peace and affording all necessary guarantees for the re-establishment of order in Cuba. The President replied that the Government of the United States recognized the good will which prompted the friendly communication, and shared in the hope for peace and the re-establishment of order in the island, "so terminating the chronic condition of disturbance there which so deeply injures the interests and menaces the tranquillity of the American nation by the character and consequences of the struggle thus kept up at our doors, besides shocking its sense of humanity." Expressing the appreciation of the Government of the United States for the humane and disinterested character of the communication from the powers, he said it was confident that equal appreciation would be shown for its own earnest and unselfish endeavors to fulfill its duty to humanity by ending a situation the indefinite prolongation of which had become insufferable. A joint note presented to Señor Gullon by the ambassadors of France, Germany, Italy, and Russia elicited the reply that Spain had reached the limit of international politics in the direction of conceding the demands and allowing the pretensions of the United States. On April 10 the Spanish Government formally proclaimed a suspension of hostilities, in compliance with the request of the Pope and of the ambassadors of the six powers, "in order to prepare for and facilitate the establishment of peace in the island," it was stated in Gen. Blanco's proclamation, which was qualified by the provision that the details of its execution and the duration of the truce should be determined by instructions to the generals commanding. The United States Government was notified by Minister Polo y Bernabe of the granting of the armistice without conditions, and stated that Spain had granted liberal institutions to Cuba to be developed by the coming Cuban Parliament. The Emperor of Austria congratulated the Pope on having secured an armistice. The insurgent Government through Maximo Gomez let it be known that, unless Spain should agree to evacuate Cuba, the Cubans would not accept an armistice and throw away their advantages at the beginning of the rainy season, when a cessation of fighting would be welcome to the Spanish troops. President McKinley withheld his message until Gen. Fitzhugh Lee and the other consular officers had left for the United States, turning over the archives and the charge of American interests to the British consuls.

The President was slow in preparing his message while a chance remained for a diplomatic settlement, and delayed sending it after it was ready, on the ground that the consuls and Americans who had not left Cuba ought first to be brought away. Meanwhile, both countries were mobilizing their

forces rapidly. The Spanish cruisers "Vizcaya" and "Almirante Oquendo" left Havana on April 1 for the purpose of meeting the torpedo fleet that was about to be dispatched from the Canary Islands, and they afterward remained at Puerto Rico, while a squadron consisting of the armored cruisers "Emperador Carlos V" and "Infanta Maria Teresa," the protected cruiser "Alfonso XIII," the torpedo gunboat "Cristobal Colon," and the flotilla of destroyers and torpedo boats assembled at the Cape Verd Islands.

In the United States troops were hurried to the Atlantic seaboard from distant outposts. On April 14 the army order was issued directing 8 regiments of the regular infantry to go to New Orleans, 7 to Mobile, and 7 to Tampa, while 6 regiments of cavalry and all the light batteries and artillery regiments, except the Sixth and Seventh, recently organized to man the new guns mounted in the coast fortifications at New York and other points, were ordered to Chickamauga. The coast fortifications were strengthened and provided with their still lacking guns as rapidly as these could be finished and mounted. Submarine mines were planted in New York and other harbors. Nine new war ships were added to the navy. The fleets at Key West and Hampton Roads were stripped for war.

The Spaniards, though much behindhand in their naval preparations, pushed forward their coast fortifications at Havana, San Juan, and other West-Indian ports, mounting mortars and heavy guns with feverish haste. The volunteers and military were put through daily drills. Havana already experienced the hardships of a siege, for commerce was stopped and rice and other common articles of food rose to double the ordinary prices. The coast line at Havana was heavily armed from Cojimar to Morro Castle, and westward to the Chossera river, with 16-inch Ordoñez and many 12-inch and 10-inch guns and lighter pieces at all available points. The garrison was increased to 60,000 regulars and 40,000 volunteers.

Marshal Blanco called on the volunteer officers to complete their organizations and bring their men up to the highest state of efficiency. These volunteers, of whom 45,000 were then on the rolls, and who in a short time numbered more than 100,000, were recruited exclusively from the Spanish residents of Cuba, who obtained exemption from all other military service by remaining ten years in a volunteer regiment. The armistice was not observed by the Spanish troops any more than by the rebels, who refused to recognize it or take advantage of it in any form. The troops continued to act against the insurgents in all the provinces, and in Pinar del Rio some spirited engagements took place.

The President's Message.—On April 11 the President sent his message to Congress. The conditions of the Cuban struggle and its relation to the state of the Union were thus reviewed:

"The present revolution is but the successor of similar insurrections which have occurred in Cuba against the dominion of Spain, extending over a period of nearly half a century, each of which, during its progress, has subjected the United States to great effort and expense in enforcing its neutrality laws, caused enormous losses to American trade and commerce, caused irritation, annoyance, and disturbance among our citizens, and by the exercise of cruel, barbarous, and uncivilized practices of warfare shocked the sensibilities and offended the humane sympathies of our people. Since the present revolution began in February, 1895, this country has seen the fertile domain at our threshold ravaged by fire and sword in the course of a struggle unequalled in the history of the island, and rarely

paralleled as to, the number of combatants and the bitterness of the contest by revolution of modern times where a dependent people, striving to be free, have been opposed by the power of the sovereign state. Our people have beheld a once prosperous community reduced to comparative want, its lucrative commerce virtually paralyzed, its exceptional productiveness diminished, its fields laid waste, its mills in ruins, and its people perishing by tens of thousands from hunger and destitution. We have found ourselves constrained, in the observance of that strict neutrality which our laws enjoin, and which the law of nations commands, to police our own waters and watch our own seaports in prevention of any unlawful act in aid of the Cubans. Our trade suffered, the capital invested by our citizens in Cuba has been largely lost, and the temper and forbearance of our people have been so sorely tried as to beget a perilous unrest among our own citizens, which has inevitably found its expression from time to time in the national Legislature, so that issues wholly external to our own body politic engross attention and stand in the way of that close devotion to domestic advancement that becomes a self-contained commonwealth whose primal maxim has been the avoidance of foreign entanglements. All this must needs awaken, and has indeed aroused, the utmost concern on the part of this Government, as well during my predecessor's term as in my own. In April, 1896, the evils from which our country suffered through the Cuban war became so onerous that my predecessor made an effort to bring about a peace through the mediation of this Government in any way that might tend to an honorable adjustment of the contest between Spain and her revolted colony on the basis of some effective scheme of self-government for Cuba under the flag and sovereignty of Spain. It failed through the refusal of the Spanish Government then in power to consider any form of mediation or indeed any plan of settlement which did not begin with the actual submission of the insurgents to the mother country, and then only on such terms as Spain herself might see fit to grant. The war continued unabated. The resistance of the insurgents was in no wise diminished. The efforts of Spain were increased both by the dispatch of fresh levies to Cuba and by the addition to the horrors of the strife of a new and inhuman phase, happily unprecedented in the modern history of civilized Christian peoples. The policy of devastation and concentration inaugurated by the Captain General's *bando* of Oct. 21, 1896, in the province of Pinar del Rio was thence extended to embrace all of the island to which the power of the Spanish arms was able to reach by occupation or by military operations. The peasantry, including all dwelling in the open agricultural interior, were driven into the garrison towns or isolated places held by the troops. The raising and movement of provisions of all kinds were interdicted. The fields were laid waste, dwellings unroofed and fired, mills destroyed, and in short everything that could desolate the land and render it unfit for human habitation or support was commanded by one or the other of the contending parties and executed by all the powers at their disposal.

"By the time the present Administration took office, a year ago, reconcentration—so called—had been made effective over the better part of the four central and western provinces, Santa Clara, Matanzas, Havana, and Pinar del Rio. The agricultural population, to the estimated number of 300,000 or more, was herded within the towns and their immediate vicinage, deprived of the means of support, rendered destitute of shelter, left poorly clad, and exposed to the most unsanitary conditions. As the scarcity of food increased with the devastation of the depopu-

lated areas of production, destitution and want became misery and starvation. Month by month the death rate increased in an alarming ratio. By March, 1897, according to conservative estimates from official Spanish sources, the mortality among the *reconcentrados* from starvation and the diseases thereto incident exceeded 50 per cent. of their total number. No practical relief was accorded to the destitute. The overburdened towns, already suffering from the general dearth, could give no aid. So-called 'zones of cultivation,' established within the immediate area of effective military control, about the cities and fortified camps, proved illusory as a remedy for the suffering. The unfortunates, being for the most part women and children, with aged and helpless men, enfeebled by disease and hunger, could not have tilled the soil without tools, seed, or shelter for their own support and for the supply of the cities. Reconcentration, adopted avowedly as a war measure in order to cut off the resources of the insurgents, worked its predestined result. As I said in my message of last December it was not civilized warfare; it was extermination. The only peace it could beget was that of the wilderness and the grave. Meanwhile the military situation in the island had undergone a noticeable change. The extraordinary activity that characterized the second year of war when the insurgents invaded even the hitherto unharmed fields of Pinar del Rio, and carried havoc and destruction up to the walls of the city of Havana itself, had relapsed into a dogged struggle in the central and eastern provinces. The Spanish arms regained a measure of control in Pinar del Rio and parts of Havana, but under the existing condition of the rural country without immediate improvement of their productive situation. Even thus partially restricted the revolutionists held their own, and their conquest and submission put forward by Spain as the essential and sole basis of peace seemed as far distant as at the outset. In this state of affairs my Administration found itself confronted with the grave problem of its duty. My message of last December reviewed the situation and narrated the steps taken with a view of relieving its acuteness and opening the way to some form of honorable settlement. The assassination of the Prime Minister, Canovas, led to a change of Government in Spain. The former Administration, pledged to subjugation without concession, gave place to that of a more liberal party, committed long in advance to a policy of reform involving the wider principles of home rule for Cuba and Puerto Rico. The overtures of the Government made through its new envoy Gen. Woodford, and looking to an immediate and effective amelioration of the condition of the island, although not accepted, to the extent of admitted mediation in any shape, were met by assurances that home rule in an advanced phase would be forthwith offered to Cuba without waiting for the war to end, and that more humane efforts should thenceforth prevail in the conduct of hostilities. Coincidentally with these declarations the new Government of Spain continued and completed the policy already begun by its predecessor, of testifying friendly regard for this nation by releasing American citizens held under one charge or another connected with the insurrection, so that by the end of November not a single person entitled in any way to our national protection remained in a Spanish prison.

"While these negotiations were progressing the increasing destitution of the unfortunate *reconcentrados* and the alarming mortality among them claimed earnest attention. The success which had attended the limited measure of relief extended to the suffering American citizens among them by the judicious expenditure through the consular agencies

of the money appropriated expressly for their succor by the joint resolution approved May 4, 1897, prompted the humane extension of a similar scheme of aid to the great body of sufferers. A suggestion to this end was acquiesced in by the Spanish authorities. On Dec. 24 last I caused to be issued an appeal to the American people, inviting contributions in money or in kind for the succor of the starving sufferers in Cuba, following this on Jan. 8 by a similar public announcement of the formation of a Central Cuban Relief Committee, with headquarters in New York city, composed of three members representing the American National Red Cross and the religious and business elements of the community.

"The efforts of the committee have been untiring and have accomplished much. Arrangements for free transportation to Cuba have greatly aided the charitable work. The president of the American Red Cross and representatives of other contributory organizations have generously visited Cuba and co-operated with the consul general and the local authorities to make effective distribution of the relief collected through the efforts of the central committee. Nearly \$200,000 in money and supplies has already reached the sufferers, and more is forthcoming. The supplies are admitted duty free, and transportation to the interior has been arranged so that the relief at first necessarily confined to Havana and the larger cities is now extended through most if not all of the towns where suffering exists. Thousands of lives have already been saved. The necessity for a change in the condition of the *reconcentrados* is recognized by the Spanish Government. Within a few days past the orders of Gen. Weyler have been revoked, the *reconcentrados* are, it is said, to be permitted to return to their homes, and aided to resume the self-supporting pursuits of peace; public works have been ordered to give them employment, and a sum of \$600,000 has been appropriated for their relief.

"The war in Cuba is of such a nature that, short of subjugation or extermination, a fine military victory for either side seems impracticable. The alternative lies in the physical exhaustion of the one or the other party, or perhaps of both, a condition which in effect ended the ten years' war by the truce of San Juan. The prospect of such a protraction and conclusion of the present strife is a contingency hardly to be contemplated with equanimity by the civilized world, and least of all by the United States, affected and concerned as we are, deeply and intimately, by its very existence. Realizing this, it appeared to be my duty, in a spirit of true friendliness, no less to Spain than to the Cubans, who have so much to lose by the prolongations of the struggle, to seek to bring about an immediate termination of the war."

The President recounted the recent diplomatic efforts of the United States, and examined the untried measures mentioned in the last annual message—viz., recognition of the insurgents as belligerents, recognition of the independence of Cuba, neutral intervention to end the war by imposing a rational compromise between the contestants, or intervention in favor of one or the other party, forcible annexation being excluded as being criminal aggression according to the American code of morality. The recognition of belligerency would effect nothing toward the pacification of the island, while the recognition of the independence of the present insurgent Government would be contrary to the uniform policy and practice of the United States, which has been to avoid interfering in disputes relating to the internal government of other nations, and eventually to recognize the authority of the prevailing party without reference to Amer-

ican interests or to the merits of the controversy. In the case of Texas and in that of the revolted European dependencies, the United States went beyond the tests imposed by public law as to the recognition of independence, requiring not only that the new state should constitute a body politic having a government in substance as well as in name, possessing the elements of stability and capable of discharging international duties, but also that the danger of its being again subjugated by the parent state should have passed away. His conclusions on this question were as follow:

"From the standpoint of expediency I do not think it wise or prudent for this Government to recognize at the present time the independence of the so-called Cuban republic. Such recognition is not necessary in order to enable the United States to intervene to pacify the island. To commit this country now to the recognition of any particular Government in Cuba might subject us to embarrassing conditions of international obligation toward the organization so recognized. In case of intervention, our conduct would be subject to the approval or disapproval of such Government. We should be required to submit to its direction and assume to it the mere relation of a friendly ally. When it shall appear hereafter that there is within the island a Government capable of performing the duties and discharging the functions of a separate nation, and having, as a matter of fact, the proper forms and attributes of nationality, such Government can be promptly and readily recognized, and the relations and interests of the United States with such nation adjusted.

"There remains the alternative form of intervention to end the war, either as an impartial neutral by imposing a rational compromise between the contestants, or as the active ally of one party or the other. As to the first, it is not to be forgotten that during the last few months the relation of the United States has virtually been one of friendly intervention in many ways, each not of itself conclusive, but all tending to the exertion of potential influence toward an ultimate pacific result, just and honorable to all the interests concerned. The spirit of all our acts hitherto has been an earnest, unselfish desire for peace and prosperity in Cuba, untarnished by differences between the United States and Spain, and unstained by the blood of American citizens. The forcible intervention of the United States as a neutral to stop the war, according to the large dictates of humanity and following many historical precedents, where neighboring states have interfered to check hopeless sacrifices of life by internecine conflicts beyond their borders, is justifiable on rational grounds. It involves, however, hostile constraint upon both parties to the contest, as well to enforce a truce as to guide the eventual settlement. The grounds for such intervention may be briefly summarized as follows: First, in the cause of humanity to put an end to the barbarities, bloodshed, starvation, and horrible miseries now existing there, and which the parties to the conflict are either unable or unwilling to stop or mitigate. It is no answer to say this is all in another country, belonging to another nation, and is therefore none of our business. It is especially our duty, for it is right at our door. Secondly, we owe it to our citizens in Cuba to afford them that protection and indemnity for life and property which no Government there can or will afford, and, to that end, to terminate conditions which deprive them of legal protection. Thirdly, the right to intervene may be justified by the very serious injury to the commerce, trade, and business of the people, by the wanton destruction of property and the devastation of the island. Fourthly, the present condition of affairs

in Cuba is a constant menace to our peace, and entails upon this Government enormous expense. With such a conflict waged for years in an island so near, with which our people have such trade and business relations, where the lives and liberty of our citizens are in constant danger, their property destroyed, themselves ruined, where our trading vessels are liable to seizure, and are seized at our very door by the war ships of a foreign nation, the expeditions of filibustering that we are powerless altogether to prevent, and the irritating questions and entanglements thus arising—all these and others that I need not mention, with the resulting strained relations, are a constant menace to our peace, and compel us to keep on a semiwar footing with a nation with which we are at peace."

The message next refers to the destruction of the "Maine" as an impressive proof of a state of things in Cuba that was intolerable, showing a condition such that the Spanish Government could not assure safety to a vessel of the American navy in the harbor of Havana on a mission of peace, and rightfully there. The President laid the whole question before Congress for its decision as to the course of action to be pursued, concluding with these declarations and recommendations:

"Sure of the right, keeping free from all offense ourselves, actuated only by upright and patriotic consideration, moved neither by passion nor selfishness, the Government will continue its watchful care over the rights and property of American citizens, and will abate none of its efforts to bring about by peaceful agencies a peace which shall be honorable and enduring. If it shall hereafter appear to be a duty imposed by our obligations to ourselves, to civilization and humanity, to intervene with force, it shall be without fault on our part, and only because the necessity for such action will be so clear as to command the support and approval of the civilized world. The long trial has proved that the object for which Spain has waged the war can not be attained. The fire of insurrection may flame or may smother with varying season, but it has not been, and it is plain that it can not be, extinguished by present methods.

"The only hope of relief and repose from a condition which can no longer be endured is the enforced pacification of Cuba. In the name of humanity, in the name of civilization, in behalf of endangered American interests which give us the right and the duty to speak and to act, the war in Cuba must stop. In view of these facts and these considerations I ask the Congress to authorize and empower the President to take measures to secure a full and final termination of hostilities between the Government of Spain and the people of Cuba, and to secure in the island the establishment of a stable Government capable of maintaining order and observing its international obligation, insuring peace and tranquillity and the security of its citizens as well as our own, and to use the military and naval forces of the United States as may be necessary for these purposes. And in the interest of humanity, and to aid in preserving the lives of the starving people of the island, I recommend that the distribution of food and supplies be continued, and an appropriation out of the public treasury to supplement the charity of our citizens. The issue is now with the Congress. I have exhausted every effort to relieve the intolerable condition of affairs which is at our doors. Prepared to execute every obligation imposed upon me by the Constitution and the law, I await your action."

An appended paragraph conveyed the information that Gen. Blanco, in order to prepare and facilitate peace, had been directed to proclaim a suspension of hostilities. "If this measure," the

President said, "attained a successful result, then our aspirations as a Christian, peace-loving people will be realized. If it fails, it will be only another justification of our contemplated action."

Rupture of Diplomatic Relations.—While parties in the United States were at variance, and the Houses of Congress were divided, on the question of recognition of the Cuban republic, all Spanish parties were of one mind in preferring war to yielding to the pretensions of the United States to intervene in Cuba as embodied in the President's message and in both the sets of resolutions before Congress. A Cabinet crisis was averted by a declaration from the responsible parties in support of the ministry. Don Carlos issued a manifesto in which he said that the Carlist was a traitor who would rise against Spain in the face of a war with the United States, but that if the Government permitted the loss of Cuba without war the Carlists would be traitors not to respond to the voice of the King. There were riotous demonstrations of Carlists in Madrid and other towns, and an outbreak of Republicans was threatened in Catalonia in case the Government weakened. The Cabinet, however, announced its purpose to take a resolute stand in defense of Spain's inalienable rights of sovereignty and honor. The doctrines laid down in the President's message were declared to be incompatible with the sovereignty and rights of the Spanish nation, and to constitute an interference with the internal affairs of Spain. In a note to the powers the Cabinet protested against calumnious charges against Spain in the resolutions of the Senate and House of Representatives and the aggressive attitude assumed by the United States. The note contained a complaint against the United States for aiding the Cubans, and repeated the denials of Spanish cruelty. A national fund was raised by subscription for increasing the navy. The Cortes were convoked for April 20, five days before the appointed time, in order that, in a situation of extraordinary importance, the national will, which has the duty of guiding the powers intrusted with the defense of the honor and integrity of the country, should be enabled to express its wishes.

The speech from the throne, which the Queen Regent read at the opening of the Cortes, dwelt on the graver complications resulting from the turn that Cuban affairs had taken. These complications were said to have been brought about by a section of the people of the United States who, seeing that the autonomy promised was about to be applied, foresaw that a free manifestation on the part of the Cuban people through its Chambers was destined to frustrate forever the schemes against the Spanish sovereignty formed by those who, with the resources and hopes furnished from the neighboring coasts, delayed the suppression of the insurrection in that unhappy island. "Should the Government of the United States," the Queen was made to say, "yield to this blind current, the threats and insults which hitherto we have been able to regard with indifference as not being expressions of the feelings of the true American nation would become intolerable provocations which would compel my Government, in defense of the national dignity, to break off relations with the Government of the United States." In anticipation of the critical moment when "neither the sanctity of our right nor the moderation of our conduct nor the express wish of the Cuban people freely manifested" might serve to restrain passions and hatred, and when reason and justice would have for their support only the courage and traditional energy of the Spanish people, the Queen appealed to Parliament to give its supreme sanction to the unalterable decision of the Government to defend Spanish rights, whatsoever sacrifices might be en-

tailed. Premier Sagasta called on his followers to unite for the purpose of resisting odious attacks upon the integrity of the kingdom, and declared that Spain would not allow a parcel of her territory to be taken from her with impunity, nor would she be a party to any trafficking in connection with her possessions.

France and Austria endeavored to bring about one more concerted effort to avert war by the friendly joint mediation of the great powers, but desisted when Great Britain refused to take part in any such negotiations. The Spanish minister at Washington received instructions to leave his post as soon as resolutions of intervention were accepted by the President. On April 20 President McKinley signed the joint resolutions of Congress declaring that the people of Cuba are and of right ought to be free and independent; that it is the duty of the United States to demand, and that the Government of the United States does demand, that the Government of Spain at once relinquish its authority and government in the island of Cuba, and withdraw its land and naval forces from Cuba and Cuban waters; that the President of the United States be and he hereby is directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States to such extent as may be necessary to carry these resolutions into effect; and that the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island, except for the pacification thereof, and asserts its determination, when that is accomplished, to leave the government and control of the island to its people. The preamble set forth that the abhorrent conditions which have existed for more than three years in the island of Cuba, so near their own borders, have shocked the moral sense of the people of the United States, have been a disgrace to Christian civilization, culminating, as they have, in the destruction of a United States battle ship, with 266 of its officers and crew, while on a friendly visit in the harbor of Havana, and can not be longer endured.

As the Spanish Government had announced a purpose to break off diplomatic relations as soon as the resolutions of Congress were accepted by the President, Mr. McKinley did not affix his signature until he had embodied the resolutions in an ultimatum, which was cabled to the American minister at Madrid. The contents of the dispatch were officially communicated to the representative of Spain at Washington on the same day, together with notice that three days would be given to Spain within which to comply with the demands. Thereupon Minister Polo y Bernabe asked for and received his passports and departed for Canada, committing Spanish interests to the care of the French ambassador. The dispatch sent to Gen. Woodford for communication to the Spanish Government contained the text of the resolutions, with the ultimatum that unless by noon on April 23 a full and satisfactory response, whereby the ends of peace in Cuba should be assured, were received, the President would proceed without further notice to use the power and authority conferred on him to the extent necessary to carry the resolutions into effect. Before he could communicate this message of the President to the Spanish Government Gen. Woodford received a note from the Spanish Minister of Foreign Affairs declaring that the sanctioning by the President of the congressional resolution which denied the legitimate sovereignty of Spain and threatened armed intervention in Cuba was equivalent to a declaration of war, and informing him that diplomatic relations and all official communications between the representatives of the two countries

ceased by that act. The American minister accordingly applied for his passports, turned the legation over to the British embassy, and left for Paris. A mob at Valladolid stoned the train and attempted to storm it, and at Madrid everything belonging to Americans was smashed by rioters.

On April 18 the Spanish Government defended its course in a circular note in which President McKinley was accused of suddenly changing his attitude when he perceived the likelihood of the new institutions in Cuba proving successful, being determined to paralyze all efforts at reconciliation in order to realize the traditional American ambitions. The joint resolution of Congress signed by the President after the proclamation of an armistice could only be regarded as a declaration of hostilities, and hence Spain had broken off diplomatic relations the continuance of which could only have exposed her to fresh insults. The professed humane motives on the part of the United States, which has the pretension to exercise absolute hegemony over the American continents, were a mere pretext, since President McKinley had declared himself against the recognition of Cuban independence as well as against Spanish sovereignty, leaving annexation as the only alternative; and certainly the island would never be declared pacified until ripe for absorption into the United States. In a circular sent on April 23 the Spanish Government announced its determination to defend the right to remain in America, and having been compelled to appeal to force in order to repel the scandalous aggression of the United States and defend the national dignity and historical integrity of the fatherland, having on its side right, correct procedure, and prudence, while the United States was actuated by disloyalty and unbridled ambition, it awaited the attack with tranquil serenity, confident that it would have the assistance of the Cubans, who also are Spaniards.

The work on the coast defenses, not only at New York, but at Portland, Boston, Newport, Charleston, Jacksonville, and Mobile, had been carried on to such an extent, mines being placed in the harbors and guns placed in position in the forts, that their capture or shelling by the Spanish fleet was almost an impossibility. At New York no vessel was allowed to enter the harbor between sunset and sunrise, and in the daytime steamers were only permitted to pass at slow speed through a special channel. Patrol boats above and below the defenses stopped all suspicious vessels, or those that disregarded the regulations, and shipmasters were warned that if they did not observe instructions in passing through the mine fields they exposed themselves to danger from the mines, and moreover might be fired on by the batteries. Nevertheless, many steamers crossed the fields by forbidden channels, and fishermen cut torpedoes from their moorings in order to spread their nets.

The Naval Situation.—In a war between the United States and Spain it was a primary necessity for either power, before it could make use of its land forces with safety, that it should establish its naval superiority within the sphere of operations, either by meeting and defeating the enemy's naval forces at sea or by shutting them up in port. Each country possessed a modern navy, which they had begun to construct about the same time. Except the "Pelayo" battle ship in Spain, and the "Chicago" and "Atlanta" class of cruisers in America, all the effective constructions in each country belonged to the extensive programme that each had undertaken within a dozen years. The two fleets were so nearly balanced in nominal strength that naval critics could hardly pronounce between them. Both consisted mainly of cruisers, with a superiority

of battle ships on the American side, offset by the Spanish flotilla of fast torpedo boats and dreaded destroyers. Although war had been long talked about, and the relations between the two countries had been strained for many months, neither had begun serious preparations for war until the last month, when both powers exerted every effort to obtain suitable vessels with which to augment their naval strength. In the United States a board of naval officers was charged with the duty of selecting and purchasing passenger steamers, yachts, and tugs, to be used as auxiliary cruisers, lookouts, torpedo craft, or for harbor defense. Officers were also sent to Europe, who made purchases or secured refusals of any war vessels of good construction and design that were to be obtained from naval constructors or foreign governments. To get such, the American and the Spanish agents vied in bidding high prices lest they should be added to the forces of the other power. Thus the two Brazilian cruisers, "Abreu" and "Amazonas," just completed in England, a German torpedo boat which was christened the "Somers," and the Japanese second-class cruiser "Diogenes," renamed the "Topeka," were secured for the United States, also the Brazilian cruiser "Nichteroy" in Rio de Janeiro. The ocean greyhounds "New York" and "Paris," of the American Line, were armed according to the prearranged plan, and rechristened "Yale" and "Harvard." The "St. Paul" and "St. Louis" were taken from the same company to serve as armed transports. The ambulance ship "Solace" was fitted out. Four steamers of the Morgan Line were converted into the cruisers "Yankee," "Dixie," "Prairie," and "Yosemite," with 10 6-inch or 5-inch rapid-fire guns in their main batteries. The yacht "Mayflower" made an effective gunboat. All these vessels were plated with light armor. All the revenue cutters, coast-survey vessels, etc., were turned into vessels of war. Torpedo boats and destroyers under contract were hurried to completion. Colliers, transports, distilling ships and hospital ships were found among the merchant navy. Of lighthouse tenders, surveying steamers, etc., about 15 were added to the fighting ships, while over 40 merchant vessels were purchased.

Both nations with the utmost speed hurried the work on vessels they had purchased or were having repaired in foreign ports, and withdrew the warlike stores they had contracted for, lest an outbreak of war should find these acquisitions locked up in foreign territory and inaccessible under the neutrality laws. While Spain had a naval reserve of 25,000 trained men, exceeding the number in active service, the reserves in the United States consisted only of naval militia. Hence high pay was offered, \$24 a month for seamen, and \$40, \$55, and \$70 for the different grades of machinists, in order to secure experienced men for the new vessels. The cadets at Annapolis were ordered to sea to supply the lack of junior officers.

When a state of war was declared the United States had already assembled at Key West, the advanced military and naval base, the steel cruiser "New York," flagship, the battle ships "Iowa" and "Indiana," the cruisers "Cincinnati," "Detroit," "Marblehead," "Montgomery," "Nashville," "Wilmington," and "Helena," together with the monitors "Puritan," "Amphitrite," and "Terror," the torpedo flotilla consisting of the "Dupont," "Cushing," "Ericsson," "Foote," "Porter," "Rodgers," and "Winslow," the dispatch vessel "Dolphin," the gunboats "Castine," "Machias," "Vicksburg," and "Newport," the dynamite cruiser "Vesuvius," the dispatch boat "Fern," and the tugs "Leyden" and "Samoset." The "Oregon," at San Francisco, was ordered to join the fleet. Capt. William T.

Sampson was placed in command of the squadron at Key West. Here great stocks of coal, provisions, stores of all kinds, and munitions of war were accumulated. The color of all the United States ships was changed from shining white to dull slate color.

At Hampton Roads was quickly collected the flying squadron under Commodore Winfield S. Schley, consisting of the steel-armored cruiser "Brooklyn," flagship, the battle ships "Massachusetts" and "Texas," the protected cruisers "Columbia" and "Minneapolis," and the ram "Katahdin."

A third squadron was assembled in the China seas, comprising the protected cruisers "Olympia," "Baltimore," "Raleigh," and "Boston," and the gunboats "Concord," "Petrel," and "Monocacy," with three merchant steamers purchased to serve as tenders.

On the Pacific station, after the "Oregon" left, were the monitors "Monterey" and "Monadnock," the cruiser "Bennington," and the gunboats "Marietta" and "Alert." The cruiser "San Francisco" and the "New Orleans," recently built in England, were at Halifax, and were ordered at first to join the squadron at Key West. The training ship "Banerolt" and the torpedo boats "Gwynn" and "Talbot" were unassigned. The cruiser "Wheeling," the monitor "Miantonomoh," and the steamer "Pensacola" were assigned to special service. The monitors "Catskill," "Montauk," "Passaic," "Jason," "Lehigh," "Nahant," "Canonicus," "Mahopae," "Manhattan," and "Nantucket," with the training ships "Constellation," "Alliance," "Adams," and "Mohican," the "Yankee," "Dixie," "Prairie," "Yosemite," "St. Paul," "St. Louis," "Panther," "Badger," and "Resolute," of the auxiliary fleet, were held in reserve to defend the northern ports.

The number of vessels added to the navy by purchase was 103, besides which the 4 vessels of the International Navigation Company were chartered, and another vessel was leased. In addition to these, the revenue cutters and lighthouse tenders were added to the auxiliary fleet. The total effective force of the navy was 4 first-class battle ships, 1 of the second class, 2 armored cruisers, 6 coast-defense monitors, 1 armored ram, 12 protected cruisers, 18 gunboats, 1 dynamite cruiser, and 11 torpedo boats. The auxiliary navy comprised 11 auxiliary cruisers, 28 converted yachts, 19 converted colliers, 15 revenue cutters, 4 lighthouse tenders, and 19 miscellaneous vessels. The enlisted force of the navy was increased until it reached, on Aug. 15, the maximum number of 24,123 men and apprentices. The auxiliary navy was manned by the naval militia of the several States.

The coast batteries, after receiving their armaments, were garrisoned by about 12,000 infantry and light artillerymen drawn from the volunteer forces and by State militia. The coast signal service was organized on land better than on the sea, having the co-operation of the lighthouse and life-saving services, enabling the Navy Department to keep all parts of the Atlantic coast from Maine to Texas under observation. Submarine mines were laid under the direction of the chief of engineers to the number of 1,535 in all the principal harbors of both coasts.

Spain had still in Cuban waters only the "Alfonso XII" and some minor second-class cruisers, besides numerous gunboats. The whole force numbered fifty-three vessels, though few were capable of fighting outside of the harbors. The "Vizeaya" and "Almirante Oquendo" had departed from Puerto Rico on April 9 for the Cape Verd Islands, where the torpedo flotilla and the first Spanish squadron were ordered to rendezvous. The Spanish liners were requisitioned and fitted out as auxil-

iary cruisers. The ships "Normannia" and "Columbia," purchased from the Hamburg-American line and armed by Krupp, were a valuable addition to the Spanish fighting force. They were renamed the "Rapido" and "Patria."

When the effective vessels of the Spanish navy that were ready for use were assembled in the Portuguese port of St. Vincent, Cape Verd, the fleet, which was commanded by Admiral Cervera, consisted of the belted cruisers "Vizeaya," "Almirante Oquendo," "Infanta Maria Teresa," and "Cristobal Colon," the destroyers "Furor," "Terror," and "Pluton," and three torpedo boats.

A second squadron was being fitted out at Cadiz, containing some of the strongest of the Spanish vessels, on which, however, much required to be done to make them ready for sea. It comprised the "Pelayo," "Carlos V.," "Alfonso XIII," and another torpedo flotilla, including the destroyers "Aridaz," "Prosperina," and "Destructor." The "Reina Regente," which was being armed at Ferrol, and the "Leon XIII" afterward joined the squadron, which contained also the "Rapido" and "Patria," the dispatch boat "Giralda," and the auxiliary cruisers "Joaquin de Pielago," "Alfonso XII," "Antonio Lopez," "Ciudad de Cadiz," and "Buenos Ayres." Admiral Caméra was placed in command of this reserve squadron. The torpedo gunboat "Temerario" was at Buenos Ayres, and it was expected that she would endeavor to surprise the battle ship "Oregon" somewhere off the eastern coast of South America.

On the principal vessels of Admiral Caméra's fleet some parts of the machinery or armament were still lacking or out of repair. There were other vessels of formidable character that were still less advanced, but which were being pushed to completion as rapidly as possible for the purpose of forming a third squadron, which should include the reconstructed battle ship "Victoria," the belted cruiser "Cardenal Cisneros," the "Princesa de Asturias," the "Lepanto," the "Numancia," and the torpedo gunboats "Dona Maria de Molina," the "Marques de la Victoria," and "Don Alvaro de Bazan." The "Buenos Ayres," "Antonio Lopez," "Joaquin de Pielago," and "Ciudad de Cadiz," auxiliary cruisers from the fleet of the Compañia Transatlantica, were armed with guns of 16, 12, and 9 centimetres' caliber, besides Maxims.

The Autonomist Government.—The elections for the Autonomous Congress were held under the auspices of the Spanish military officials. A few Cubans who had been identified with the revolutionary cause joined the Autonomists when war became inevitable. *Parlementaires* who were sent to try to induce the insurgents to accept the armistice were not received by the Cuban leaders. The armistice had not been observed by the Spanish commanders, who carried on all their operations at least as vigorously as before. On April 21 the Autonomist Colonial Government issued a proclamation to the inhabitants of Cuba, calling upon all to unite in defense of the integrity of Spain and the autonomy of Cuba against the ambition of the Americans, who wished to possess themselves of the island, with the result that it would be dominated by a strange race, opposed in temperament, traditions, language, religion, and customs, which would be silently eliminated by those who seek to gain by subjugation and absorption.

The Autonomist Council was opened by Capt.-Gen. Blanco on May 4. Fernandez del Casco was made president. A notification was made to all foreign governments that Cuba was pacified and accepted autonomy by a large majority of the people. Capt.-Gen. Blanco, in his opening address, said that Spain had given all that she could be

called upon to give to satisfy the aspirations of the people; that the autonomist form of government was as ample as that of the British colonies, and would be made more ample still if such a course were judged to be necessary by the Autonomist Congress. All the new laws were to go into force on July 1.

Attempts to Relieve the Cubans.—Soon after a state of war was declared Lieut.-Col. Joseph H. Dorst was ordered to investigate the strength of the rebellion in western Cuba, while Lieut. A. S. Rowan was sent to confer with leaders in the east, and Lieut. Henry Whitney was detailed to visit Gen. Gomez in central Cuba. Col. Dorst, after visiting the coast of Pinar del Rio in the "Leyden," and conferring with the Cubans near Banes, took charge of a cargo of rifles and ammunition for Perico Delgado's force, which were conveyed on the steamer "Gussie," whose departure and destination, with the details of the intended landing, were published in the American newspapers despite the admonitions given to reporters by the naval authorities. The result was that when the "Gussie" attempted a landing east of Mariel, and afterward at Banes, instead of the insurgents, who were expected to receive the supplies, large bodies of Spanish troops were found patrolling the shore. After this a censorship of press dispatches was instituted which was strictly administered during the whole war. Gen. Greely, chief of the Signal Service, first issued orders directing the suppression of all messages "inimical to the United States," which were afterward modified so as to cover press messages containing information of prospective naval movements or current military operations.

Lieut. Rowan, landing on April 26, traversed the province of Santiago de Cuba, which had been evacuated by the Spaniards, except three towns and the blockhouses defending the railroad. Gen. Pando, the military commandant of the province, had sent a third of his force of 18,000 men to Havana. He withdrew on April 25 to Manzanillo from Bayamo, which was immediately occupied by Gen. Calixto Garcia, who issued a proclamation declaring that the property and civil rights of the Spaniards would be respected. Lieut. Rowan brought back the information that the Cuban general could furnish a contingent of at least 8,000 well-armed men to co-operate with an army of invasion, and that as guides the Cubans would prove invaluable, as they had a rapid method of transmitting information from all parts of the island.

The Cuban forces increased at a rapid rate after the declaration of war, all the Captain General's efforts to induce the Cubans to accept any form of autonomy that they themselves might dictate and join the Spaniards in fighting the Americans having proved useless. His orders forbidding the sale of food, and confiscating for the use of the soldiers the supplies contributed by Americans for the succor of the *reconcentrados*, caused an enormous increase of mortality among the latter. Those who could travel left the towns in droves to join the insurgents, who were unable to relieve their necessities, and turned away all except a few who were able-bodied and had friends in their ranks. The Spanish troops in central Cuba were withdrawn from Sancti Spiritus and other towns, which were destroyed, and were concentrated on the Jucaro-Moron trocha to prevent a junction of Gen. Garcia and Gen. Gomez. The Cuban general-in-chief deprecated the invasion of Cuba by an American army, believing that with arms and supplies furnished by the United States, and aided only by a force of American artillery, the Cubans could compel the Spanish garrison to evacuate the island. Gomez feared perhaps a prolonged American oc-

cupation and dictation in the political reconstruction of Cuba. He had under arms and within call a force not exceeding 3,500 men, including 800 infantry commanded by Gen. Gonzalez, armed with Mausers and Remingtons, and 150 cavalry and 700 infantry led by the American Joseph Desrampes, an expert artilleryman, which formed his immediate command. He asked for 40,000 rifles and several million cartridges to arm the entire Cuban army, and a small supply of provisions landed at several points, promising that if the American fleet maintained an effective blockade he would free Cuba without spilling a drop of American blood or losing a man from sickness.

The Spaniards from their reduced area of occupation began in the beginning of May to prosecute more actively their operations against Gen. Gomez. Lieut. Whitney was landed on the coast, met a Cuban escort, and, after a brush with the Spanish patrol, reached the camp of Maximo Gomez in Santa Clara on April 28. He arranged for the landing of supplies and of Cuban volunteers that had been enlisted in the United States.

A body of 750 Cubans was recruited under the auspices of the Cuban junta and placed under the command of Gen. Laeret, recently commander of insurgents in Matanzas, after being armed and equipped by the United States Government and trained by regular army officers. Gen. Gomez called together his scattered bands until he had concentrated 3,000 men. With these he waited two weeks on the coast for the expedition, until his men were obliged to kill their horses for food. Finally, giving up hope of receiving the promised munitions and supplies, he ordered the men to disperse. The "Gussie" and "Suwanee" attempted to land the expedition, but were unable to effect a landing on the north coast. The "Gussie" returned to Tampa, while the "Suwanee" went round to the south coast in search of an unguarded landing place on that side of Santa Clara province, but Rear-Admiral Sampson stopped her at Santiago and had the supplies handed over to the Cubans under Gen. Cabreco. The Vice-President of the provisional Cuban republic, Domingo Mendez Capote, went to the United States before the end of May to inform the Government authorities at Washington of the needs and resources of the insurgent forces, which he acknowledged were in sore straits and greatly reduced in numbers. Yet he declared that they would not permit American interference or control in Cuba, however beneficent that control might be. Capt. Dorst left Tampa on May 16 with 450 Cubans under Gen. Laeret, a large number of mules, and quantities of ammunition and rifles and of clothing for the troops of Gen. Garcia. Gen. Baldomero Acosta and other Cubans who had joined the insurgents in Pinar del Rio from the "Leyden," after a skirmish with Spanish cavalry, explained to Delgado the plans for the landing of supplies and arms.

The "Gussie" reached the entrance of Mariel Bay on May 12, and under cover of the guns of the "Manning" and "Wasp" landed near Cabañas a party of United States regulars under the command of Lieut. Crofton, who were opposed by a force of Spanish infantry. The Spaniards were put to flight by the firing of the landing party from the bush and the shells of the gunboats, losing twelve or more men in the retreat, but they had effectually intercepted the Cubans and prevented the delivery of the arms and ammunition intended for them, so that the troops were obliged to re-embark without accomplishing their purpose of landing a cargo of nearly 7,000 rifles, 200,000 cartridges, canned food, and clothing. These were the munitions and supplies that the "Gussie" had failed to land in Cuba.

The "Florida" was convoyed by the "Osceola." By agreement 1,500 Cubans under Col. Feria and Col. Rojas met the expedition on the coast of Santiago province, and the men and munitions were landed without being observed by the Spanish forces.

Spanish Spy System.—Minister Polo y Bernabe stayed in Canada with his suite until May 21, and after his departure Secretary of Legation du Bosc remained in Quebec, and Lieut. Ramon Carranza, the naval *attaché*, in Montreal. These two conducted an elaborate system of secret intelligence by means of a corps of spies distributed throughout the United States, which was in a measure frustrated by the vigilance of the American authorities who captured in May one of the principal Spanish agents in Washington, another in Tampa, and others of less importance in various places. The spy service had been set on foot long before the rupture of diplomatic relations, when the naval *attaché* was Lieut. Sobral, who boasted that he had complete plans of all the American coast fortifications. An intercepted letter of Carranza revealed to the Canadian Government the nature of his activity, in consequence of which he was expelled from the country early in June.

The United States Volunteer Army.—On April 23 the President issued a proclamation in accordance with the act of Congress approved the day before for volunteers to the aggregate number of 125,000, to be apportioned as far as practicable among the several States and Territories according to population, and to serve for two years unless sooner discharged, in order to carry out the joint resolution of Congress for the recognition of the independence of the people of Cuba, directing the President to use the land and naval forces of the United States to carry into effect the resolution demanding that the Government of Spain relinquish its authority and government in Cuba and withdraw its forces. The bill provided for the expansion of the volunteer force to any number required to meet future war emergencies, the maximum being changed from time to time in accordance with presidential recommendations to Congress. The essential feature of the plan was the individual enlistment of every volunteer. It was desired to utilize the military training and *esprit du corps* of the National Guards of the several States, who were expected to form the whole force first called for, and therefore the bill provided for acceptance of the existing organizations, but each of these was required to become a part of the United States army independent of the State authorities, every man being sworn into the United States service as an individual, and every officer receiving his commission from the President, to whom was reserved the authority to make selections for every rank. The volunteer forces were kept separate and distinct from the regular army, to be commanded at all times by volunteer officers, the officers of the regular army being confined to commands of the regular troops.

The regular and volunteer army was organized in 7 corps and a cavalry division. A Department of the Pacific was created, and Major-Gen. Wesley Merritt was assigned to the command, with the duty of organizing the expeditionary force for the Philippines and directing the military occupation of those islands, with Major-Gen. Elwell S. Otis second in command; Major-Gen. John R. Brooke was assigned to the command of the First Corps in the Department of the Gulf; Major-Gen. William M. Graham to the command of the Second Corps, with headquarters at Falls Church, Va.; Major-Gen. James F. Wade to the command of the Third Corps, to report to Gen. Brooke at Chickamauga; Major-

Gen. John J. Coppinger to the command of the Fourth Corps at Mobile; Major-Gen. William R. Shafter to the command of the Fifth Corps at Tampa; Major-Gen. James H. Wilson to the command of the Sixth Corps, with orders to report to Gen. Brooke; Major-Gen. Fitzhugh Lee to the command of the Seventh Corps, which was ordered to Tampa; and Major-Gen. Joseph Wheeler to the command of the volunteer cavalry division at Tampa. The President appointed 11 major-generals, all but 4 promoted from the regular army, and 26 brigadiers, also regulars, to command the volunteer army. Many young men of wealth and education and students of the universities and colleges volunteered to serve in the ranks. In the First Volunteer Cavalry Regiment, raised by Theodore Roosevelt, who resigned for the purpose the office of Assistant Secretary of the Navy and a membership on the Board of Strategy, taking a commission as lieutenant colonel, while Col. Leonard Wood, a former army officer, took command of the regiment, polo players of the Eastern clubs, New York mounted policemen, and ranchmen from the Western plains took their places side by side. This regiment was popularly known as Roosevelt's Rough Riders. Another regiment of rough riders was raised among the cowboys and plainmen by Col. Terry, of Arizona. The war gave an opportunity to wealthy citizens to show their patriotism and to the South to show its loyalty to the Union. Miss Helen M. Gould offered to fit out a cavalry regiment for the Cuban army, after first offering the money to the Government, which was not empowered to accept donations. O. H. P. Belmont, of New York, offered his yacht, and John Jacob Astor, who was appointed later a staff officer, armed a battery of artillery.

Immediate responses from the Governors of nearly all the States and Territories offered volunteers much in excess of the number called for by the President. Massachusetts, New York, and other States had appropriated large sums of money and begun to muster their National Guard regiments and furnish them with service uniforms, arms, and necessities for a tropical campaign.

By another act of Congress the strength of the regular army was increased to 62,000 men. At the beginning of May a force of about 7,000 men was concentrated at Tampa. An immediate expedition to Cuba was planned, but after the sailing of the Spanish ships from Cape Verd the orders were countermanded. It was intended to form a junction with whatever forces Gomez could raise, and to supply these with arms and ammunition, and relieve the starving Cubans outside of Havana from a base to be established on the coast of Cuba.

The strength of the regiments mustered in was 1,000 men. National Guard regiments of this strength were accepted and maintained as organizations, and, if they were not of full strength, they were allowed to recruit their complement. Volunteers to the number of 1,000 from a single State must be collected into a single regiment, and its strength be kept up as far as possible by volunteers from that State. If a State's quota did not reach 1,000 men, the regiment was filled up with volunteers from adjoining States.

Late in May the President called for 75,000 more volunteers, making the total strength of the army to be organized, regular and volunteer, more than 280,000 men. Instead of relying, as before, on the National Guards, the Government now resorted to open enlistment. When the Spanish fleet appeared in the Caribbean Sea the army that was getting ready to invade Cuba, numbering then 45,000 men, was ordered to concentrate at Chickamauga instead of proceeding to Tampa, Mobile, and New Orleans for immediate embarkation. For the troops to be

next mustered in a camp was prepared at Washington.

The Blockade of Cuba.—The dismissal of Minister Woodford was considered equivalent to a declaration of war, and a state of war was assumed to exist from April 21. To regularize the situation, Congress passed on April 25, and the President signed, a declaration to that effect, empowering the President to use the land and naval forces of the United States and to call into service the militia of the several States. A notification of the act was telegraphed to all of the United States legations, to be communicated to foreign governments, so that their neutrality might be assured. The squadron at Key West received orders to blockade the Cuban coast at once. War preparations had been pushed with redoubled energy in both countries during the diplomatic crisis, when in all quarters except the Vatican hopes of a peaceful issue had vanished. The Spanish Minister of War issued orders for 80,000 reserves, and in Cuba Gen. Blanco called all men to arms. Three vessels loaded with troops sailed from Cadiz on April 21. Capt. William T. Sampson, who had been placed in command of the North Atlantic squadron, was made acting rear admiral. Armed yachts and merchant steamers were being made ready to re-enforce the blockading squadron. Meanwhile Admiral Sampson confined his efforts to sealing up the larger ports. The President proclaimed the blockade on April 22, announcing that a sufficient force would be posted to prevent the entrance or exit of vessels from all ports on the north coast between Cardenas and Bahia Honda and the port of Cienfuegos, on the south coast. Any neutral vessel approaching or attempting to leave a blockaded port without notice or knowledge of the blockade would be warned by the commander of the blockading force, and if she again attempted to enter any of the ports she would be captured. Neutral vessels in the ports were allowed thirty days to issue therefrom. Admiral Sampson kept a particularly strong force in front of Havana and Matanzas. He disposed his forces in such a manner as to have near the entrance of the blockaded ports a line of torpedo boats and other small craft, with a line of cruisers outside of these, and the battle ships in a third line beyond the probable radius of action of the enemy's torpedo craft.

The United States Government announced in the beginning that its policy would be not to resort to privateering, but to adhere to the rules of the declaration of Paris and conduct the war upon principles in harmony with the present views of nations and sanctioned by recent practice. A decree was issued by the Spanish Government on April 25 proclaiming a state of war and defining the rules of war that Spain meant to observe. In regard to privateering, it was considered indispensable to make absolute reserve in order to maintain Spain's liberty of action and uncontested right to issue letters of marque when deemed expedient, but the Spanish Government would at first confine itself to organizing immediately a force of auxiliary cruisers taken from the mercantile marine to co-operate with the navy under naval control and to exercise the right of search. The regulation that neutral flags cover the enemy's merchandise except contraband of war, and the one exempting from seizure neutral merchandise under the enemy's flag, were accepted. American vessels in Spanish ports were warned to leave within thirty days. Foreign vessels not American, if committing acts of war under letters of marque issued by the United States, would be treated as pirates. A blockade to be obligatory must be effective, and this was defined as meaning that it must be maintained with

sufficient force to prevent access to the enemy's littoral.

In the President's proclamation of April 26 declaring that war had existed since April 21, including that day, he declared respecting the right of search and the rights of Spanish vessels that the neutral flag covers enemy's goods, with the exception of contraband of war; that neutral goods not contraband of war are not liable to confiscation under the enemy's flag; that blockades in order to be binding must be effective; that Spanish vessels in American ports would have till May 21 to load and depart, and would not be molested on their voyage unless they carried officers in the enemy's service or coal or other prohibited article; that any Spanish merchant vessel bound to American ports would be permitted to enter, discharge her cargo, depart forthwith, and continue her voyage to any port not blockaded; and that the right of search must be exercised with strict regard for the rights of neutrals, and the voyages of mail steamers not be interfered with except on the clearest ground of suspicion of a violation of law in respect of contraband or blockade.

A general order issued by the Navy Department subsequently defined the rule laid down at Paris in 1856, that blockades to be binding must be effective, as meaning that the blockading force must be sufficient to render ingress and egress from a port dangerous; if the blockading vessels leave voluntarily or are driven away by the enemy's force the blockade is broken, but not if they are driven away by stress of weather or are absent in a chase. Articles adapted or designed only for hostile use by the enemy, including arms and equipments of all kinds, machinery for manufacture of arms, all ammunition and explosives, including saltpeter, armor plate, gun carriages, pontoons, range finders, and other warlike appliances and materials, and horses were declared to be absolutely contraband, while coal when destined for a naval station, a port of call, or a ship or ships of the enemy, materials for the construction of railroads or telegraphs, money destined for the enemy's forces, and provisions destined for an enemy's ship or ships, or for a place that is besieged, were conditionally contraband.

Neither Spain nor the United States was a signatory to the declaration of Paris, by which the rest of the chief maritime powers agreed not to issue letters of marque or countenance privateering in war. The British Government notified Spain that it intended to treat coal as contraband of war and would forbid its sale to both parties, and it also asked Spain what her intentions were as to the right of searching neutral vessels. The "Somers," which had put into the English port of Falmouth to take on a crew, received notice to leave when a state of war was declared before the complement of men were enlisted, and was consequently there till the end of the war. The cruiser "Albany," formerly the Brazilian ship "Admiral Abreu," was tied up in the same manner at Newcastle. The State Department received notifications from nearly all foreign governments that they would observe strict neutrality in the war between the United States and Spain. Germany sent no such notice, deeming it unnecessary.

The Blockade.—The blockading vessels formed in line before Havana in the evening of April 22. Admiral Sampson confined the blockade to the ports connected with Havana by railroad. Gen. Blanco took measures to prepare Havana for either a siege or an attack. He issued a decree declaring the island again in a state of war, annulling all previous decrees, but granting pardon to rebels who surrendered within a month. The colonial Cabinet published a manifesto protesting against the in-

iquitous attack and unjust aggression of the United States, and calling upon all Cubans, for the sake of nationality and justice, and in defense of the future of their children, to answer Gen. Blanco's call to arms. New recruits raised the force defending Havana to 100,000 men, including 60,000 volunteers.

The blockading line extended from Mariel, 60 miles west of Havana, to Cardenas, an equal distance east of the blockaded city. The "Puritan," "Cincinnati," "Machias," "Nashville," "Castine," "Newport," "Foote," "Winslow," and "Dupont" were detached to blockade Matanzas, Mariel, and Cardenas. While the boats were scouting off Matanzas the first night they were fired on by the shore batteries without sustaining any damage. The "Foote" was fired on a second time from a masked battery when she was steaming by. The officers and crews of the blockading squadron were very eager to give the Spaniards a lesson, as well as to test in actual warfare the efficiency of the guns and ships and the value of their target practice in time of peace, and the more thorough practice that they had lately received at Dry Tortugas. This the orders for a pacific blockade prevented them from doing until permission came to Admiral Sampson to retaliate on the forts at Matanzas or other points except Havana, and one or two other places, if they fired on his ships. The first shots from the fleet were fired by the "New York" upon a battalion of Spanish infantry which was trying to hit the sailors from the shore, until a 4-inch shell smashed the building in which they hid. On April 27 Admiral Sampson ordered a reconnoissance in force at Matanzas for the purpose of locating the batteries and discovering what guns they mounted and preventing the completion of a new earthwork. The "New York," "Puritan," and "Cincinnati" ran into the bay and opened fire upon this new battery. When the third shot from the 8-inch guns struck the rampart a Spanish fort returned the fire, doing no damage, nor did the American firing cause any casualties, according to the Spanish report, except the death of a mule, though a 12-inch shell from the "Puritan" struck one of the batteries and other shots were sent direct to the mark, whereas the Spanish firing was wild. The three ships fired 86 shots at ranges of 4,000 to 11,000 yards. Although it was nothing more than a reconnoissance and practice drill, this first collision of the war was vaunted as a victory by both sides. The Spaniards fired only a dozen shots, and the American fire at such long range could do no harm to earthworks. During the bombardment the rebel force under Betancourt approached with the object of attacking the city, but was driven off by the Spaniards with a loss of 20 men.

The torpedo boat "Foote" ran into the bay at Cardenas, exchanged shots with Spanish gunboats anchored there, and quickly ran out again without hitting anything or being hit. She also ran into Matanzas harbor and escaped unharmed after locating the batteries, which fired six shots. On May 2 the "Wilmington" sent two shells into the midst of a troop of cavalry that fired on the torpedo boat "Ericsson," which was patrolling a mile from the shore at Cojimar, west of Havana.

Prizes.—The Spanish freight steamer "Buena-ventura" was captured by the "Nashville" when the blockading vessels first put out to sea on April 22. Afterward the steamer "Pedro" was taken by the "New York," the schooner "Mathilde" by the "Porter," the schooners "Saco" and "Tres Hermanes" by the "Terror," the steamer "Miguel Jover" by the "Helena," the schooners "Canelita" and "Sofia" by the "Wilmington" and "Porter," and the steamers "Saturnina" and "Catalina" by

the "Winona" and "Detroit." On April 25 the United States vessel "Mangrove," which had been fitted up as a cable ship, seized off Havana the mail steamer "Pauama," a Spanish auxiliary cruiser, and the gunboat "Newport" took two prizes, the sloop "Paquete" and the schooner "Pireneo." On April 26 the "Terror" captured the "Ambrosio Bolivar." The "Terror" overhauled the Spanish steamship "Guido" off Cardenas on April 27. The sloop "Engraeias" was taken by the "Newport" and the schooner "Lola" by the "Dolphin" on April 28; on April 29 the steamer "Argonauta" by the "Nashville," and on May 1 the schooner "Mas-cota" by the "Foote." Subsequent captures were the schooner "Paco" on May 3, the steamer "Lafayette" and schooners "Oriente" and "Antonio Suarez" on May 5, the brigantine "Frasquito" and bark "Lorenzo" on May 6, the schooners "Es-pano" and "Poder de Dios" on May 7, the steamer "Rita" on May 8, and the fishing smacks "Santiago Apostel" and "Fernandito" and schooner "Severo-rifo" on May 9. After that prizes were rarely taken, for all Spanish fishermen and masters of coasting vessels were now aware of hostilities. Only fast British or Norwegian steamers ventured to run the blockade, and these were usually cautious enough to escape capture. The barks "Carlos F. Rosses" and "Maria Dolores" were taken on May 18 and 21. On May 22 the steamship "Ardan-mohr" and on May 29 the "Restormel" were seized, both of which were afterward released, as had been previously the steamships "Miguel Jover" and "Saturnina" and the French mail steamship "Lafayette," which had obtained a promise from the American consular authorities that it would be permitted to land passengers in Havana, but no cargo. The steamship "Twickenham" was captured when attempting to run the blockade on June 10. Despite the close blockade of Havana and the north coast ports, a brisk trade in cattle, provisions, and other supplies for the city and garrison was carried on with the coast of Yucatan, from which vessels made a quick passage to the Isle of Pines, whence the supplies could be landed in boats on the south coast of Cuba and transported by rail to Havana. All the Spanish vessels were condemned by the prize court sitting at Key West, with the exception of the steamers "Catalina" and "Miguel Jover," which were exempt from capture under the terms of the President's proclamation. The blockade was extended from the coast on either side of Havana from Cardenas to Bahia Honda, first to Cienfuegos, and gradually to the whole coast of Cuba, covering more than 1,200 miles. After the heavier vessels were concentrated at Santiago blockade running was resumed on the south coast west of Santa Cruz, especially at Batabano, but an active patrol by many of the smaller ships along the whole length of about 500 miles soon rendered this extremely hazardous. After the transatlantic steamer "Santo Domingo" was driven ashore and burned by the "Eagle" few more attempts were made.

War in the Philippines.—Great Britain was the first to issue a proclamation of neutrality, in accordance with which Commodore George Dewey was notified to leave the port of Hong-Kong with the Asiatic squadron, which he had concentrated there in the latter part of February in anticipation of hostilities. He protested against the decree, but when immediately afterward the President proclaimed that a state of war existed he took his departure, on April 25, for Mir's Bay, a neighboring Chinese harbor, whence he was warned a day or two later by the Chinese Government, after a formal proclamation of neutrality. In the meantime the fleet had received orders to proceed against the Spaniards at Manila, and had been busily getting

together coal and provisions for the expedition. Commodore Dewey entered into communication with the revolutionary Filipinos, and arranged with their exiled leader, Aguinaldo, then in Hong-Kong, for provisional co-operation with them.

The Filipinos, oppressed by the financial burdens imposed on them for the support of Spanish Government authorities and clergy, and by the extortion and tyranny of the officials sent to rule over them, were unanimous in their desire to throw off the yoke of Spain. Out of an annual budget amounting to \$17,000,000, only \$60,000 was applied to education and science, \$40,000 to railroads, a trifling sum to river and harbor improvements, and nothing at all to highways and bridges, while the colony was burdened with the support of African establishments and the Spanish consular service in the eastern hemisphere, paid a heavy contribution to the expenses of the General Government in Madrid, defrayed a great part of the cost of the Colonial Office, paid \$1,600,000 a year in pensions to Spaniards who had served in the Philippines, and was taxed \$1,400,000 for the support of the church, in addition to the fees obtained by the clergy for marriages, indulgences, etc., amounting to a much greater sum.

When Capt.-Gen. Primo de Rivera made peace with the insurgents at the end of 1897, the latter, while still in possession of the mountain districts, agreed, on the advice of their leaders, to lay down their arms on these conditions: The expulsion or secularization of the religious orders and the abolition of their vetoes in civil affairs; a general amnesty for all rebels, with guarantees for their security from the vengeance of friars and parish priests; the reform of glaring abuses in the civil administration; freedom of the press to denounce official corruption and blackmailing; representation of the colony in the Spanish Cortes; and abolition of the system of secret deportation of political suspects. When the insurgent army was disarmed and disbanded and the leaders were out of the country the Governor General refused to execute any of the conditions, and the insurgents were exasperated to the point of renewing the rebellion at the first opportunity by the retaliatory proceedings of the friars and officials.

Hence Emilio Aguinaldo y Fami, their most prominent leader, declaring that Spain's violation of her agreement absolved him from his promise, decided to revive the insurrection, and placed himself in communication with the American consul general at Singapore, and with Commodore Dewey at Hong-Kong, after war broke out between the United States and Spain. He explained the nature of the co-operation that he could give, promised to maintain order among the Filipinos and to conduct military operations according to civilized methods, declared his ability to establish a responsible government in the Philippines on liberal principles, and declared that he was willing to accept for Luzon the same terms that the United States intended to give to Cuba. His aim was to found a republic in the Philippines, of which he expected to be president.

The American squadron departed for the Philippines on April 27, the day on which the Spanish gunboat "El Cano" made a prize of the American bark "Saranac," laden with coal from Newcastle, off Iloilo. Gov.-Gen. Basilio Augustin issued a proclamation in which he told the Philippine natives that the Americans had killed off the natives of their own country and taken possession of their lands, instead of preserving and civilizing them as Spain had civilized the Philippine natives, and that if the islanders now fell under the dominion of the Americans the fate of the American Indians was in

store for them. In another proclamation he warned the people that the North Americans were social excrescences from other nations, possessing neither cohesion nor history, and were sending a squadron manned by foreigners without instruction or discipline, with the ruffianly object of treating Filipinos as tribes refractory to civilization, taking possession of their property, kidnaping them to man American ships or to be exploited in agricultural and industrial labor, and substituting Protestantism for the Catholic religion. Martial law was proclaimed, summary death threatened to any one proposing submission, and every able-bodied man called to arms.

Although the Philippine rebellion was officially terminated in the previous year, when the leaders, after their military fortunes had begun to wane, agreed to disarm and disband their followers, and to leave the country for a bribe of \$700,000, as to the division of which they afterward fell to quarrelling in Hong-Kong, still the insurgents had continued to make disturbances in a desultory way after their leaders left, and now they were ready to break out again in a general rising when war between the United States and Spain was threatened promising to give independence to Cuba. About the beginning of March, 1898, the rebellion started up afresh. The most serious rising was in the provinces of Zambales and Pangasinan. The natives considered that they had been deceived by Gen. Primo de Rivera, who had carried out none of the reforms promised in the peace treaty. Telegraph communication with Manila having been severed at Bolinao, the rebels annihilated the scattered Spanish detachments in Zambales. Troops that were sent overland were unable to break through the rebel intrenchments, and re-enforcements were dispatched, until 8,000 men, with artillery and four war vessels were on the scene of action, leaving Manila exposed to a rising which the former chiefs, who began to return from Hong-Kong, were ready to set in motion. Bands of insurgents appeared in Bulacan, Nueva Ecceja, Pangasinan, and Tarlac, committing depredations and murders without the restraints which their old leaders had exercised over them. Risings took place also in the island of Panay, which the Spaniards recaptured after killing several hundred rebels, and in Zebu, where the Governor and the other officials were massacred. The regular Spanish troops in the Philippines numbered about 25,000 men. Gen. Primo de Rivera was recalled and replaced by Gen. Augustin after the rebels had attacked the military stations at Subig, Apalit, and Bautista, and captured a great many Mauser rifles with ammunition, to take the place of the long knives with which they fought the Spanish troops in the mountains of Zambales. Emilio Aguinaldo sent more arms from abroad.

Such was the situation when Commodore Dewey sailed to attack the Spaniards in Manila. While the American fleets in the Atlantic were believed to be strong enough to hold the sea against the Spaniards, there was danger that the numerous small war vessels that Spain had in the Philippine Islands, where the rebellion had been going on for two years, would be able to paralyze American commerce in Asiatic waters and the Pacific. Hence Commodore Dewey was ordered to go to Manila and capture or destroy the Spanish fleet. Sailing from Mirs Bay, and running only eight knots an hour in order to economize coal, Dewey's squadron arrived on April 30 in front of Subig Bay, which was explored in search of the enemy's ships. Not finding them there, Commodore Dewey, taking council with his officers, determined to steam boldly into Manila Bay. The fleet entered the bay at night with all lights out, regardless of the batteries on Corregidor Island,

which fired two ineffective shots, and of the mines known to have been placed in the harbor. The second shot was answered by a shell from the "Concord," aimed from the flash, which exploded among the Spanish gunners. Two sunken torpedoes were exploded ahead of the flagship when the fleet advanced on May 1 at early dawn against the Spanish vessels sighted at the other end of the bay, where the Spanish admiral hastily formed in battle line under the protection of the guns of the Cavité fort. The Spanish commander, Rear-Admiral Patricio Montojo y Pasaron, had abandoned his anchorage in Subig Bay, and taken up this defensive position, so that the fire of his ships could be supplemented by the shore batteries. The American ships, piloted by Lieut. Calkins, entered the harbor before they were expected, and passed the batteries and torpedo defenses of the entrance with such ease, and navigated the bay with such knowledge of the channels and shallows, that Admiral Montojo was taken by surprise. The Spanish ships had not enough steam up to manœuvre properly. Three of them had broken machinery. As the American fleet advanced to the attack in line ahead, the Manila batteries opened fire with guns powerful enough to send shells over the vessels at a distance of five miles. The "Concord" replied with two shots. No more were fired, for fear of burning the city. When the column neared Cavité, the guns of the fortress and of the Spanish ships first opened fire. The Spaniards were drawn up in line of battle before Cavité, five cruisers and an armed transport backed and flanked by the forts during the entire engagement, while two torpedo boats remained inside of the mole until they stole out to attack the American flagship, and four gunboats fired from behind the same protection. Some of the American vessels engaged the fleet, while others directed their fire against the batteries. Commodore Dewey constantly manœuvred his fleet to keep an advantageous position in the strong currents of the bay and to avoid giving the Spaniards a steady mark. The fleet consisted of the second-class cruisers "Olympia," "Baltimore," "Boston," and "Raleigh," the partially protected gunboat "Concord," the armed revenue cutter "Hugh McCulloch," and the small gunboat "Petrel," with the tenders "Zafiro" and "Nau-shon." The Spanish fleet was made up of the protected cruiser "Maria Cristina," flagship, the wooden cruiser "Castilla," the third-class cruisers "Isla de Cuba," "Isla de Luzon," "Don Antonio de Ulloa," and "Don Juan de Austria," and the gunboats "General Lezo" and "Marques del Duero." The "Velasco" was in the harbor, but was undergoing repairs, and her guns were mounted on earthworks ashore. There were four torpedo boats, two of which were sunk during the action, and two armed transports, the "Manila" and "Isla de Mindanao," one of which was sunk and the other captured. The torpedo boat "Barcelo," the "Correo," the "Leyte," and other light gunboats escaped by running up into the lagoons.

In total weight of fire the fleets were nearly equal, but the American cruisers mounted 8-inch guns in their main batteries, while the heaviest caliber on board the Spanish ships was 6 inches; moreover, the former were more modern, better engined, more heavily armored. This superiority was counterbalanced by the Spanish land batteries at Cavité, on Corregidor island, and in front of Manila. The Spanish gunnery was poor, the first shots passing over, the later ones falling short, though in the thick of the battle two shots pierced the upper works of the "Baltimore" and several shells burst above the ships or against their sides. One of the shots that struck the "Baltimore" exploded a case of ammunition, wounding eight men, the only

casualties on the American side. Commodore Dewey's flagship led the American column, which sailed back and forth as near the Spanish fleet, close to the shore batteries, as it was supposed that the deep draught of the "Olympia" would allow; then, at a distance of 4,000 yards, changing its course, the fleet ran parallel to the Spanish column and opened fire with guns of all calibers on the ships and forts. After twenty minutes the American ships stood out and used their heavy guns with terrible effect and then they closed in again. The Spaniards worked their guns gallantly, but the damage inflicted by the American shells caused their fire gradually to weaken. After four runs were made in front of the Spanish fleet with all guns working, the enemy's fleet was rendered useless. The "Maria Cristina" advanced out of the Spanish line to attack the American flagship, but in a few minutes she was rendered a helpless cripple. The fire of the "Olympia" was directed upon her until a shell, raking the Spanish flagship, exploded a magazine. Two torpedo boats that crept out in the smoke to attack the "Olympia" and the "Baltimore" were detected and disabled by the concentrated fire of the "Olympia's" secondary battery, though not until they had approached within 500 yards. The "Don Juan de Austria" was blown up. The "Castilla" also burst into flames, and then the "Isla de Cuba," to which the flag of Admiral Montojo had been transferred, caught fire and sank. The "Don Antonio de Ulloa," the only remaining ship outside of the breakwater, was fired by American shells and abandoned, after which the "Concord" and "Petrel" went across the bay and destroyed the "Mindanao" and the lighter craft which the Spanish crews had run upon the beach. The Spanish admiral's last signal was for the captains all to scuttle and abandon their ships. The American fleet withdrew to give the men a rest and breakfast after two hours of hard work, and because also Admiral Dewey did not know how completely he had disabled the Spanish ships and the ammunition on his ship was reported, though by mistake, to be running short. They returned later in the morning to silence, with a few well-directed shots from the "Baltimore" and from the "Concord," which ran up into close range, all the remaining batteries afloat and ashore; after which the gunboats went inside the breakwater and destroyed the remnant of the fleet, except those that the Spaniards scuttled or ran aground in the shallow lagoons. The "Petrel" ran close up to the shore to do this work. The water battery at Cavité was shelled until a magazine exploded, killing 40 soldiers. The commander of the fort raised a white flag, which was taken for a signal for surrender. When on the following day an American officer went ashore he was told that a truce was desired, so that women and children could be taken to a place of safety. The Spanish officer said he had no authority to surrender the arsenal. Admiral Montojo, his chief, having been wounded in the battle and conveyed to Manila. When Commodore Dewey threatened to renew the bombardment, the forts of Cavité and Corregidor surrendered finally, and the arsenal was delivered over at the same time, thus giving the Americans complete command of the bay.

This exploit of modern American armor clad engaging simultaneously a fleet of nearly equal apparent strength and shore batteries mounting heavy ordnance is a remarkable one in naval annals. On the American side not one ship was disabled nor a man killed, while the Spaniards lost 618 men killed and lost their entire fleet, and their fort, too, was shattered in spite of the obstinate courage of its defenders.

The Cruise of Cervera's Fleet.—Admiral Pasqual Cervera sailed from Cadiz on April 8 with the armored cruisers "Infanta Maria Teresa" and "Cristobal Colon." The number of vessels, their names, and their destination were alike shrouded in mystery, so that the unknown strength of the fleet, and the uncertainty as to where it would strike, created unrest and dread in the United States. A naval war board was appointed by the President, charged with the task of preparing plans for encompassing the destruction of Spain's fleet. On April 14 the two vessels were reported at St. Vincent, the port of the Portuguese Cape Verde Islands, where the torpedo-boat destroyers "Terror," "Furor," and "Pluton," with transports, had previously arrived. All five vessels busied themselves with coaling and preparations for a cruise while awaiting the arrival of the "Vizeaya" and "Almirante Oquendo," which had sailed from Puerto Rico to join the active squadron. They arrived on April 19, and on April 29 the whole fleet steamed away, taking a westerly course. The fast auxiliary cruisers of the American navy scoured the western Atlantic in search of the Spanish squadron; but no news came from any quarter regarding its movements, though vague rumors of its being sighted at different points off the American coast caused consternation in the seaboard cities. The failure to receive any intelligence of the movements of the hostile fleet from consuls, spies, cables, passing steamers, or news agencies stationed all over the world, or from the scouts of the fleet, was a surprise, not only to the American Government, but to all naval powers, as it was supposed that the days were past when fleets could navigate the seas unobserved and strike in unexpected quarters.

On May 11 the squadron arrived off Martinique, near which port the bunkers were partly refilled from coaling steamers waiting there. The voyage of 2,200 miles was made at a speed below 10 knots. The "Terror" was left at St. Pierre for repairs. The rest of the squadron was reported as hull down to the west by Capt. Cotton of the "Harvard," whose dispatch was delayed a day in the telegraph office at St. Pierre. While Admiral Sampson with a fleet detached from blockade duty was watching San Juan, Puerto Rico, and scouts were patrolling the channels leading to Cuban ports, Cervera took a straight course for Curaçao. His fleet was first sighted on May 14 off the Venezuelan coast, where it took on coal from colliers, two of the cruisers entering the Dutch port of Willemsted. After that came another time of uncertainty for the American naval authorities. The fleet sailed for Santiago de Cuba and succeeded in making that port without encountering either of the American fleets or being observed by the scouts cruising in the Caribbean. Spanish ships were reported to have been seen near the Jamaican coast, and after a collier had been caught by the "St. Paul" attempting to enter the bay of Santiago it was surmised that this harbor was the destination of the Spanish fleet. On May 19 Cervera entered the bottle-shaped harbor of Santiago de Cuba, which is only a cable's length wide at the entrance, and was protected by the old Morro and some freshly erected batteries and earthworks, with a triple line of sunken torpedoes, while within was deep water and good anchorage, where the fleet could securely coal and prepare for another cruise. The slow passage over the Atlantic, and the secret movements in the Caribbean, although baffling to the American strategists and a cause of doubts and dismay to the public, placed the Spanish forces more and more at a disadvantage compared with the Americans, who were now fully prepared both to cover the coast and to strike at the enemy wherever he might be found. When at last the

fleet of the wily Spaniard was securely bottled up in Santiago harbor, all questions and fears of the American public were removed. The condition of the Spanish ships as to speed, armament, and seaworthiness was far from what was supposed, and the cruise in tropical seas had caused the fouling of their bottoms and further reduced their fighting efficiency. Even at their nominal strength, they were inferior to either of the American squadrons, having only 8 heavy guns, while Admiral Sampson's squadron and the flying squadron each had 22; having altogether only 54 guns in the main battery, with a muzzle energy of 282,392 pounds, while in Sampson's squadron there were 68 guns, with a total muzzle energy of 562,958 pounds, and in Schley's 60 guns, with a muzzle energy of 540,622 pounds. In speed and quickness in manœuvring the Spanish cruisers were, from their build and design, superior to any of the American ships; but their condition, and the defects in their machinery, the impossibility of their obtaining sufficient coal so far away from their naval base, and the mechanical inefficiency of their engineers, rendered this superiority of no avail, just as lack of practice and training in gunnery rendered the best of the Spanish guns almost useless when contending with the scientific marksmanship of American gunners.

Measures of Naval Defense.—The Navy Department at Washington was guided in its preparations and defensive measures by the advice of a council of experts constituted for the emergency, known as the Board of Strategy, but officially designated the Naval War Board. It consisted in the beginning of Assistant Secretary Theodore Roosevelt, Capt. Arent S. Crowninshield, chief of the Bureau of Navigation, and Capt. Albert S. Barker, then naval aid to Secretary Long. After the retirement of Col. Roosevelt, and the assignment of Capt. Barker to the command of the "Newark," the members were Capt. Crowninshield, Rear-Admiral Montgomery Sicard, and Capt. A. T. Mahan. This board organized the information service. It received reports in cipher from the United States consuls and diplomatic officers in all countries, and was thus informed of the military and political situation in Europe at all times. It also had its secret agents everywhere, even in the naval ports and dockyards of Spain. Its plan of naval defense for the Atlantic coast of the United States served at least to alleviate the trepidation felt in the seaboard cities when the Spaniards succeeded in concealing the movements of their vessels at sea, easing owners of property to fear a sudden descent of the fast cruisers on one or another of the exposed towns and its demolition by bombardment. A coast-patrol system was established, with Capt. Bartlett J. Cromwell at its head. A large number of vessels of the auxiliary navy were employed to create four lines of observation and three separate lines of defense. Some of the strongest vessels were stationed at important points, as the "Katahdin" off Provincetown, Mass., the "Columbia" off the Maine coast, and two monitors at Boston. Soon after the Spanish fleet left Cape Verde the converted ocean liners "St. Paul," "St. Louis," "Harvard," and "Yale" were sent out to sea, each having a stated line to patrol hundreds of miles from the coast. A second patrol fleet, under the command of Commodore John A. Howell, consisted of the swift steamers "Yosemite," "Dixie," "Prairie," "Yankee," and "San Francisco," which covered the New England coast and had orders to steam to the nearest cable station on discovering the approach of the enemy, and notify the authorities at Washington, so as to enable them to concentrate all the ships along the coast at any threatened point.

A line still nearer to the shore was guarded by what was called the mosquito fleet, commanded by Rear-Admiral Henry Erben, and consisting of more than 40 ships of all sizes, which watched along the whole coast line from Maine to Texas. The Signal Corps attended to the transmission of intelligence from the patrol fleets to the Naval Department at Washington. About 60 signal stations along the coast were fitted out with telegraph and telephone instruments and elaborate signaling apparatus.

Bombardment of San Juan.—Admiral Sampson withdrew the battle ships "Iowa" and "Indiana" and the cruisers "New York" and "Detroit" from the Cuban blockade on May 1, and went to Key West to prepare for a cruise in search of the Cape Verd squadron. The United States fleet left Key West on May 3 with orders to intercept and destroy the Spanish squadron. They proceeded slowly eastward, having taken in tow the monitors "Terror" and "Amphitrite," which joined the fleet with the torpedo boat "Porter" off Cardenas. The speed was not more than 5 knots. The ocean steamships "Harvard," "Yale," "St. Louis," and "St. Paul" were scouting in the Caribbean Sea, but found no traces there of the Spanish squadron. Some anxiety was felt for the safety of the battle ship "Oregon," which had reached Bahia, accompanied by the gun vessel "Marietta" and the unarmored "Nithero," purchased from Brazil. At Cape Haytien Admiral Sampson heard a report that Spanish war ships had been seen heading for Porto Rico. Early in the morning of May 12 the American ships approached San Juan and made ready for an attack on the forts. The battle was so planned that the vessels would be in position to meet the Spanish war ships, should these emerge from the harbor. The attacking column was formed of the "Iowa," flagship, the "Indiana," "New York," "Amphitrite," and "Terror." The "Detroit" went ahead to sound until 10 fathoms of water was reached, and, after marking the position, to remain on the lookout for torpedo-boat destroyers. The "Wampatuck" sounded for 10 fathoms at the other end of the course. The "Montgomery" took station opposite the Canelo fort, with orders to silence the guns if they opened fire. The "Porter" watched near the harbor's mouth, ready to torpedo the enemy's ships if they came out. If Cervera's squadron were not in the harbor (as was the case) it was Admiral Sampson's purpose to attack the shore batteries in order to test the effectiveness of his guns against land fortifications, and to cripple these as much as possible, so as to render them less capable of supporting the Spanish fleet, but chiefly to accustom his men to battle and test their marksmanship in action.

The attack was begun at daylight and lasted about three hours, resulting in considerable damage to the batteries, and incidentally to the adjacent portion of the city. The attack was made on the shore battery of 6-inch guns and the less effective Morro battery on the eastern arm of the harbor. The fleet steamed past the forts in elliptical formation, the "Iowa," which led the column, beginning the attack with a 12-inch shell, followed by a broadside. The "Detroit" approached within 1,000 yards, and then withdrew with the "Montgomery" after passing the fortifications once, their guns being too small to do any execution. The "Wampatuck" and "Porter" also stayed out of range. The rest of the fleet sailed by three times, the end of the course being marked by an anchored boat of the tug "Wampatuck." The thick smoke from the common brown powder used on the American ships interfered, as in all other engagements of the war, with the aim of the gunners. Nevertheless, the fortifications were hit frequently, and structures

within were set on fire several times. The "Terror" not seeing the signal, continued firing for half an hour after the rest of the ships withdrew. The Spanish gunners were frequently driven away by the shower of large and small shot that fell inside of the fortifications, but always returned and worked their guns industriously though unskillfully. Nearly all their shots went wide of the mark, and the incessant fire had no material effect on the American ships. An 8-inch shell went through the superstructure of the "Iowa," scattering splinters that wounded 3 men. This vessel was hit eight times, but her armor was not pierced. On the "New York" 1 seaman was killed and 5 were wounded, and on the "Amphitrite" a gunner's mate was killed. The Spanish commander reported 1 officer, 3 soldiers, and 1 civilian killed, and 13 soldiers and 30 civilians wounded. The "Porter" crept up during the engagement close under a bluff from which a masked battery suddenly poured a plunging fire, from which she escaped unharmed. The ships forming the battle line, rolling in a heavy sea, manœuvred at too long range to do much execution. Most of their shells fell in the harbor, Morro Castle and the fortress of San Cristobal were damaged in places, and shells struck the barracks as well as the cathedral, the palace, the town hall, the seminary, and private houses in the city. The American fleet discharged only 400 shots, ceasing then because the men were becoming exhausted by their exertions in the torrid heat. The Spaniards fired a great many more shots.

After the action Admiral Sampson returned with his squadron to Key West, reuniting the whole fighting force of the American navy, for Commodore Schley's ships were at that rendezvous on the alert for any hostile movement of the enemy. The "Terror" made a dash out of the harbor a month later, with the object of sinking the auxiliary cruiser "St. Paul," which was steaming along the coast on observation duty. Capt. Sigsbee saw the destroyer in time, and turned his rapid-fire guns upon her, killing an officer and 2 men and damaging the vessel so badly that only with difficulty did she manage to make her way back into port.

Blockade of the Spanish Fleet in Santiago.—Commodore Schley's flying squadron left Hampton Roads for Key West on receipt of the news that the Spaniards were off Martinique, and remained at Key West guarding the coast and covering the blockading fleet of small vessels against a possible attack, while Admiral Sampson was endeavoring to intercept the Spaniards at the entrance of the Caribbean. Schley's squadron was still at Key West when Sampson returned from the fruitless bombardment of San Juan de Puerto Rico, but after Cervera's fleet left the vicinity of Curaçao it hurriedly took on coal and departed on May 20 to blockade Cienfuegos with the "Brooklyn," "Texas," "Massachusetts," "Iowa," and "Scorpion," while Admiral Sampson was instructed to guard the entrance of Havana harbor. In consequence of information arriving at the Naval Department from the Cubans that the Spanish ships were at Santiago, Commodore Schley was ordered on May 21 to proceed cautiously thither, if satisfied that they were not at Cienfuegos. When the "Marblehead" arrived on May 24 Commander McCalla established communications with the Cubans on shore, and thus obtained definite knowledge that the Spanish fleet was not at Cienfuegos. Commodore Schley therefore sailed for Santiago. The fleet steamed very slowly, and after arriving off that port on May 26 and receiving the reports of the commanders of the scouts, Commodore Schley, rendered anxious for his fleet by the state of the weather and the shortness of coal on his ships, having less than two

days' supply on the "Brooklyn," gave orders to return to Key West without ascertaining definitely that the Spanish fleet was in the bay. Meeting the "Harvard" on May 27, he received a dispatch saying that the Department, having information indicating that the Spanish squadron was still at Santiago, looked to him to ascertain whether this was the fact, and to see that the enemy, if in that harbor, did not leave without a decisive action. Admiral Schley, replying that he could not obey these orders, being forced to proceed for coal to Key West, continued on his westward course until the sea became calmer, enabling the ships to take on coal from the colliers on May 28; then he turned and before night had retraced the 48 miles and arrived 12 miles off Santiago. In the morning, drawing nearer shore, the officers of the fleet sighted a vessel that they made out to be the "Cristobal

a tour of 72 miles on shore, passing round the harbor and positively identifying the ships of Cervera's command. Admiral Sampson, joining the blockading fleet on June 1, decided to stop the entrance to the harbor and intrusted this work to Assistant Naval Constructor Richmond P. Hobson. Many officers and seamen by hundreds from all the vessels offered themselves for the forlorn hope. Lieut. Hobson, who suggested the details of the plan, selected for the crew Daniel Montague, George Charette, J. C. Murphy, John P. Phillips, Oscar Deignan, and John Kelly, while another seaman slipped on board and took part in the expedition without permission. With these seven men from the fleet Hobson, before daylight on June 3, entered the mouth of the harbor on the loaded coaling steamer "Merrimac," which was practically disabled by defects in her machinery, passing for

MORRO CASTLE, SANTIAGO. (PHOTOGRAPH TAKEN THE DAY OUR FLAG WAS HOISTED.)

Colon" lying near the entrance, later two vessels of the "Vizcaya" class, and in the afternoon one of the torpedo boats.

The American squadron, on May 31, formed in battle line outside, the smaller vessels scouting close inshore, and engaged the shore batteries and the ships lying near the entrance of the harbor, which returned the fire with 4 shots to 1, firing about 300 shells altogether, none of which hit the American ships. The earthworks were plowed repeatedly by American shells, and the flagship "Colon" was twice hit by the guns of the "Massachusetts." This reconnaissance was made with the heavy guns of the "Massachusetts," "Iowa," and "New Orleans" for the purpose of developing the fortifications as well as the presence of the Spanish ships, of which Commodore Schley was satisfied from the shells that were fired at random from the bay inside. However, it did not afford proof that Cervera's whole fleet was bottled up, and this fact remained in doubt until Lieut. Victor Blue, on June 11, made

twenty minutes through a shower of shot and shell from the Morro and other batteries and from the Spanish vessels, and at the designated point, where the channel was narrowest, fired the torpedoes fixed in the hull of the "Merrimac," while he and his companions made off in a small boat. They were picked up by a boat from the Spanish flagship, being unable in the daylight to run the gantlet of the batteries and reach the launch on which Cadet Joseph W. Powell waited until he had to scud from under the guns of the batteries after day broke. The sunken collier failed to close the channel entirely because a shot had taken away her rudder, and this had made it impossible for Hobson to swing the vessel round athwart the channel before sinking her. Admiral Cervera was so struck with the bravery of Lieut. Hobson and his men that he sent Capt. Oviedo under a flag of truce to inform Admiral Sampson that they were all alive and well cared for, although two were wounded by the shells that burst around them. The main force of the

American navy was thenceforth employed in the difficult task of confining Admiral Cervera's squadron in Santiago Bay, which required elaborate precautions and constant vigilance. Three of the principal vessels took turns in the dangerous duty of guarding the entrance at night within range of the shore batteries and illuminating with their search lights the entrance and the bay, rendering it no less impossible for the Spaniards to get to sea unobserved under cover of darkness than in the light of day.

Operations of the Blockading Fleet.—While Admiral Sampson departed with the strongest and fastest vessels of the fleet to intercept Cervera's fleet, Commodore John C. Watson and Commodore George C. Remey were left in command of the two divisions of the blockading squadron. The force that was left on blockade duty consisted of the monitor "Miantonomoh," 6 unarmored cruisers, 10 torpedo boats, and a large number of improvised war vessels. The whole blockading fleet combined would be incapable of resisting only a part of the Spanish fleet, but it was sufficiently strong and numerous to maintain an effective blockade and to cope with the Spanish naval force stationed in the Cuban harbors.

On May 11 the "Wilmington" engaged the fortifications at Cardenas and rescued the "Winslow" and "Hudson," which had been betrayed into running under the guns of a masked battery. The torpedo boat "Winslow," as well as other vessels of the fleet, had before challenged the three Spanish gunboats lying in the harbor, but could not draw them away from the protection of the land batteries. When the cruiser "Wilmington" arrived and took station at a range of 2,500 yards, the "Winslow" and "Hudson" went into the inner harbor to attack the Spanish vessels. The Americans had not counted on a strong battery close to the water's edge, which suddenly opened fire on the small craft. The first shell damaged the steering gear of the "Winslow" and another burst inside, wrecking her boiler, wounding Lieut. John B. Bernadou, the commander, and killing or mortally wounding Ensign Worth Bagley and four men. The "Wilmington" moved up to within 1,800 yards, till her keel almost touched bottom, sending 376 shells into the batteries and the town, and finally silencing the guns. Meanwhile, Lieut. Frank H. Newcomb ran the "Hudson" alongside of the "Winslow," and amid a hail of shots towed her out of danger.

On the same day the "Marblehead," "Nashville," and "Windom" were taken into the bay at Cienfuegos by Commander Bowman H. McCalla, and Lieut. Cameron Winslow and Lieut. Anderson explored in launches for the telegraph cables, to cut them, while a party attempted to land from the "Marblehead" to sever the cables at the shore end. When Commander McCalla called for volunteers for the dangerous work thrice the desired number offered themselves. The batteries drove off the landing party, killing 2 men and wounding 7 before the vessels moved up into close range and silenced them. The parties in the boats dragged for the cables and grappled and cut two of the three, under a rain of bullets and a constant fire of Maxims and 1-pounders, which killed or fatally wounded 3 and wounded Lieut. Winslow and 6 men. As soon as one man was hit another jumped to take his place. Meanwhile the guns of the vessels fired on the fortifications until they were smashed, sending in more than 600 shells. The Spanish losses were reported to be 2 killed and 14 wounded. The cables were afterward repaired by the Spaniards, and communication with Havana was kept open.

Attempts were made to cut the far more im-

portant cables running from Santiago at Guantamano, which would have isolated Cuba from Spain. There were two British lines running to Jamaica, and a French line to Martinique. The United States Government was unwilling to cut the cables out at sea, since there was no precedent for such an act, which might be construed as a violation of the rights of neutrals. But within the territorial three-mile limit, it was assumed, the cutting of cables was a legitimate exercise of belligerent rights, the United States having expressly reserved freedom of action in this regard in the cable convention of 1884. The first essay was made near Santiago on May 11 by the cruiser "St. Louis" and the tug "Wampatuck." A further attempt was made by the same vessels on May 18. The American war ships, as they approached the mouth of Guantamano harbor, flew the Spanish flag, an act that Spanish orators denounced as Yankee treachery, although the United States colors were raised, according to the usages of war, before the action was begun. The heavy fire from the Spanish batteries and the gunboat in the harbor compelled the tug "Wampatuck" to retire after grappling one of the cables within 800 yards of the shore. One of the cables leading to Kingston was cut by the "St. Louis" at Santiago after both vessels had been under fire nearly an hour.

Gen. Blanco at Havana, on May 14, attempted by a ruse to draw the vessels then blockading the mouth of the harbor within range of the heavy guns on the shore. His purpose was also to draw the American naval forces to that point in order that Admiral Cervera might carry out his plans unobserved and in safety. The gunboat "Vicksburg" and the converted revenue cutter "Morrill" had a week before been decoyed by a fishing smack under the Krupp guns of Santa Clara, and it was only owing to the indifferent gunnery that they managed to get out of range without being sunk. On this latter occasion the two principal Spanish war vessels at Havana, the "Conde de Venadito" and "Nueva España," suddenly emerged from the harbor and ran along the shore. The "Mayflower," "Vicksburg," "Annapolis," "Wasp," "Tecumseh," and "Osceola" formed a column and moved obliquely in upon the Spanish vessels to prevent their escape, whereupon the Spaniards doubled on their course, and firing steadily in reply to the American guns put back into port, while the pursuing vessels stopped at a safe distance offshore. The diversion of the Spanish commander caused a concentration of eight more of the blockading vessels at Havana.

On May 24 some of the American ships exchanged shots with the fortress of San Hilario guarding the entrance to the port of Nuevitas. Other vessels reconnoitered the entrance to Cardenas Bay to ascertain whether torpedoes had been laid. An exchange of prisoners—Col. Cortijo and an army surgeon for two American newspaper correspondents named Thrall and Jones—was effected in Havana Bay on May 27.

On May 29 the "St. Paul" cut the cables off Cape Maisi; but Gen. Blanco's telegraphic communications with Spain were not entirely severed until a completely outfitted cable ship, carrying war cables and cable gear for establishing communications with the United States, as well as instruments for grappling and cutting the Spanish cables, was placed in Cuban waters by the Signal Service.

The blockade, while effective enough to cause a scarcity of food that was felt by all classes, and the direst famine among the poor, did not prevent the entrance of many blockade runners of various nationalities. Before it was well established the Spanish troopship "Alfonso XII," leaving St. Thomas on April 21, landed 800 troops with cannon and

other warlike stores in Cienfuegos and slipped away again to Puerto Rico. Havana in the beginning of May had supplies sufficient to last three months. The poorer class were better off than before the war, for free kitchens were instituted from which 35,000 rations were distributed daily. The transatlantic steamer "Montserrat" slipped into Cienfuegos with 100 guns, 15,000 rifles, a large quantity of ammunition, stores of provisions, and 1,000 soldiers, and made one or more trips to Batabano with cargoes of foodstuffs to be conveyed to Havana by rail. Many schooners from Mexico got provisions into Havana by this route. French and English steamers were allowed to ply in the tobacco trade at Sagua la Grande, on the north coast. The Autonomist Government, late in May, decreed that blockade runners bringing provisions and coal should be allowed to load with sugar for neutral ports, and that their cargoes should have free entry at all Cuban ports.

On June 28 the President proclaimed a blockade of all ports on the south side of Cuba, from Cape Frances to Cape Cruz, in order to make it more difficult to bring supplies into Havana. At the same time San Juan in Puerto Rico was declared a blockaded port.

Operations in the Philippines.—After the destruction of the Spanish fleet and the surrender of the forts, Admiral Dewey demanded the complete surrender of the city of Manila, the fortifications, munitions, and stores. When Gen. Augustin, the Governor, refused to surrender, Dewey threatened to bombard the forts and the citadel, but having no military force at hand to garrison the place and fearing the revengeful action of the insurgents against the Spaniards, he refrained at the request of the foreign consuls and established a close blockade, while the insurgents hemmed in Manila from the land side. He reported that he could take the capital at any moment. He occupied Cavité and destroyed the 6 batteries at the entrance of the bay. The losses of the Spaniards on land included the navy yard, with its equipments and stores and 9 batteries. At Cavité the Americans established hospitals, where 250 Spanish, wounded and sick were cared for and protected. On May 12 the Spanish gunboat "Callao" was captured while attempting to run the blockade. Communication with the outside world was interrupted after the Americans acquired possession of the bay; for Commodore Dewey, after Gen. Augustin had refused to allow him to use the telegraph, cut the cable.

The number of Spanish troops fit for service then in the Philippines was not more than 7,000. There were 30,000 or more native troops, on whose loyalty no reliance could be placed. No sooner had the rebel flag been again unfurled than whole regiments deserted to the enemy with their arms and accoutrements, after killing the Spanish officers. Gen. Emilio Aguinaldo arrived on May 18, having been allowed by Admiral Dewey to take passage from Hong-Kong on the dispatch boat "McCulloch." When Admiral Dewey took Cavité arsenal the rebels held all the heights within ten miles around, ready to close in upon Manila. Their strength rapidly increased, and even in the city the Spaniards captured a conclave of 150 conspirators, all of whom were put to death. Gen. Aguinaldo establishing his headquarters in the town of Cavité, gradually massed a force exceeding 30,000. Deserters from the Spanish army and bold parties which, armed only with knives, overcame Spanish detachments by surprise, supplied the rebels with a number of Mauser rifles, and Remingtons were smuggled in on a steamer. Toward the end of May the rebels crossed the bay in boats and, fighting from the cover of the bush, attacked the Spanish positions

on the Zapote river, taking 418 prisoners. On May 30 the Filipinos captured a powder magazine and 4 small field guns, taking 250 prisoners. Several scattered detachments in Cavité province were overcome before re-enforcements were sent from Manila. When the Spanish column advanced, on May 30, along a narrow road flanked by impassable swamps, Gen. Tomas Mascado, the Filipino commander, posted 500 men at a bridge, where 4 field guns were concealed. The Spaniards were checked and fell back in disorder when these guns were suddenly unmasked, accompanied by a withering fire of musketry. They rallied and charged, but were again repelled. The rebels afterward drove the Spaniards from Old Cavité and captured the town of Imus, where 4 Krupp field pieces fell into their hands. Their own cannon consisted of boiler pipes wound with wire. After the Spanish garrison in Old Cavité surrendered, on June 8, the rebels began a general advance upon Manila.

In the Visayas and Mindanao islands the rebels of Aguinaldo's faction were less successful than in Luzon. In Panay, where rebellion first broke out, the Spanish were victorious, storming on May 3 an intrenched position held by 4,000 rebels, of whom 172 were slain in the battle and 500 more during the retreat. In Cebu the Spaniards slew great numbers of both sexes after overcoming the rebellion. In Luzon, however, the principal island, most of the detachments of Spanish troops surrendered for lack of food, and all officials, priests, and planters who escaped with their lives took refuge in Cavité. In Cavité province the rebels took nearly 2,000 prisoners, adding as many modern rifles to their supply. Aguinaldo summoned Capt. Gen. Augustin to surrender, but the Spanish commander refused to treat on any terms with the rebel chieftain, though provisions were becoming very scarce, and the troops, weakened by hunger and disease, had difficulty in maintaining their position inside of the line of blockhouses. The Chinese in Manila had requested the British consul to take them under his protection, but the Spanish authorities would not acquiesce. In response to an application of German firms, the German Government ordered 4 war ships to proceed to Manila Bay. As a means of conciliating the natives, the Captain General instituted a consultative assembly of 15 members of mixed and native blood, having for its president Señor Perno, who had achieved the peace with the rebel leaders in the previous December. The Archbishop of Manila, in a pastoral letter, told the natives that in the event of American victory altars would be desecrated, churches converted into Protestant chapels, vice inculcated instead of pure morality, and the children turned from the true faith. The rebel leaders on their arrival promised Admiral Dewey to regulate their conduct according to the principles of humanity. The Spanish gunboat "Leyte," pressed by insurgents, came out from its place of concealment and surrendered to Rear-Admiral Dewey on June 20.

Occupation of the Ladrões.—Capt. Glass, of the "Charleston," received sealed orders at Honolulu to call at the island of Guam and destroy the Spanish fortifications and ships there. He arrived off the island on June 20, and, leaving his convoy—the transports "Peking," "Australia," and "Sydney"—outside, he steamed into the harbor of San Luis de Apra and fired 13 shells at the abandoned fort—which the Spanish officers mistook for a salute, being ignorant of the existence of a state of war. Spanish officers who came aboard were sent to notify the Governor to surrender himself and his military forces, and on his declining on the ground that Spanish law forbade him to step aboard a foreign war ship, a landing party was got ready. On

June 21 the Governor, Juan Moreno, came down to the seaport of Piti, and, after a parley, formally surrendered Guam and all the Ladrone group, with his munitions and troops, which marched down from Agaña to Piti for disarmament. The Governor, who made a formal protest, and the Spanish garrison of 60 soldiers were carried off as prisoners of war on the ships as they continued their voyage to Manila. The 200 native soldiers were released on parole, and a small garrison of American troops was left in occupation.

The Santiago Campaign.—The strategic plan proposed by Gen. Miles was to arm the Cubans, and thus help them to harass the enemy and to fit out an expedition, ostensibly for the invasion of Cuba, but with secret orders to proceed to Puerto Rico and seize that island—the gate of the Antilles, and for the Spaniards the key to the military situation. After this was in American possession a large force of cavalry could be landed in the center of Cuba, cutting the Spanish forces in two, sweeping the Spaniards from the provincial towns in co-operation with the Cubans, and at the same time relieving the starving population. After the rainy season was over, a powerful army, well organized, perfected in drill and discipline, seasoned to camp and service, would be able to move westward, and Havana could be reduced by a combined land and sea attack. The bottling up of Cervera's fleet created a new situation, changing all the plans. When it was known that Cervera's ships were sealed up in Santiago harbor, and after Hobson's exploit was supposed to have rendered their escape almost impossible, even though a hurricane should disperse the blockading fleet, this eastern end of Cuba, where the insurgents were in greatest force and the Spaniards weakest and isolated from their base for lack of land communications, was chosen as the field of operations for the first military expedition, which could co-operate with the fleet in reducing the city and fortifications, defended by about 6,000 Spanish troops, and in capturing or destroying Cervera's squadron. This being accomplished, the fleet could operate without danger against any of the coast defenses, or cover a landing of troops at any insufficiently fortified point of the Cuban seaboard. Guantanamo Bay was seized for a naval station, a sheltered retreat where the vessels could recoil and a base of supplies, on June 10, by Capt. McCalla with the "Marblehead," "Yankee," and "St. Louis." The cables connecting Santiago with Mole St. Nicholas were severed. The bay afforded a safe harbor, where the fleet could coal and store ships and torpedo boats could lie in all kinds of weather, as well as troop transports when they should arrive. The town of Caimanera, on the inner bay, was garrisoned by 3,000 Spanish troops and protected by a fort and several gunboats. When the "Marblehead" and "Yankee" opened fire at 800 yards, driving the Spaniards out of the blockhouse and village at the mouth of the outer bay, the "Alfonso Pinzon" appeared at the entrance of the inner channel and fired her 5-inch guns with surprising accuracy at a range of 4,000 yards. The American boats replied with guns of the same size, and quickly got the range, but the Spanish commander refused to retire until the "Marblehead" made ready to go in after him, when he took position behind the fort and continued firing. Lieut.-Col. R. W. Huntington landed a battalion of marines, 600 strong, from the troopship "Panther" and the men-of-war, and encamped on the hill at the entrance of the outer bay. In the evening Spanish infantry, which had fled in such panic to the mountains that the Americans had no thought of their returning, advanced under cover of the thick bush and attacked the pickets.

In the following night the guerrillas showed themselves in greater force and charged up to the edge of the camp, killing Surgeon John Blair Gibbs and two marines. The attacks were continued until morning, when the assailants were driven away by 12-inch shells from the field guns. The earthworks that the Spaniards had left were strengthened and enlarged during the day. The guerrillas kept up their harassing fire into the camp, now from one direction and now from another, giving the Americans no rest for one more night; but on the third their tactics were frustrated by a body of Cubans who had come up with Col. La Borda and were put on skirmish duty. On June 14 a detachment of marines advanced with the Cubans through the hills against the camp of the Spaniards, and with one steady onset put them to flight. The total losses of the Americans from the beginning were 6 killed and 3 wounded, while the Spanish dead numbered more than 40.

The cable communications between Santiago and Havana and between Havana and Europe were not completely severed until Gen. Greely, chief of the Signal Corps of the army, had fitted out a cable ship, on which Lieut.-Col. James Allen and Capt. Martin Hellen grappled and cut the lines at the east end of Cuba and at Guantanamo within the three-mile limit.

Major-Gen. William R. Shafter was placed in command of the expedition that was organized at Tampa, consisting of the Fifth Army Corps. He received instructions to capture the garrison at Santiago and assist the navy in capturing the fleet. The army of invasion sailed from Tampa on June 14 on a fleet of 37 transports convoyed by the "Indiana," "Castine," "Helena," "Annapolis," "Bancroft," "Morrill," and "Hornet," joined at Tortugas by the "Dupont," "Manning," "Osceola," "Wasp," "Wampatuck," and "Ericsson," and off Puerto Principe by the "Montgomery" and "Porter." On June 21 the fleet arrived off Santiago. Gen. Shafter and Admiral Sampson went ashore to consult with Gen. Garcia, the Cuban commander, at his camp at Acerradero. The Spanish infantry, cavalry, and guerrilla forces stretched out for 50 miles from Guantanamo to Cabañas, ready to concentrate at the point of attack, but starving and harassed inland by the insurgents. They had a total strength of about 40,000. Garcia raised a force of 3,500 Cubans, ill fed, lacking clothing, and only partly armed, chiefly with the munitions brought by the "Florida," to co-operate with the American troops. There were 1,000 more performing guerrilla service with the marines at Guantanamo. Gen. Shafter's army numbered 819 officers and 15,058 men, to which 8,000 re-enforcements were sent when it was known that Gen. Blanco had ordered the troops of Gen. Pando to re-enforce Gen. Linares at Santiago. The expedition consisted of the First, Second, Third, Sixth, Seventh, Eighth, Ninth, Tenth, Twelfth, Thirteenth, Sixteenth, Seventeenth, Twentieth, Twenty-first, Twenty-second, and Twenty-fourth Regular Infantry, the Seventy-first New York Volunteers, and the Second Massachusetts; two dismounted squadrons each, of four troops, from the First, Third, Sixth, Ninth, and Tenth Regular Cavalry and two from the First Volunteer Cavalry, known as the Rough Riders; one mounted squadron of the Second Regular Cavalry; two light batteries each from the First and Second Artillery, and two siege batteries of the Fourth; and two companies of engineers. Most of the cavalry was dismounted because of lack of transportation for the animals and because the country about Santiago was unfavorable for cavalry operations. The expedition was ready to sail on June 7, but, on account of an unfounded rumor of a Spanish war vessel having

been seen, the order to start was countermanded and the sailing delayed for a week. When Gen. Shafter accepted Gen. Garcia's offer of the services of his troops he told the Cuban general that he could exercise no military control over him except such as he would concede, but so long as these troops served under his orders they would be furnished with rations and ammunition. Some sharpshooters and machine guns and mountain artillery were landed to co-operate with the Cubans in clearing the hills, but the forces did not begin to land until June 22, when 6,000 men were put ashore at Daiquiri. Difficult though the landing was with defective transport facilities, the Spaniards, held in check by Gen. Garcia's Cubans and the shelling of the hills by the vessels, and deceived by Admiral Sampson's feint of bombarding Juragua, made no serious attempt to oppose it. On June 23 a like number were debarked, and Major-Gen. Henry W. Lawton's division advanced to Siboney, marching on the next

there and throw up intrenchments. Gen. Shafter was eager to advance with all haste upon Santiago, not appreciating the time that it would take to debark his command and supplies for it and transport sufficient stores over the difficult roads. His resolve to give battle without delay was prompted by anxiety lest a storm should drive the store ships out to sea, for not for two weeks was it possible to place on shore provisions for more than three days ahead; also by the fear that Gen. Pando would soon arrive from Manzanillo with re-enforcements for the Spanish garrison. He intended to push on with only a few wagons and pack trains. The rest of the troops were landed at Siboney. Before the night of June 24 all the troops were on land. Gen. Lawton was ordered to take up a strong defensive position on the road between Siboney and Santiago, with Gen. John C. Bates's brigade supporting him, while Gen. Kent's division was to be held near Siboney, and Gen. Wheeler's cavalry division

CUBAN TROOPS MARCHING INTO SIBONEY.

day to give place to Major-Gen. Jacob Ford Kent's division. While Gen. Shafter remained on board to direct the disembarkation, Major-Gen. Joseph Wheeler conducted operations on shore. Siboney was shelled by the naval force, and the Spanish who were driven out intrenched themselves two and a half miles out on the road to Santiago. Gen. Lawton marched his troops down from Daiquiri to take possession of Siboney, bivouacking overnight on the road and entering the town the next morning. The enemy had returned to contest the place and had prepared an ambush for the advanced guard, but this was discovered and the Spaniards beat a hasty retreat, pursued by the Cubans under Gen. Castillo. Gen. Lawton's orders were to send a force to occupy the place where the railroad from the Juragua iron mines crosses the road into Santiago, and if this were accomplished without opposition to encamp

was to be in the rear on the road from Daiquiri to Siboney. The commanding general had altered his plan and now intended the troops to remain in a defensible position until the transportation service could be organized. Gen. Wheeler, however, with Gen. S. M. B. Young's brigade, pushed forward during the night of June 23 until he found himself the next morning in advance of the rest of the troops. Learning from Cuban scouts that the enemy were posted in force at Las Guasimas, where two roads leading to Santiago unite, he determined to attack their position. Shortly after the regular cavalry under Gen. Young had come in contact with the enemy, the Rough Riders, marching along the other road, were checked and somewhat confused by a sudden fusillade with smokeless powder, and fell back, but rallied directly. On the other flank the colored cavalry stormed a ridge with noble cour-

age and the Spaniards abandoned their intrenchments and fell back a mile or more from their original position. Gen. Wheeler had sent for reinforcements, but before Gen. Chaffee came up with the Second Infantry, the three regiments of dismounted cavalry had completely routed the enemy. The American forces engaged numbered 964 men. The American losses were Capt. Allyn K. Capron, Jr., and 14 men killed and 6 officers and 46 men wounded; the Spanish, whose strength was officially reported as 500, lost 9 killed and 27 wounded.

On June 25 the American line was advanced without opposition to the ridge of Sevilla, looking down on Santiago, 6 miles away. Sevilla was occupied by Gen. Lawton's second division, behind which encamped Gen. Wheeler's dismounted cavalry, while Gen. Kent's first division lay farther in the rear. By June 27 the outposts reached points within 3 miles of Santiago. The light batteries were brought up and posted alongside of Gen. Wheeler's division, and near these the mounted troops of cavalry. The re-enforcements having arrived, Gen. Shafter, in consultation with the other generals, determined on an enveloping movement to prevent a junction of Gen. Pando's force with the troops in Santiago, and a vigorous attack at the same time on the formidable outworks in front, the fortified heights of the San Juan ridge. In order to turn the enemy's left flank and reach the northern side of the city, it was necessary to capture the fortified suburban village of El Caney, an elevated position strongly held 3 miles northeast of Santiago, menacing the American right flank. Gen. Lawton's division moved out on June 30 into the positions determined by a previous reconnaissance. Before daylight on July 1 Capt. Allyn K. Capron's light battery occupied an eminence commanding the village, 2,400 yards distant. Major-Gen. Adna E. Chaffee's brigade took up a position east of the town, ready to move to the attack after the preliminary bombardment, and Brig.-Gen. William Ludlow took his brigade round to the west to cut off the retreat of the Spaniards into Santiago. While the battery was firing at the stone blockhouse and church in the center of the Spanish position and the hedges and trenches where the enemy's infantry was located, Gen. Chaffee's brigade, consisting of the Seventh, Twelfth, and Seventeenth Infantry, advanced to the attack in front, firing continuously but with care, for the men had only 100 rounds of ammunition. Gen. Ludlow also moved up in the rear, and Brig.-Gen. Evan Miles brought up his reserves on the south, so as to form the center of a continuous line nearly encircling the town, and steadily closing in upon its brave defenders. So stubborn was the defense that the brigade of Major-Gen. John C. Bates was ordered up from the rear to strengthen the line, which was thinned in the repeated desperate assaults. After the Spaniards had fallen back from the intrenchments the fire of the guns was concentrated on the brick fort, from which a deadly fire of musketry was poured into the American ranks. Rents were soon torn in the thick walls, and then the brigades of Chaffee, Miles, and Bates made a rush, and carried the work, which was so stoutly defended to the last that only wounded men were left. The smaller blockhouses ceased fighting soon after the main one fell, except one, which was knocked to pieces by a few shots from Capron's battery. The valiant defense of El Caney was conducted by Brig.-Gen. Vara de Rey, who perished in the battle, and of whose total force of only 520 men scarcely a fifth remained alive at the end of the day. The attack on the San Juan position was delayed until Gen. Lawton's troops were well engaged with the Spaniards at El Caney. Gen. Wheeler's cavalry division lay concealed from

the enemy on the hill of El Pozo, 3 miles from Santiago, and Gen. Kent's division was in the rear of the other, encamped near the road. Capt. Grimes got his battery into position at El Pozo, and began firing as soon as it was light on July 1. The Spanish field guns on San Juan hill replied, concentrating their fire on the battery, which, having only ordinary black powder, made a good target. An hour later the cavalry division, the command of which during the illness of Gen. Wheeler devolved upon Brig.-Gen. Edwin V. Sumner, crossed the Aguadores river and deployed to the right under a heavy volley fire of the enemy. Gen. Kent's division followed, taking a road discovered by the war balloon crossing the river farther down, and when across the river advanced in the face of a destructive enfilading fire, then turned to the left, and formed for the attack in front of the main Spanish position, being subjected all the while to the fire of infantry and machine guns from the hill, and that of riflemen hidden in trees on both flanks and in the rear. While the column was halting before forming in line for a charge, Grimes's battery shelled the enemy's position on the heights, 2,000 yards distant. After the cavalry had driven the enemy from their outpost on Kettle hill, the whole line advanced. The brigade commanded by Col. Charles A. Wikoff, consisting of the Ninth, Thirteenth, and Twenty-fourth Infantry, suffered most severely while getting into position, losing successively that commander, Lieut.-Col. William S. Worth, and Lieut.-Col. Emerson H. Liscom, so that the command devolved finally upon Lieut.-Col. Ezra P. Ewers. Gen. Kent hurried forward the rear brigade to save the imperiled formation, the Tenth and Second Infantry, under the brigade commander Col. E. P. Pearson, going to the support of Wikoff's brigade, and driving the enemy back toward his trenches, while the Twenty-first was sent after the brigade of Col. Hamilton S. Hawkins, which had deployed on the right of the division. The formation was at length completed under a destructive fire, and the whole line advanced a short distance, only to find a wide bottom obstructed with entanglements of barbed wire, on the other side of which the enemy was strongly posted along the crest of the high hill. The United States regulars were not dismayed by the sacrifices necessary for the taking of such a position. Both divisions went forward in perfect order, halting at intervals under a pitiless fire while the thick wire fences were being cut. Lieut.-Col. Ewers led his men against a blockhouse surmounting San Juan hill flanked by rifle pits and guarded by obstructions stretching for a mile on both sides. Lieut. Parker's Gatling battery performed valuable service, moving from place to place along the line to support the advance of the infantry. Gen. Hawkins, whose brigade consisted of the Sixth and Sixteenth Infantry and the Seventy-first New York Volunteers, led the two regiments of regulars up the steep sides of the hill in the face of a constant hail of bullets from Mauser repeating rifles. The Thirteenth, Twenty-fourth, and Sixteenth Regiments suffered most heavily. There was no keeping the ranks together in this heroic charge, no need and no possibility of giving orders, yet no wavering or confusion occurred. With one common impulse the men swarmed up the hill, each man as fast and as safely as he could find his way, and over into the trenches, which the Spaniards quickly abandoned. When the action was over the company commanders found that half or more of their men were missing, but the places of some were filled by soldiers from other commands. Capt. Ducat of the Twenty-fourth started with 75 men up the path to the blockhouse, and though he fell, Lieut. Lyon after him,

and half the detachment also, the leaderless remnant rushed into the fortification and took it from the Spaniards, who were dismayed by their impetuosity, thus opening a breach in the Spanish line. Wheeler's division, the Tenth Cavalry, and the Rough Riders in the van, stormed the intrenchments on the Spanish left with not less gallantry than the infantry had displayed, and reached the top, carried the second blockhouse, and cleared the rifle pits almost simultaneously with the capture of the central position. At the beginning of the day the "New York" and "Oregon" attempted to land shells in Santiago from Agnadores, the range being indicated from the captive balloon, but most of the shells cleared the city, many fell in the harbor, and of the few that fell within the city not one exploded. The American forces in the firing line at San Juan and El Caney scarcely exceeded 12,000.

of Gen. Wheeler's division. The two other batteries were brought up and placed in position near Grimes, whence could now be directed a heavier fire on the Spanish trenches. Gen. H. M. Duffield's brigade, consisting of the Thirty-third and Thirty-fourth Michigan and a Massachusetts regiment, captured the outpost of Aguadores on the same afternoon. Spanish prisoners taken at El Caney, who were fed and sent back to Siboney, had been impressed with the fear that they would be shot if captured, which probably was the cause of their desperate fighting there, keeping Gen. Lawton's troops busy throughout most of the day, whereas he had expected to carry the position in two or three hours. The American lines were arranged in their new positions and strengthened with fresh troops during the night. In the morning of July 2 the battle was renewed by the Spaniards, who began

THE TOWN OF EL CANEY THE DAY AFTER THE BATTLE.

The victors at El Caney did not rest after their exertions, but marched through the mud to join hands with Gen. Kent's division. Already the Americans were in possession of the entire row of hills along the San Juan river, a mile and a half from Santiago. The American advance had been hurried by reason of the intelligence obtained through Cuban scouts that 8,000 of Gen. Pando's troops were marching to the support of the Santiago garrison. Gen. Garcia's Cuban forces were posted on the road leading from the west, but they were not strong enough to hold in check such a body of Spanish regulars. When night fell Gen. Shafter's troops held the main redoubts in the Spanish outer line of defenses and approached within three-quarters of a mile of the city walls. The Spaniards evacuated only those positions that the Americans took by hard fighting, and still held others of equal strength. While the cavalry division and Gen. Kent's division intrenched themselves securely, Gen. Bates took up a position on the left. Gen. Lawton moved round in the rear to the right

firing from trenches just outside of Santiago as soon as it was light, and drawing but a feeble reply from the Americans, who were safe behind earthworks, made vigorous assaults on Kent's and Wheeler's divisions, which these repelled without stirring from their works. Gen. Lawton on the right made a further advance and gained commanding positions. Nevertheless, so exhausted and depressed were officers and men by two days of fighting, and so alarmed by reports that the enemy had placed siege guns in positions to enfilade the American lines or take them in reverse, and by the belief that the bush on both sides of the road was filled with sharpshooters, which arose from the fact that the long-range Mauser rifles hit and killed men going or coming along the road for at least a mile in the rear of the American line, that many officers importuned the commanding general to order a retreat. A heavy rainfall gave rise to the further fear that the roads would become impassable to the provision trains. Accordingly, Gen. Shafter called a council of the division commanders and discussed

with them the arrangements for a withdrawal. He ordered them to remain in the positions then held for another day, at the end of which they would hold another conference. That night the troops were dismayed afresh by a lively fire of musketry, which occasioned a belief that the Spaniards were trying to break through the lines. Gen. Shafter cabled to the Secretary of War that he was seriously considering a withdrawal of his forces to high ground about 5 miles in the rear. Santiago he found so well defended that he feared he could only take it with serious loss of life, and he must have re-enforcements. While waiting for them he was afraid he could not supply his army in its present advanced position. The Secretary cabled in reply that he desired him to hold the San Juan heights if possible, though he would leave the matter entirely to the judgment of Gen. Shafter. Gen. Miles, who had another expedition already organized at Tampa for the invasion of Puerto Rico, telegraphed to Gen. Shafter that he would be with him in a few days with re-enforcements, which were immediately sent forward. Gen. Shafter had determined to demand the surrender of Santiago before either retreating or advancing. After the first day's battle he asked Admiral Sampson to force the entrance of the harbor and attack the city with the fleet in order to avoid further sacrifice of life in the army. The admiral explained that he was deterred from making such an attempt by the mines in the channel, which would probably cause the destruction of one or more of his ships, rendering the position of both fleet and army more difficult; that if the land forces had attacked the shore batteries in the rear and reduced them he would be able to raise the mines and take his ships inside, but without that the army would have to wait until he could try countermining. He had the apparatus and would make the attempt if Gen. Shafter desired, but it would take a long time. A conference was appointed for the next morning. While Admiral Sampson was steaming up the coast to Siboney for the purpose of going to Gen. Shafter's headquarters at El Pozo in the morning of July 3, Admiral Cervera made his desperate dash out of Santiago harbor. Lest the enemy should evacuate the city, Gen. Shafter had extended his line round to the north and then to the west, so that with the left flank resting on Santiago Bay he had the Spaniards shut in on every side, but with a line perilously attenuated until a re-enforcement of 6,000 men arrived a week later. Siege guns, however, came up and were placed in position, also the re-enforcements of field artillery, and intrenchments were rapidly thrown up by the infantry. In the morning of July 3 there was firing of infantry on both sides, with more heart on the part of the Americans, with less on the part of the Spaniards, who yielded some ground. The siege line was thus drawn closely round the city when the Spanish admiral made his attempt to run the gantlet of the blockading fleet, taking with him some of the guns that had done good execution on the investing troops. The issue of the naval battle greatly altered the military situation. Already on the same morning Gen. Shafter had sent a flag of truce into Santiago demanding the surrender of the town and its garrison before 10 o'clock the next day, on pain of bombardment, and asking the commanding general of the Spanish forces to notify the citizens of foreign countries and women and children to leave the city. Gen. José Toral, on whom the Spanish command devolved, Gen. Linares having been wounded at San Juan, refused to surrender. At the request of the foreign consuls Gen. Shafter agreed to postpone shelling the city for a day, in order that foreigners might be brought into places of safety beyond the American

lines. They asked if the non-combatants would be allowed to take refuge in El Caney, and begged the American general to supply them with food there. Since the imperfect transportation made it impossible to feed the troops sufficiently, the task of supplying 20,000 more people at a point 15 miles from the base was one that Gen. Shafter was unwilling to undertake on his own responsibility. He telegraphed to Washington, and received the approval of the President to his plan of opening the battle on July 5. The whole civil population of Santiago trooped out, their fears being quickened by a terrific cannonading that was heard at the mouth of the harbor, which they believed to be the American fleet forcing an entrance. It was caused by the attempt of the Spaniards in the night of July 4 to block the channel by sinking the "Reina Mercedes," which drew the fire of the American ships. She was sunk by her own crew at the designated place, but, like the "Merrimac," failed to close the passage, for the reason that a shot severed one of the anchor chains, causing her to swing round to one side. At a conference on July 5 with Capt. Chadwick, representing Admiral Sampson, it was agreed that the army and navy should make a joint attack on Santiago at noon on July 9. A truce was arranged till that date, when Gen. Shafter repeated his demand and the threat of bombardment. Gen. Toral offered to evacuate the city on condition that his troops were allowed to march out with all their arms; but Gen. Shafter insisted on unconditional surrender, which was refused. In the afternoon of July 10 the Spaniards opened a vigorous fire with musketry and field pieces. The American artillery returned the fire with telling effect, while the infantry kept under cover of their trenches, firing but little. The infantry fire of the Spaniards also lagged, and their men kept hidden behind their breastworks. The American casualties were only 3 men wounded. Before the firing ceased in the evening all the Spanish artillery had been silenced except one gun. The navy had promised to throw 8-inch and 10-inch shells into the city for twenty-four hours, and, if this did not prove effective, to force an entrance with the smaller vessels. Accordingly, the ships continued firing on the morning of July 11. Some of the shells fell within the city, but did little damage, as the houses were of stone, and when in one or two instances fires were started they were quickly extinguished. The army fired only a few shots from the field guns on this second day, and the infantry kept quiet. In the afternoon another truce was arranged as a preliminary to negotiations for surrender. The archbishop and the citizens, as well as the consuls, urged Gen. Toral to capitulate. After the arrival of Gen. Miles, on July 12, Gen. Toral met him and Gen. Wheeler to discuss terms, and on July 17 the terms were finally settled. The Spanish general agreed to surrender the province of Santiago and all the Spanish troops within its boundaries, except 10,000 at Holguin. The Spaniards were to come to Santiago and to surrender all arms. The guns and fortifications of Santiago and other fortresses were to be turned over to the Americans in good condition. The Spaniards were to co-operate in destroying sunken torpedoes. The American medical corps was to give its services in taking care of Spanish sick and wounded, and the American Government promised to transport back to Spain the surrendered troops, about 22,000 in number. When Gen. Shafter entered Santiago he found such an entanglement of defensive works that, had the Spaniards offered the same resistance as on the first day, it would have cost 5,000 American lives to reduce the place. The actual American losses in the three days of fighting were 22

officers and 208 men killed, 81 officers and 1,203 men wounded, and 79 missing—1,593 in all. Gen. Lawton lost 410 men at El Caney, Gen. Kent 859 at San Juan, and Gen. Wheeler 285. The Spanish losses were Brig.-Gen. Joaquín Vara de Rey, 3 commanders, 12 officers, and 78 men killed, Col. José Baquero, 4 officers, and 116 men missing, and Gen. Linares, Lieut.-Gen. Arsenio Pombo, 6 commanders, 30 officers, and 339 men wounded—total, 593.

Destruction of Cervera's Fleet.—With the coast of Cuba blockaded, Santiago invested, and Manila at the mercy of Admiral Dewey, the Spanish Government, threatened by Republican and and Carlist revolutionaries, and looking forward to speedy bankruptcy, saw no chance of redressing the disasters of the war unless by a lucky stroke of

"New York," had gone up the east coast to hold a conference with Gen. Shafter, so that the command devolved upon Commodore Schley on the "Brooklyn." The fleet had standing orders, in case the enemy attempted to elude the blockade, to close in toward the harbor entrance and attack. The trail of smoke rising above the hills gave warning of the approach of the Spanish vessels as they came down the bay. Commodore Schley signaled to clear for action and close up. As soon as the nose of the "Maria Teresa" was discerned, the "Brooklyn" rushed inshore to head her off, and when she and the "Vizeaya" turned westward Commodore Schley, signaling that the enemy was escaping, turned in a wide circle eastward, southward, and westward, and took a parallel course, followed by the "Texas,"

THE WRECK OF THE "CRISTOBAL COLON."

Admiral Cervera. If he could only succeed in breaking through the American fleet off Santiago and gaining Havana harbor, the reviving hopes of the Spanish people and the nervous fears of the Americans might change the issue of the war. Orders were sent to Admiral Cervera from Madrid to make a dash out of Santiago Bay at the first favorable moment. As he foresaw nothing but the annihilation of his squadron as the result of such an attempt, he would not obey until, when the Americans had taken the outworks of Santiago and were planting guns within easy range of the city, the command came from Gen. Blanco in the most peremptory and definite form. On July 3, in the morning, the Spanish ships steamed past the sunken wreck of the "Merrimac," and when they emerged from the harbor's mouth turned their head westward in the direction of Havana. The "Maria Teresa" came first, flying the admiral's flag, then the "Vizeaya," "Colon," and "Oquendo" in order. If he could sink or disable the "Brooklyn," Admiral Cervera hoped that his ships would show their heels to the rest of the fleet. Admiral Sampson, on the

"Iowa," and "Indiana," all firing their heavy guns. The "Oquendo" took fire from one of the first shots of the "Oregon" or the "Texas," but tried to keep on her course, until, riddled with projectiles, disabled, sinking, with half her crew killed, she turned her head to the beach. The "Maria Teresa" was already out of the fight, having been struck by a 12-inch shell from the "Iowa," which exploded one of her magazines and left her a total wreck, only able to run ashore not seven miles from the entrance of the harbor and half a mile nearer than the spot where the "Oquendo" was beached a few minutes later. The destroyers "Terror" and "Pluton" stole out of the harbor in the wake of the cruisers, watching for an opportunity to approach the American battle ships. They were descried by Lieut.-Commander Richard Wainwright, of the converted yacht "Gloucester," who ran in to meet them under the guns of the shore batteries, and the battle ships at the same time turned their 6-pounder and rapid-fire guns upon the torpedo craft. A shell exploded on the "Pluton," causing her to sink instantly, after which the "Gloucester" en-

gaged the "Terror" at short range and riddled her with shot until she fled, crippled, for the shore, but struck a reef. The "Vizeaya" and "Colon" led the American ships a race, and the "Iowa" and "Indiana," which had done magnificent execution with their guns hitherto, were left behind. The "Brooklyn" led in the chase, keeping steadily on the "Vizeaya's" quarter, and drew nearer and nearer until she was able to exchange broadsides with the Spaniard. The "Oregon," running closer in, gradually got up a full head of steam, and closed up the distance until the 6-inch guns found their range and landed shell after shell in the cruiser's hull and superstructure. Badly crippled and burning forward and aft, she turned sharp inshore opposite Assaderos, hauled down her colors, and ran

the sinking ships by the boats of the American war vessels and were made prisoners of war and brought to the United States. So poor was the Spanish gunnery that George H. Ellis, chief yeoman of the "Brooklyn," was the only American killed, and only 3 were wounded, and the vessels escaped with scarcely a mark of the combat. Among the Spanish dead was the second in command, Commodore Villamil. Capt. Lazago of the "Oquendo" blew out his brains at the moment of beaching his ship. The "Maria Teresa" was struck 28 times, the "Oquendo" 62, the "Vizeaya" 66, the "Colon" 7 times, but in no instance was side armor penetrated. Of the 12-inch shells, 2 took effect on the "Teresa," with 8-inch shells 55 hits were made; but the greatest destruction was wrought by the rapid-fire

6-pounders, with which 79 effective shots were made. No 13-inch shell struck a Spanish ship.

Admiral Cervera knew that his fleet was doomed before he crossed the ocean, and had informed the Spanish Admiralty that with a short coal supply, defective machinery, and damaged ammunition, and with many of the guns on all the ships defective and useless, and no guns in the turret of the "Colon," the only thoroughly protected ship, his vessels were scarcely able to go to sea, and were altogether unfit for fighting. When the fleet steamed out of Santiago harbor all the officers, who obeyed orders without a murmur, expected nothing but death; yet they manœuvred their vessels in the difficult channel under the fire of the American fleet with the utmost skill, and as soon as they turned into the open sea worked their broadsides as well as they could with useless charges and guns that wounded their own men.

The Cadiz Squadron.—

When the insurgents invested the city of Manila and were entering the suburbs, so that Gen. Augustin sent word that he could not hold out much longer, the Spanish Government, spurred by popular clamor, made preparations to send reinforcements of troops with the reserve fleet of Admiral Cámara, in hope of wresting the naval control of the Philippines from the Americans and re-establishing Spanish authority over the natives.

This squadron consisted of the "Pelayo," the armored cruisers "Carlos V," "Alfonso XIII," and "Victoria," the auxiliary cruisers "Rapido," "Patria," "Alfonso XII," "Buenos Aires," and "Antonio Lopez," the "Normannia" and "Giralda," two Hamburg-American liners fitted out as cruisers, the "Audaz" and "Proserpina," the destroyers "Proserpine," "Osada," and "Colombia," and 3 torpedo boats. The new torpedo-boat destroyer "Destructor," accompanied by 3 torpedo boats, made a cruise in the Mediterranean with the object of capturing American pleasure yachts. Cadiz and other Spanish harbors had their fortifications greatly strengthened and mounted with powerful guns, and the channels planted with torpedo mines. The coasts of the Balearic Isles were

WRECK OF THE "OQUENDO."

upon the beach. The "Colon" kept on her way, chased by the "Brooklyn" and "Oregon," with the "Texas" behind them, and on her two quarters the "New York" and the little "Vixen." The chase lasted two hours before the "Brooklyn" drew within range, and then the "Oregon" and both ships opened fire with their heavy guns on the cruiser that was bent only on flight. The shots were so effective that the Spanish commander hauled down his colors and ran his ship upon the beach, 50 miles from Santiago harbor. Admiral Sampson, whose ship had signaled to close in at the first sound of battle and moved toward the scene with all possible speed, but arrived too late to take an active part in the battle, received the sword of Admiral Cervera. One third of the Spanish crews were killed or drowned. The remainder, 1,200 in number, made their way to the shore or were taken off

also fortified, and at Teneriffe 7,000 troops worked for weeks throwing up bastions and breastworks. The military expedition to be conveyed by the fleet to the Philippines numbered 11,000 men. Toward the end of June Admiral Cámara set out on the voyage for the Philippines. Whether with his defective ships he could make the cruise, whether his setting out was only a feint, was known only to the Spanish authorities. Orders were published in the United States for Commodore John C. Watson to proceed in all haste with a division of the fleet to harass the coast of Spain. This was indeed a ruse to procure the recall of Cámara's ships, for not one of Admiral Sampson's seven armored vessels could be spared from the more important service of keeping Admiral Cervera's division confined in Santiago harbor. The monitors "Monterey" and "Monadnock," however, were dispatched across the Pacific, so that if Admiral Dewey were compelled to leave Manila Bay on Cámara's approach he could join the monitors, return later, and effectually give battle to the Spanish armored fleet, thus restoring the previous conditions. Admiral Cámara's vessels reached the Suez Canal in very poor condition, and, after a controversy with the Egyptian Government, which refused to let them take on coal for hostile purposes in violation of the neutrality laws, took their laboring course back to Spain.

Operations in Puerto Rico.—The conquest of Puerto Rico was undertaken by Major-Gen. Nelson A. Miles, commanding general of the army, who had a complete plan of campaign ready, but could not carry it out until the fall of Santiago set free some of the seasoned troops. He set out from Guantanamo Bay on July 20 with the advanced guard of 3,415 officers and men, consisting of the re-enforcements that he had brought to Gen. Shafter's army at Santiago. The primary objective was Ponce, on the opposite side of the island from San Juan, the principal stronghold where the Spanish forces were massed. He did not, however, venture an immediate descent upon the fortified and presumably well-defended southern port. The navy made a feint of attacking it, and another demonstration at San Juan, and the Spaniards were induced to guard Fajardo and other supposed points of debarkation, while the troops were landed on July 25 in the neighborhood of Ponce at Guanica, opposed only by a small force in a blockhouse. On the following day they advanced to Yauco, and after a sharp encounter seized the railroad running into Ponce. On July 28 the "Dixie," "Annapolis," "Wasp," and "Gloucester" arrived with transports off Ponce, which was surrendered without a struggle, the Spanish garrison and officials retiring toward San Juan, while the people of the town welcomed the Americans. If the Puerto Ricans had not been disappointed and deceived by the Spanish Government like the Cubans, exasperated by false and illusive promises of reform and home rule, the difficulties of the expedition would have been greater. As it was, Gen. Miles had to plan the conquest from a sea base of a country in the possession of an enemy having at first superior forces, 8,233 Spanish regulars and 9,107 volunteers, and for the success of his operations he was obliged to depend mainly, not on the skillful and fearless soldiers of the regular army who broke through the defenses at Santiago, but upon inexperienced volunteers. The fresh detachment of troops was landed at Ponce on July 29, and while a column proceeded toward the important inland town of Guayama the third and last section of the invading army debarked on Aug. 2 at the neighboring seaport of Arroyo, which had surrendered to the navy on the preceding day. The entire expedition consisted of the Eleventh and Nineteenth Regular Infantry, Second and Third Wisconsin,

Sixth Massachusetts, Third and Sixth Illinois, Fourth and Sixteenth Pennsylvania, Fourth Ohio, First Kentucky, two companies of the Twenty-seventh Indiana, one troop from the Second and one from the Sixth United States Cavalry, two militia troops from New York and one from Philadelphia, four batteries of the Fourth, two of the Third, two of the Fifth, and two of the Seventh Artillery, one company of the Signal Corps and two companies of United States Engineers. The total strength was 16,973 officers and men. With this force Gen. Miles planned to occupy the remaining ports and the highways and towns of the interior, driving the Spanish troops back upon San Juan, which was closely blockaded by the fleet. From Ponce and Guanica, around by the west coast, were the ports of Mayaguez and Aguadilla, the two connected by a railroad, and on the north coast Arecibo, whence a railroad leads to San Juan. From Guayama the way to San Juan was northward across the island. Major-Gen. John R. Brooke, commanding at Arroyo, sent Brig-Gen. Peter C. Hains with two regiments of volunteers to occupy Guayama, which was accomplished with slight opposition on Aug. 5. The enemy had taken up a strong position 3 miles beyond on the road to Cayey, and was found in too great force to warrant an attack by the advance guard, which intrenched itself at Guayama until Gen. Brooke could bring up the main body of his division.

A column under Brig-Gen. Theodore Schwan made a rapid advance from Yauco in the direction of Mayaguez and Aguadilla with a column consisting of the Eleventh Infantry, a troop of the Fifth Cavalry, and batteries of the Third and Fifth Artillery. Setting out on Aug. 8, he occupied Sabana la Grande and San German on Aug. 10, and proceeded to attack the enemy in the hills near Hornigueros. With a swift charge under heavy fire, the Americans carried the strong position with a loss of only 1 killed and 15 wounded, putting to flight 1,200 Spaniards, who lost 4 officers and 20 men killed and 50 wounded. Gen. Schwan marched into Mayaguez, which was undefended, the next morning, and immediately moved on toward Aguadilla. On Aug. 13 he repelled an attack by 1,500 of the enemy near Rio Canas, suffering no losses. Operations then ceased, as he was able to inform the Spanish commander on the following day that an armistice had been concluded between the two nations.

Major-Gen. James H. Wilson commanded the second division, with headquarters at Ponce. Brig-Gen. Roy Stone set out on Aug. 1 with a company of the Second Wisconsin Volunteers and a detail from the Signal Corps, for the purpose of reconnoitering the route to be followed by the brigade of Gen. Guy B. Henry, who was instructed to clear the road across the island to Arecibo and there effect a junction with Gen. Schwan, so that the united forces could execute a flank movement on San Juan and menace the rear of the Spanish forces contesting Gen. Wilson's advance along the main military road through the hills about Aybonito, cutting off their retreat and compelling them to surrender if they should not hastily abandon their positions of strength and fall back on San Juan. When Gen. Stone's little party approached Adjuntas, a town in the hills where the roads from Ponce and Yauco unite in a single road leading down to Arecibo, the garrison of 400 Spanish regulars retired northward, leaving 100 volunteers in the place, who promptly surrendered to the Americans. The enemy continued to retreat before him, as Gen. Stone pushed on to Utuado and beyond, accepting the surrender of the villages through which he passed, until he finally found himself in front of Arecibo. In re-

sponse to a demonstration, the inhabitants of that place offered to surrender, but he was too prudent to take possession with his feeble force. Gen. Henry followed with his column of troops to occupy the places that had been willingly surrendered to the reconnoitering party from which the Spaniards ran away. Gen. O. H. Ernst's brigade of Gen. Wilson's division encountered opposition in its advance by the main military road. Leaving Juan Diaz, 13 miles from Ponce, on Aug. 4, it took Coamo on Aug. 9 after a short but sharp engagement, in which the Spaniards lost their commander and many soldiers and the Americans had 6 men wounded. Near Aybonito the enemy was found intrenched on the hills commanding the pass through the mountains. Gen. Wilson brought up re-enforcements, and after Capt. Potts had shelled the position of the Spaniards, who replied with artillery and musketry fire, killing 1 man and wounding 1 officer and 4 men, more advantageous ground was gained for the artillery, which was about to resume the battle on the following day, Aug. 13, when news of the armistice reached the front and hostilities ceased. A simultaneous advance was made from Arroyo by Gen. Brooke, who marched on Aug. 12 with the main body of his troops to Guayama and moved up the enemy's intrenched position in the hills near Cayey in the afternoon of the same day. Just as the dispositions for the attack were completed and the guns were about to open fire orders came to stop all operations. Not one of the movements in Gen. Miles's well-conceived strategic plan was brought to completion, yet every manœuvre as far as it had gone had been carried out swiftly, smoothly, and harmoniously, precisely as was intended. Gen. Miles had kept the Spaniards in a state of uncertainty, and while they were withdrawing along the line of the great military road, destroying bridges behind them to obstruct the road and fortifying strong positions in the mountain passes, they were surprised to see one column of the Americans sweeping round to the west and capturing the principal towns, while another made its way over a mountain trail that was believed to be impassable. Suddenly a strong brigade of Americans appeared near the northern coast at the terminus of the railroad connecting San Juan and Arecibo. The brilliant campaign was already virtually won, and in a few days more all the columns would have been closing in upon San Juan. The positions gained by the United States forces in less than three weeks had rendered every Spanish post untenable outside of San Juan. The Spaniards had been defeated in six engagements, leaving a large part of the island in the control of the United States troops, who by skillful tactics and good generalship had achieved this with a loss of 3 killed and 40 wounded, about a tenth of the enemy's loss in killed, wounded, and captured.

Actions at Manzanillo and Nipe.—After the destruction of Cervera's squadron and the surrender of Santiago, the blockading vessels were at liberty to push the war at other points of the coast with less restraint. Admiral Sampson ordered the flotilla blockading Manzanillo to go in and destroy the shipping there. Under the command of Commander Chapman C. Todd the gunboats "Wilmington" and "Osceola" and the auxiliary vessels "Scorpion," "Hist," "Hornet," "Wompatuck," and "Osceola" steamed boldly into the harbor on the morning of July 18 and opened fire upon the Spanish shipping. Several Spanish gunboats came out to meet them, firing briskly but without accurate aim. After two hours and a half the American vessels withdrew, having sunk 3 Spanish gunboats and driven 2 ashore in a disabled state, and destroyed 3 transports without a single casualty on their side nor any injury to the vessels.

On July 21 the "Annapolis," "Topeka," "Wasp," and "Leyden," under the orders of Commander John J. Hunker, entered the harbor of Nipe on the northeast coast of Cuba for the purpose of capturing it as a base of operations for the Puerto Rican campaign. As the result of a lively bombardment for an hour the three forts were silenced, the Spanish gunboat "Jorge Juan" was sunk, the Spanish infantry who fired upon the vessels from various points of vantage were driven away, and the Americans were left in possession of the harbor. The ships received no damage, and not a man was hurt.

The Taking of Manila.—The United States Government, after Commodore Dewey's victory, decided to carry on an aggressive military campaign in the Philippines, and to send 12,000 troops to occupy Manila. Major-Gen. Wesley Merritt was assigned to the command of the expedition and appointed Military Governor of the Philippines. The troops of his command, consisting of volunteers from States and Territories west of the Mississippi, and regulars stationed on the Pacific coast, were ordered to a training camp at San Francisco. Gen. Merritt asked for a larger force and one consisting to a great extent of regulars. The first expedition under Brig.-Gen. Francis V. Greene, numbering 158 officers and 3,428 men, sailed from San Francisco on May 25 and arrived at Manila on June 30. Brig.-Gen. T. H. Anderson followed with another force on June 3. The United States troops occupied a line of intrenchments in front of Malate, the center of the Spanish position, with their left flank resting on the sea and their right covered by the insurgent forces, who infested the eastern and northern sides of the city completely, and were armed with the weapons they had taken from Cavité arsenal and some that they had imported, in addition to those that the volunteer regiments organized among the natives by Gen. Augustin had taken over to the insurgents when they deserted. The American commanders never had recognized them as allies, and were anxious to have a sufficient force on the spot, not only to compel the surrender of Manila, which the ships might have accomplished by a bombardment, but to oppose Aguinaldo's forces if necessary and prevent them from taking and sacking the city. Gen. Merritt arrived with the third expeditionary force under Brig.-Gen. Arthur McArthur on July 31, and on Aug. 4 the monitor "Monterey" joined the fleet, having heavier guns than the 10-inch Krupps that the Spaniards had mounted on the sea front. While waiting behind the breastworks the Americans had repeatedly been subjected to harassing night attacks. Immediately after the American troops occupied the trenches on the sea side, which the insurgents had been induced by clever negotiation to yield up, and found themselves for the first time immediately in front of the Spanish lines, an assault was made on July 28 upon both flanks and in front by 3,000 Spanish, who demoralized the Tenth Pennsylvania by a cross fire and had begun to throw into confusion a battery of Utah volunteer artillery, when a battery of the Third Regular Artillery was brought up by Lieut. Krayenbuhl and Lieut. Kessler, which checked the Spaniards as they were sweeping before them a battalion of the Pennsylvanians that was moving across an open space to re-enforce the right flank. Gen. Greene hastened to the scene, and with another battery of artillery turned the tide of battle and drove the Spaniards to cover. Capt.-Gen. Augustin who had frequently declared that he would resist to the death, when he saw that he could not save the Philippines for Spain, resigned his authority on July 24 into the hands of Gen. Fermin Jandenes, and with the permission of Admiral Dewey sailed away on a German man-of-war. With Gen. McArthur's division the

American troops numbered more than 11,000. The Filipinos had been restrained from assailing the city with great difficulty by the able diplomacy of Admiral Dewey. This danger and the impatience and uncomfortable situation of his own troops rendered imperative the speedy action of Gen. Merritt, now that his force was strong enough to police the city as well as to capture it. On Aug. 7 Gen. Merritt and Admiral Dewey gave notice to Capt.-Gen. Jaudenes that they might begin operations within forty-eight hours, and when in his reply he expressed solicitude for the sick, wounded, women, and children, they appealed to him to surrender as a course as honorable as it was humane in view of the hopelessness of the military situation. He asked for time to consult his Government, but such delay they declined to grant. In the meantime both sides were making every preparation for battle. The commanders had no knowledge that the two governments had concluded a truce. The attack was delayed beyond the time set in the ultimatum to give Gen. Merritt time to extend his line around to the east so as to save and guard the bridges against the insurgents who were bent on plunder and vengeance against the Spaniards. The intended attack was carefully kept from their knowledge. The Spaniards were unwilling to yield up the defenses of the city without a contest and yet were anxious to have the Americans in possession before the insurgents on the other side could force their lines. They understood that Admiral Dewey would not shell the city itself if the forts of the walled town kept silent, and they intended to capitulate after the Americans broke through the outer line of defenses, having a circumference of 10 miles around the city. In the morning of Aug. 13 the fleet, consisting of the "Charleston," "Baltimore," "Boston," "Concord," "Monterey," "Olympia," "Raleigh," "Petrel," and the captured "Callao" and "Barcelo," bombarded the fortifications of Malate, and after many shells had fallen in the water found the range in spite of a heavy mist and rain. Shells exploded inside of Fort San Antonio de Abad, setting fire to ammunition and stores. Simultaneously the Utah battery played on the breastworks. The Colorado regiment advanced before the bombardment had ceased, firing volleys, which were answered by the noiseless Mausers, and an hour and a half after the first shot they had possession of the fort. Followed by the California troops they drove the Spanish infantry out of their intrenchments, rushed the Malate barricades, fought from house to house, and reached the Luneta and esplanade, when a white flag was raised. The insurgents had opened fire before the Americans and were advancing upon the town from the opposite side passing by Gen. McArthur's troops, which had been extended far to the right to hold them in check. When Gen. Greene found bodies of insurgents entering the city he drove them back. In the confusion some of the Spaniards continued to fire upon the Americans after the signal of surrender was displayed. On the right the Astor Battery, eager for the fight, attacked the Spanish blockhouses, and when Gen. McArthur ordered an advance the Spaniards were driven from their barricades, but not without inflicting some losses. The total losses of the Americans in the engagement were 5 killed and 45 wounded.

The city and the Spanish troops capitulated with the honors of war, and the Americans placed a strong guard in all parts of the city to protect them and the citizens from the insurgents. Gen. Merritt, as Military Governor, issued a proclamation in which he assured the people of the islands that he had not come to wage war upon them nor upon any faction among them, but to protect them in

their homes, their employments, and their personal and religious rights; that the municipal laws, so far as they were compatible with military government, would remain in force; that the port of Manila would be open to the people of all neutral nations, as well as to the American people, upon the payment of the established rates of duty; and that no persons would be disturbed in their persons or their property so long as they preserve the peace and perform their duties toward the representatives of the United States.

Additional re-enforcements were sent to the Philippines in the middle of August. Major-Gen. Elwell S. Otis took the chief military command, allowing Gen. Merritt to devote all his attention to political and administrative problems. The total force numbered 641 officers and 15,058 enlisted men. It comprised the Fourteenth, Eighteenth, and Twenty-third Infantry, First California, First Nebraska, Tenth Pennsylvania, First Wyoming, First Idaho, Thirteenth Minnesota, First Colorado, First Washington, First South Dakota, First Tennessee, Twentieth Kansas, Fourth Cavalry, first troop of Nevada cavalry, four heavy batteries of the Third Artillery, two light batteries of the Sixth, the Astor Battery, four companies of California Artillery, two batteries of Utah Artillery, one company and one detachment of United States Engineers, and detachments of the Signal and Hospital Corps.

Gen. Merritt appointed Gen. McArthur Military Commandant of Manila, Gen. Greene Provost Marshal, Col. Smith (who was succeeded later by Brig.-Gen. C. A. Whittier), Director of Fiscal Affairs, and Capt. Glasspert Collector of Customs. Gen. Anderson was appointed commandant at Cavité. Gen. Elwell S. Otis was assigned to the command of the United States troops in the Philippines.

Peace Negotiations.—On July 26 Jules Cambon, French ambassador, to whom the interests of Spain had been committed when diplomatic relations were broken off, was instructed to inquire if peace negotiations could be opened. The President replied to the French note on July 30, with a statement of the preliminary conditions that the United States would insist upon as a basis of negotiations. The President did not for the moment put forward any claim for a pecuniary indemnity, but required the relinquishment of all claim of sovereignty over or title to the island of Cuba, as well as the immediate evacuation of that island; the cession to the United States and immediate evacuation of Puerto Rico and other islands under Spanish sovereignty in the West Indies, and the like cession of an island in the Ladrões. The United States would occupy and hold the city, bay, and harbor of Manila pending the conclusion of a treaty of peace, which should determine the control, disposition, and government of the Philippines. If these terms were accepted by Spain in their entirety, the United States would name commissioners empowered to meet commissioners appointed on the part of Spain for the purpose of concluding a treaty of peace on this basis.

A protocol of agreement was signed by Secretary Day and Ambassador Cambon on Aug. 12, containing the following articles embodying a basis for the establishment of peace between the two countries.

ARTICLE I.—Spain will relinquish all claim of sovereignty over and title to Cuba.

ART. II.—Spain will cede to the United States the island of Puerto Rico and other islands now under Spanish sovereignty in the West Indies, and also an island in the Ladrões, to be selected by the United States.

ART. III.—The United States will occupy and hold the city, bay, and harbor of Manila pending

the conclusion of the treaty of peace, which shall determine the control, disposition, and government of the Philippines.

ART. IV.—Spain will immediately evacuate Cuba, Puerto Rico, and other islands now under Spanish sovereignty in the West Indies; and to this end each Government will, within ten days after the signing of this protocol, appoint commissioners, and the commissioners so appointed shall, within thirty days after the signing of this protocol, meet at Havana for the purpose of arranging and carrying out the details of the aforesaid evacuation of Cuba and the adjacent Spanish islands, and each Government will, within ten days after the signing of this protocol, appoint other commissioners who shall within thirty days after the signing of this protocol, meet at San Juan, in Puerto Rico, for the purpose of arranging and carrying out the details of the aforesaid evacuation of Puerto Rico and other islands now under Spanish sovereignty in the West Indies.

ART. V.—The United States and Spain will each appoint not more than five commissioners to treat of peace, and the commissioners so appointed shall meet at Paris not later than Oct. 1, 1898, and proceed to the negotiation and conclusion of a treaty of peace, which treaty shall be subject to ratification according to the respective constitutional forms of the two countries.

ART. VI.—Upon the conclusion and signing of this protocol hostilities between the two countries shall be suspended, and notice to that effect shall be given as soon as possible by each Government to the commanders of its military and naval forces.

The naval and military commanders on both sides were ordered to cease hostilities, and the blockade of Cuba was discontinued.

The expenditures for the army during the war were estimated at \$78,500,000; for the navy, \$36,000,000; total, \$114,500,000. The army lost 33 officers and 257 men killed in battle; 4 officers and 61 men died from wounds, and 80 officers and 2,485 men from disease; total, 2,910 out of 274,717 officers and men in the service. The casualties in the navy were 18 killed in battle, 29 from injuries received, 1 drowned, and 56 from disease.

The arms surrendered at Santiago included 16,902 Mauser, 872 Argent, and 6,118 Remington rifles, 1,247 carbines, 4,651,000 rounds of small-arm ammunition, 30 bronze, 10 iron, and 8 steel rifled cannon, 5 mortars, 44 smooth-bore cannon, 3,551 solid shot, 437 shrapnel, and 2,577 shells. The vessels sunk by Admiral Sampson's squadron off Santiago were the armored cruisers "Cristobal Colon," "Vizcaya," "Maria Teresa," and "Almirante Oquendo," and the destroyers "Furor" and "Pluton." The gunboats "Maria Ponton," "Delgado Perado," "José Garcia," "Cuba," and "Española" were burned, and the transport "Gloria" sunk at Manzanillo on July 18. Admiral Dewey's squadron sunk in the battle of Cavité the cruisers "Reina Christina," "Castilla," "Ulloa," "Isla de Cuba," "Isla de Luzon," and "General Lezo," the gunboats "Duero," "Correo," and "Velasco," and one transport. Of the ships sunk at Manila the "Isla de Luzon," "Isla de Cuba," and "Don Juan de Austria" were raised and repaired by the skill of Naval Constructor G. W. Capps, and now belong to the American navy. The naval vessels captured in the Philippines were the torpedo boat "Barcelo," the iron gunboats "Leyte" and "Callao," the wooden gunboat "Mindanao," the iron transport "Manila," and the tugs "Rapido" and "Hercules." Lieut. Hobson raised the "Maria Teresa," but she was driven in a storm upon a reef off Cat island while being towed to the United States. The gunboat "Sandoval," sunk in Guantanamo harbor, was

raised by Commander McCalla. The steel gunboat "Alvarado" was captured at Santiago. The other vessels taken in Cuban waters were the gunboats "Hernan Cortez," "Pizarro," "Vaseo Nuñez," "Diego Velasquez," "Alerta," "Ardilla," "Tradera," "Flecha," "Ligera," "Satellite," "Margarit," "Vigia," "General Blanco," "Intrepida," and "Canto," each of about 300 tons.

Administration of the Army.—The condition of the United States troops became pitiful after the surrender of Santiago. Several cases of yellow fever had developed in camp during the investment. The endemic malarial fever, frequently mistaken for yellow fever, spread rapidly through the ranks while the men were in the trenches, finding them in an extremely susceptible condition, owing to their privations and fatigues, their lack of proper and sufficient food, of preventive medicines, and of clothing and shelter sufficient in the tropical rains. The refugees who came out of Santiago when the place was threatened with bombardment numbered nearly 20,000 persons, and carried infection into the camps. When Gen. Miles reached the front he ordered the town of Siboney, where a general hospital had been established, into which the sick refugees, some of them infected with yellow fever, were admitted, to be burned to the ground. From the refugees the fever spread to the army camps, and the swamp fever and typhoid caused even more mortality among the soldiers. Secretary Alger had given instructions to have the troops moved back into the mountains, to remain in camp there until the yellow fever had run its course among them. Some of them began the toilsome march, though the conditions were found to be fully as unsanitary in the hills as near the coast, and Col. Roosevelt, of the Rough Riders, assumed the responsibility of protesting against the policy of the War Department. He informed Gen. Shafter that not ten per cent. of the troops were fit for service, and that the army was likely to perish if it was kept in camp in Cuba after the privations and exposure it had undergone. All the division and brigade commanders united in signing a round robin saying that the army must be moved to save the lives of the soldiers, and this document was given to the press. Gen. Miles also urged the return of the army to the United States as quickly as possible. Secretary Alger thereupon issued orders to have the troops taken to a camp prepared for them at Montauk Point, Long Island, instructing Gen. Shafter at the same time that no more reports must be divulged without the authorization of the War Department. The regiments of immunes alone were left to garrison the surrendered territory. Camp Wikoff, on Montauk Point, near the eastern extremity of Long Island, was naturally salubrious, but was not ready for the reception of the soldiers, either sick or well, when they were hurried up from Cuba, crowded on 32 transports, insufficiently provisioned and lacking medical supplies. Most of the men were broken in health in consequence of the fatigues, exposure, and privations endured in Cuba; many were suffering from climatic and camp diseases. The first transport arrived on Sept. 21. Not until the last one came was a true case of yellow fever discovered. The number of men who died on the voyage from Cuba to Montauk Point was 37. In the camps in Cuba 427 deaths from disease occurred. In Puerto Rico there were 137 deaths, and in camp near Manila 63 men died. The mortality at Camp Wikoff during the brief period of its existence was 257.

The first of the 12 main army camps in the United States was established on April 14 at Chickamauga Park, in Georgia, and was called Camp Thomas. Here the regulars were concentrated and

encamped until they were ordered to Cuba. Later, volunteer regiments, out of which the First and Third Corps were organized, were drilled here, and troops kept coming until nearly 60,000 were collected in this spot, which became a nursery of typhoid fever. After 425 men had died the War Department broke up the camp, sending the troops to other quarters. On May 2 a camp was established at Tampa, Fla., which was the port of embarkation for troops sent to Cuba. Gen. Shafter's Fifth Army Corps was organized and trained here, and though there was congestion of men and material and much confusion and lack of proper supplies and camp equipment, epidemic disease did not break out and only 56 deaths occurred. Camp Cuba Libre, at Jacksonville, Fla., first established on May 26 and commanded by Major-Gen. Fitzhugh Lee, was the best managed and kept of all the camps. There the Seventh Corps was organized and trained in brigade evolutions, and the camp

ect of quartering soldiers in the cities having been vetoed by Secretary Alger, it was decided to establish small camps in the vicinity of Southern cities, as Camp Wheeler at Huntsville, Ala., Camp Hamilton at Lexington, Ky., Camp Poland at Knoxville, Tenn., Camp Shipp at Anniston, Ala., and others at Athens, Macon, Atlanta, Huntsville, Greenboro, and other towns in North and South Carolina and Georgia. At Camp Poland 23 men died; at Camp Shipp, 12; at Camp Hamilton, 29; at Camp Wheeler, 35. At other minor camps and posts in the east the number of deaths was 373. As the months went on, better supplies were furnished, sanitary precautions were taken, and better care was given to the sick, so that the health of the troops was much improved, even before the cool weather came to diminish the chances of infection. The number of deaths in the camps at San Francisco was 139, making the total number of deaths from disease and accidents 2,435. The sickness and debility of

HOSPITAL TENT, CAMP WIKOFF.

was always full from the time of its establishment until Gen. Lee took his soldiers to Havana in December, they having been selected as the ones most fit for relieving the Spanish garrisons in Cuba. There never was any lack of proper food or water, as at Tampa and other camps. Drainage, bathing facilities, and other sanitary arrangements were provided here alone, and no epidemic was developed. The total number of deaths was 246. Camp Alger, established at Dunn Loring, near Falls Church, Va., on May 18, had a deficient water supply, and very soon typhoid fever broke out in epidemic form. The hospitals were filled with patients, and after 107 deaths had occurred the camp was condemned and the troops sent in August to Camp Meade, at Middletown, Pa., where 64 more deaths resulted from fever contracted at Camp Alger. The War Department at this time concluded that large camps were fatal places for soldiers and dangerous to the health of the country. The proj-

the men in the trenches before Santiago was aggravated by the lack of ambulances, which Gen. Shafter in his eagerness to shorten the campaign, had omitted to take along, of medical supplies, which were left on the ships for lack of method in packing and discharging the cargoes, and for want of a sufficiency and variety of food, due to defects in the commissary and transport services. Many of the staff officers appointed from civil life were unacquainted with or neglectful of their duties.

The Government attempted to supply the troops with refrigerated beef; but through some oversight the contracts provided that it should keep only twenty-four hours after delivery, instead of seventy-two hours as was intended. Much of it was said to be spoiled before it reached the camps, and some of it had the odor and appearance of having been injected with boracic or salicylic acid or some such preservative fluid. Much of the canned roast beef was so low in quality and so deficient in nutritive

constituents that the men would not eat it, declaring that it made them sick. It was dealt out to the troops only to be thrown away, and great quantities reached Cuba in a putrid condition and were thrown overboard. This beef was believed to have been rejected scraps and carcasses from which whatever soluble nutrients they contained had been boiled out to make commercial meat extract. Gen. Miles bought native beasts in order to furnish his regiments in Puerto Rico with cattle on the hoof, as has been the custom in the United States army.

The medical service in Cuba was so deficient that the Red Cross Society came to its aid with hospital equipments and medicines. So many complaints were made of the commissary and quartermaster-general's and the medical departments, that the President appointed a commission to investigate the charges of criminal neglect of the soldiers in camp and field and hospital and in transport, and to examine the administration of the War Department in all its branches. After many had declined to serve, the commission was finally constituted as follows: Gen. Granville M. Dodge, president, Col. James A. Sexton, Col. Charles Denby, Capt. Evan P. Howell, Urban A. Woodbury, Brig.-Gen. John M. Wilson, James A. Beaver, Major-Gen. Alexander McDowell McCook, and Dr. Phineas S. Conner. They met first in Washington on Sept. 8, and examined witnesses there and in New York and Chicago, and inspected the Southern camps. Gen. Miles described the refrigerator beef supplied to his army as apparently "embalmed" and causing sickness among his men, and so objectionable that he asked the War Department to send him no more. He called it an experiment to supply the army with refrigerated beef. Brig.-Gen. Charles P. Egan, Commissary General of Subsistence, appeared before the commission and accused Gen. Miles of lying. Gen. Egan was court-martialed and condemned to be dismissed from the army for conduct unbecoming an officer and a gentleman, but President McKinley commuted the sentence to six years' suspension from duty.

The Philippine Revolutionary Government.

—When Gen. Anderson first landed with American troops, Aguinaldo endeavored to extract from him assurances that the United States would not assert sovereignty over the islands. Failing to obtain pledges from the American authorities, he prevented the troops from getting transportation from the natives. The young Filipino leader, who gained recruits constantly by representing that the Americans intended to restore the islands to Spain, and by encouraging his adherents to plunder the Spaniards in the interior, removed all possible rivals and all who might be favorable to American control. Thus Isabelo Artacho was executed and Sandigo was compelled to flee. The Spanish garrisons in the smaller places were captured one by one and priests and civilians also were made captives. The rich booty of the convents was divided between the provincial leaders and the central administration. Aguinaldo, who assumed the titles of President of the Philippine Republic and Dictator, appointed on July 5 a Cabinet in which Baldomero Aguinaldo was Minister of War and Public Works, Leandro Ibarra Minister of the Interior, and Mariani Trias Minister of Finance. He issued on Aug. 6 a declaration of Philippine independence and an appeal to the foreign powers to recognize the belligerent rights of the revolutionary Government. He asserted that the revolution dominated the provinces of Luzon and the capital city; that Government was administered by the revolutionary authorities; that he had a regular army of 30,000 combatants and held 9,000 Spanish prisoners of war. In various public declarations he intimated that the United

States representatives had recognized him as a military ally and had formally co-operated with him against the Spaniards. This impression Gen. Merritt removed by refusing to discuss political questions with Aguinaldo, who after the fall of Manila complained that the American commanders had attacked Manila without inviting his co-operation, and had not admitted him to a share of the spoils after he had permitted the American troops to land and had befriended and helped them in many ways. He put forward a series of demands, promising to withdraw his troops to certain limits close to the city, provided that Gen. Merritt agreed to give him certain convents in Manila, to consult him about all civil appointments, to permit Filipino soldiers to enter the city at will with their arms, and to confine the occupation to the city only, no Americans being permitted to leave its limits without permission from him. For some days after the surrender of Manila the Spanish soldiers in the trenches on the eastern and northern sides of the city remained at their posts to co-operate with the Americans in keeping out the insurgents, who made ineffectual attempts to break through the lines. The Filipinos held the waterworks supplying Manila and only by threats were they induced to give up possession. Felipe Agoncillo, Vice-President of the revolutionary Government, was sent as an envoy to the United States to confer with President McKinley with reference to the recognition of Philippine independence.

A Philippine Congress met at Malolos in September to draw up a constitution. Many influential Filipinos held themselves aloof, and not all who were present were opposed to American rule. On Sept. 8 Gen. Otis demanded that the Filipinos should evacuate the suburbs of Manila, and Aguinaldo at length complied to avoid a collision. Later, fearing that the Americans would cut his lines of communication and hem in his forces south of Manila, he evacuated Cavité, Baker, and other posts and established his headquarters at Malolos. His power and influence grew not only in the island of Luzon, but in Mindoro, Panay, Zebu, Leyte, and Samar. The insurgent soldiers, undisciplined and without training during the siege of Manila, were afterward put through a severe course of drill and schooled in imitation of American methods until they attained a remarkable proficiency in ordinary evolutions and the manual of arms. The army was organized in brigades and divisions. In civil administration the revolutionary Government, after the meeting of the Congress, more carefully conformed to the laws and usages of civilized communities. The policy of the United States Government was not defined until after the signature of the treaty of peace. President McKinley then instructed Gen. Otis to make known to the inhabitants of the Philippine Islands that, in succeeding to the sovereignty of Spain, the authority of the United States is to be exerted for the security of the persons and property of the people of the islands and for the confirmation of their private rights; and that whoever by active aid or by honest submission co-operates with the Government of the United States will receive its support and protection, but all others will be brought within its lawful rule with firmness, though without severity, the municipal laws of the territory continuing in force until the legislation of the United States shall otherwise provide. At the end of December Aguinaldo reconstructed and completed his Cabinet by appointing Mabani Minister of Foreign Affairs, Teodoro Sandica Minister of the Interior, and Gregorico Gonzaga Minister of Public Works. The Spanish Government entered into negotiations with the revolutionary Government for the release of the Spanish

prisoners without success, and at its request the United States military authorities made an unavailing demand for their liberation.

Occupation of Iloilo.—When Gen. Rios, in Iloilo, who with 800 Spanish troops could not have held out much longer against the assaults of the natives, received word that the islands were to be ceded to the United States, he handed the town over to Vincente Guies, the Alcalde, and on Dec. 25 departed with his troops, instead of awaiting the American force, which was sent somewhat tardily to take possession. The Alcalde surrendered the place on Dec. 26 to 3,000 insurgents, expressing the hope that the Philippine republic would maintain its power against any other Government. The Eighteenth Infantry, Sixth Artillery, and Iowa volunteers, under command of Gen. M. P. Miller, arrived in the bay, Dec. 29, on the "Newport," conveyed by the "Baltimore." Gen. Lopez at once assembled 15,000 native warriors at Jaro, outside of Iloilo. The orders from Washington were to occupy Iloilo, but to do nothing to bring on a conflict with the insurgents. The Filipinos refused to surrender the town without instructions from Aguinaldo, and Gen. Miller prepared to land forces to take forcible possession, but was deterred by a petition from the European residents. It was not till Feb. 11, 1899, that the city was occupied by the Americans.

The Cuban Military Assembly.—The Provisional Government of the Republic of Cuba, consisting of President Bartolome Maso, Vice-President Mendez Capote, and Secretaries Pont, Aleman, and Moreno de la Torre, met at Santa Cruz on Sept. 1, and—considering that they had been elected by the people under arms, but that they represented the majority of the Cubans; that the United States Government, which had liberated Cuba from Spanish domination, pursued the same object as themselves, Cuban independence, and, while not recognizing, had not opposed or dissolved their authority—decided to call another assembly to determine what course should be pursued pending the execution of the purpose of the United States Government, which was that the whole Cuban people should choose a Government that would shape the destinies of the island. The first Council of Government was constituted in September, 1895, when representatives of the Cuban army assembled at Jimaguay and voted a constitution for two years unless the war ended before. In 1897 the Assembly, meeting again, adopted a new constitution, and appointed a new Government Council for the war period. President Maso, in a letter to President McKinley, represented that this constitution was the only legal system in force in Cuba; and that the Provisional Government, although its mandate expired on the cessation of the war, ought to be the legal starting point for future developments of Cuban politics, since it alone exercised any authority that was respected. The Provisional Government was not recognized any more than it had been. A military government was appointed for Santiago, with Gen. Leonard Wood as Governor, and when the other provinces were evacuated by the Spanish troops an army officer was appointed to administer each one.

There was some friction and distrust between the Cubans and the Americans from the time of the landing of Gen. Shafter's army at Santiago. The American soldiers complained that their allies did not do their share of work on intrenchments and transport, and conceived a poor opinion, both of their fighting qualities and of their moral character, finding some of them predacious and cruel to the Spaniards who fell into their hands. When a body of Cuban guerrillas closed in on the survivors of Cervera's fleet who went ashore near Cabrera, pre-

venting them from escaping inland, they were seen to fire at sailors clinging to the wrecks, upon which the American officers who were endeavoring to save the drowning men threatened to throw shells among the Cubans if they did not desist from such inhuman actions. Gen. Garcia's troops were posted in the siege of Santiago at the extreme right of the American line, and in the end took the Spanish outposts on the north and the villages of Dos Caminos and Cobre, completing the circle of investment, but not until Col. Escario had slipped through with 2,000 Spanish troops from Manzanillo. Gen. Francisco Estrada, who afterward joined Gen. Garcia, harried the Spanish column on the march, with the assistance of some of Garcia's cavalry, but Gen. Garcia himself did not move out to meet the Spaniards, giving as his reason that he was unwilling to abandon his position on the right flank of the American army, where, after extending his line to the bay, he could prevent a sortie of the besieged toward Holguin or assist the Cuban forces of Canagüey and Holguin to prevent the entrance of a large relieving force of Spaniards that Gen. Mario was expected to bring from Holguin. When Santiago surrendered, Gen. Shafter was unwilling to admit Gen. Garcia to any share of the triumph, the Cubans having taken a minor part in the victory. He feared that the rude and undisciplined negroes would commit acts of pillage, or that they and the Spaniards would come into collision. Their leaders, moreover, would be tempted to aspire to political control and to pursue their old enemies with acts of confiscation and revenge, for which the United States would be held responsible. Gen. Garcia, not being invited to take part in receiving the surrender, and the Cubans being forbidden to enter the city, he marched away with his forces, taking them back to their own districts on the plea that Gen. Miles had given him no orders to co-operate in further operations. The Cubans generally, while grateful to the Americans for liberating their island from Spanish rule, felt deeply wronged through the dilatory and unsympathetic way in which the war was carried on. The pacific blockade, especially, is said to have caused more frightful suffering and mortality among their people than Gen. Weyler's order of reconcentration. The evils of famine fell upon the native country population, not upon the Spanish troops or the Spanish residents of the cities, for whom the food that was on the island was collected and more was brought in by blockade runners. After the conclusion of the armistice the Cuban army was left in a desperate case. Its commanders accepted the armistice and abstained from further hostilities against the Spanish. The Provisional Government, which had failed to obtain recognition, was powerless, nor was there any other authority that could raise loans to buy food for the soldiers or the starving civil population. The troops had subsisted by levying contributions from the owners of plantations, but this resource was now cut off. Some of them resorted to lawless pillaging, from which they were not restrained by the Spanish military authorities, which restricted their jurisdiction to the garrison towns pending evacuation. They refused to permit Red Cross agents or other almoners of American charity to import food for the Cuban army. Toward the end of November the situation was relieved through the distribution among the Cuban forces and the starving inhabitants of 2,000,000 rations sent by the United States Government. A previous cargo had been brought back to the United States because the Spanish authorities would not let it pass the customs barriers without paying duties. In the neighborhood of Havana the Cubans fared not so badly as in other parts of the island, as their sympathizers in

the city were suffered to smuggle provisions out to them. Although troubled at being neglected by the Americans and by the greater cordiality shown toward the Spanish soldiers than to themselves, the Cuban army, after the earlier expressions of doubt and distrust from Gen. Garcia and Gen. Gomez, followed those leaders in accepting every act of the United States Government as intended to promote the speedy realization of their hope of independence. Some of the leading Cubans advocated the ultimate annexation of the country to the United States, but not without a preliminary trial of independence.

The Cuban Assembly elected by the army met at Santa Cruz, and on Nov. 7 chose Domingo Mendez Capote as President, Fernando Freyre de Andrade as Vice-President, and Manuel M. Coronado and Dr. Porfirio Caliente as Secretaries—not of the Provisional Government, which was regarded as defunct, but to carry on the general business during the adjournment of the General Assembly of the Army, which was the only Cuban authority recognized, except the commander-in-chief, who asserted rival and conflicting powers. Both made it their chief business to raise money to pay off the Cuban soldiers, those who had served two years or more, of whom there were 20,000 in a total number of 36,000. Gen. Gomez would not disband the army or resign his post as commander-in-chief until the troops had received some pay for their services, and he endeavored to obtain an advance from the United States Government, which finally appropriated \$3,000,000 for this purpose. He appealed to the Cubans when the Americans took control of the Government after the evacuation, in accordance with the terms of the treaty, to give their efforts to the establishment of law and order, that Cuba might be the sooner free and independent, declaring his conviction that when a strong and stable Government could be established in Cuba the American army would depart, leaving Cubans to govern themselves and their country.

The Spanish Evacuation.—A Spanish-American commission arranged the details of the evacuation of Cuba, which was delayed on account of the difficulty the Spanish Government had in procuring steam transportation for about 130,000 officers and men of the army, and 15,000 civilian and military employees and their families. The American commissioners were Major-Gen. James F. Wade, Rear-Admiral William T. Sampson, and Major-Gen. Matthew C. Butler. A like commission performed the same service in Puerto Rico, consisting of Major-Gen. John R. Brooke, Rear-Admiral Winfield S. Schley, and Brig.-Gen. William W. Gordon. The repatriation of the soldiers who surrendered at Santiago was carried out according to the terms of the capitulation by the United States Government, which awarded the contract to the Spanish Transatlantic Company. The Puerto Rican joint commission speedily accomplished its task, and by Oct. 18 the evacuation of the island was complete. The transfer of Havana to the American authorities took place at last on Jan. 1, 1899, when Gen. Jimenez Castellanos, who succeeded Gen. Blanco as Captain General, and the Spanish military commissioners formally surrendered the government to the United States commissioners, who resigned it into the hands of Major-Gen. John R. Brooke, Military Governor of Cuba. Major-Gen. Fitzhugh Lee was appointed Governor of the city and province of Havana.

The Treaty of Peace.—In accordance with the peace protocol, the governments of the United States and Spain each appointed five commissioners to meet in Paris for the negotiation of a treaty of peace. On Aug. 26 President McKinley named

William R. Day, chairman, Senator Cushman K. Davis, Senator William P. Frye, Whitelaw Reid, and Justice Edward D. White. Justice White having declined to serve, Senator George Gray was appointed on Sept. 9. The Spanish commissioners were Eugenio Montero Rios, chairman, Buenaventura d'Abarzuza, José de Garnica, Wenceslao Ramirez de Villa Urrutia, and Gen. Rafael Cerero. The Peace Commission came together on Oct. 1. At the first meeting the Spanish commissioners made a demand that the American forces be withdrawn from Manila and the administration handed over to the Spanish officials prior to the discussion of other matters. This demand the American representatives refused to entertain. The Cuban question was the first matter of discussion. The Spanish commissioners contended that, since there was no Cuban state, sovereignty over Cuba must pass to the United States, and that this Government was responsible for the Cuban debt secured on the customs of the island. The United States commissioners refused to accept for their Government the capacity of sovereign over Cuba, the war having been waged, not for territorial aggrandizement, which was disclaimed in the beginning, but for liberation and order. It was not till Oct. 27 that the Spanish commissioners accepted the Cuban articles. A contest then arose over the demands of the United States regarding the Philippines, which were presented on Oct. 31. These comprised the cession of the entire archipelago, the United States Government undertaking to reimburse Spain to the extent of her pacific expenditures for permanent improvements. The Spanish Government, on Nov. 4, rejected this proposition, asserting that the third article of the protocol reserved sovereignty over the Philippines in accordance with its previous instructions to M. Cambon, to which the American Government had made no objection. The capitulation of Manila on the day subsequent to the signing of the protocol was void, in its opinion, and the holding of Spanish prisoners and the seizure of the administration and public moneys it held to be breaches of international law, by the commission of which the United States had prevented Spain from quelling the insurrection. The question had been discussed during the negotiation of the protocol, when M. Cambon secured the substitution in the third article for the word "possession" the more elastic term "disposition." The Spanish Government, in the note of Aug. 7, took the view that the temporary occupation of Manila should constitute a guarantee, and declared that it did not renounce the sovereignty of Spain over the archipelago, but would leave it to the negotiators to decide what reforms were desirable and suitable for the natives. The United States Government would not accept this reservation, but embodied in the protocol the precise terms upon which it was willing to negotiate as M. Cambon explained in forwarding it. The American commissioners would not, therefore, admit that any conditions or reservations were attached to the protocol. On instructions from their Government they demanded the cession of the islands in positive terms, refusing to discuss any question in connection with them besides the manner of their surrender and the compensation for improvements. On Nov. 16 the Spanish commissioners reaffirmed the position of their Government as to the discussion of sovereignty, and insisted that by the very terms of the protocol a demand extending to the relinquishment of Spanish sovereignty was precluded, offering to submit the interpretation of the third article to arbitration. The American commissioners held that the words were quite plain. On Nov. 21 they submitted a final offer to pay \$20,000,000 as a lump sum to cover all ex-

penditures of Spain for betterments and to admit Spanish merchandise and Spanish ships to the Philippines on the same terms as those of the United States, declaring it to be the policy of the United States to maintain in those islands an open door for the commerce of all nations. The American commissioners offered further to insert in the treaty a provision for the mutual relinquishment of all American and Spanish claims for indemnity, either national or private, that had arisen since the opening of hostilities. That these proposals were final and irreducible was conveyed in a hope expressed by the American commissioners that their acceptance, together with that of the stipulations respecting Cuba and Puerto Rico, the other islands of Spain in the West Indies and Guam, in the form which had been provisionally agreed, would be signified on or before Nov. 28. On that date the acceptance was given, accompanied by a memorandum setting forth that, compromise and arbitration having been rejected and a prompt answer made the condition of the continuation of negotiations, the Madrid Government had instructed its representatives to accept the victor's terms, however harsh, to save further loss and injury to Spain, recognizing the impossibility of further resisting her powerful antagonist. On Dec. 1 the Spanish commission made a proposition to constitute a technical commission, an American, an Englishman, and a Frenchman to be selected by the United States, a Spaniard, an Englishman, and a Frenchman by Spain, and a German by both governments—who should investigate the explosion of the "Maine." When the American commissioners rejected this proposition and the President afterward in his annual message spoke of the catastrophe as suspicious, the Spanish commissioners in their memorandum protested that the United States refused to Spain the right possessed by a criminal of defending himself, and appealed to the world to decide whether those are responsible who desire the truth or those refusing to seek it.

The treaty was finally drawn up on Dec. 10 and was signed the same evening. The text is given below:

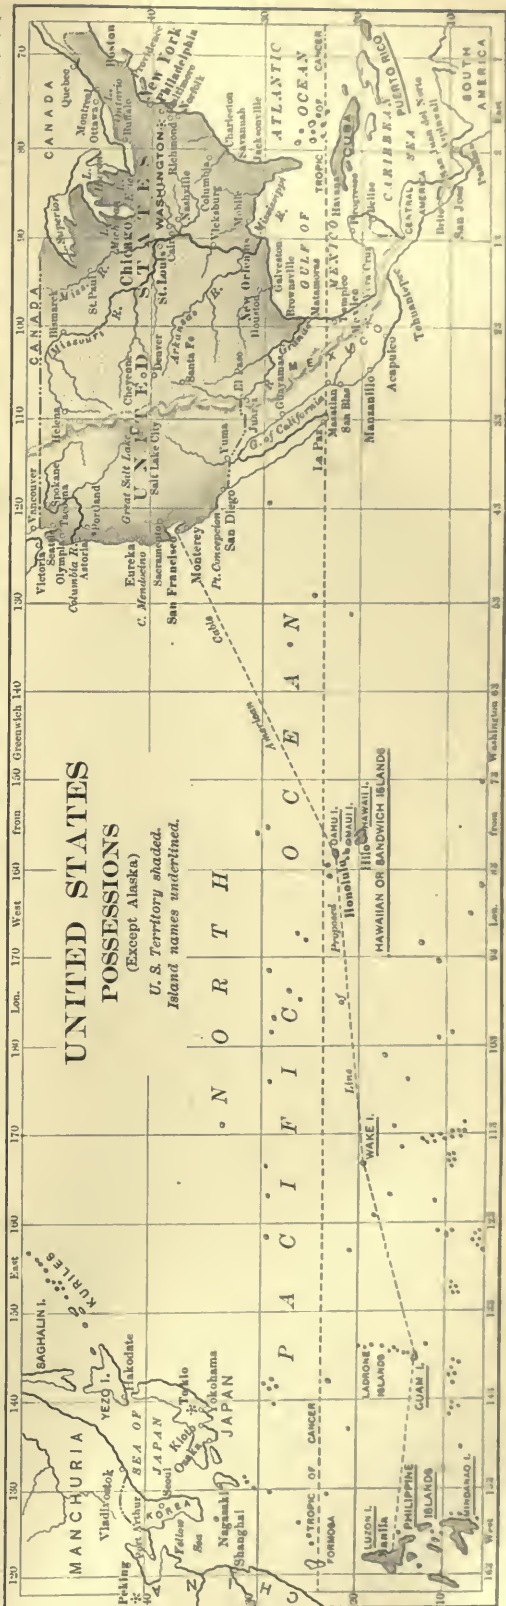

ARTICLE I.—Spain relinquishes all claim of sovereignty over and title to Cuba.

And as the island is, upon its evacuation by Spain, to be occupied by the United States, the United States will, so long as such occupation shall last, assume and discharge the obligations that may under international law result from the fact of its occupation for the protection of life and property.

ART. II.—Spain cedes to the United States the island of Puerto Rico and other islands now under Spanish sovereignty in the West Indies, and the island of Guam in the Marianas or Ladrões.

ART. III.—Spain cedes to the United States the archipelago known as the Philippine Islands, and comprehending the islands lying within the following lines:

A line running from west to east along or near the twentieth parallel of north latitude, and through the middle of the navigable channel of Bachi, from the one hundred and eighteenth (118th) to the one hundred and twenty-seventh (127th) degree meridian of longitude east of Greenwich, thence along the one hundred and twenty-seventh (127th) degree meridian of longitude east of Greenwich to the parallel of four degrees and forty-five minutes (4:45) north latitude, thence along the parallel of four degrees and forty-five minutes (4:45) north latitude to its intersection with the meridian of longitude one hundred and nineteen degrees and thirty-five minutes (119:35) east of Greenwich, thence along the meridian of longitude one hundred and nineteen degrees and thirty-five minutes

(119:35) east of Greenwich to the parallel of latitude seven degrees and forty minutes (7:40) north, thence along the parallel of latitude seven degrees and forty minutes (7:40) north to its intersection with the one hundred and sixteenth (16th) degree meridian of longitude east of Greenwich, thence by a direct line to the intersection of the tenth (10th) degree parallel of north latitude with the one hundred and eighteenth (18th) degree meridian of longitude east of Greenwich, and thence along the one hundred and eighteenth (18th) degree meridian of longitude east of Greenwich to the point of beginning.

The United States will pay to Spain the sum of twenty million dollars (\$20,000,000) within three months after the exchange of the ratifications of the present treaty.

ART. IV.—The United States will, for ten years from the date of exchange of ratifications of the present treaty, admit Spanish ships and merchandise to the ports of the Philippine Islands on the same terms as ships and merchandise of the United States.

ART. V.—The United States will, upon the signature of the present treaty, send back to Spain, at its own cost, the Spanish soldiers taken as prisoners of war on the capture of Manila by the American forces. The arms of the soldiers in question shall be restored to them.

Spain will, upon the exchange of the ratifications of the present treaty, proceed to evacuate the Philippines, as well as the island of Guam, on terms similar to those agreed upon by the commissioners appointed to arrange for the evacuation of Puerto Rico and other islands in the West Indies under the protocol of August 12, 1898, which is to continue in force till its provisions are completely executed.

The time within which the evacuation of the Philippine Islands and Guam shall be completed shall be fixed by the two governments. Stands of colors, uncaptured war vessels, small arms, guns of all calibers, with their carriages and accessories, powder, ammunition, live stock, and materials and supplies of all kinds belonging to the land and naval forces of Spain in the Philippines and Guam remain the property of Spain. Pieces of heavy ordnance, exclusive of field artillery, in the fortifications and coast defenses shall remain in their emplacements for the term of six months, to be reckoned from the exchange of ratifications of the treaty; and the United States may in the meantime purchase such material from Spain if a satisfactory agreement between the two governments on the subject shall be reached.

ART. VI.—Spain will, upon the signature of the present treaty, release all prisoners of war and all persons detained or imprisoned for political offenses in connection with the insurrections in Cuba and the Philippines and the war with the United States.

Reciprocally the United States will release all persons made prisoners of war by the American forces, and will undertake to obtain the release of all Spanish prisoners in the hands of the insurgents in Cuba and the Philippines.

The Government of the United States will at its own cost return to Spain and the Government of Spain will at its own cost return to the United States, Cuba, Puerto Rico, and the Philippines, according to the situation of their respective homes, prisoners released or caused to be released by them, respectively, under this article.

ART. VII.—The United States and Spain mutually relinquish all claims for indemnity, national and individual, of every kind, of either Government, or of its citizens or subjects, against the other Government, which may have arisen since

the beginning of the late insurrection in Cuba and prior to the exchange of ratifications of the present treaty, including all claims for indemnity for the cost of the war. The United States will adjudicate and settle the claims of its citizens against Spain relinquished in this article.

ART. VIII.—In conformity with the provisions of Articles I, II, and III of this treaty, Spain relinquishes in Cuba and cedes in Puerto Rico and other islands in the West Indies, in the island of Guam, and in the Philippine archipelago all the buildings, wharves, barracks, forts, structures, public highways and other immovable property which in conformity with law belong to the public domain and as such belong to the Crown of Spain.

And it is hereby declared that the relinquishment or cession, as the case may be, to which the preceding paragraph refers, can not in any respect impair the property or rights which by law belong to the peaceful possession of property of all kinds, of provinces, municipalities, public or private establishments, ecclesiastical or civic bodies or any other associations having legal capacity to acquire and possess property in the aforesaid territories renounced or ceded, or of private individuals, of whatsoever nationality such individuals may be.

The aforesaid relinquishment or cession, as the case may be, includes all documents exclusively referring to the sovereignty relinquished or ceded that may exist in the archives of the peninsula. Where any document in such archives only in part relates to said sovereignty a copy of such part will be furnished whenever it shall be requested. Like rules shall be reciprocally observed in favor of Spain in respect of documents in the archives of the islands above referred to.

In the aforesaid relinquishment or cession, as the case may be, are also included such rights as the Crown of Spain and its authorities possess in respect of the official archives and records, executive as well as judicial, in the islands above referred to, which relate to said islands or the rights and property of their inhabitants. Such archives and records shall be carefully preserved, and private persons shall, without distinction, have the right to require, in accordance with the law, authenticated copies of the contracts, wills, and other instruments forming part of notarial protocols or files, or which may be contained in the executive or judicial archives, be the latter in Spain or in the islands aforesaid.

ART. IX.—Spanish subjects, natives of the peninsula, residing in the territory over which Spain by the present treaty relinquishes or cedes her sovereignty, may remain in such territory or may remove therefrom, retaining in either event all their rights of property, including the right to sell or dispose of such property or of its proceeds; and they shall also have the right to carry on their industry, commerce, and professions, being subject in respect thereof to such laws as are applicable to other foreigners. In case they remain in the territory they may preserve their allegiance to the Crown of Spain by making, before a court of record, within a year from the date of the exchange of ratifications of this treaty, a declaration of their decision to preserve such allegiance; in default of which declaration they shall be held to have renounced it and to have adopted the nationality of the territory in which they may reside.

The civil rights and political status of the native inhabitants of the territories hereby ceded to the United States shall be determined by the Congress.

ART. X.—The inhabitants of the territories over which Spain relinquishes or cedes her sovereignty shall be secured in the free exercise of their religion.

ART. XI.—The Spaniards residing in the territories over which Spain by this treaty cedes or relinquishes her sovereignty shall be subject in matters civil as well as criminal to the jurisdiction of the courts of the country wherein they reside, pursuant to the ordinary laws governing the same, and they shall have the right to appear before such courts and to pursue the same course as citizens of the country to which the courts belong.

ART. XII.—Judicial proceedings pending at the time of the exchange of ratifications of this treaty in the territories over which Spain relinquishes or cedes her sovereignty shall be determined according to the following rules:

First—Judgments rendered either in civil suits between private individuals or in criminal matters, before the date mentioned, and with respect to which there is no recourse or right of review under the Spanish law, shall be deemed to be final, and shall be executed in due form by competent authority in the territory within which such judgments should be carried out.

Second—Civil suits between private individuals which may on the date mentioned be undetermined shall be prosecuted to judgment before the court in which they may then be pending, or in the court that may be substituted therefor.

Third—Criminal actions pending on the date mentioned before the Supreme Court of Spain against citizens of the territory which by this treaty ceases to be Spanish shall continue under its jurisdiction until final judgment; but, such judgment having been rendered, the execution thereof shall be committed to the competent authority of the place in which the case arose.

ART. XIII.—The rights of property secured by copyrights and patents acquired by Spaniards in the island of Cuba and in Puerto Rico, the Philippines, and other ceded territories, at the time of the exchange of the ratification of this treaty, shall continue to be respected. Spanish scientific, literary, and artistic works not subversive of public order in the territories in question shall continue to be admitted free of duty into such territories for the period of ten years, to be reckoned from the date of the exchange of the ratifications of this treaty.

ART. XIV.—Spain shall have the power to establish consular officers in the ports and places of the territories the sovereignty over which has either been relinquished or ceded by the present treaty.

ART. XV.—The Government of each country will, for the term of ten years, accord to the merchant vessels of the other country the same treatment in respect to all port charges, including entrance and clearance dues, light dues, and tonnage duties, as it accords to its own merchant vessels not engaged in the coastwise trade.

This article may at any time be terminated on six months' notice given by either Government to the other.

ART. XVI.—It is understood that any obligations assumed in this treaty by the United States with respect to Cuba are limited to the time of its occupancy thereof; but it will upon the termination of such occupancy advise any Government established in the island to assume the same obligations.

ART. XVII.—The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by her Majesty the Queen Regent of Spain; and the ratifications shall be exchanged at Washington within six months from the date hereof, or earlier, if possible.

The Supreme Court.—The result of the work of the United States Supreme Court for the year is as follows: The total number of cases on the docket

for the term beginning in October, 1897, was 685; and of this number 372 were disposed of during the term. The number actually considered by the court was 311, of which 179 were argued orally and 132 submitted on printed arguments. Among the cases decided of general interest and importance were the following:

Constitution of Mississippi.—In *Williams vs. Mississippi*, decided April 25, 1898, the provisions of the Constitution of Mississippi making ability to read any section of the Constitution or to understand it when read a necessary qualification for a legal voter, and making it a necessary qualification for a grand or petit juror that he shall be able to read and write, and other provisions in regard to elections which do not on their face discriminate between the white and negro races, were held not to amount to a denial of the equal protection of the law secured by the fourteenth amendment to the Constitution, and the judgment of the Supreme Court of Mississippi was affirmed.

Infected Cattle.—In the case of the *Missouri, Kansas and Texas Railway Co. vs. Haber*, the Court affirmed the constitutionality and validity of the law of Kansas prohibiting the transportation into the State of cattle affected with Texas fever and providing for a civil action for damages in case of the infraction of the law, it was held not to be in any just sense a regulation of commerce among the States. The provision in the Kansas act is in aid of the objects which Congress had in view when it passed the animal industry act of May 29, 1884.

Physicians.—The decision in *Benjamin Hawker vs. New York* affirmed the constitutionality of the act of the New York Legislature prohibiting persons who have been convicted of and punished for a crime from practicing medicine in the State, in the case of one who had been convicted of a felony prior to its enactment. Its unconstitutionality was alleged on the ground of a conflict with the clause of the Constitution forbidding a State to pass "any bill of attainder, *ex post facto* law, or law impairing the obligation of contracts." This legislation was held not as an imposition of additional penalty, but as prescribing qualifications to be possessed by those who practice medicine. Justices Harlan, Peckham, and McKenna dissented.

Confederate Bonds.—On May 31, 1898, an opinion was rendered in the case of *Baldy vs. Hunter*, administrator, affirming the validity of investments in Confederate bonds during the civil war by Hunter as guardian; both guardian and ward residing within the Confederate lines, and being under subjection to the Confederate States.

Using Official Position.—In *Payne vs. Robertson* the court held that a United States deputy marshal who had, as such, entered Oklahoma prior to the opening of the lands for settlement, was, because of his official character, disqualified from making a homestead entry immediately upon the lands being opened for settlement.

Liquor Laws.—The case of *Rhodes vs. Iowa* involved the construction of the law of Iowa forbidding the sale of liquors in the State, and dealt with the construction of the State law under the Wilson act of Congress of Aug. 8, 1890. The opinion rendered was that the State law is an infringement of the constitutional prerogative of the United States regarding interstate commerce, so far as it affected interstate commerce transportation; and that imported liquors upon arrival within the jurisdiction of the State become at once subject to its jurisdiction. Justices Gray, Harlan, and Brown dissented on the ground that the State law was valid as a police regulation.

In the case of *Vance vs. Vandercook Company* the South Carolina liquor law was again made the

subject of a decision. The law had been amended after the Supreme Court decision in *Scott vs. Donald* (165 U. S. 58) and changed in many important particulars. The new law attempted to eliminate the features of the old law discriminating against other States in the shipment of liquor to individuals for their own use in South Carolina; but while this inhibition was eliminated and the privilege restored in the new law, it was coupled with conditions of inspection which it was urged still amounted to discrimination. The court accepted this view of the case, holding that the inspection provision of the law was tantamount to a denial of the right of interstate commerce, and therefore antagonistic to the Constitution of the United States. The court held, however, that the portion of law regulating the sale of original packages within the State was valid. Chief-Justice Fuller and Justices Shiras and McKenna dissented as to a portion of the opinion. They took the position that the law in its entirety is in violation of the Constitution.

Suicide.—In the case of *Ritter vs. Mutual Life Insurance Company of New York*, decided Jan. 17, 1898, the question whether the heirs of a man who commits suicide when in sound mind can recover an insurance policy, was involved. Mr. Runk, of Philadelphia, committed suicide within a year after increasing his insurance to the extent of \$200,000, making an aggregate insurance of \$500,000 upon his life. The New York company carried \$75,000, which it refused to pay, on the ground that Runk was sane when he took his life. It was shown that he had written a letter the day before his death, saying that it was his purpose to put an end to his life so that his life insurance money could be collected for the payment of his debts. The court held that no insured person committing suicide and found to be of sound mind could recover upon his policy.

Oleomargarine.—In the cases of *Schallenberger vs. Pennsylvania* and *Collins vs. New Hampshire* the court, May 23, 1898, decided the oleomargarine laws of Pennsylvania and New Hampshire to be unconstitutional. In Pennsylvania George Schallenberger, George E. Paul, and J. Otis Paul were prosecuted in the State courts on the charge of violating the law prohibiting the introduction of oleomargarine into the State. The court held the law to be invalid under the Federal Constitution, on the ground that it infringed the provision in regard to interstate commerce. Justice Peckham, in delivering the opinion, said: "The act of the Legislature of Pennsylvania under consideration, to the extent that it prohibits the introduction of oleomargarine from another State and its sale in the original package, as described in the special verdict, is invalid." In New Hampshire the law provides that when the oleomargarine is colored pink there shall be no prohibition. Justice Peckham said this was a mere evasion of the direct prohibition contained in the Pennsylvania statute, and was invalid on the same ground. Justices Harlan and Gray dissented.

Freight Rate Law.—March 7, 1898, the court decided the cases of *Smyth vs. Ames*, *Smyth vs. Smith*, and *Smyth vs. Higginson*. These suits were instituted to test the validity of a law passed by the Nebraska Legislature in 1893, prescribing the maximum rates for transportation of freight by railroads within the State. The law was declared unconstitutional. It is settled that a railroad corporation is a person within the meaning of the fourteenth amendment declaring that no State shall deprive any person of property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws. A State enactment, or regulations made under the authority of a State enactment, establishing rates for the transportation of persons or property by

railroad that will not admit of the carrier earning such compensation as under all circumstances is just to it and to the public, would deprive such carrier of its property without due process of law, and deny to it the equal protection of the laws, and would therefore be repugnant to the fourteenth amendment to the Constitution of the United States.

The Eight-Hour Law.—The case of *Holden vs. Hardin* involved the constitutionality of the law of Utah fixing a day's work in mines and smelters at eight hours a day. It was held that the provisions of the law did not violate the fourteenth amendment to the Constitution, and were a valid exercise of the police power of the State. Justice Brown said that, in his opinion, it was not the intention of the court to pass generally upon the constitutionality of eight-hour laws; but that in so far as State laws were exerted for the protection of the lives, the health, or the morals of a community there could be no doubt of their propriety or of their constitutionality. There could be no doubt of the exceptional and unhealthful character of work in smelters or mines, because of bad air, high temperature, and obnoxious gases; and hence the wisdom of the State legislation. Justices Brewer and Peckham dissented.

Inheritance Tax.—The case of *Magoun vs. Illinois Trust and Savings Bank*, decided April 25, 1898, involved the constitutionality of the inheritance tax law of Illinois. One of the counsel for the defendant was ex-President Harrison. The State of Illinois imposed an inheritance tax which varied according to the amount of the legacy and according to the degree of relationship of the legatee. The question was decided in favor of the constitutionality of the law, and is a matter of national interest, as it has a bearing upon similar legislation in other States. Justice Brewer dissented from the opinion so far as it sustained the constitutionality of that part of the law which grades the rate of the tax upon legacies to strangers by the amount of such legacies.

Inspection Laws.—The court, May 31, has decided the case of the *Patapasco Guano Company vs. North Carolina Board of Agriculture*. The case involved the validity of the North Carolina law providing for the inspection of fertilizers, and sought to enjoin the collection of the charge for such inspections. The opinion sustained the law. Inspection laws are not in themselves regulations of commerce. When their object is to protect the community, they come within the police power of the State. Justices Harlan and White dissented.

Contracts with Railroad Companies.—The case of the *Chicago, Milwaukee and St. Paul Railway Company vs. Solan* involved the constitutionality of the Iowa law rendering void any contract with a railroad company exempting it from liability which would have existed if no contract had been made. Solan sued in the State courts to recover damages for injuries suffered, and was awarded \$1,000, although his contract with the company limited its liability to \$500. The decision upheld the State law, as not interfering with interstate commerce and within the province of State legislation.

Civil Service.—In the case of *Kipley vs. Illinois*, decided April 18, 1898, in regard to the constitutionality of the civil service law of Illinois, the court held that it had no jurisdiction. The question whether the Illinois civil service act was unconstitutional applied to the State Constitution and not to the Constitution of the United States. The action of the Supreme Court of Illinois did not raise a question of a Federal nature.

Citizenship.—The case of the *United States vs. Wong-Kim-Ark* was decided. The defendant was

born in California of Chinese parents and returned to China and was refused readmission to the United States. The court held that he was a citizen by the fourteenth amendment and should be admitted.

Indian Depredation Claims.—In *United States and Comanche Indians vs. Kemp* the judgment of the Court of Claims was affirmed by a divided court. The case turned on a question involving the validity of several million dollars of claims growing out of alleged Indian depredations. The Government contended that these claims, under the Indian treaties, should have been presented within the proper time to the tribes. The Court of Claims held that this was not necessary.

Death of Commissioner of Patents.—In *United States ex rel. Bernardin vs. Butterworth* it was held that a suit in mandamus to compel the Commissioner of Patents to issue a patent abates by the death of the commissioner, and can not be revived so as to bring in his successor, although the latter gives his consent.

Bequest to Smithsonian Institution.—The case of *Smithsonian Institution vs. Meech* involved the right of a husband to devise property held as a trust in his wife's name. Robert S. Avery, of Washington, after giving in his will \$1,000 to the relatives of his wife, whose death had occurred before his, left the residue of his property to the Smithsonian Institution. The principal part of this property was a lot of land in Washington in Mrs. Avery's name, and the will was attacked on the ground that he could not dispose of property whose title was in his wife's name. The Court did not sustain this view. Justice Brewer said: "It is true that when the consideration is paid by a husband and the conveyance made to his wife there is a presumption that such a conveyance was intended for her benefit; but this is not a presumption of law but of fact, and can be overthrown by proof of the real intent of the parties."

The Antitrust Law.—The case of *United States vs. Joint Traffic Association et al.* was argued on Feb. 24 and 25, 1898, and decided Oct. 24. It was brought under the antitrust law to have the agreement creating the Joint Traffic Association declared illegal and its further execution enjoined. The joint traffic agreement went into effect Jan. 1, 1896. Under it 31 railroad companies, constituting 9 trunk line systems, practically controlling the business of railroad transportation between Chicago and the Atlantic coast, entered into an agreement for the purpose of maintaining rates and fares on all competitive traffic. The court held, Justice Peckham delivering the opinion, following the *Trans-Missouri* case, that the joint traffic agreement was in violation of the antitrust law, and therefore void; and it further held that Congress, in dealing with interstate commerce, and in the course of regulating it in the case of railroad corporations, has the power to say that no contract or combination shall be legal which shall restrain trade and commerce by shutting out the operation of the general law of competition. Justices Gray, Shiras, and White dissented; Justice McKenna took no part in the case.

Live Stock Exchange.—The case of *Hopkins vs. United States* (the Kansas City Live Stock Exchange) was a prosecution under the antitrust act of July 2, 1890. The court held that the association did not come within the terms of the law, because it did not appear that the defendants were engaged in interstate commerce or that their agreements were in restraint of any such commerce. Justice Harlan delivered a dissenting opinion.

Alaskan Seal Fisheries.—Among the more important litigation concluded during the year was

that of the *United States vs. The North American Commercial Company*. By an indenture, bearing date March 12, 1890, made by the Secretary of the Treasury with this company, it became the lessee of the seal fisheries on the Pribylov Islands of St. George and St. Paul, in Alaska, for twenty years, at an annual rental of \$60,000, in addition to which the company agreed to pay a revenue tax or duty of \$2 upon each fur-seal skin taken and shipped, and also the further sum of \$7.62½ for each fur-seal skin so taken and shipped. The right of the company to engage in the business of taking fur seals on these islands was exclusive. An action was brought by the United States against the company in the United States circuit court at New York city to recover the annual rental, as defined in the lease, for the year ending April 1, 1894, which amounted, according to the claim of the Government, to \$132,187.50. The company disputed its obligation to pay this rental upon the ground that by the convention or agreement between the United States and the Government of Great Britain, commonly called the *modus vivendi*, established during the pendency of the arbitration between those two governments relating to the Bering Sea controversy and the preservation of the seals resorting to those waters, the United States prohibited the company from taking in excess of 7,500 seals in the year mentioned. The company further set up a claim for specific damages against the United States by reason of its interference with its alleged right under the lease, the amount of said counterclaim amounting to \$287,725 for the skins it could have taken during the season of 1893 had not the United States, under the *modus vivendi*, prevented it from so doing. The case having been tried in the circuit court without a jury, that court awarded to the United States the sum of \$94,687.50, with interest. The said court, as to the counterclaim of the company, decided that by reason of the breach of the lease by the United States prohibiting the defendant from taking any seal skins during 1893, the United States was liable to the company for the sum of \$142,187.50, but that on account of the failure of the company to present its claim and have it disallowed by the accounting officers of the Treasury, it could not be allowed as a counterclaim or credit in that suit, and was accordingly dismissed, but not on the merits, and without prejudice to the right of the company to enforce its claim by any other proper legal proceeding. The case having been appealed and removed to the Supreme Court, it was decided substantially in favor of the Government, the amount of the judgment in the case pending being reduced, however, to \$76,687.50.

UNITED STATES WAR RECORD. In connection with the details given in the article immediately preceding as to the extent of military and naval operations during the war with Spain, it is of interest to note the record of each organization, both Federal and State. The State records, with the exception of Idaho, Kentucky, and Nevada, are complete. This is due to the prompt and effective responses made by Governors and members of their military staffs. In the case of States not represented, five appeals were made for the necessary information, which, up to time of going to press, has not been forthcoming. In numerous instances, among the most populous States, much time and labor has been cheerfully expended by adjutants-general in order that a fair showing of the record might be made.

The fullness of the record given below for Federal troops has been made possible by prompt and effective action on the part of Adjutant-General Henry C. Corbin and Assistant-Adjutant-General W. H. Carter, both of whom have cheerfully placed

at the disposal of the "Annual Cyclopædia" all available data bearing directly on the subject.

The naval record shown in this article has been prepared largely from official data, obtained by courtesy of the Navy Department at Washington and commanders serving on many of the vessels mentioned as being on active service during the campaign.

It will be observed that some regiments and some vessels occupy a seemingly disproportionate space in the record. When this happens no slight is intended. In some instances the service of regiment or ship has been devoid of incident; in others the record, although earnestly sought for, has not been secured.

Endeavor has been made to systematize, as far as possible, the entries for organizations and vessels. Where certain information is lacking it may be taken for granted that the required facts were not within reach.

Title.—As the title or name by which organizations are commonly known does not always correspond with the official title, it has been deemed advisable to give the latter a separate place.

Date of Organization.—Usually the date given is that on which an organization was first brought together. Regiments have frequently been disbanded and reorganized, but the traditions of the corps always remain; hence it seems best to give original dates.

Strength.—Considerable discrepancy has been found between State and Federal figures; but as a rule those given under proper State authority of very recent date have been accepted. This refers, of course, to volunteer organizations.

Stations during War.—Under this heading endeavor has been made to show the various temporary stopping places of organizations in the United States and elsewhere. Sometimes only a part of an organization was stationed at the place indicated. It has been found impossible to complete the showing in greater detail than appears.

Casualties.—The word "casualties" has been somewhat misunderstood by State officials. It is intended, except where the records of engagements are given, that only deaths should be shown. For regiments actually under fire only killed and wounded are shown, as a rule.

In the following military record Federal troops are arranged numerically, by branches of the service. State organizations are arranged alphabetically by States, the organizations in each State being inserted numerically.

The vessels of the navy are arranged alphabetically by fleets or squadrons, the North Atlantic fleet being first, followed by Pacific and Asiatic squadrons and vessels on special duty.

FEDERAL TROOPS.

FEDERAL ORGANIZATIONS.

(Entered in the order in which they appear in the War Department roster, issued March 9, 1899.)

Engineer Battalion.—No detailed report of the services and movements of this battalion is available at present. The nature of the service performed was such that detachments must accompany every considerable body of troops on the march or during active service in the field. In the operations against Santiago two companies (C and E), consisting of 8 officers and 192 men, were with the headquarters of the Fifth Army Corps. One man was wounded. Detachments accompanied the expeditions to Puerto Rico and the Philippines. So far as is known, members of the battalion have also been sent to Hawaii on special service. The Corps of

Engineers was first established during the Revolutionary War, and has continued in existence ever since.

Signal Corps.—The service of the Signal Corps during the last war was largely in detachments, the service being special, like that of the engineers. The strength of the Signal Corps detachment with the Fifth Army Corps in Cuba on June 30 was 7 officers and 81 men. No casualties were reported. Members of the Signal Corps accompanied the Puerto Rican and Philippine expeditions. The establishment of a Signal Corps in connection with the United States army may be said to date from June 27, 1860, when Dr. A. J. Myer was made signal officer.

First Cavalry.—Official title, First Regiment of Cavalry. Organized as First Regiment of Dragoons, March 2, 1833; as First Regiment of Cavalry, Aug. 3, 1861. Served in Mexican War, Civil War, and Indian expeditions. Quartered in Kansas, Arizona, Oklahoma, and Illinois at outbreak of war. Placed under orders for war with Spain, April 15, 1898. Strength in officers and men for war with Spain: 20 officers, 503 men. Commanded by Lieut.-Col. C. D. Vele during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Cuba. Sent from United States for service in Cuba. Served at La Quasima and in operations against Santiago. Troops A, B, G, and K participated in engagements at La Quasima. Troops A, B, C, D, E, G, H, I, and K took part in subsequent operations against Santiago. Casualties during campaign: 7 men killed, 3 officers and 5 men wounded at La Quasima; 1 officer and 12 men killed, and 47 men wounded at San Juan. The regiment left Cuba for United States Aug. 8, 1898. The First Cavalry took part in the brilliant charge when the Spanish position was carried at La Quasima on June 24, 1898; also at San Juan. The regiment is now stationed in United States.

Second Cavalry.—Official title, Second Regiment of Cavalry. Organized 1836. Served in Florida and Mexican Wars, Civil War, and Indian expeditions. Quartered in New Mexico, Colorado, and Kansas at outbreak of war. Placed under orders for war with Spain, April 15, 1898. Strength in officers and men for war with Spain: 9 officers, 257 men. Commanded by Lieut.-Col. W. A. Rafferty during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Cuba; (3) Puerto Rico. Sent from United States for service in Cuba and Puerto Rico. Served with Fifth Army Corps in Cuba; with Gen. Miles in Puerto Rico. Troops A, C, D, and F participated in operations against Santiago. Casualties during campaign not reported. The four troops in Cuba were the only mounted troops in Gen. Shafter's command at Santiago. The regiment is now on service in Cuba.

Third Cavalry.—Official title, Third Regiment of Cavalry. Organized as a regiment of mounted riflemen, May 19, 1846; as Third Regiment of Cavalry, Aug. 3, 1861. Served in Mexican War, Civil War, and Indian expeditions. Quartered in Vermont and Missouri at outbreak of war. Placed under orders for war with Spain, April 15, 1898. Strength in officers and men for war with Spain: 23 officers, 433 men. Commanded by Major H. W. Wessells during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Cuba. Sent from United States for service in Cuba. Troops B, C, E, F, G, H, I, and K participated in engagements at San Juan. Casualties during campaign: 3 men killed, 6 officers and 46 men wounded. The regiment fought for twelve hours at San Juan on July 1, 1898. Four troops returned to Montauk Point from Santiago, Aug. 14, 1898. The regiment is now stationed in United States.

Fourth Cavalry.—Official title, Fourth Regiment of Cavalry. Organized Aug. 3, 1861. Served in Civil War and Indian expeditions. Placed under orders for war with Spain, June 26, 1898. Commanded by Major S. C. Kellogg during war operations. Sent from United States for service in the Philippines. Troops C, E, G, I, K, and L participated in engagements at Manila. Casualties, up to April 4, 1899: 3 men killed, and 1 officer and 16 men wounded. The six troops above mentioned are, at time of going to press, still stationed in the Philippines. Troops A, B, D, F, H, and M are stationed in United States.

Fifth Cavalry.—Official title, Fifth Regiment of Cavalry. Organized 1855. Served in Civil War and Indian expeditions. Sent from United States for service in Puerto Rico. Participated in engagements at Hormigueros. No casualties recorded. The regiment is now on service in Puerto Rico.

Sixth Cavalry.—Official title, Sixth Regiment of Cavalry. Organized as Third Cavalry, May 3, 1861; as Sixth Cavalry, Aug. 10, 1861. Served in Civil War and Indian expeditions. Quartered in Virginia, Kansas, and Nebraska at outbreak of war. Placed under orders for war with Spain, April 15, 1898. Strength in officers and men for war with Spain: 16 officers, 435 men. Commanded by Major T. C. Lebo during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Cuba; (3) Puerto Rico. Sent from United States for service in Cuba. Troops A, B, C, D, E, F, G, and K participated in engagements at San Juan. Casualties during campaign: 4 men killed, 4 officers and 51 men wounded. The regiment fought for twelve hours at San Juan on July 1, 1898. Troop H served in Puerto Rico. Now stationed in United States.

Seventh Cavalry.—Official title, Seventh Regiment of Cavalry. Organized Dec. 22, 1866. Served in Indian expeditions. Sent from United States for service in Cuba. The regiment is now on service in Cuba.

Eighth Cavalry.—Official title, Eighth Regiment of Cavalry. Organized 1866. Served in Indian expeditions. Sent from United States for service in Cuba. The regiment is now on service in Cuba.

Ninth Cavalry (Colored).—Official title, Ninth Regiment of Cavalry. Organized 1866. Served in Indian expeditions. Quartered in Nebraska, Utah, and Wyoming at outbreak of war. Placed under orders for war with Spain, April 15, 1898. Strength in officers and men for war with Spain: 12 officers, 207 men. Commanded by Lieut.-Col. J. M. Hamilton during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Cuba. Sent from United States for service in Cuba. Troops A, B, C, D, E, G, H, and K participated in engagements at San Juan and around Santiago. Casualties during campaign: 2 officers and 2 men killed; 2 officers and 18 men wounded. The regiment is now stationed in United States.

Tenth Cavalry (Colored).—Official title, Tenth Regiment of Cavalry. Organized 1866. Served in Indian expeditions. Quartered in Montana at outbreak of war. Placed under orders for war with Spain, April 15, 1898. Strength in officers and men for war with Spain: 27 officers, 453 men. Commanded by Lieut.-Col. T. A. Baldwin during war operations. Stationed during campaign: (1) Chickamauga, Ga.; (2) Cuba. Sent from United States for service in Cuba. Four troops (A, B, E, and I) participated in engagement at La Quasima. Troops C, D, G, and H joined in subsequent operations before Santiago. Casualties during campaign: At La Quasima, 1 man killed, 10 men wounded; at San Juan, 2 officers and 5 men killed, 9 officers and 64 men wounded. Now stationed in United States.

First Artillery.—Official title, First Regiment of Artillery. Organized 1802. Served in War of 1812, Florida and Mexican Wars, and Civil War. Quartered at outbreak of war: Battery E, District of Columbia; Battery K, Texas. Placed under orders for war with Spain, April 15, 1898. Strength in officers and men for war with Spain: Battery E, 3 officers, 79 men; Battery K, 2 officers, 78 men. Commanded by: Battery E, Capt. A. Capron; Battery K, Capt. C. L. Best, during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Cuba. Batteries E and K took part in operations before Santiago. Casualties (Battery K), 1 man wounded. The regiments, with the exception of Battery E (at Manila), is now stationed in United States.

Second Artillery.—Official title, Second Regiment of Artillery. Organized March 21, 1821. Served in Florida and Mexican Wars, Civil War, and riots. Quartered at outbreak of war: Battery A, Illinois; Battery F, Rhode Island. Placed under orders for war with Spain, April 15, 1898. Strength in officers and men for war with Spain: Battery A, 3 officers and 79 men; Battery F, 2 officers and 77 men. Commanded by: Battery A, Capt. G. S. Grimes; Battery F, Capt. C. D. Parkhurst, during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Cuba. Battery A participated in engagements at San Juan and around Santiago; Battery F took part in the fight at San Juan. Casualties during campaign: Battery A, 2 men killed, 8 men wounded; Battery F, 1 officer and 2 men wounded. The regiment is now in service in Cuba, with the exception of Batteries N and O, organizing at Fort McHenry, Md.

Third Artillery.—Official title, Third Regiment of Artillery. Organized 1775. Served in all previous wars, also in Indian expeditions. Quartered at outbreak of war: Battery C and F, California. Placed under orders for war with Spain, April 15, 1898. Commanded by: Battery C, Capt. J. M. Calliff; Battery F, Capt. R. D. Potts, during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Puerto Rico; (3) Philippines. Sent from United States for service in (1) Puerto Rico; (2) Philippines. Participated in engagements: Battery F, near Coamo and near Arbonito, Puerto Rico; Battery C, at Hormigueros and at the Rio Prieto, Puerto Rico; Batteries H and K fought in the trenches before Manila. Batteries G, H, K, and L were sent from United States for service in Manila. Casualties during campaign: 2 officers and 21 men were killed, and 3 officers and 76 men were wounded in these four batteries during engagements between Feb. 4, 1899, and April 4, 1899. They are still serving in Manila. The other batteries are now stationed in United States.

Fourth Artillery.—Official title, Fourth Regiment of Artillery. Organized 1821. Served in Florida and Mexican Wars, Civil War, and Indian expeditions. Placed under orders for war with Spain, April 15, 1898. Stationed during war: (1) Chickamauga, Ga.; (2) Cuba; (3) Puerto Rico. Battery B was in skirmishes near Coamo, Puerto Rico; Battery F is en route to Manila; Batteries G and H took part in operations before Santiago. The regiment, except Battery F, is now stationed in United States.

Fifth Artillery.—Official title, Fifth Regiment of Artillery. Organized May 4, 1861. Served in Civil War. Placed under orders for war with Spain, April 15, 1898. Stationed during war: (1) Chickamauga, Ga.; (2) Puerto Rico. Sent from United States for service at Puerto Rico. Battery D participated in engagements at Hormigueros; a detachment from Battery A took part in a fight at the crossing of the Rio Prieto. Battery F landed in

Cuba, but was not engaged. The regiment is now stationed in United States, except Battery F at Manila, and Batteries B, E, and G at Puerto Rico.

Sixth Artillery.—Official title, Sixth Regiment of Artillery. Organized 1898. Two batteries sent from United States for service in the Philippines. Casualties up to April 4, 1899: 4 men wounded. Batteries D and G are at Manila; Batteries A, I, K, and N ordered to Honolulu; other batteries in United States.

Seventh Artillery.—Official title, Seventh Regiment of Artillery. Organized 1898. Two batteries sent from United States for service in Puerto Rico. The regiment is stationed in United States, with the exception of Batteries C and M, in service in Puerto Rico.

First Infantry.—Official title, First Regiment of Infantry. Organized June 3, 1784. Served in all previous wars, also Indian expeditions. Quartered in California at outbreak of war. Placed under orders for war with Spain, April 15, 1898. Strength in officers and men for war with Spain: 14 officers, 438 men. Commanded by Lieut.-Col. W. H. Bisbee during war operations. Stationed during war: (1) New Orleans; (2) Cuba. Sent from United States for service in Cuba. Companies E and G took part in a fight at Point Arbolites, Cuba, May 12, 1898. The regiment participated in engagements at El Caney and around Santiago. Casualties during campaign: 1 man wounded at El Caney, and 1 man wounded during other engagements. Now on service in Cuba.

Second Infantry.—Official title, Second Regiment of Infantry. Organized March 3, 1791. Served in all previous wars, also Indian expeditions. Quartered in Montana and North Dakota at outbreak of war. Strength in officers and men for war with Spain: 20 officers, 618 men. Commanded by Lieut.-Col. W. M. Wherry during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Cuba. Participated in engagements at San Juan and fighting around Santiago. Casualties during campaign: 6 men killed and 4 officers and 49 men wounded at San Juan; 1 officer and 1 man killed and 1 officer and 3 men wounded in other engagements. Now stationed in United States.

Third Infantry.—Official title, Third Regiment of Infantry. Organized Nov. 1, 1796. Served in all previous wars, also Indian expeditions. Strength in officers and men for war with Spain: 21 officers, 464 men. Commanded by Col. J. H. Page during war operations. Stationed during war: (1) Mobile, Ala.; (2) Cuba; (3) Philippines. Sent from United States for service in (1) Cuba; (2) Philippines. Participated in engagements at San Juan and El Caney. Casualties during campaign in Cuba: 1 man killed and 12 men wounded at San Juan; 2 men killed and 3 men wounded at El Caney. Casualties at Manila: 2 men killed, and 1 officer and 12 men wounded. Now on service in the Philippines.

Fourth Infantry.—Official title, Fourth Regiment of Infantry. Organized May 30, 1796. Served in all previous wars, also Indian expeditions. Quartered in Illinois at outbreak of war. Strength in officers and men for war with Spain: 21 officers, 444 men. Commanded by Lieut.-Col. A. H. Bainbridge during war operations. Stationed during war: (1) Tampa, Fla.; (2) Cuba; (3) Philippines. Sent from United States for service in (1) Cuba; (2) Philippines. Participated in engagements at San Juan and El Caney. Casualties during Cuban campaign: 1 man killed and 3 men wounded at San Juan; 1 officer and 6 men killed and 2 officers and 33 men wounded at El Caney. Casualties at Manila: 1 officer and 1 man killed, and 3 men wounded. Now on service in the Philippines.

Fifth Infantry.—Official title, Fifth Regiment of Infantry. Organized July 16, 1798. Served in all previous wars, also Indian expeditions. Quartered in Georgia at outbreak of war. Stationed during war: (1) Tampa, Fla.; (2) Cuba. Now on service in Cuba.

Sixth Infantry.—Official title, Sixth Regiment of Infantry. Organized July 16, 1798. Served in War of 1812 and all subsequent wars, also Indian expeditions. Quartered in Kentucky at outbreak of war. Strength in officers and men for war with Spain: 31 officers, 461 men. Commanded by Lieut.-Col. H. C. Egbert during war operations. Stationed during war: (1) Tampa, Fla.; (2) Cuba. Sent from United States for service in Cuba. Participated in engagements at San Juan. Casualties during campaign: 2 officers and 10 men killed, 8 officers and 106 men wounded. Now under orders for service in the Philippines.

Seventh Infantry.—Official title, Seventh Regiment of Infantry. Organized July 16, 1798. Served in War of 1812 and all subsequent wars, also in Indian expeditions. Quartered in Colorado at outbreak of war. Strength in officers and men for war with Spain: 25 officers, 891 men. Commanded by Lieut.-Col. G. S. Carpenter during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Cuba. Sent from United States for service in Cuba. Participated in engagements at El Caney. Casualties during campaign: 1 officer and 32 men killed; 4 officers and 97 men wounded. Now stationed in United States.

Eighth Infantry.—Official title, Eighth Regiment of Infantry. Organized July 5, 1838. Served in Florida and Mexican Wars, Civil War, and Indian expeditions. Quartered in Wyoming at outbreak of war. Strength in officers and men for war with Spain: 19 officers, 487 men. Commanded by Major C. H. Conrad during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Cuba. Sent from United States for service in Cuba. Companies A, B, C, D, E, F, and H participated in engagements at El Caney. Casualties during campaign: 6 men killed, 1 officer and 47 men wounded. Company F served in Puerto Rico. Now on service in Cuba.

Ninth Infantry.—Official title, Ninth Regiment of Infantry. Organized Jan. 17, 1799. Served in War of 1812, Mexican War, Civil War, and Indian expeditions. Quartered in New York at outbreak of war. Strength in officers and men for war with Spain: 21 officers, 445 men. Commanded by Lieut.-Col. E. P. Ewers during war operations. Stationed during war: (1) Tampa, Fla.; (2) Cuba. Sent from United States for service in Cuba. Participated in engagements at San Juan. Casualties during campaign: 1 officer and 7 men killed, 25 men wounded. Now on service in the Philippines.

Tenth Infantry.—Official title, Tenth Regiment of Infantry. Organized March 3, 1855. (The Tenth Infantry existed from a much earlier period.) Served in Civil War and Indian expeditions. Quartered in Oklahoma at outbreak of war. Strength in officers and men for war with Spain: 23 officers, 432 men. Commanded by Lieut.-Col. E. R. Kellogg during war operations. Stationed during war: (1) Tampa, Fla.; (2) Cuba. Sent from United States for service in Cuba. Participated in engagements at San Juan. Casualties during campaign: 1 officer and 4 men killed; 5 officers and 35 men wounded. Now on service in Cuba.

Eleventh Infantry.—Official title, Eleventh Regiment of Infantry. Organized May 14, 1861. Served in Civil War and Indian expeditions. Quartered in in Missouri and Arkansas at outbreak of war. Commanded by Col. J. D. De Russey during war operations. Stationed during war: (1) Mobile, Ala.;

(2) Puerto Rico. Sent from United States for service in Puerto Rico. Participated in engagements at Hornigueros and the crossing of the Rio Prieto. Casualties during campaign: 1 man killed and 12 men wounded at Hornigueros. Now on service in Puerto Rico.

Twelfth Infantry.—Official title, Twelfth Regiment of Infantry. Organized May 4, 1861. Served in Civil War and Indian expeditions. Quartered in Nebraska at outbreak of war. Strength in officers and men for war with Spain: 20 officers, 564 men. Commanded by Lieut.-Col. Richard Comba during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Cuba; (3) Philippines. Sent from United States for service in (1) Cuba; (2) Philippines. Participated in engagements at San Juan and El Caney. Casualties during Cuban campaign: 5 men wounded at San Juan; 9 men killed and 2 officers and 29 men wounded at El Caney. Now on service in the Philippines.

Thirteenth Infantry.—Official title, Thirteenth Regiment of Infantry. Organized May 14, 1861. Served in Civil War and Indian expeditions. Quartered in New York at outbreak of war. Strength in officers and men for war with Spain: 24 officers, 441 men. Commanded by Lieut.-Col. W. S. Worth during war operations. Stationed during war: (1) Tampa, Fla.; (2) Cuba. Sent from United States for service in Cuba. Participated in engagements at San Juan. Casualties during campaign: 1 officer and 16 men killed, 6 officers and 86 men wounded. Under orders for service in the Philippines.

Fourteenth Infantry.—Official title, Fourteenth Regiment of Infantry. Organized May 4, 1861. Served in Civil War and Indian expeditions. Commanded by Major C. F. Robe during war operations. Sent from United States for service in the Philippines. Participated in engagements in the trenches at Manila, July 30 to Aug. 5, 1898 (Companies A, C, D, E, F). Casualties up to April 4, 1899: 1 officer and 13 men killed, and 45 men wounded. Now on service in the Philippines, with the exception of Companies B and H, stationed in Alaska.

Fifteenth Infantry.—Official title, Fifteenth Regiment of Infantry. Organized Jan. 11, 1812. Served in Mexican and Civil Wars. Sent from United States for service in Cuba. Now on service in Cuba.

Sixteenth Infantry.—Official title, Sixteenth Regiment of Infantry. Organized March 3, 1869. Served in Indian expeditions. Quartered in Idaho and Washington at outbreak of war. Strength in officers and men for war with Spain: 24 officers, 655 men. Commanded by Col. H. A. Theaker during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Cuba. Sent from United States for service in Cuba. Participated in engagements at San Juan. Casualties during campaign: 1 officer and 13 men killed, 6 officers and 109 men wounded. Now under orders for service in the Philippines.

Seventeenth Infantry.—Official title, Seventeenth Regiment of Infantry. Organized May 3, 1861. Served in Civil War and Indian expeditions. Quartered in Ohio at outbreak of war. Strength in officers and men for war with Spain: 24 officers, 482 men. Stationed during war: (1) Tampa, Fla.; (2) Cuba; (3) Philippines. Sent from United States for service in (1) Cuba; (2) Philippines. Participated in engagements at San Juan and El Caney. Casualties during Cuban campaign: 3 men killed and 13 men wounded at San Juan; 6 men killed, and 2 officers and 23 men wounded at El Caney. Casualties at Manila: 1 man killed and 3 wounded. Now on service in the Philippines.

Eighteenth Infantry.—Official title, Eighteenth Regiment of Infantry. Organized May–July, 1861. Served in Civil War and Indian expeditions. Quartered in Texas at outbreak of war. Commanded by Col. D. D. Van Valzah during war operations. Stationed during war: (1) New Orleans; (2) Manila. Sent from United States for service in the Philippines. Participated in assault on Manila. Casualties up to April 4, 1899: 4 killed and 19 wounded. Now on service in the Philippines.

Nineteenth Infantry.—Official title, Nineteenth Regiment of Infantry. Organized May 4, 1861. Served in Civil War and Indian expeditions. Quartered in Michigan at outbreak of war. Placed under orders for war with Spain, April 15, 1898. Commanded by Lieut.-Col. C. C. Hood during war operations. Stationed during war: (1) Mobile; (2) Puerto Rico. Sent from United States for service in Puerto Rico. Now on service in Puerto Rico.

Twentieth Infantry.—Official title, Twentieth Regiment of Infantry. Organized May 4, 1861. Served in Civil War and Indian expeditions. Quartered in Kansas at outbreak of war. Placed under orders for war with Spain, April 15, 1898. Strength in officers and men for war with Spain: 23 officers, 573 men. Commanded by Major W. S. McCaskey during war operations. Stationed during war: (1) Mobile, Ala.; (2) Cuba; (3) Philippines. Sent from United States for service in (1) Cuba; (2) Philippines. Participated in engagements at San Juan and El Caney. Casualties during Cuban campaign: 1 officer and 5 men wounded at San Juan; 1 man killed, and 1 officer and 7 men wounded at El Caney. Casualties at Manila to April 4, 1899: 3 men killed and 28 men wounded. Now on service in the Philippines.

Twenty-first Infantry.—Official title, Twenty-first Regiment of Infantry. Organized May 4, 1861. Served in Civil War and Indian expeditions. Quartered in New York at outbreak of war. Placed under orders for war with Spain, April 15, 1898. Strength in officers and men for war with Spain, 26 officers, 441 men. Commanded by Lieut.-Col. Chambers McKibbin during war operations. Stationed during war: (1) Tampa, Fla.; (2) Cuba. Sent from United States for service in Cuba. Participated in engagements at San Juan and around Santiago. Casualties during campaign: 6 men killed, 1 officer and 33 men wounded at San Juan; 1 man wounded in other engagements. Under orders for service in the Philippines.

Twenty-second Infantry.—Official title, Twenty-second Regiment of Infantry. Organized May 4, 1861. Served in Civil War and Indian expeditions. Quartered in Nebraska at outbreak of war. Placed under orders for war with Spain, April 15, 1898. Strength in officers and men for war with Spain: 29 officers, 467 men. Commanded by Lieut.-Col. J. H. Patterson during war operations. Stationed during war: (1) Tampa, Fla.; (2) Cuba; (3) Philippines. Sent from United States for service in (1) Cuba; (2) Philippines. Participated in engagements at San Juan and El Caney. Casualties during Cuban campaign: 2 men killed and 3 men wounded at San Juan; 8 men killed, and 6 officers and 35 men wounded at El Caney. Casualties at Manila: 1 officer and 7 men killed, 3 officers and 53 men wounded. Now on service in the Philippines.

Strength in officers and men for war with Spain, 1,027. Commanded by Col. Thomas H. Barber during war operations. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Fort Columbus and Fort Hamilton; (3) Camp Merritt, Presidio, San Francisco; (4) Camp McKinley, Honolulu. This regiment was composed of the Tenth Battalion and volunteers from separate companies (Third, Fifth, Fourteenth, Fifteenth, Twentieth, Twenty-fourth, Thirty-third, and Forty-fourth). The regiment was mustered out at Albany, N. Y., March 1, 1899.

The Tenth Battalion carries, by authority, silver rings on the lances of its colors, inscribed as follows: On the national color—McGill's Ferry, La., Jan. 6, 1863; Ponchatoula, La., March 24, 1863; McGill's Ferry, La., March 24, 1863; Civique's Ferry, La., March 25, 1863; Amite River, La., May 10 and 11, 1863; Port Hudson, La., May 23 to July 8, 1863. On the State color—Helderbergs, 1865; West Albany, 1877; Buffalo, 1892.

Second New York Infantry.—Official title, Second Regiment, Infantry, New York Volunteers. Headquarters, Troy, N. Y. Organized April 27, 1898. Mustered in for war with Spain, May 16-17, 1898. Strength in officers and men for war with Spain, 1,019. Commanded by Col. Edward E. Hardin during war operations. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Chickamauga, Ga.; (3) Tampa, Fla.; (4) Fernandina, Fla.; (5) Sand Lake, N. Y. This regiment was composed of volunteers from separate companies (Sixth, Seventh, Ninth, Twelfth, Eighteenth, Twenty-first, Twenty-second, Thirty-first, Thirty-second, Thirty-sixth, Thirty-seventh, and Forty-sixth). The regiment was mustered out at home stations of companies, Nov. 2, 1898.

Third New York Infantry.—Official title, Third Regiment, Infantry, New York Volunteers. Organized April 27, 1898. Mustered in for war with Spain, May 17, 1898. Strength in officers and men for war with Spain, 1,019. Commanded by Col. Edward M. Hoffman during war operations. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Camp Alger, Dunn Loring, Va.; (3) Camp Meade, Pennsylvania. The regiment was composed of volunteers from separate companies (First, Second, Eighth, Twenty-fifth, Twenty-ninth, Thirtieth, Thirty-fourth, Forty-first, Forty-second, Forty-third, Forty-seventh, and Forty-eighth). The regiment was mustered out at home stations of companies, Dec. 10, 1898.

Eighth New York Infantry.—Official title, Eighth Regiment, Infantry, New York Volunteers. Headquarters, New York city. Organized July 27, 1847. Mustered in for war with Spain, May 19, 1898. Strength in officers and men for war with Spain, 1,024. Commanded by Col. Henry Chauncey, Jr., during war operations. Stationed during war: (1) Camp Townsend, New York; (2) Camp Thomas, Chickamauga, Ga. The regiment was mustered out at New York city, Nov. 3, 1898.

The regiment (then the Third New York Regiment) performed service for the State at the flour riots in 1826, at the stonecutters' riot in 1835, and at the great fire in New York city, July 19, 1845. Since assuming its present title it has seen service as follows: At the Astor Place riots, May 10, 1849; at the police riots, June 16, 1857; at the dead-rabbit riots, July 5, 1857; at the quarantine war or Sepoy

riots, Sept. 11 to 29, 1858; at the camp of the Corcoran Legion, preserving order, Oct. 18 to 23, 1862; at the draft riots, July, 1863; at the Orange riots, July 12, 1871; at the railroad riots, July 25-29, 1877; and at Brooklyn during the motormen's strike, January, 1895. It was in the service of the United States from Sept. 15 to Dec. 15, 1812; from April 23 to Aug. 2, 1861; from May 29 to Sept. 9, 1862; and from June 17 to July 23, 1863. It was mustered in the United States service as the Eighth Regiment, Infantry, New York Volunteers, May 14, 17, and 19, 1898, and out of such service, Nov. 3, 1898. It has authority to place silver rings on the lances of the colors of the regiment, engraved as follows: On the national color—Fort Gansevoort, 1812; Fort Greene, 1812; Washington, April, 1861; Bull Run, July 21, 1861; Yorktown, 1862; Gettysburg campaign, 1863. On the State color—Flour riot, 1826; stonecutters' riot, 1835; great fire, New York city, 1845; Astor Place riot, 1849; police riot, 1857; dead-rabbit riot, 1857; Sepoy riot, 1858; Camp Corcoran Legion, 1862; draft riots, 1863; Orange riots, 1871; Syracuse, 1877; Brooklyn, 1895.

Ninth New York Infantry.—Official title, Ninth Regiment, Infantry, New York Volunteers. Headquarters, New York city. Organized June, 1859. Mustered in for war with Spain, May 17-25, 1898. Strength in officers and men for war with Spain, 1,026. Commanded by Col. S. James Greene during war operations. Stationed during war: (1) Camp Townsend, New York; (2) Camp Thomas, Chickamauga, Ga. The regiment was mustered out at New York city, Nov. 15, 1898.

The Ninth entered the United States service in 1861 for three years, being known in such service as the Ninth New York State Militia, and also as the Eighty-third New York Volunteers. It rendered the State service in the Orange riot, July 12, 1871; in the railroad riots in July, 1877; at the switchmen's strike at Buffalo in August, 1892; and during the Brooklyn motormen's strike in January, 1895. It has authority to place silver rings on the lances of the colors of the regiment, engraved as follows: On the national color—Harper's Ferry, Va., July 4, 1861; Warrenton Junction, Va., April 6, 1862; Warrenton Junction, Va., April 16, 1862; North Fork River, Va., April 18, 1862; Rappahannock River, Va., May 5, 1862; Cedar Mountain, Va., Aug. 9, 1862; Rappahannock River, Va., Aug. 22, 1862; Rappahannock Station, Va., Aug. 23, 1862; Thoroughfare Gap, Va., Aug. 28, 1862; Bull Run, Va., Aug. 30, 1862; Chantilly, Va., Sept. 1, 1862; South Mountain, Md., Sept. 14, 1862; Antietam, Md., Sept. 17, 1862; Fredericksburg, Va., Dec. 13, 1862; Pollock's Mill Creek, Va., April 29, 1863; Chancellorsville, Va., May 2 and 3, 1863; Gettysburg, Pa., July 1 to 4, 1863; Hagerstown, Md., July 12 and 13, 1863; Liberty, Va., Nov. 21, 1863; Mine Run, Va., Nov. 26 to Dec. 2, 1863; Wilderness, Va., May 5 to 7, 1864; Spottsylvania Courthouse, Va., May 8, 1864; Piney Branch Church, Va., May 8, 1864; Laurel Hill, Va., May 10, 1864; Spottsylvania, Va., May 12, 1864; North Anna, Va., May 22, 1864; Topopotomoy, Va., May 27 to 31, 1864; Cold Harbor, Va., June 1 to 7, 1864. On the State color—Abolition riot, Jan. 11 and 12, 1835; great fire, Dec. 17, 1835; Orange riot, July 12, 1871; West Albany, July, 1877; Buffalo, August, 1892; Brooklyn, Jan., 1895.

Twelfth New York Infantry.—Official title, Twelfth Regiment, Infantry, New York Volunteers. Headquarters, New York city. Organized as the Eleventh Regiment June 21, 1847. Mustered in for war with Spain, May 13, 1898. Strength in officers and men for war with Spain, 1,021. Commanded by Col. Robert H. Leonard during war operations. Stationed during war: (1) Camp Townsend, New

York; (2) Camp Thomas, Chickamauga, Ga.; (3) Camp Hamilton, Lexington, Ky.; (4) Americus, Ga.; (5) Cuba. The regiment, at time of going to press, is still in service, and stationed in Cuba.

The regiment performed duty during the Astor Place riots in 1849. April 21, 1861, the regiment entered the United States service for three months; July 12 took part in a skirmish near Martinsburg, and July 15 near Bunker Hill, W. Va.; Aug. 5, 1861, it was mustered out of service at New York city. May 27, 1862, the regiment again entered the United States service for three months, during which they were engaged in the defense of Harper's Ferry and were present at the surrender, although their services expired Aug. 27, 1862, having volunteered to remain in service until Oct. 15, 1862; Sept. 16, the regiment was paroled; Oct. 8, it was mustered out; and Jan. 11, 1863, declared exchanged. June 20, 1863, the regiment re-entered the service of the United States for thirty days, serving in Pennsylvania and Maryland and in suppressing the draft riots at New York city; it was mustered out by companies between July 20 and 25; but remained in the service of the State until September, 1863. The regiment was on duty during the Orange riots in July, 1871; during the railroad riots in July, 1877; during the switchmen's strike at Buffalo in August, 1892, and at Brooklyn during the motormen's strike in January, 1895.

Fourteenth New York Infantry.—Official title, Fourteenth Regiment, Infantry, New York Volunteers. Headquarters, Brooklyn, N. Y. Organized 1847. Mustered in for war with Spain, May 13-16, 1898. Strength in officers and men for war with Spain, 1,027. Commanded by (1) Col. Frederick D. Grant; (2) Col. Weber E. Wilder during war operations. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Camp Thomas, Chickamauga, Ga.; (3) Camp Shipp, Anniston, Ala. The regiment was mustered out at Brooklyn, N. Y., Oct. 27, 1898.

The Fourteenth entered the service of the United States for three years in May, June, and July, 1861; June 1, 1864, those entitled to discharges were mustered out and the re-enlisted men and recruits transferred to the Fifth New York Volunteers. During this service the regiment was also known as the Eighty-fourth New York Volunteers and participated in the following engagements: First Bull Run, Binn's Hill, Falmouth, Cedar Mountain, Rappahannock Station, Beverly Ford, Sulphur Springs, Gainesville, Groveton, Manassas Plains, Fredericksburg, South Mountain, Antietam, Port Royal, Fitzhugh Crossing, Chancellorsville, Seminary Hill, Gettysburg, Mine Run, Wilderness, Laurel Hill, Spottsylvania Courthouse. The regiment was in service during the quarantine disturbances at Fire Island, September, 1892, and the Brooklyn motormen's strike, January, 1895.

Twenty-second New York Infantry.—Official title, Twenty-second Regiment, Infantry, New York Volunteers. Headquarters, New York city. Organized April, 1861. Mustered in for war with Spain, May 24, 1898. Strength in officers and men for war with Spain, 1,023. Commanded by Col. Franklin Bartlett during war operations. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Willett's Point; (3) Fort Schuyler and Fort Slooem. The regiment was mustered out at New York city, Nov. 23, 1898.

The Twenty-second entered the United States service May 28, 1862, for three months, and was mustered out Sept. 5, 1862, having been stationed at Washington, D. C., and later forming part of the garrison at Harper's Ferry, Va. June 18, 1863, it was again mustered in the service of the United States for thirty days, and was mustered out July

24, 1863, having during the service taken part in the engagements at Sporting Hill and Carlisle, Pa., June 30 and July 1, 1863. The regiment has performed duty for the State at the draft riots in July, 1863; the Orange riots in July, 1871; the switchmen's strike at Buffalo, August, 1892; and the motormen's strike at Brooklyn, January, 1895. The regiment has been authorized to place rings on its colors, engraved as follows: On the national color—Harper's Ferry, 1862; Gettysburg campaign, 1863; Sporting Hill, Pa., June 30, 1863; Carlisle, Pa., July 1, 1863. On the State color—Draft riots, 1863; Orange riots, 1871; Buffalo, 1892; Brooklyn, 1895.

Forty-seventh New York Infantry.—Official title, Forty-seventh Regiment, Infantry, New York Volunteers. Headquarters, Brooklyn, N. Y. Organized 1862. Mustered in for war with Spain, May 24, 1898. Strength for war with Spain 1,024. Commanded by (1) Col. John G. Eddy; (2) Col. William H. Hubble. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Quonset, R. I.; (3) Fort Adams, Dutch Island, R. I.; (4) Puerto Rico. Sent from United States for service in Puerto Rico. Served at Caguas, Guayama, Viesquez, Carolina, Arbonito, Caye, Payordo, Humacao. The regiment, at time of going to press, is stationed at Brooklyn, N. Y., and about to be mustered out.

The regiment entered the United States service for three months, May 27, 1862, and was mustered out Sept. 1, 1862; it was remustered into service June 17, 1863, and mustered out July 23, 1863, by reason of expiration of term of service. It served the State during the draft riots, July, 1863; railroad riots, July, 1877; the quarantine disturbances at Fire Island, September, 1892; and the motormen's strike, January, 1895. The regiment received authority to place silver rings on the lances of its colors, engraved as follows: On the national color—Fort McHenry, Md., 1862; Washington, D. C., 1863. On the State color—Railroad strike, 1877; Fire Island, 1892; Brooklyn, 1895.

Sixty-fifth New York Infantry.—Official title, Sixty-fifth Regiment, Infantry, New York Volunteers. Headquarters, Buffalo, N. Y. Organized 1848. Mustered in for war with Spain, May 17, 1898. Strength in officers and men for war with Spain, 1,030. Commanded by Col. Samuel M. Weleh, Jr., during war operations. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Camp Alger, Dunn Loring, Va. The regiment was mustered out at Buffalo, N. Y., Nov. 19, 1898.

It performed duty for the State in 1849 in quelling a riot; in 1863 during the draft riots; in 1877 during the railroad riots; in 1892 during the switchmen's strike at Buffalo; and at Tonawanda in 1893. It entered the service of the United States June 19, 1863, and was mustered out July 30, 1863. In October, 1864, practically the whole of this regiment, as part of the One Hundred and Eighty-seventh Regiment New York Volunteers, was again mustered in the United States service for one year and mustered out July 1, 1865. It received authority to place silver rings on the lances of its colors inscribed as follows: On the national color—Gettysburg campaign, 1863; before Petersburg, Va., Oct. 20, 1864, to April 2, 1865; Hatcher's Run, Va., Oct. 27-28, 1864; Hicksford Raid, Va., Dec. 6-11, 1864; Hatcher's Run, Va., Feb. 5-7, 1865; Appomattox campaign, Va., March 28 to April 9, 1864; White Oak Ridge, March 29-31, 1865; Five Forks, April 1, 1865; fall of Petersburg, April 2, 1865; Appomattox Courthouse, April 9, 1865. On the State color—Canal riot, Buffalo, 1849; draft riots, New York, 1863; railroad strike, Buffalo, 1877; railroad strike, Buffalo, 1892; lumbermen's strike, Tonawanda, 1893.

Sixty-ninth New York Infantry.—Official title, Sixty-ninth Regiment, Infantry, New York Volunteers. Headquarters, New York city. Organized Oct. 12, 1851. Mustered in for war with Spain, May 19, 1898. Strength in officers and men for war with Spain, 1,026. Commanded by Col. Edward Duffy during war operations. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Camp Thomas, Chickamauga, Ga.; (3) Tampa, Fla.; (4) Fernandina, Fla.; (5) Huntsville, Ala. The regiment was mustered out at New York city, Jan. 3, 1899.

The Sixty-ninth was mustered in the United States service May 9, 1861, at Washington, D. C., to serve three months, and mustered out Aug. 3, 1861, during which service it took part in the actions at Blackburn's Ford and Bull Run. In August, 1861, about 800 men of this regiment joined the Sixty-ninth New York Volunteers, to serve three years. The regiment was again recruited and re-entered the service of the United States May 26, 1862, to serve three months; it was mustered out of service Sept. 3, 1862. On the return from this service again the major part of the regiment entered the service of the United States for three years as the Sixty-ninth National Guard Artillery or One Hundred and Eighty-second New York Volunteers. The regiment, having been reorganized, was mustered in the service of the United States for thirty days from June 25 to July 25, 1863. July 6, 1864, it was again mustered in the United States service for three months, and mustered out Oct. 6, 1864. The regiment has rendered the State service during the quarantine riots in 1858; the draft riots, 1863; and the quarantine disturbances in 1892. It was reduced, Dec. 6, 1893, to a battalion of 5 companies. The battalion was on duty at Brooklyn during the motormen's strike in January, 1895. New companies were organized for the battalion in 1895. The battalion was reconstituted a regiment Sept. 4, 1895.

Seventy-first New York Infantry.—Official title, Seventy-first Regiment, Infantry, New York Volunteers. Headquarters, New York city. Organized August, 1852. Mustered in for war with Spain, May 10, 1898. Strength in officers and men for war with Spain, 1,024. Commanded by (1) Col. Francis V. Greene; (2) Col. Wallace A. Downs. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Ybor City, Fla.; (3) Tampa, Fla.; (4) Cuba; (5) Montauk Point, Long Island. Participated in engagements at San Juan Hill, Cuba. Casualties during campaign: 12 men killed, and 1 officer and 67 men wounded. The regiment was mustered out at New York city, Nov. 15, 1898.

The American Rifles, a battalion of 4 companies, formed the nucleus of the regiment. Sept. 21, 1870, the Thirty-Seventh Regiment was consolidated with the Seventy-first Regiment. In 1861 it entered the United States service for three months, from April 21 to July 30; in 1862 it re-entered the same service May 29 for three months, at the expiration of which it volunteered to remain, and remained until Sept. 1; in 1863 it was mustered in the United States service for thirty days, and served from June 17 to July 22. It participated in engagements at Aquia Creek, June 20, 1861; Bull Run, Va., July 21, 1861; Kingston, Pa., June 26, 1863; Fort Washington, Pa., June 29, 1863; draft riots in New York city, July, 1863; Orange riots in 1871; railroad riots in 1877; switchmen's strike at Buffalo, August, 1892; and motormen's strike at Brooklyn, January, 1895. It received authority to place silver rings on the lances of its colors, inscribed as follows: On the national color—Alexandria, Va., May 24, 1861; Aquia Creek, Va., May 31, 1861; Matthias Point, Va., June 27, 1861; Bull Run, Va., July 21, 1861; Tenallytown, D. C., 1862;

Washington, D. C., 1862; Gettysburg campaign, 1863; Kingston, Pa., June 26, 1863; near Harrisburg, Pa., June 29, 1863. On the State color—dead-rabbit riot, 1857; quarantine riots, 1858; draft riots, 1863; Orange riots, 1871; railroad riots, 1877; Buffalo, 1892; Brooklyn, 1895.

Two Hundred and First New York Infantry.—Official title, Two Hundred and First Regiment, Infantry, New York Volunteers. Organized July 10, 1898. Mustered in for war with Spain, July 16-26, 1898. Strength for war with Spain, 1,275. Commanded by Col. Henry W. Hubbell during war operations. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Camp Meade, Pennsylvania; (3) Athens, Ga.; (4) Greenville, S. C. The regiment, at time of going to press, is still in the service, stationed at Greenville, S. C.

Two Hundred and Second New York Infantry.—Official title, Two Hundred and Second Regiment, Infantry, New York Volunteers. Organized July 10, 1898. Mustered in for war with Spain, Aug. 8, 1898. Strength in officers and men for war with Spain, 1,300. Commanded by Col. Stephen Y. Seyburn during war operations. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Camp Meade, Pennsylvania; (3) Camp Haswell, Athens, Ga.; (4) Cuba. The regiment, at time of going to press, is still in the service and stationed in Cuba.

Two Hundred and Third New York Infantry.—Official title, Two Hundred and Third Regiment, Infantry, New York Volunteers. Organized July 10, 1898. Mustered in for war with Spain, July 15-24, 1898. Strength in officers and men for war with Spain, 1,286. Commanded by Col. Walter L. Schuyler during war operations. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Camp Meade, Pennsylvania; (3) Greenville, S. C. The regiment, at time of going to press, is still in the service, and stationed at Camp Wetherill, Greenville, S. C.

New York Cavalry (Squadron A).—Official title, Troop A, New York Volunteer Cavalry. Headquarters, New York city. Organized April 3, 1889. Mustered in for war with Spain, May 20, 1898. Strength in officers and men for war with Spain, 84. Commanded by Capt. Howard G. Badgley during war operations. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Camp Alger, Dunn Loring, Va.; (3) Puerto Rico. Sent from United States for service in Puerto Rico. Served at Ponce, Coamo, Santa Isabel, Ceuta. The troop was mustered out at New York city, Nov. 28, 1898.

Troop A performed duty at Buffalo during the switchmen's strike in August, 1892, and at Brooklyn during the motormen's strike in January, 1895.

New York Cavalry (Squadron C).—Official title, Troop C, New York Volunteer Cavalry. Headquarters, Brooklyn, N. Y. Organized Dec. 16, 1895. Mustered in for war with Spain, May 20, 1898. Strength in officers and men for war with Spain, 84. Commanded by Capt. Bertram T. Clayton during war operations. Stationed during war: (1) Camp Black, Hempstead, Long Island; (2) Camp Alger, Dunn Loring, Va.; (3) Puerto Rico. Sent from United States for service in Puerto Rico. Served at Ponce, Coamo, Juana Diaz, Ceuta. Participated in engagements at Arbonito Road, Puerto Rico. The troop was mustered out at Brooklyn, N. Y., Nov. 25, 1898.

New York Light Battery (Fourth).—Official title, Fourth Battery, Light Artillery, New York Volunteers. Organized July 18, 1898. Mustered in for war with Spain, July 27, 1898. Strength in officers and men for war with Spain, 109. Commanded by Capt. W. L. Flanagan during war operations. Stationed during war at Camp Black, Hempstead.

Long Island. The battery was mustered out at New York city, Oct. 21, 1898.

New York Light Battery (Fifth).—Official title, Fifth Battery, Light Artillery, New York Volunteers. Organized July 18, 1898. Mustered in for war with Spain, July 27, 1898. Strength in officers and men for war with Spain, 108. Commanded by Capt. Theodore F. Schmidt during war operations. Stationed during war at Camp Black, Hempstead, Long Island. The battery was mustered out at New York city, Oct. 24, 1898.

New York Light Battery (Seventh).—Official title, Seventh Battery, Light Artillery, New York Volunteers. Organized July 18, 1898. Mustered in for war with Spain, July 27, 1898. Strength in officers and men for war with Spain, 108. Commanded by Capt. Lansford F. Sherry during war operations. Stationed during war at Camp Black, Hempstead, Long Island. The battery was mustered out, Nov. 30, 1898.

First North Carolina Infantry.—Official title, First North Carolina Volunteer Infantry. Headquarters, Statesville, N. C. Organized Oct. 19, 1882, as Fourth Regiment of the North Carolina State Guard. Mustered in for war with Spain, May 12, 1898. Strength in officers and men for war with Spain: 50 officers, 1,277 enlisted men. Commanded by Col. J. F. Armfield during war operations. Stationed during war: (1) Raleigh, N. C.; (2) Jacksonville, Fla.; (3) Cuba. Sent from United States for service in Cuba. The regiment, at time of going to press, is still in the service, and stationed in Cuba.

Second North Carolina Infantry.—Official title, Second North Carolina Volunteer Infantry. This regiment was made up from 4 companies of the State Guard and by enlistment of other companies. Mustered in for war with Spain, May 27, 1898. Strength in officers and men for war with Spain, 50 officers, 1,277 enlisted men. Commanded by Col. W. H. S. Burgwyn during war operations. Stationed during war: By detachments (1) Fort McPherson, Georgia; (2) Lands End, South Carolina; (3) St. Simon's Island, Georgia; (4) Tybee Island, Georgia. The regiment was mustered out by companies at home stations, Nov. 5, 1898.

Third North Carolina (Colored) Infantry.—Official title, Third North Carolina Volunteer Infantry. This regiment was composed and officered by colored men. Three companies were originally mustered in as Russell Black Battalion, which was subsequently expanded to a regiment of 10 companies. Its foundation was the Charlotte Light Infantry of the North Carolina State Guard. Mustered in for war with Spain, July 19, 1898. Strength in officers and men for war with Spain: 40 officers, 1,065 enlisted men. Commanded by Col. James R. Young during war operations. Stationed during war: (1) Raleigh, N. C.; (2) Knoxville, Tenn.; (3) Macon, Ga. The regiment was mustered out at Macon, Ga., Feb. 8, 1899.

First North Dakota Infantry.—Official title, First Infantry, North Dakota Volunteers (formerly First Infantry, North Dakota National Guard). Headquarters, Valley City. Organized for National Guard, April 1, 1885. Mustered in for war with Spain, May 2, 1898. Strength in officers and men for war with Spain, 685. Commanded by Lieut.-Col. William C. Trueman during war operations. Stationed during war: (1) Fargo; (2) San Francisco, Cal.; (3) Philippines. Sent from United States for service in the Philippines. Participated in the battle at Manila and subsequent engagements. Casualties up to April 4, 1899: 1 man killed, and 3 officers and 5 men wounded. The regiment, at time of going to press, is still in the service, and stationed in the Philippines.

First Ohio Infantry.—Official title, First Ohio Volunteer Infantry. Headquarters, Cincinnati. Organized as First Regiment, Ohio National Guard, June 21, 1875; as First Regiment, Ohio Volunteer Infantry, April 25, 1898. Mustered in for war with Spain, May 6, 1898. Strength for war with Spain: 50 officers, 1,302 enlisted men. Commanded by Col. Charles B. Hunt during war operations. Stationed during war: (1) Chickamauga, Ga.; (2) Tampa, Fla.; (3) Fernandina, Fla.; (4) Jacksonville, Fla. Casualties during campaign: death of 10 men. The regiment was mustered out at Cincinnati, Oct. 25, 1898.

Second Ohio Infantry.—Official title, Second Ohio Volunteer Infantry. Headquarters, Cincinnati. Utah Light Artillery (Battery C).—Official title, Light Battery C, Utah United States Volunteers. Headquarters, Fort Douglas. Organized and mustered in for war with Spain, July 14, 1898. Strength for war with Spain, 109. Commanded by Capt. F. W. Jennings. Stationed during war at Camp Merritt, Presidio, Cal. The battery was mustered out at San Francisco, Dec. 21, 1898.

Utah Cavalry (First Troop).—Official title, First Troop, Utah United States Volunteer Cavalry. Headquarters, Fort Douglas. Organized and mustered in for war with Spain, May 5, 1898. Strength for war with Spain, 84. Commanded by Capt. Joseph E. Caine during war operations. Stationed during war at Camp Merritt. About one third of the command was stationed at Sequoia, National Park, Cal. The troop was mustered out Dec. 23, 1898.

First Vermont Infantry.—Official title, First Regiment, Infantry, Vermont Volunteers. Headquarters, Camp Olympia, Colechester, Vt. Organized April 13, 1873. Mustered in for war with Spain, May 16, 1898. Strength for war with Spain, 1,038. Commanded by (1) Col. Osnan D. Clark (afterward brigade commander); (2) Lieut.-Col. John H. Mimms. Stationed during war at Camp Thomas, Chickamanga, Ga. Casualties during campaign: death of 1 officer and 27 men. The regiment was mustered out at Camp Olympia, Sept. 20, 1898.

Second Virginia Infantry.—Official title, Second Regiment, Virginia Volunteer Infantry. Headquarters, Woodstock. Organized April 20, 1889. Mustered in for war with Spain, May 21, 1898. Strength in officers and men for war with Spain, 1,021. Commanded by Col. James C. Baker during war operations. Stationed during war: (1) Camp Lee, Richmond, Va.; (2) Camp Cuba Libre, Jacksonville, Fla. The regiment was mustered out at Richmond, Va., Dec. 11, 1898.

Third Virginia Infantry.—Official title, Third Regiment, Virginia Volunteer Infantry. Headquarters, Culpeper. Organized June 13, 1881. Mustered in for war with Spain, May 26, 1898. Strength in officers and men for war with Spain, 999. Commanded by Col. William Nalle during war operations. Stationed during war: (1) Camp Lee, Richmond, Va.; (2) Camp Alger, Dunn Loring, Va. The regiment was mustered out at Richmond, Va., Nov. 6, 1898.

Fourth Virginia Infantry.—Official title, Fourth Regiment, Virginia Volunteer Infantry. Headquarters, Norfolk. Organized Aug. 29, 1882. Mustered in for war with Spain, May 20, 1898. Strength in officers and men for war with Spain, 997. Commanded by Col. George W. Taylor during war operations. Stationed during war: (1) Camp Lee, Richmond, Va.; (2) Camp Cuba Libre, Florida; (3) Camp Onward, Georgia; (4) Cuba. Sent from United States for service in Cuba. The regiment, at time of going to press, is still in the service, and stationed in Cuba.

Sixth Virginia (Colored) Infantry.—Official title, Sixth Regiment, Virginia Volunteer Infantry. Or-

ganized May 26, 1898. Mustered in for war with Spain, July 30, 1898. Strength in officers and men for war with Spain, 853. Commanded by Lieut.-Col. Richard C. Croxton (first lieutenant, First United States Infantry) during war operations. Stationed during war: (1) Camp Corbin, Virginia; (2) Camp Poland, Tennessee; (3) Camp Haskell, Georgia. The regiment was mustered out at Macon, Jan. 26, 1899.

First Washington Infantry.—Official title, First Washington Volunteers. Headquarters, Camp John R. Rogers, Tacoma. Organized May 1, 1898. Strength in officers and men for war with Spain, 1,326. Commanded by Col. John H. Wholley (first lieutenant, Twenty-fourth United States Infantry). Stationed during war: (1) Vancouver Barracks, Washington; (2) Presidio, San Francisco, Cal.; (3) Angel Island, San Francisco Bay. Sent from United States for service in the Philippines. Participated in engagements in and around Manila. Casualties up to April 4, 1899: 29 killed, and 4 officers and 136 men wounded. This organization lost more men in killed and wounded in the first conflicts near Manila than any other. The regiment, at time of going to press, is still in the service, and stationed near Manila.

Washington Infantry Battalion.—Official title, Independent Battalion, Washington Volunteer Infantry. Headquarters, Tacoma. Organized June 21, 1898. Mustered in for war with Spain, July 2, 1898. Strength for war with Spain: 14 officers, 412 enlisted men. Commanded by Major E. H. Fox during war operations. Stationed during war at Vancouver Barracks. The battalion was mustered out at Vancouver Barracks, Oct. 28, 1898.

First West Virginia Infantry.—Official title, First West Virginia Volunteer Infantry. The regiment was composed of 6 companies of the First and 6 companies of the Second Infantry, West Virginia National Guard, with headquarters at Fairmont and Huntington, respectively. Organized May 2, 1898. Mustered in for war with Spain, May 7 to 14, 1898. Strength for war with Spain: 51 officers, 1,307 enlisted men. Commanded by Col. B. D. Spilman during war operations. Stationed during war: (1) Camp Lee, Charleston; (2) Camp George H. Thomas, Chickamauga, Ga.; (3) Camp Poland, Tennessee; (4) Camp Conrad, Georgia. Casualties during campaign: death of 15 men. The regiment was mustered out at Camp Conrad, Columbus, Ga., Feb. 4, 1899.

Second West Virginia Infantry.—Official title, Second West Virginia Volunteer Infantry. Not a National Guard organization. Mustered in for war with Spain, June 25 to July 9, 1898. Strength for war with Spain, 1,321. Commanded by Col. D. T. E. Casteel during war operations. Stationed during war: (1) Camp Atkinson, Charleston; (2) Camp Meade, Pennsylvania; (3) Camp Wetherill, South Carolina. Casualties during war: death of 18 enlisted men. The regiment, at time of going to press, is still in the service, and stationed at Camp Wetherill. One battalion of the Second West Virginia Infantry attended the Peace Jubilee in Philadelphia and made a creditable record on that occasion.

First Wisconsin Infantry.—Official title, First Regiment, Infantry, Wisconsin Volunteers. Headquarters, Monroe. Organized as National Guard, April 26, 1882; as Volunteers, April 28, 1898. Mustered in for war with Spain, May 14, 1898. Strength for war with Spain, 1,357. Commanded by Col. Samuel P. Schadel during war operations. Stationed during war: (1) Camp Harvey, Wisconsin; (2) Camp Cuba Libre, Florida. Casualties during campaign: death of 45 men. The regiment was mustered out at home stations, Oct. 19, 1898.

Second Wisconsin Infantry.—Official title, Second Regiment Infantry, Wisconsin Volunteers. Headquarters, Sheboygan. Organized as National Guard, April 26, 1882; as Volunteers, April 28, 1898. Mustered in for war with Spain, May 12, 1898. Strength for war with Spain, 1,349. Commanded by Col. Charles A. Born during war operations. Stationed during war: (1) Camp Harvey, Wisconsin; (2) Camp Thomas, Chickamauga, Ga.; (3) Puerto Rico. Sent from United States for service in Puerto Rico. Participated in engagements near Arbonito pass. Casualties during campaign: death of 38 enlisted men. The regiment was mustered out by companies at home stations Nov. 21, 1898.

Third Wisconsin Infantry.—Official title, Third Regiment, Infantry, Wisconsin Volunteers. Headquarters, La Crosse. Organized as National Guard, April 30, 1883; as Volunteers, April 28, 1898. Mustered in for war with Spain, May 11, 1898. Strength for war with Spain, 1,353. Commanded by Col. Martin T. Moore during war operations. Stationed during war: (1) Camp Harvey, Wisconsin; (2) Camp Thomas, Chickamauga, Ga.; (3) Puerto Rico. Sent from the United States for service in Puerto Rico. Participated in engagements near Arbonito pass. Casualties during campaign: 2 killed and died of wounds. The regiment was mustered out by companies at home stations from Jan. 8 to Jan. 15, 1899.

Fourth Wisconsin Infantry.—Official title, Fourth Regiment, Infantry, Wisconsin Volunteers. Headquarters, Milwaukee. Organized as National Guard, April 25, 1884; as Volunteers, June 27, 1898. Mustered in for war with Spain, July 11, 1898. Strength for war with Spain, 1,301. Commanded by Col. Horace M. Seaman during war operations. Stationed during war: (1) Camp Douglas, Wisconsin; (2) Camp Shipp, Anniston, Ala. Casualties during campaign: 1 officer and 16 men. The regiment was mustered out at Anniston, Ala., Feb. 28, 1899.

Wisconsin Light Battery.—Official title, Battery A, Light Artillery, Wisconsin Volunteers. Headquarters, Milwaukee. Organized as National Guard, May 11, 1885; as Volunteers, July 7, 1898. Mustered in for war with Spain, July 9, 1898. Strength for war with Spain, 109. Commanded by Capt. Benjamin H. Dally during war operations. Stationed during war at Camp Douglas, Wis. The battery was mustered out at Camp Douglas, Oct. 8, 1898.

First Wyoming Infantry.—Official title, First Battalion, Wyoming Volunteers (before enlistment First Regiment, Wyoming National Guard). Headquarters, Evanston. Organized Feb. 26, 1891. Mustered in for war with Spain, May 10, 1898. Strength for war with Spain: 14 officers, 324 enlisted men. Commanded by Major Frank M. Foote during war operations. Stationed during war: (1) Camp Merritt, California; (2) Manila. Sent from United States for service in the Philippines. Participated in engagements at Manila, including waterworks. Casualties up to April 4, 1899: 2 killed and 5 wounded. The battalion, at time of going to press, is still in service at Manila.

Wyoming Light Battery.—Official title, Alger Light Battery (Battery A), Wyoming Volunteers. Headquarters, Cheyenne. Organized Feb. 19, 1896. Mustered in for war with Spain, June 16, 1898. Strength for war with Spain: 3 officers, 122 enlisted men. Commanded by First-Lieut. H. A. Clarke during war operations. Stationed during war: (1) Camp Merritt; (2) Manila. Sent from United States for service in the Philippines. The battery, at time of going to press, is still in service at Manila.

United States Volunteer Organizations.—In addition to the volunteer organizations fur-

nished by the States and given in detail above, a number of regiments and companies were mustered in under the general title of United States Volunteers, by authority of acts of Congress dated April 22 and May 11, 1898. These acts, specially drawn for war purposes, gave to the President authority to bring about the enrollment (1) of 3,000 men from the nation at large possessing special qualifications; (2) of 3,500 men qualified for engineering work; and (3) 10,000 men possessing immunity from disease incident to tropical climates. The muster in of 3 regiments of cavalry ("Rough Riders") was completed by May 30; that of the 10 regiments of infantry (immune) by July 30; that of the 3 regiments of engineers by Aug. 20, the last volunteer organization being mustered in Aug. 24, 1898. According to the official roster, these organizations included 3 regiments of engineers, 3 regiments of cavalry, 11 regiments of infantry, and 12 companies forming a signal corps. Official data concerning these organizations is not yet sufficiently complete to admit of a detailed statement concerning the record of each during war operations. In addition to the engineers, cavalry, infantry, and the signal corps, a battery of artillery was organized through the instrumentality of a private citizen of New York (John Jacob Astor).

Engineers.—The United States Volunteer Engineers, according to the official data available, did excellent service during the campaign. In the official roster showing the principal camps and stations the following statement is given: First Regiment, mustered out at New York city, Jan. 25, 1898; Second Regiment, 8 companies at Havana and 4 companies at Honolulu; Third Regiment, 4 companies at Cienfuegos with headquarters, 4 companies at Matanzas, and 4 companies at Havana.

Cavalry.—The following statement is made concerning the United States Volunteer Cavalry: First Regiment, mustered out at Montauk, N. Y., Sept. 15, 1898; Second Regiment, mustered out at Jacksonville, Fla., Oct. 24, 1898; Third Regiment, mustered out at Chickamauga, Ga., Sept. 8, 1898. The official record of the First United States Volunteer Cavalry shows that Troops A, B, D, E, F, G, K, L, consisting of 31 officers and 567 men, took part in the engagement at La Quasima, Cuba, on June 24, 1898. The casualties recorded for the regiment at that fight were: 1 officer and 15 men killed, 6 officers and 44 men wounded. In subsequent operations against Santiago (San Juan, July 1-3) the 8 troops before mentioned have the following casualty record: 1 officer and 14 men killed, 5 officers and 69 men wounded. This regiment was commanded by (1) Col. Leonard Wood; (2) Lieut.-Col. Theodore Roosevelt.

Astor Battery.—Equipped and organized at New York city at the expense of John Jacob Astor, May, 1898. Mustered in for war with Spain, June, 1898. Strength: 3 officers, 101 men. Commanded by Lieut. March during war operations. Stationed during war: (1) Pelham Bay Park, N. Y.; (2) Presidio, Cal.; (3) Manila. This battery took part in the action of Aug. 13, 1898, at Manila. Casualties during campaign: 3 men killed. The battery was mustered out in New York city, Feb. 2, 1899. During the fighting at Manila on Aug. 13 the Astor Battery was on the right of the line. It shelled the blockhouse with its Hotchkiss mountain guns, the men, under Capt. March, subsequently charging the position with revolvers.

Infantry.—The following statement is made concerning the United States Volunteer Infantry: First Regiment, mustered out at Galveston, Texas, Oct. 28, 1898; Second Regiment, stationed at Santiago; Third Regiment, stationed at Macon, Ga.; Fourth Regiment, stationed at Manzanillo; Fifth

Regiment, stationed at Santiago; Sixth Regiment, stationed at Savannah, Ga.; Seventh Regiment (colored), mustered out at Macon, Ga., Feb. 28, 1899; Eighth Regiment (colored), stationed at Chickamauga, Ga.; Ninth Regiment (colored), stationed at Santiago; Tenth Regiment (colored), stationed at Macon, Ga.; Territorial Regiment, mustered out at Albany, Ga., Feb. 15, 1899. The roster on which these regiments are named is dated March 9, 1899, and shows that the Third, Sixth, Eighth, and Tenth Regiments were at that time under orders to be mustered out.

Signal Corps.—The roster above referred to shows that on the date given the Second, Third, Sixth, Eleventh, Twelfth, Thirteenth, Fifteenth, Sixteenth, and Seventeenth Companies were stationed in Cuba. The Fourth Company was stationed at Puerto Rico, and the First and Eighteenth Companies at Manila. These companies included experts from State organizations.

The North Atlantic Fleet.—The following statement shows the dates on which the vessels named joined the North Atlantic fleet, the length of their service, and such other details as have been made available concerning the nature of their service during the war. It is not possible to say what vessels were under the direct command of the several squadron commanders, as the disposition of the vessels depended upon their location. Vessels within signal distance of Key West were under the command of the commandant of the naval base at that place; those on the western coast of Cuba were under the orders of the commanding officer of the blockading division or of the commander of the first North Atlantic squadron; others on the east coast of Cuba, by reason of their presence there, received their orders from Commodore Schley or Admiral Sampson.

Northern Patrol Squadron.—On April 20, 1898, Commodore John A. Howell assumed command of the Northern patrol squadron. This squadron, consisting at first of the "San Francisco" (flagship), "Prairie," "Dixie," "Yankee," and "Yosemite," was organized for the protection of the coast and coastwise trade between the Capes of the Delaware and Bar Harbor, Me.

On May 29 the "Yankee" was detached from the squadron, and the services of the "Yosemite" and "Dixie" being required in Southern waters, the former was detached on May 30, and the latter on June 13. During May the squadron was strengthened by the addition of the "Columbia," "Badger," and "Southery." On June 9 the "Minneapolis" was ordered to duty in the squadron, and was stationed at Newport News, Va., to guard the new battle ships being constructed there.

The Navy Department, considering it advisable to increase the efficiency of the blockade of Cuba, Commodore Howell, on June 25, was ordered to assemble the vessels of his command, with the exception of the "Minneapolis," at Key West. Upon his arrival there, June 1, with the "San Francisco," "Columbia," "Prairie," "Badger," and "Southery," he was assigned by Rear-Admiral Sampson to the command of the first division of the North Atlantic fleet.

Flying Squadron.—The flying squadron was under the command of Commodore W. S. Schley, U. S. N., who, from the beginning of the war to May 24, 1898, acted independently, and from May 24 until June 21, 1898, when the flying squadron ceased to exist, under the directions of Admiral Sampson.

Eastern Squadron (Commodore J. C. Watson, commanding).—During June and July the department issued orders for the formation of the Eastern squadron, to which the following vessels were as-

signed: "Oregon," on July 7, 1898; "Newark," on July 7, 1898 (detached Aug. 3); "Yankee," on July 7, 1898; "Yosemite," on July 7, 1898; "Dixie," on July 7, 1898; "Massachusetts," on July 9, 1898; "Badger," on July 12, 1898; "New Orleans," on July 17, 1898. The colliers "Abarenda," "Alexander," "Cassius," "Caesar," "Seindia," and "Justin" and the supply ship "Glacier" were attached to this squadron on Aug. 3, with orders to hold themselves in readiness at Hampton Roads to join the squadron. At the time of formation of the Eastern squadron the Navy Department especially directed that the vessels assigned to it were to remain under the orders of the commander in chief of the North Atlantic station until the departure of the Eastern squadron for Europe, but as this squadron was never sent abroad the vessels composing it always remained under the orders of Admiral Sampson.

Abarenda.—Steamer converted into a collier. Commissioned in United States navy May 20, 1898. Lieut.-Commander W. H. Buford. Took part in the attack on Guantanamo, June 12, 1898. Assigned to Eastern squadron, under Commodore Watson.

Alexander.—Steamer converted into a collier. Commissioned in United States navy June 1, 1898. Commander W. T. Burwell. Assigned to Eastern squadron, under Commodore Watson. Served chiefly at Santiago and Guantanamo.

Amphitrite.—Double-turreted monitor. Twenty-six officers, 156 men. Launched June 7, 1883. First commission, April 23, 1895. Capt. C. J. Barelay. Ordered to Key West early in March, 1898. Off Matanzas early in April. Ordered to San Juan, Puerto Rico, May 4. Supported naval force in holding lighthouse at Cape San Juan, Aug. 9.

Annapolis.—Gunboat. 11 officers, 124 men. Cost, \$227,700. Launched Dec. 23, 1896. First commission, July 20, 1897. Commander J. J. Hunker. With expedition of Gen. Miles to Puerto Rico. Proceeded on July 27, 1898, with "Dixie," "Wasp," and "Gloucester," from Guanica to blockade Ponce and to capture lighters for the use of the army.

Apache.—Converted tug. 4 officers, 44 men. First commission in United States navy, June 11, 1898. Lieut. G. C. Hanus. Served chiefly in Hampton Roads and at Key West.

Armeria.—Lighthouse tender. Commander L. C. Logan. Served chiefly at Key West, Santiago, Guantanamo.

Accomac.—Converted tug. 1 officer, 11 men. First commission, April 2, 1898. Ensign W. S. Crosby commanded to May 6, 1898; Boatswain J. W. Angus held command from May 6 to close of war.

Badger.—Auxiliary cruiser. 19 officers, 216 men. First commission in United States navy, April 22, 1898. Commander A. S. Snow. Officers and crew made up almost entirely from the Battalion of the East, New Jersey Naval Reserves. Served on the northern patrol, having a patrol line of 120 miles, from Quoddy Head to the westward. Assisted in the destruction of the "Alfonso XII" on July 6. Carried supplies and mail to Guantanamo Bay, in August, for fleet and army. Brought home three companies of the Thirty-fourth Michigan Volunteers from Cuba. When on blockade duty at Nuevas on July 26, captured a Spanish tug, barge, and brigantine. These vessels were subsequently released.

Bancroft.—Gunboat. 10 officers, 113 men. Cost, \$250,000. Launched April 30, 1892. First commission, March 3, 1893. Commander Richardson Clover. The Bancroft served before Havana, Santiago, Guantanamo, and about the Isle of Pines, where she was engaged in several sharp fights. The only persons killed the first day that Gen. Shafter's army

landed at Daiquiri were Major Luis Belini, commandant at Siboney, and two Spanish soldiers, by a shell from the "Bancroft." The last man killed in the navy during the war, Emanouil Koulouris, was from the "Bancroft," in a sharp boat attack at Bailen in the Bay of Cortes. Now out of commission.

Brooklyn.—Armored cruiser. 46 officers, 470 men. Cost, \$2,986,000. Launched Oct. 2, 1895. First commission, Dec. 1, 1896. Capt. F. A. Cook in flying squadron from beginning of war to May 24, 1898. Sailed in search of Cervera's squadron on May 13. Assisted in destruction of same on July 3, chasing the "Cristobal Colon," which surrendered to her commander. During this engagement Chief Yeoman G. H. Ellis was killed and one man wounded. The "Brooklyn" also took part in the bombardment of Santiago, Cuba, on Sunday, July 10, 1898. Now serving in the North Atlantic fleet.

Capt. Cook, in his official report of the "Brooklyn's" action during the pursuit and destruction of Cervera's ships said, after noting the time and method of exit of the Spanish ships from Santiago harbor: "We opened fire on the leading ship in five minutes from the discovery. The port battery was first engaged as we stood with port helm to head off the leading ship, and giving them a raking fire at about 1,500 yards range. The enemy turned to the westward to close into the land. We then wore around to starboard, bringing the starboard battery into action. The enemy hugged the shore to the westward.

"The 'Brooklyn' leading, was followed by the 'Texas,' 'Iowa,' 'Oregon,' 'Indiana,' and 'Gloucester.' The 'Vixen,' which had been to the westward of us on the blockade, ran to the southward and eastward of us, and kept for some time off our port side distant about 1,000 yards, evidently intending to guard against torpedo attack upon this ship. The shell passing over us fell very thick about her, some passing over her. At this time the firing was very fast and the whistling of shell incessant. . . . The 'Maria Teresa,' which had dropped astern while we were wearing, under the heavy fire of our fleet ran ashore, the 'Vizcaya,' 'Oquendo,' and 'Colon' continuing on and gaining in distance.

"The 'Brooklyn' was engaged with the three leading ships of the enemy, which were forging ahead, the 'Texas,' 'Iowa,' and 'Indiana' keeping up a heavy fire, but steadily dropping astern. The 'Oregon' was keeping up a steady fire and was coming up in the most glorious and gallant style, outstripping all others. . . . We were making 14 knots at the time, and the 'Oregon' came up off our starboard quarter at about 600 yards and maintained her position, though we soon after increased our speed to 15 knots, and just before the 'Colon' surrendered were making nearly 16.

"The 'Oquendo' . . . dropped astern, and, on fire, ran ashore. The 'Vizcaya' and 'Colon' continued on, under fire from the 'Brooklyn' and 'Oregon.' The other vessels of our fleet were well astern and out of range. The 'Texas' was evidently coming up fast. At about 10.53 A. M. the 'Vizcaya' was seen to be on fire, and the 'Colon' passed inside of her with increased speed, took the lead, and gradually forged ahead. The 'Vizcaya' soon after ran on the beach, ablaze with fire. We signaled the 'Oregon' to cease firing on the 'Vizcaya,' as her flag was down. Firing immediately ceased, and we both continued the chase of the 'Colon,' now about 12,000 yards away. The ranges ran from 1,500 to 3,000 yards with the 'Vizcaya' as she kept in and out from the coast.

"We steered straight for a distant point near Cape Cruz, while the 'Colon' kept close to the

land, running into all the bights. She could not have come out without crossing our bows, and we were steadily gaining on her. . . . After running for about 50 miles west from the entrance, the 'Colon' ran into a bight of land, beached, fired a gun to leeward, and hauled down her flag. The 'Oregon' and 'Brooklyn' had just previously begun to fire upon the 'Colon' and were landing shell close to her."

Cæsar.—Steamer converted into collier. Commissioned in United States navy, May 13, 1898.

Calumet.—Revenue cutter. First-Lieut. W. H. Cushing, R. C. S. Served between Key West, Port Tampa, and Havana.

Castine.—Gunboat. 11 officers, 140 men. Cost, \$318,500. Launched May 11, 1892. First commission, Oct. 22, 1894. Commander S. W. Berry. Served chiefly at Key West and in Cuban waters.

Celtic.—Special class. Supply ship. Commissioned in United States navy May 27, 1898. Lieut. Commander N. J. K. Patch. Served chiefly between Santiago and Guantanamo.

Cincinnati.—Protected cruiser. 20 officers, 294 men. Cost, \$1,100,000. Launched Nov. 10, 1892. First commission, June 16, 1894. Capt. C. M. Chester. Took part in the Havana blockade, afterward aiding the blockade of Matanzas; then participated in bombardment. Scouted in the Yucatan channel for Cervera's fleet. Sent on duty with Puerto Rican expedition. Took part in San Juan blockade. Aided the Cincinnati in defending the lighthouse at San Juan.

Columbia.—Protected cruiser. 30 officers, 447 men. Cost, \$2,725,000. Launched July 26, 1892. First commission, April 23, 1884. In flying squadron. Commanded by (1) Capt. J. H. Sands; (2) Capt. T. F. Jewell. On North Atlantic station from July 1, 1898, to close of war. The "Columbia" accompanied Gen. Miles from United States to Santiago, starting July 9, 1898; having on board the First Battalion of the Sixth Illinois Infantry. Afterward proceeded with Puerto Rican expedition from Guantanamo Bay.

Cushing.—Torpedo boat. 3 officers, 20 men. Cost, \$82,750. Launched Jan. 23, 1890. First commission, April 22, 1890. Lieut. Albert Gleaves. Served on dispatch duty at beginning of war. Took part in the capture of two Spanish schooners off Havana on April 23, 1898. With the "McKee," while under fire from three Spanish gunboats, captured and destroyed 5 sloops in the harbor of Sagua la Grande, which was mined, on Aug. 7, 1898. Three days later, at Cardenas, in company with the "Gwin," entered the bay through a mined channel and destroyed a schooner. Now out of commission.

Detroit.—Unprotected cruiser. 20 officers, 236 men. Cost, \$612,500. Launched Oct. 28, 1891. First commission, July 20, 1893. Commander J. H. Dayton. On the morning of April 24 captured the steamer "Catalina." On Havana blockade until May 4. Was with Admiral Sampson's squadron in first trip to Puerto Rico in search of Cervera. Headed the column in engagement with fortifications at San Juan, Puerto Rico, on May 12. After return, in the patrolling squadron on north coast of Cuba until whereabouts of Cervera was discovered with certainty. Scout duty in Santander passage and St. Nicholas channel. One of the convoy for Gen. Shafter's expedition. Assisted with boats in the landing at Daiquiri and in shelling the beach preparatory to landing. For the remainder of the war, blockade duty off Cienfuegos and the Isle of Pines.

Dixie.—Auxiliary cruiser. 14 officers, 167 men. First commission in United States navy, April 19, 1898. Commander C. H. Davis. North-

ern patrol squadron, May 6 to June 18, 1898. When the Eastern squadron was formed under Commodore Watson for service along the Spanish coast the "Dixie" was included among the vessels for that service. In July, accompanied the expedition to Puerto Rico from Guantanamo Bay. Assigned, on July 27, 1898, to blockade Ponce and capture lighters for the use of the army, joining with the "Annapolis," "Wasp," and "Gloucester" for that purpose.

Dolphin.—Dispatch boat. 7 officers, 110 men. Cost, \$315,000. Launched April 12, 1884. First commission, Dec. 8, 1885. Commander H. W. Lyon. From April 24 to May 5, on the blockade off Bahia Honda, north coast of Cuba. Overhauled a large number of vessels and captured the Spanish schooner "Lola." On the blockade, north coast of Cuba, and on blockade of Havana. On May 29 convoyed cable steamer "Adria" to Santiago, for use in cutting cables. Remained on the Santiago blockade, assisting in bombardment until June 12. Re-enforced the "Marblehead," at Guantanamo, in support of marine battalion who were attacked by superior force. On June 13 the "Dolphin" shelled the water-supply station from the seacoast. On June 14 supported advance of marines, shelling blockhouse, supplying ammunition and water to United States force, and caring for wounded. At various times conveying Cuban officers and others to and from engaged points of the Cuban coast.

Dorothea.—Converted yacht. 6 officers, 63 men. First commission in United States navy, June 1, 1898. Lieut.-Commander W. J. Barnette commanding until Aug. 9, 1898; Lieut.-Commander N. T. Houston from that date to close of war. Chiefly at Key West.

Du Pont.—A torpedo boat. Cost, \$144,000. Launched March 30, 1897. First commission, Sept. 23, 1897. Lieut. S. S. Wood. Accompanied blockading fleet to Cuba on April 22, 1898. Aided in blockade of Matanzas. Attacked two blockhouses at that place after being fired upon, and did effective service. Carried dispatches from Admiral Sampson to Commodore Schley (Key West to Cienfuegos), a run of 625 miles, in a heavy sea. Performed effective dispatch service. Accompanied Gen. Shafter's expedition to Santiago. Performed patrol duty off the entrance to Santiago harbor. Carried Admiral Sampson's dispatch announcing the Santiago victory to Siboney.

Eagle.—Converted yacht. 4 officers, 60 men. First commission in United States navy, March 26, 1898. Lieut. W. H. H. Southerland. On April 29 the "Eagle" was attacked in Cienfuegos harbor by three Spanish gunboats, and repulsed them within fifteen minutes, striking one of the enemy's vessels twice and disabling her. The "Eagle's" battery consisted of 4 6-pounder rapid-fire guns and 2 Colt automatic guns. Engaged on blockade duty, dispatch service, convoy service, and at the landing of troops for Santiago. On June 29 attacked a large force of Spanish cavalry near the mouth of the Rio Hondo, inflicting much loss on the enemy and driving them away. Afterward engaged on blockade duty at the Isle of Pines. On July 12, when on this blockade duty, the "Eagle" chased, drove ashore, and seized as a prize the armed transatlantic liner "Santo Domingo," loaded with supplies and armed with 2 shielded 4.72-inch breech-loading rifle guns. During four months the "Eagle" boarded 32 vessels.

Ericsson.—Torpedo boat. 3 officers, 20 men. Cost, \$113,500. Launched May 12, 1894. First commission, Feb. 18, 1897. Lieut. N. R. Usher. Served chiefly on blockade duty off Havana. Present during engagement with Cervera's vessels at Santiago, July 3, 1898, accompanying the "New York" until end of engagement. Then rendered

very efficient service in reseuing prisoners from the "Vizeaya."

Fern.—Wooden steam vessel. Built in 1871. 5 officers, 45 men. Lieut.-Commander W. S. Cowles commanding until April 27, 1898; Lieut.-Commander Herbert Winslow from that date to close of war. Served in Cuban waters and at Key West.

Fish Hawk.—Fish Commission vessel. Lieut.-Commander F. H. Delano. Served chiefly at Key West and Havana. Now out of commission.

Foote.—Torpedo boat. 4 officers, 20 men. Cost, \$97,500. Launched Oct. 1, 1896. First commission, Aug. 7, 1897. Lieut. William L. Rodgers.

Frolic.—Converted yacht. 7 officers, 37 men. First commission in United States navy July 6, 1898. Commander E. H. Gheen. Served chiefly in Puerto Rican waters.

Glacier.—Special class. Refrigerator ship. Commissioned in United States navy July 5, 1898. Commander J. P. Merrell. Assigned to Eastern squadron. Employed chiefly as supply ship for United States vessels in eastern Cuban and Puerto Rican waters.

Gloucester.—Converted yacht. 9 officers, 85 men. First commission in United States navy, May 20, 1898. Lieut.-Commander Richard Wainwright. Joined blockading squadron off Santiago chiefly to carry dispatches. Bombarded fort at Aquadores repeatedly, and also took part in a number of the bombardments of Morro Castle. On July 3, when the Spanish fleet issued from the harbor, the "Gloucester" was lying at the extreme easterly point of the blockading line, about two miles to the south and east of Morro Castle. She fired upon all the Spanish ships in turn, but her efforts were soon confined to the two torpedo-boat destroyers "Furor" and "Pluton," which were the last to leave the harbor.

This battle, distinct from the general engagement, continued for more than an hour, when the "Pluton," the leading destroyer, ran ashore three miles west of Morro Castle and exploded, and the "Furor" sank in deep water. The few survivors, however, aboard the "Furor" were rescued before the boat sank, and also those from the "Pluton." The "Gloucester" rescued those aboard the burning, exploding cruisers "Maria Teresa" and "Oquendo." Nearly 500 men were taken ashore through the surf from these ships. Admiral Cervera and his staff were brought aboard the "Gloucester" with many other prisoners.

Joined Puerto Rican expedition. On reaching Guanica Commander Wainwright obtained permission to enter the harbor in advance. The entrance was made and the town taken after a sharp skirmish by the infantry company of the "Gloucester," under the command of Lieut. Huse, and held until other troops were landed. Was present at the surrender of Ponce. Proceeding then to Arroya, the infantry company was again landed, and held the place in the face of the enemy for two days, until United States troops arrived.

Gwin.—Torpedo boat. Cost, \$39,000. Launched Nov. 15, 1897. First commission, April 4, 1898. Lieut. C. S. Williams. Served chiefly in Southern and Cuban waters.

Hamilton.—Revenue cutter. Capt. W. D. Roath, R. C. S. Details of service not available.

Hannibal.—Steamer converted into collier. Commissioned in United States navy June 7, 1898. On North Atlantic squadron from July 1, 1898, to close of war. Commander H. G. O. Colby. Served chiefly in Puerto Rican waters.

Hawk.—Converted yacht. 4 officers, 46 men. First commission in United States navy, April 5, 1898. Lieut. J. Hood. Served chiefly between Key West and Havana and at Cuban ports. On night of July 4, 1898, chased and destroyed a large steamer

of about 6,000 tons when attempting to run the blockade off Mariel. Name of steamer not known.

Helena.—Light-draught gunboat. 10 officers, 165 men. Cost, \$280,000. Launched Jan. 30, 1896. First commission, July 8, 1897. Commander W. T. Swinburne. Captured Spanish steamer, April 23, 1898. On convoy duty in Gen. Shafter's army to Santiago. Bombarded Siboney prior to landing of army, June 22. Served on Cienfuegos-Batabano blockade from June 27 to end of war.

On July 2 engaged earth battery of 5 guns, 2 field guns, and intrenched infantry at Tunas. Enemy's fire silenced in twenty-eight minutes. Under cover of this demonstration the Cuban expedition moved to Palo Alto, 40 miles to eastward, and successfully landed men, arms, and supplies for Gen. Gomez. On July 18, with "Wilmington," "Scorpion," "Osceola," "Hornet," "Hist," and "Wompatuck," destroyed 3 transports and 5 small gunboats at Manzanillo. Bombarded Santa Cruz, raised and cut cables from Juaro to Tunas and from Tunas to Trinidad. On July 26, with "Osceola," engaged batteries at Tunas to test enemy's strength.

Hist.—Converted yacht. 6 officers, 50 men. First commission in United States navy, May 13, 1898. Lieut. Lucien Young. On patrol duty until June 5 on Atlantic coast, then ordered to Cuba. On June 30, at Manzanillo, destroyed an armed pontoon containing soldiers, injured a torpedo boat and several other vessels of the enemy, silenced a shore battery and fort, and inflicted great loss of life. Also on the same day destroyed a gunboat in the harbor of Niguero and forced ashore a transport filled with soldiers. Took part in the chase and the destruction of Cervera's fleet at Santiago, running close under the shore batteries. Remained near the "Vizeaya" for several hours, taking from that vessel many prisoners, including wounded, in the midst of fire and explosions.

On July 11 aided in cutting the cable between Havana, Manzanillo, and Santiago. On July 18 piloted the squadron through the inland water to Manzanillo and took part in bombardment and destruction of 5 gunboats, a storeship, and 3 large transports. On July 20 took part in bombardment of Santa Cruz and in cutting cable loops. From Aug. 6 to 10 made reconnaissance of inland waters south of Cuba, running through mine fields in main channel and engaging shore batteries and troops. Did effective blockade duty in Cuban waters. Assisted in capture of several blockade runners and also captured a number of smaller vessels, afterward released. The "Hist" was schooner rigged, 174 feet long, with a breadth of 26 feet, and a tonnage of 312. She carried 1 3-pounder, 4 1-pounders, and 1 Colt.

Hornet.—Converted yacht. 4 officers, 51 men. First commission in United States navy, April 12, 1898. Lieut. J. M. Helm. Assisted in bombarding blockhouses and batteries off Matanzas, May 6, 1898. On the next day entirely destroyed these structures. Two days later shelled and broke up cavalry and infantry encampment and destroyed fort near Sabinilla Point. Proceeded with convoy of Gen. Shafter's expedition from Tampa to Santiago. On June 22 assisted in the bombardment of Siboney. On June 25 captured Spanish schooner loaded with provisions. On June 27 captured Spanish steamer coming out of Manzanillo. On June 30 captured schooner entering Manzanillo with supplies. On same date joined in reconnaissance toward Manzanillo and repelled attack by gunboat and troops, disabling the former and dispersing the latter. Bombarded forts and engaged batteries, artillery, and 9 armed batteries in the harbor (with "Hist" and "Wompatuck"). In this fight one Spanish gunboat and another armed vessel were sunk and others

more or less disabled. The "Hornet" was struck by many shells and the main steam pipe was shot away. The only casualties were 3 men sealed.

On July 11 assisted in cable cutting near Manzanillo. On July 15 captured Spanish schooner. On July 18 assisted in the second attack on Manzanillo, when 4 Spanish war vessels were burned and blown up, 2 transports burned, and 4 other war vessels beached and totally disabled. This result was achieved without loss of life or damage to United States ships. Fired 748 shells during this action. On Aug. 9 captured Spanish schooner attempting to run blockade off the Isle of Pines. The "Hornet" was schooner rigged, 180 feet long, with a breadth of 24 feet and a tonnage of 301.89. She carried 3 6-pounders, 2 1-pounders, 2 Colts, and 2 other guns.

Hudson.—Revenue cutter. First-Lieut. F. H. Newcomb. Rescued the "Winslow" when the latter vessel was disabled at Cardenas on May 11, 1898. The "Winslow" had been engaged with shore batteries.

Indiana.—First-class battle ship. 32 officers, 441 men. Cost, \$3,020,000. Launched Feb. 28, 1893. First commission, Nov. 20, 1895. Capt. H. C. Taylor. On April 22, 1898, joined Admiral Sampson's fleet on the way to blockade Havana. On April 25 aided in capture of Spanish steamer. On April 26 with cable-cutting expedition. On May 4 formed one of fleet to search for Cervera's squadron. On May 12 took part in bombardment of San Juan fortifications, Puerto Rico. On June 22 engaged with Santiago batteries. On duty at blockade of Santiago until July 1. Next day took part in bombardment of Santiago forts. On July 3 the "Indiana" was close into the Morro when the Spanish ships came out of Santiago harbor and received the fire of each ship, at the same time keeping up a hot fire on the escaping vessels. Within forty minutes the "Indiana's" guns fired nearly 1,000 shells from 13-inch to 6-pounders, with about 20 1-pounder shots. Was in action about one hour and twenty minutes, or until she had assisted in beaching or sinking the "Maria Teresa," "Oquendo," "Vizcaya," "Pluton," and "Furor," and fired a number of shells at the "Cristobal Colon." On July 10-11 engaged in long-range bombardment of Santiago city. On July 17 proceeded to Guantanamo Bay and prepared to accompany Eastern squadron.

Iowa.—First-class battle ship. 36 officers, 469 men. Cost, \$3,010,000. Launched March 28, 1896. First commission, June 16, 1897. Capt. R. D. Evans. Took part in bombardment of Morro battery, San Juan, Puerto Rico, on May 12, 1898. Three men wounded, being struck by fragments of a shell which exploded abreast of the after 8-inch turret. On May 22 joined Commodore Schley's squadron off Cienfuegos. On May 24 took part in Cienfuegos blockade. On May 29 took up position off Santiago harbor. Took part in firing at Spanish vessels in Santiago harbor on May 31, 1898. Participated in engagement with Spanish squadron on July 3, 1898, heading toward the "Infanta Maria Teresa" (Admiral Cervera's flagship), then leading the Spanish squadron, and fired first shot, at a distance of about 6,000 yards. The course of the "Iowa" was so laid that the range speedily diminished. A number of shots were fired at ranges varying between 6,000 and 4,000 yards. The range was rapidly reduced to 2,500 yards, and subsequently to 2,000 and to 1,200 yards.

"When it was certain," says Capt. Evans in his official report, "that the 'Maria Teresa' would pass ahead of us, the helm was put to starboard, and the starboard broadside delivered at a range of 2,500 yards. The helm was then put to port and the ship headed across the bow of the second ship,

and as she drew ahead the helm was again put to starboard and she received in turn the full weight of our starboard broadside at a range of about 1,800 yards. The 'Iowa' was again headed off with port helm for the third ship, and as she approached the helm was put to starboard until our course was approximately that of the Spanish ship. In this position at a range of 1,400 yards the fire of the entire battery, including rapid-fire guns, was poured into the enemy's ship.

"About ten o'clock the enemy's torpedo-boat destroyers 'Furor' and 'Pluton' were observed to have left the harbor and to be following the Spanish squadron. At the time that they were observed, and in fact most of the time that they were under fire, they were at a distance varying from 4,500 to 4,000 yards. As soon as they were discovered the secondary battery of this ship was turned upon them, while the main battery continued to engage the 'Vizcaya,' 'Oquendo,' and 'Maria Teresa.' The fire of the main battery of this ship when the range was below 2,500 yards was most effective and destructive, and after a continuance of this fire for perhaps twenty minutes it was noticed that the 'Maria Teresa' and 'Oquendo' were in flames and were being headed for the beach. Their colors were struck about 10.20, and they were beached about 8 miles west of Santiago.

"About the same time (about 10.25) the fire of this vessel, together with that of the 'Gloucester' and another smaller vessel, proved so destructive that one of the torpedo-boat destroyers ('Pluton') was sunk and the 'Furor' was so much damaged that she was run upon the rocks. After having passed, at 10.35, the 'Oquendo' and 'Maria Teresa,' on fire and ashore, this vessel continued to chase and fire upon the 'Vizcaya' until 10.36, when signal to cease firing was sounded on board, it having been discovered that the 'Vizcaya' had struck her colors. At eleven the 'Iowa' arrived in the vicinity of the 'Vizcaya,' which had been run ashore, and, as it was evident that she could not catch the 'Cristobal Colon,' and that the 'Oregon,' 'Brooklyn,' and 'New York' would, two steam cutters and three cutters were immediately hoisted out and sent to the 'Vizcaya' to rescue her crew. Our boats succeeding in bringing off a large number of officers and men of that ship's company, and in placing many of them on board the torpedo boat 'Ericsson' and the auxiliary dispatch vessel 'Hist.' About 11.30 the 'New York' passed in chase of the 'Cristobal Colon,' which was endeavoring to escape from the 'Oregon,' 'Brooklyn,' and 'Texas.'"

The "Iowa" was selected as one of the vessels of the Eastern squadron, which was organized for service along the coast of Spain.

Justin.—Steamer converted into collier. Commissioned in United States navy April 27, 1898. Commander George E. Ide. Served chiefly in Virginian waters.

Katahdin.—Armored ram. 7 officers, 90 men. Cost, \$930,000. Launched Feb. 4, 1893. First commission, Feb. 20, 1896. Commander G. F. F. Wilde. Served chiefly in Massachusetts and Virginian waters.

Lancaster.—Wooden steam vessel. Built in 1858. Commander Thomas Perry. Commissioned May 5, 1898, as a station ship to be stationed at Key West, Fla. Arrived at Key West, May 31. Became flagship of Commodore G. C. Remy, commandant of the naval base of operations. Remained there during the entire war on that service.

Lebanon.—Steamer converted into collier. Commissioned in United States navy April 16, 1898. Lieut.-Commander C. T. Force. Stationed chiefly in Cuban waters.

Leonidas.—Steamer converted into collier, Commissioned in United States navy May 21, 1898. Commander W. I. Moore. Served chiefly in Virginian waters. Visited Guantanamo and Santiago.

Leyden.—Iron steam tug. On North Atlantic station. Boatswain J. W. Angus commanding to May 6, 1898; Ensign W. S. Crosley then assumed command. Attacked by Spanish troops at Nipe Bay on July 21, 1898. Afterward, on same date, attacked by and engaged with Spanish vessel in vicinity. This vessel, the "Jorge Juan," was sunk by united efforts of the "Leyden," "Wasp," and "Annapolis." Accompanied Puerto Rican expedition. Supported naval force in holding lighthouse at Cape San Juan, Puerto Rico, on Aug. 9, 1898.

Machias.—Gunboat. 11 officers, 140 men. Cost, \$318,500. Launched Dec. 8, 1891. First commission, July 20, 1893. Commander J. F. Merry commanding to June 27, 1898; Commander W. W. Mead then assumed command. Served on the Cardenas, Matanzas, and Havana blockade. Took part in the battle at Cardenas to the extent of guarding the main channel. Was senior officer's vessel in convoying 6 troopships from Key West to Siboney. Captured or assisted in capturing 2 steamers and 3 schooners.

Mangrove.—Lighthouse tender. Commanded by Lieut.-Commander Daniel D. V. Stuart, from June 7, 1898. Served chiefly between Key West and Havana. Engaged with two Spanish gunboats, Aug. 14, 1898, off Caibarien harbor. Captured the "Panama" on April 25, 1898.

Manning.—Revenue cutter. Capt. F. M. Munger, R. C. S. Engaged Spanish forces in vicinity of Cabañas on May 12, while covering the landing of the "Gussey's" expedition. On same date engaged Spanish batteries off Moriel. Served on blockade duty off Bahia Honda. Accompanied Gen. Shafter's expedition, and was present during operations before Santiago. Served with squadron in action at Santa Cruz. On blockade duty off Cienfuegos.

Maple.—Lighthouse tender. Lieut.-Commander W. Kellogg. On blockade duty off Havana, Matanzas, Cardenas, and Gibara. Took part in firing on 4 Spanish war ships when the latter were endeavoring to leave Havana. Captured Spanish sloop on July 21, 1898. While on blockade duty at Isle of Pines engaged the enemy and sunk one vessel.

Marblehead.—Unprotected cruiser. 20 officers, 228 men. Cost, \$674,000. Launched Aug. 11, 1892. First commission, April 2, 1894. Commander B. H. McCalla (promoted to captain, Aug. 10). On blockade duty at Havana. Captured Spanish steamer, containing 11 Spanish army officers, near Cienfuegos. Served with flying squadron, and took part in blockade off Santiago and attack on batteries. With the "Yankee," reconnoitered Guantanamo Bay, engaged gunboat and fought, and severed cable. Engaged in two actions off Cienfuegos, in one of which, when cable cutting, 2 men were killed and 5 wounded. After actual hostilities with Spain had ceased an officer and 12 men from the "Marblehead" successfully raised the Spanish gunboat "Sandoval," which had been sunk in 23 feet of water. As soon as the occupation of Guantanamo Bay was assured the "Marblehead" opened communication with the Cuban army and conveyed supplies and arms to the Cuban army and people, and landed Cuban troops to aid the marines occupying the eastern side of the entrance to the bay. Now on North Atlantic station, under command of Capt. W. W. Mead.

Marietta.—Unarmored composite gunboat. Commissioned in United States navy Sept. 1, 1897. Commander F. M. Symonds. Accompanied the "Ore-

gon" from Punta Arenas, on April 17, to a point between Rio de Janeiro and Bahia. Reached Key West on June 4, 1898, after a long voyage from Sitka, Alaska, which latter place she started from on Dec. 9, 1897.

Mayflower.—Converted yacht. Commander M. R. S. Mackenzie. Joined Admiral Sampson's squadron on April 19, 1898. Three days later sent one mile ahead of the squadron as a scout. Served on the blockade of Havana almost continuously during the war. On May 8 captured a large fishing vessel. On May 15 engaged with two Spanish gunboats. On July 19 captured a British steamer attempting to run the blockade with foodstuffs, drugs, and chemicals. Carried the official dispatches concerning the sinking of the "Merrimac." Detailed to accompany the Eastern squadron to Spain. Did efficient service as a dispatch boat.

Massachusetts.—First-class battle ship. 32 officers, 441 men. Cost, \$3,020,000. Launched June 10, 1893. First commission, June 10, 1896. Capt. F. J. Higginson. Ordered to Hampton Roads, March 17, 1898. Left Key West, May 19, and assisted in blockade of Cienfuegos from May 22 to May 24. Took part in firing at Spanish war ships off Santiago harbor on May 29, then assisted in blockade. More firing on May 31. Engaged with shore batteries off Santiago, June 16. Participated in bombardment of Santiago, July 2. With four other vessels convoyed Puerto Rican expedition, leaving Guantanamo July 21.

McKee.—Torpedo boat. Cost \$45,000. Launched March 5, 1898. First commission, May 16, 1898. Lieut. C. M. Knepper. Served chiefly at Southern points.

McLane.—Revenue cutter. First-Lieut. W. E. Reynolds, R. C. S. Assigned by Admiral Sampson, at beginning of war, to protect the submarine cable between the naval base at Key West and the mainland. Continued in this service until Aug. 26, 1898.

Merrimac.—Commander J. W. Miller. Commissioned in United States navy April 11, 1898. Served as a collier with North Atlantic squadron. Sunk in the channel at Santiago harbor by Assistant-Naval-Constructor Hobson and a volunteer crew of six men on June 3, 1898.

Miantonomoh.—Double-turreted monitor. 13 officers, 136 men. Launched Dec. 5, 1876. First commission, Oct. 27, 1891. Capt. M. L. Johnson. Served chiefly in Southern waters and on Cuban blockade. On the fall of Santiago was ordered to Puerto Rico, accompanying other vessels of the fleet on the expedition.

Minneapolis.—Protected cruiser. 30 officers, 447 men. Cost, \$2,690,000. Launched Aug. 12, 1893. First commission, Dec. 13, 1894. Served in flying squadron. Capt. T. F. Jewell. Ordered to patrol eastern coast United States, April 23, 1898. Placed on watch to discover Cervera's fleet, May 13. Proceeded to Venezuelan coast, May 15, thence to Santiago on May 19. Afterward in Southern waters.

Montgomery.—Unprotected cruiser. 20 officers, 237 men. Cost, \$612,500. Launched Dec. 5, 1891. First commission, June 21, 1894. Commander G. A. Converse. Sent to Havana to replace the "Maine," March, 1898. Attended upon the Court of Inquiry. On April 26 convoyed the transport "Panther," having on board marines comprising the "First Battalion of Occupation" for Cuba. Served on Havana blockade from May 1 to May 3. Proceeded with fleets in search of Cervera, acting as scout and dispatch vessel. On May 12 took part in engagement with land batteries at San Juan, Puerto Rico. Served on several searching expeditions. Flagship of Commodore J. C. Watson from May 23 to June 4. Convoyed the monitors to Puerto Rico. Towed the "Amphitrite" from Cardenas to Port Nipe, and the

THE BATTLE SHIP "OREGON"

"Puritan" from Cape Haitien to San Juan. On Aug. 4, with the "Puritan," captured the lighthouse at Cape San Juan. Co-operated with the army at Ponce from Aug. 6 to Aug. 10. Recovered torpedoes from the wrecks of Cervera's fleet on Aug. 26. From Aug. 31 to Sept. 21 acted as convoy to the monitors from Puerto Rico to Hampton Roads.

Morrill.—Revenue cutter. Capt. H. D. Smith, R. C. S. Served chiefly between Key West and Havana, and between Port Tampa and St. Petersburg, Fla.

Morris.—Torpedo boat. Cost, \$85,000. First commission, May 11, 1898. Lieut. C. E. Fox. Served in Southern waters. Now out of commission.

Nashville.—Light-draught gunboat. 11 officers, 165 men. Cost, \$280,000. Launched Oct. 19, 1895. First commission, Aug. 19, 1897. Commander Washburn Maynard. On April 22, 1898, captured a Spanish steamer. Served on blockade duty off Port Mariel and Cienfuegos. On April 29 captured a Spanish steamer with 10 officers and 10 men of the Spanish army. Took part in engagements with Spanish troops at Cienfuegos while cutting cables. On this occasion 2 officers and 5 men were wounded. Afterward served on blockade duty at Havana and other points. On July 26 captured 2 Spanish schooners. Now serving on North Atlantic station.

Newark.—Protected cruiser. 34 officers, 350 men. Cost, \$1,248,000. Launched March 19, 1890. First commission Feb. 2, 1891. Capt. A. S. Barker commanding to Aug. 6, 1898; Capt. C. F. Goodrich reported from that date to close of war. Assigned to Eastern squadron June 27, 1898. One hour before the peace protocol was signed the "Newark" began a bombardment of Manzanillo. Four other vessels were engaged and much damage was done before news was received that hostilities had been suspended.

New Orleans.—Protected cruiser. 24 officers, 383 men. Launched Dec. 4, 1896. Date of purchase, March 16, 1898. First commission, March 18, 1898. Capt. W. M. Folger. In flying squadron from May 9 to May 24, 1898. Was present at landing of Gen. Shafter's troops at Daiquiri, and shelled the vicinity before the landing was made. Engaged at Santiago, May 31, in ascertaining strength and location of batteries. With Commodore Schley's squadron.

Newport.—Gunboat. 11 officers, 124 men. Cost, \$229,400. Launched Dec. 5, 1896. First commission, Oct. 5, 1897. Commander B. F. Tilley. Served on Cuban blockades off Mariel, Cabañas, and Havana. Accompanied third expedition to the Philippines, having Gen. Merritt on board. Reached Manila July 25.

New York.—Armored cruiser. 40 officers, 516 men. Cost, \$2,985,000. Launched Dec. 2, 1891. First commissioned Aug. 1, 1893. Capt. F. E. Chadwick. On March 26, 1898, when Rear-Admiral Sampson assumed command, the "New York" was at Key West with the rest of the squadron, and remained there until April 22, when the whole force proceeded to the blockade of Cuban ports. Was engaged in action against the batteries at Matanzas and at the bombardment of San Juan, Puerto Rico. Was blockading off Santiago from June 1; in action against the batteries, June 6, June 16, and July 2; shelled Spanish position at Aguadores, July 1; present at the battle of Santiago, July 3; bombarded Santiago several times during the siege after that date, and remained in service in the vicinity after the surrender on July 16 until Aug. 12, 1898.

Niagara.—Special class. Commissioned in United States navy April 18, 1898. Commander E. S. Prime. Served as distilling ship with North Atlantic squadron.

Oneida.—Converted yacht. 2 officers, 22 men. First commission in United States navy, April 30,

1898. Lieut. W. G. Miller. Served in Southern waters, then between Key West and Havana.

Oregon.—First-class battle ship. 32 officers, 441 men. Cost, \$3,180,000. Launched Oct. 26, 1893. First commission, July 15, 1896. Capt. C. E. Clark commanding to Aug. 6, 1898; Capt. A. S. Barker from that date to close of war. Arrived at Key West, May 26, 1898, from a long cruise, which began on March 19, at San Francisco. Left Key West, May 28, for blockade duty, arriving at Santiago on June 1. On June 6 took part in general bombardment of the outer fortifications of Santiago. Performed reconnaissance duty at Guantanamo, landing marines for the purpose. On June 16 again took part in bombardment. On July 1 shelled the city of Santiago from the eastward of the harbor entrance. On July 2 took part in general bombardment. On July 3 participated in destruction of Cervera's fleet, taking part in the chase and capture of the "Cristobal Colon." Assigned for duty with the Eastern squadron, and became flagship.

Osceola.—Converted tug. Lieut. J. L. Purcell. Served with blockading squadron at Havana. Conveyed the steamer "Florida" and aided in landing expedition on Cuban coast. Served on blockade duty off Santiago. Engaged 6 shore batteries at Manzanillo, July 1, with the "Scorpion." On July 18, with 5 other vessels, engaged the enemy at Manzanillo for three and a half hours, destroying 3 transports, 1 armed pontoon, and 5 gunboats. Took part in other engagements on July 22, July 26, and Aug. 12.

Panther.—Auxiliary cruiser. 13 officers, 185 men. First commission in United States navy, April 22, 1898. Commander G. C. Reiter. On May 24 landed marines at Cuba, and towed the "Amphitrite" to join blockading squadron. Performed scout duty during May. Landed parties of marines successfully. Aided in protecting marine encampment. On Aug. 27 started from Santiago with part of the Ninth Massachusetts Volunteer Infantry, and landed them at Montauk Point.

Peoria.—Auxiliary gunboat. Commissioned in United States navy May 15, 1898. Lieut. T. W. Ryan. Conveyed an expedition sent to Cuba on the "Florida" and "Fanita." Took part in attack on Spaniards when expedition was landed at Tunas. Expedition subsequently re-embarked, and was landed at Palo Alto.

Piscataqua.—Converted tug. Commissioned in United States navy June 18, 1898. Lieut.-Commander N. E. Niles. Served on blockade and other duty off Cuban coast, including Havana, Mariel, Cabañas, and Bahia Honda.

Pompey.—Steamer converted into collier. Commissioned in United States navy May 26, 1898. On duty in Southern waters, and off Havana, Cardenas, and Isle of Pines, Cuba. Commander J. W. Miller.

Porter.—Torpedo boat. 4 officers, 28 men. Cost, \$144,000. Launched Sept. 9, 1896. First commission, Feb. 20, 1897. Lieut. J. C. Fremont. Covered the landing of marines from the transport "Panther" at Guantanamo Bay on June 10, 1898, with six other vessels.

Prairie.—Auxiliary cruiser. 18 officers, 267 men. First commission in United States navy, April 14, 1898. Commander C. J. Train. With the "Castine," destroyed large four-masted steamer when the latter was attempting to run the blockade at Mariel on July 5, 1898. On same date, with the "Hawk" and "Castine," sank a gunboat and shelled the shore batteries. On duty off Havana and Gibara, also at Guantanamo, San Juan, and Ponce, Puerto Rico, and Santiago, Cuba. At Ponce pulled the "Massachusetts" and "Manitoba," loaded with men and horses, off a shifting sand bar. Afterward released the steam collier "Saturn" from a similar

predicament in the same locality. Conveyed part of the Seventh Colorado Regiment to Montauk.

Princeton.—Gunboat. 11 officers, 124 men. Cost, \$230,000. Launched June 3, 1897. First commission, May 27, 1898. Commander C. H. West. On blockade duty along Cuban coast, and engaged on the coasts of British Honduras, Guatemala, and Mexico, searching for Cuban blockade runners.

Potomac.—Converted tug. Lieut. G. P. Blow. On duty principally at wrecks of "Maria Teresa" and "Cristobal Colon," also in Guantanamo Bay and at Santiago.

Puritan.—Double-turreted monitor. 22 officers, 208 men. Launched Dec. 6, 1882. First commission, Dec. 10, 1896. Capt. P. F. Harrington commanding to June 18, 1898; Capt. Fred Rodgers from that date to close of war. Took part in the first action of the war, bombarding and silencing the forts at Matanzas, in company with the "New York" and "Cincinnati." Took part in naval expedition under Admiral Sampson, on May 4, along the northern coast of Cuba. Captured a Spanish schooner and sloop at Cape San Juan, Puerto Rico, on Aug. 2.

Resolute.—Special class. Commissioned in United States navy May 11, 1898. Commander J. G. Eaton. Received prisoners from the "Cristobal Colon" at Santiago. Took part in action off Manzanillo, Aug. 12. When hostilities were suspended conveyed marine force north.

Rodgers.—Torpedo boat. 4 officers, 20 men. Cost, \$97,500. Launched Nov. 10, 1896. First commission, April 2, 1898. Lieut. J. L. Jayne. On duty principally in Guantanamo Bay and off Santiago.

San Francisco.—Protected cruiser. 33 officers, 350 men. Cost, \$1,428,000. Launched Oct. 26, 1889. First commission, Nov. 15, 1890. Capt. R. P. Leary. During May and June served on Massachusetts coast. Established blockade from Nuevitas to Nipe in rear of the Spanish forces at Santiago early in July. Fired at by the eastern forts, Havana, on Aug. 12, the same date on which the peace protocol was signed. About 20 shots were fired at her at a 2 miles' range. Was struck once by a fragment from a 10- or 12-inch shell, which burst on the water astern.

Saturn.—Steamer converted into collier. Commissioned in United States navy April 11, 1898. Commander S. W. Very commanding to June 4, 1898; Commander G. A. Bicknell from that date to close of war. Served with flying squadron and afterward under Admiral Sampson, then on duty at Puerto Rico. Did much effective service as a collier, and in emergent cases where other vessels needed assistance.

Seindia.—Steamer converted into collier. Commissioned in United States navy May 21, 1898. Commander E. W. Watson. Served at Guantanamo and in Southern waters. Assigned to Eastern squadron.

Scorpion.—Converted yacht. 8 officers, 103 men. First commission in United States navy, April 11, 1898. Lieut.-Commander Adolph Marx. Served with flying squadron. On June 9 narrowly escaped engagement with the British war ship "Talbot" near Nuevitas, mistaking the latter for a Spanish ship. With the "Osceola," entered Manzanillo harbor on July 1, and engaged 4 gunboats, another vessel, 5 shore batteries, and troops in vicinity. Aided in capturing a number of vessels during Cape Cruz blockade. Took part in engagement at Manzanillo, destroying 4 gunboats, July 18.

Stoux.—Converted tug. Commissioned in United States navy April 9, 1898. Ensign W. R. Gherardi.

Siren.—Converted yacht. 5 officers, 37 men. First commissioned in United States navy June 24,

1898. Lieut. J. M. Robinson. Served on Havana blockade. On Aug. 1 cut out the Norwegian steamer "Franklin," a blockade runner, from under the guns of a Spanish cruiser, and took her to Key West as a prize. The captured vessel was conveyed by 3 Spanish gunboats, but they left her and proceeded out of gunshot range as the "Siren" approached. On Aug. 7, with the "Viking," captured a blockade runner.

Solace.—Special class. Ambulance ship. Commissioned in United States navy April 14, 1898. Commander A. Dunlap. Served between Cuban points and United States. Carried sick and wounded from Cienfuegos, Guantanamo Bay, Santiago (including Spaniards), Puerto Rico, and Key West to United States hospitals.

Southery.—Steamer converted into collier. Commissioned in United States navy April 30, 1898. Commander Walton Goodwin. Served in Cuban waters, including Guantanamo Bay and Santiago. Also at Hayti.

Sterling.—Steamer converted into collier. Commissioned in United States navy April 16, 1898. Commander R. E. Impey. Served in Southern waters, then with flying squadron when searching for Cervera. At Santiago and Puerto Rico.

Stranger.—Converted yacht. 8 officers, 49 men. First commission in United States navy, June 30, 1898. Lieut. G. L. Dyer. Served in Cuban waters.

Supply.—Special class. Supply ship. On special service under Lieut.-Commander W. W. Kimball.

Suwanee.—Lighthouse tender. Lieut.-Commander D. DeLahanty. Convoyed the "Gussie" on Cuban expedition in May. Lieut. Victor Blue, of this vessel, with an armed boat's crew, captured 2 schooner yachts at Cayo Frances on May 31. Aided in shelling a fort in Guantanamo Bay on June 15. Supported position held by marines in same locality. Aided in covering landing of Gen. Shafter's troops at Daiquiri, June 22. Participated in shelling of fortifications at Aguadores on July 2. Took part in bombardment of Manzanillo on Aug. 12.

Sylvia.—Converted yacht. 5 officers, 31 men. First commission in United States navy, June 29, 1898. Lieut. G. H. Peters. Served in southern waters and off Havana. Now out of commission.

Talbot.—Torpedo boat. Cost, \$39,000. Launched Nov. 14, 1897. First commission, April 4, 1898. On North Atlantic station. Lieut. W. R. Shoemaker commanding from July 10, 1898, to close of war. Served at Key West and Piedras Cay, Cuba.

Tecumseh.—Converted tug. Lieut. G. R. Evans. Served between Key West and Havana.

Terror.—Double-turreted monitor. 26 officers, 151 men. Launched March 24, 1883. First commission, April 15, 1896. Capt. Nicoll Lindlow. Participated in engagement off San Juan, Puerto Rico, May 12, 1898. Served at Cardenas, off Havana, and at Guanica and Ponce, Puerto Rico.

Texas.—Second-class battle ship. 30 officers, 359 men. Cost, \$2,500,000. Launched June 28, 1892. First commission, Aug. 15, 1895. Capt. J. W. Philip. Served in flying squadron. Landed 40 marines at Guantanamo with 2 Colt automatic guns to support force of marines already on shore. On June 15 aided in shelling a fort in Guantanamo Bay. Engaged a battery at Daiquiri on June 22 to cover landing of Gen. Shafter's army. Served on Santiago blockade. Took part in destruction of Cervera's fleet. In the official report of part taken by the "Texas" in chase and destruction of Cervera's fleet, Capt. Philip says: "As the leader, bearing the admiral's flag, appeared in the entrance she opened fire, which was, at 9.40, returned by the 'Texas' at a range of 4,200 yards while closing in. The ship leading was of the 'Vizcaya' class and the flagship. Four ships came out, evidently the 'Vizcaya,'

the 'Oquendo,' 'Maria Teresa,' and 'Colon,' followed by two torpedo-boat destroyers. Upon seeing these two we immediately opened fire upon them with our secondary battery, the main battery at the time being engaged with the second and third ships in line. Owing to our secondary battery, together with the 'Iowa' and 'Gloucester,' these two destroyers were forced to beach and sink.

"While warmly engaged with the third in line, which was abreast and engaging the 'Texas,' our fire was blanketed for a short time by the 'Oregon' forging ahead and engaging the second ship. This third ship, after a spirited fire, sheered inshore, and at 10.35 ran up a white flag. We then ceased fire on the third and opened fire with our forward guns at long range (6,600 yards) on the second ship (which was then engaged with the 'Oregon') until 11.5, when she (enemy's second ship) sheered in to the beach on fire.

"At 11.10 she struck her colors. We ceased fire and gave chase, with 'Brooklyn' and 'Oregon,' for the leading ship until 1.20, when the 'Colon' sheered in to beach and hauled down her colors, leaving them on deck at foot of her flagstaff. We shut off forced draught and proceeded at moderate speed to close up." Participated in bombardment of Santiago city, July 10.

Topeka.—Gunboat. Launched in 1881. Commander W. S. Cowles. Served off Havana and at Port Nipe, Cuba. Took part in the capture of Port Nipe and in the destruction of a Spanish gunboat.

Uncas.—Converted tug. Commissioned in United States navy April 6, 1898. Lieut. F. R. Brainard. Served between Key West, Matanzas, Havana, and Cardenas.

Vesuvius.—Dynamite gunboat. 6 officers, 63 men. Cost, \$350,000. Launched April 28, 1888. First commission, June 7, 1890. Lieut.-Commander John E. Pillsbury. Participated in bombardment of fortifications at Santiago. Ran into Santiago channel after the sinking of the "Merrimac," on a tour of investigation.

Vicksburg.—Gunboat. 11 officers, 124 men. Cost, \$229,400. Launched Dec. 5, 1896. First commission, Oct. 23, 1897. Commander A. B. H. Lillie. Served between Havana and Key West; also on duty off Havana. Now in use as a training ship.

Viking.—Converted yacht. 3 officers, 40 men. First commission in United States navy, May 11, 1898. Lieut.-Commander J. C. Wilson. Served on blockade off the coast of Cuba from Matanzas to Nuevitás. Captured a steamer off Cay Frances. Convoyed and protected the landing of a Cuban expedition at Cay Santa Maria.

Vixen.—Converted yacht. 6 officers, 76 men. First commission in United States navy, April 11, 1898. Lieut. A. Sharp. Aided in covering the landing of marines from the "Panther," at Guantanamo Bay. Took part in the pursuit and destruction of Cervera's fleet. Commodore Schley, in his official report of the engagement on July 3, 1898, said: "Lieut. Sharp, commanding the 'Vixen,' acted with conspicuous courage; although unable to engage the heavier ships of the enemy with his light guns, nevertheless he was close in to the battle line under heavy fire, and many of the enemy's shot passed beyond his vessel." The 'Vixen,' during the naval operations at Santiago, took part in all the bombardments, had frequent communications with the insurgents, brought the Cuban generals to the commander in chief, carried flags of truce, made reconnaissances for landing places for the army, carried Cuban soldiers, was a general dispatch boat, and was the first vessel to enter Santiago harbor after the surrender of the Spanish army.

Vulcan.—Special class. Repair ship. Commissioned in United States navy May 22, 1898.

Wasp.—Converted yacht. 4 officers, 51 men. First commission in United States navy, April 11, 1898. Lieut. A. Ward. Served on Havana blockade. Participated in engagement off Cabañas on May 12, 1898. Accompanied Gen. Shafter's expedition to Santiago. Took part in bombardment of Daiquiri to cover the landing of the army. Served as convoy to the transport "Cutania" to Siboney. Took part in exploration of Nipe Bay in search of torpedoes and mines. With the "Leyden" attacked Spanish cruiser "Don Jorge Juan" and brought about its destruction. Participated in attack on Ponce, Puerto Rico, July 27. On Aug. 1, with the "Gloucester," attacked Arroya. Was present when the first hostile shots were fired at the army during the "Gusnie" expedition, and was also present at Nipe when the last gun of the war was fired from a Spanish war ship.

Wilmington.—Light-draught gunboat. 10 officers, 165 men. Cost, \$280,000. Launched Oct. 19, 1895. First commission, May 13, 1897. Commander C. C. Todd. Served on blockade duty around Cuba. On May 3 shelled Spanish forces erecting batteries east of Havana. On May 4 covered landing of ammunition for Cubans, bombarding a block-house and driving off a regiment of cavalry. On May 11 entered Cardenas Bay with the "Winslow" and "Hudson," destroying 2 Spanish gunboats. On July 18 entered Manzanillo harbor with other vessels, destroyed 3 transports, 1 guard ship, and 6 gunboats. On July 20 bombarded and drove the Spanish forces from Santa Cruz del Sud, and repeated this work on July 24. Cut the submarine cable south of Cuba in three places: July 16, between Santa Cruz and Jucaro; between Jucaro and Tunis on July 21; and between Tunas and Trinidad on July 22—cutting all cable connections on the south side. During hostilities the "Wilmington" was on several occasions detailed to secretly land and take from shore couriers between Gen. Maximo Gomez and the national authorities. These missions were successfully accomplished.

Windom.—Revenue cutter. Capt. S. E. Maguire. R. C. S. Convoyed the collier "Saturn" to Cienfuegos, May 8 to 10, 1898. Took part in firing on fortified lighthouses, driving back a military force from vicinity of Colorado Point, at entrance to Cienfuegos harbor. Carried sick and wounded men to Key West. Afterward served on blockade duty off Havana.

Winslow.—Torpedo boat. 4 officers, 20 men. Cost, \$97,500. Launched Jan. 6, 1897. First commission, Dec. 29, 1897. Lieut. J. B. Bernadou. On blockade duty off Havana, Matanzas, and Cardenas. On May 11, 1898, with the "Wilmington" and "Hudson," took part in engagement at Cardenas with Spanish gunboats and shore batteries. Was disabled. Ensign Worth Bagley and 4 sailors being killed, and Lieut. Bernadou and 2 others wounded.

Wompatuck.—Converted tug. Lieut. C. W. Jungen. On blockade duty off Havana. Accompanied Admiral Sampson's squadron on cruise to San Juan. Co-operated with the "St. Louis" in cutting cables on the south side of Cuba. Engaged with Spanish gunboats and shore batteries, also Spanish troops, when on this duty. Served with convoy of army transports to Santiago. On dispatch duty. Assisted in landing troops at Daiquiri. At Manzanillo, with "Hist" and "Hornet," engaged four gunboats and a cruiser, also shore batteries and other artillery. Took part in second engagement at Manzanillo, in which much damage was done to enemy's ships. Now out of commission.

Woodbury.—Revenue cutter. Capt. H. B. Rogers. R. C. S. No record available.

Yankee.—Auxiliary cruiser. 15 officers, 267 men. First commission in United States navy,

April 14, 1898. Commander W. H. Brownson. In patrol squadron from May 6 to May 29, 1898. On blockade duty off Santiago. Took part in bombardment of the batteries on June 6, 1898. Next day, at Guantanamo Bay, with the "Marblehead," engaged a gunboat and fort. On same date destroyed Spanish blockhouses in vicinity. On June 13 established the blockade of Cienfuegos. Engaged and partially destroyed a Spanish gunboat. On June 25 captured five fishing vessels off the Isle of Pines. Afterward assigned to Eastern squadron. Returned to New York Aug. 21. On Sept. 2 the Naval Militia was mustered out.

Yankton.—Converted yacht. 8 officers, 70 men. First commission in United States navy, May 16, 1898. Lieut.-Commander J. D. Adams. Engaged a shore battery to protect the "Eagle" off Point Muno and Casilda on June 29, 1898. Chased a four-masted steamer, supposed to be the "Alfonso XII," off Cienfuegos, but without making capture, having insufficient speed. Served at Santiago, Cienfuegos, and Guantanamo.

Yosemite.—Auxiliary cruiser. Commander W. H. Emory. In patrol squadron from May 6 to May 30, 1898. Aided in covering the landing of marines at Guantanamo. Assigned to Eastern squadron. Engaged with Spanish transport off San Juan, June 10, 1898. Served off Havana and Santiago, and at Puerto Rico.

Flying Squadron.—The vessels comprising the flying squadron, including the "Brooklyn," "Columbia," "Katahdin," "Massachusetts," "Merri-mac," "Minneapolis," "New Orleans," "Scorpion," "Sterling," "Texas," and "Saturn," are referred to under the preceding heading, "North Atlantic Fleet," to which they properly belonged.

On Special Service.—*Harvard*.—Auxiliary cruiser. 26 officers, 381 men. Capt. C. S. Cotton. On April 29, 1898, ordered to ascertain whether the Spanish fleet, lately at Cape de Verde Islands, intended moving upon the West Indies. Blockaded by Spanish fleet at St. Pierre, Martinique, on May 13. Ordered to Key West, May 14, but proceeded to Mona Passage, West Indies. Ordered to Santiago, May 25. Aided in rescuing Spanish prisoners after destruction of Cervera's fleet at Santiago, taking on board 35 officers and 637 men from the Spanish vessels, including 38 sick and wounded. Brought from Santiago to United States Thirty-third Michigan Volunteers, also a number of staff officers, reaching Long Island on Aug. 25.

St. Louis.—Auxiliary cruiser. Capt. C. F. Goodrich. Attempted to cut Santiago-Jamaica cables, but withdrew after discovery by Spanish patrol boat, May 18, 1898. Endeavored to cut French cable at Guantanamo, but retired when attack of Spanish gunboat proved too annoying, May 19. On May 20 severed French cable to Cuba. Grappled for cable near Ponce, Puerto Rico, on May 22. Sent in search of the Spanish fleet on April 29. Sent to notify Admiral Sampson that Spanish squadron had arrived off Martinique, May 13. Ordered to Santiago on May 20, and instructed, with the "Minneapolis," "St. Paul," and "Harvard," to keep in communication with the Spanish fleet. Assisted in landing Gen. Shafter's troops in Cuba, June 22 to 26.

St. Paul.—Auxiliary cruiser. 24 officers, 357 men. Commissioned in the United States navy April 20, 1898. Capt. C. D. Sigsbee. On duty between Morant Point, Jamaica, and west end of Hayti, watching for Spanish squadron. Ordered to Key West for dispatch service, May 14. Ordered to Cape Haytien on May 19. Chased and intercepted a British collier on May 25, near Santiago harbor. The vessel was made a prize, with 2,400 tons of coal. Sent with dispatches on May 29 from Commodore Schley to Admiral Sampson. The "St. Paul" did hard duty off

Santiago, giving chase to suspected vessels, sometimes several during a day, at a speed exceeding 19 knots. Aided in shelling the forts and town at Guantanamo on June 15. Blockaded San Juan, Puerto Rico. On June 22, while on this duty, was attacked by the Spanish torpedo-boat destroyer "Terror." The "Terror" made a dash, which was awaited by the "St. Paul," and while still at long range the destroyer was struck by three shells, which so disabled her that she dropped back under cover of the fortifications with difficulty, and was towed into the harbor in a sinking condition. Disembarked the Eighth Ohio Regiment at Siboney on July 14.

Yale.—Auxiliary cruiser. 25 officers, 381 men. Capt. W. C. Wise. Ordered to ascertain locality of Spanish fleet, proceeding to Puerto Rico and other points. On May 8 captured cargo steamer "Rita." On May 14 ordered to San Juan, Puerto Rico. Sent to inform vessels off Santiago as to locality of flying squadron, May 20. Landed troops at Guanica, Puerto Rico, as one of the vessels in Puerto Rican expedition under Gen. Miles.

Pacific Station.—*Albatross*.—Fish Commission vessel. Lieut.-Commander J. F. Moser commanding to July 14, 1898; Lieut.-Commander C. K. Curtis from that date to Aug. 1, when Lieut.-Commander J. F. Moser again assumed command. On duty principally in Californian waters. Served from Aug. 11 to Sept. 7 on cruise to Acapulco, Mexico.

Bennington.—Gunboat. 16 officers, 179 men. Cost, \$490,000. Launched June 3, 1890. First commission, June 20, 1891. Commander H. E. Nichols commanding to July 14, 1898; Lieut.-Commander J. F. Moser from that date to Aug. 1, when Commander E. D. Taussig assumed command. Served at Hawaiian Islands and on Pacific coast.

Corwin.—Revenue cutter. Capt. W. J. Herring. R. C. S. Served as an auxiliary cruiser on the Pacific coast, and assigned to duty off San Diego, Cal., for the purpose of guarding the mine fields at the entrance of the harbor.

Grant.—Revenue cutter. Capt. J. A. Slamm, R. C. S. Aided in defense of San Francisco harbor until July 15, 1898. On Aug. 3 ordered from Seattle, Wash., on a six weeks' cruise in Alaskan waters in search of a reported Spanish privateer, and to protect Klondike traffic. Visited 33 harbors and boarded and searched 12 vessels.

Mohican.—Wooden steam vessel. Built in 1872-'83. 21 officers, 186 men. Commander G. M. Book. Served on Pacific coast and at Hawaii.

Monadnock.—Double-turreted monitor. 26 officers, 157 men. Launched Sept. 19, 1883. First commission, Feb. 20, 1896. Served in the civil war, taking part in the second attack on Fort Fisher, January, 1865. Capt. W. H. Whiting. Served on Pacific coast, at Hawaiian Islands, and at the Philippines. Sailed June 25 from San Francisco for Manila, preceding Gen. Merritt's expedition. Arrived at Manila Aug. 16.

Monterey.—Double-turreted monitor. 19 officers, 176 men. Cost, \$1,628,950. Launched April 28, 1891. First commission, Feb. 13, 1893. Capt. C. E. Clark commanding to May 24, 1898; Commander E. H. C. Leutze assumed command on that date. Served on Pacific coast, Hawaiian Islands, and in the Philippines. Sailed from San Diego for Manila June 11, 1898. Arrived at Manila Aug. 4.

Perry.—Revenue cutter. Capt. W. J. Kilgore, R. C. S. Employed as a patrol vessel on Puget Sound and at the mouth of the Columbia river.

Philadelphia.—Protected cruiser. 34 officers, 350 men. Cost, \$1,350,000. Launched Sept. 7, 1889. First commission, July 28, 1890. Capt. G. H. Wadleigh. Served on Pacific coast and at Hawaii.

Rush.—Revenue cutter. Capt. W. H. Roberts, R. C. S. No record available.

Wheeling.—Unarmed gunboat. First commission, Aug. 10, 1897. Commander Uriel Sebree. Served on Pacific coast and in Alaskan waters.

Asiatic Station.—*Baltimore*.—Protected cruiser. 36 officers, 350 men. Cost, \$1,325,000. Launched Oct. 6, 1888. First commission, Jan. 7, 1890. Capt. N. M. Dyer. Participated in naval battle at Manila Bay, May, 1, 1898. Capt. Dyer, in his official report to Commodore (Admiral) Dewey of the engagement, said:

"At 10.55 you made general signal 'designated vessel will lead' with 'Baltimore's' distinguishing pennant, and in a few minutes signal to 'attack the enemy's batteries or earthworks' and for fleet to 'close up'; in obedience to which order this ship led in, with starboard helm, to a position off the Cañacao and Sangley Point batteries and opened fire with starboard battery at a distance of about 2,800 yards, closing in to 2,200, between which and 2,700 yards our best work was done, slowing the ship dead slow, stopping the engines as range was obtained, delivering a rapid and accurate fire upon the shore batteries and a gunboat just inside of Sangley Point, since proved to have been the 'Don Antonio de Ulloa,' practically silencing the batteries in question before the fire of another ship became effective, owing to the lead we had obtained in our start for the supposed Spanish steamer."

The "Baltimore" was struck five times with small projectiles. 2 officers and 6 men were wounded.

Boston.—Protected cruiser. 19 officers, 259 men. Cost, \$619,000. Launched Dec. 4, 1884. First commission, May 2, 1887. Capt. Frank Wildes. Participated in naval battle at Manila Bay, May 1, 1898. The Boston was struck four times without receiving material damage. Occupied sixth place in the attacking column, bringing up the rear.

Brutus.—Steamer converted into collier. Commissioned in United States navy May 27, 1898. Lieut. V. L. Cottman. Served on Asiatic station.

Charleston.—Protected cruiser. 20 officers, 286 men. Cost, \$1,017,500. Launched July 19, 1888. First commission, Dec. 26, 1889. Capt. Henry Glass. On May 10 ordered from Honolulu to Manila, in company with the "City of Pekin." Also instructed to capture Guam, in the Marianas, seizing the governor and any armed force present. Carried out instructions and raised the United States flag at Guam. Sailed from Honolulu on June 4, with "City of Pekin," "Australia," and "City of Sydney" under convoy. Seized Gnam on June 21.

Concord.—Gunboat. 13 officers, 181 men. Cost, \$490,000. Launched March 8, 1890. First commission, Feb. 14, 1891. Commander Asa Walker. Participated in battle of Manila Bay, May 1, 1898. From May 2 to May 6 captured numerous Spanish tugs and destroyed batteries at entrance to bay. On July 7 to 10, with the "Raleigh," visited Subig Bay and captured Spanish force of about 600 men on Grande island. On Aug. 13 was stationed north of the Pasig river during bombardment and fall of Manila. On blockade duty after that date.

McCulloch.—Revenue cutter. Commissioned December, 1897. Capt. D. B. Hodgson. Served in the Philippines. Took part in naval battle at Manila, May 1, 1898, forming a part of the attacking squadron. On entering Manila Bay, received and returned the fire of the Spanish batteries at the entrance. During the battle was assigned to the duty of protecting the squadron supply ships from attack by Spanish gunboats, and while so employed was under fire of the batteries at Manila and Sangley Point. As dispatch boat, carried the news of Admiral Dewey's victory to Hong-Kong, May 7.

During the blockade of the port of Manila, which followed, divided with the United States steamers "Concord" and "Petrel" the guard duty of the squadron and boarded a great number of vessels, both national and merchant, entering the bay. Captured the Spanish gunboat "Leyte" off the mouth of the Pasig river, June 29. Was in the battle line at the bombardment and capture of Manila, Aug. 13. Subsequently captured, in Batangas Bay, the filibustering steamer "Abbey," engaged in bringing arms and ammunition to the insurgents. Putting a prize crew on board, the "McCulloch" slipped the "Abbey's" cables and towed her beyond the reach of the guns of the insurgents before they realized what was being done. The prize was then towed to Cavité and turned over to the commander in chief. Later, the "McCulloch" was given the duty of completing the destruction of the Spanish batteries at the entrance to Manila Bay, which she did, by throwing the guns there on El Fraile Rock into the bay, dismounting the batteries on Caballo and Corregidor islands, and destroying the carriages. She was detached from the Asiatic squadron Nov. 16, 1898, and ordered to proceed to San Francisco. Capt. Hodgson was relieved and ordered to return home, June 6, his command being turned over to Capt. Foley.

Monocacy.—Iron steam vessel. Built in 1863. 12 officers, 146 men. Commander O. W. Farenholt. Has served on the Asiatic station constantly since 1866. Was the leading vessel under Admiral John Rodgers in 1870 in the attacks of the fort at Seoul, Korea. Since that time has repeatedly visited every port, bay, island, and river from Singapore to Vladivostok, doing valuable service in the protection of life and property. Stationed at Shanghai during last war protecting American interests on the Yangtse-Kiang and in the north of China.

Nanshan.—Steamer converted into collier. Purchased by Admiral Dewey before war was declared, with 3,000 tons of coal on board. Served with Asiatic squadron.

Nero.—Steamer converted into collier. Commissioned in United States navy June 8, 1898. Commander Charles Belknap. Served with Asiatic squadron.

Olympia.—Protected cruiser. 34 officers, 416 men. Cost, \$1,796,000. Launched Nov. 5, 1892. First commission, Feb. 5, 1895. Capt. C. V. Gridley commanding to May 25, 1898; Capt. B. P. Lamberton from that date to close of war. Served in the Philippines. Participated in naval battle at Manila, May 1, 1898. On that occasion was flagship of Commodore (Admiral) Dewey. In his official report of the part taken by the "Olympia" in this engagement Capt. Gridley said:

"On April 30 we stood down for the entrance to Manila Bay. At 9.42 p. m. the crew were called to general quarters (the ship having been previously cleared for action) and remained by their guns, ready to return the fire of the batteries if called upon. At about 11.30 p. m. we passed through Boca Grande entrance of Manila Bay. The lights on Corregidor and Caballo islands and on San Nicolas Banks were extinguished. After this ship had passed in the battery on the southern shore of the entrance opened fire at the ships astern, and the 'McCulloch' and the 'Boston' returned the fire."

"At 4 a. m. of May 1 coffee was served out to officers and men. At daybreak sighted shipping at Manila. Shifted course to southward and stood for Cavité. At 5.6 two submarine mines were exploded near Cavité, bearing south-southeast, distant 4 miles. At 5.15 battery on Sangley Point opened fire, but the shell fell short. Other shells passed over us, ranging 7 miles. At 5.41 a. m. we

opened fire on Spanish ships with forward 8-inch guns, which were soon followed by the 5-inch battery. A rapid fire was kept up until the close of the action. The range varied from 5,600 to 2,000 yards. A torpedo boat ran out and headed for this ship, but was finally driven back by our secondary battery. She came out a second time and was again repulsed. This time she had to be beached, as several shot had hit her. Batteries from Manila fired occasional shots at the ships during the action, but did no damage.

"At 6.20 turned to starboard and headed back in front of the Spanish line. The 'Olympia' led the column three times to the westward and twice to the eastward in front of the Spanish ships and shore batteries. On one occasion the Spanish flagship 'Reina Cristina' was hit by an 8-inch shell from our forward turret and raked fore and aft. At 7.35 ceased firing and stood out into Manila Bay. The men went to breakfast. Many of the Spanish ships were seen to be on fire, and when we returned at 11.16 to complete the destruction of the Spanish fleet only one, the 'Don Antonio de Ulloa,' and the shore batteries returned our fire. The former was sunk and the latter were silenced. At 12.40 p. m. stood back to Manila Bay and anchored."

Capt. Gridley was ordered home by a medical board about May 27, left Manila the following day, and died at Kobe, Japan, on June 3.

Petrel.—Gunboat. 10 officers, 112 men. Cost, \$247,000. Launched Oct. 13, 1883. First commission, Dec. 10, 1889. Commander E. P. Wood. Served in the Philippines. Took part in naval battle at Manila, May 1, 1898, being fourth from head of column on entering Manila Bay and during first part of engagement. In second part of engagement followed the "Olympia." In the official report of Commander E. P. Wood he said, with reference to subsequent orders at the end of the general engagement:

"In obedience to a signal from flagship to destroy all shipping in the harbor, Lieut. Hughes was sent with a whaleboat's crew of seven men, this whaleboat being the only one on the ship which would float, and set fire to the 'Don Juan de Austria,' 'Isle de Cuba,' 'Isle de Luzon,' 'General Lezo,' and 'Marques del Duero.' Afterward Ensign Fermier was sent to set fire to the 'Velasco' and 'El Correo.' The 'Isle de Cuba,' 'Isle de Luzon,' and 'Don Juan de Austria' were aground and full of water when they were fired. Their outboard valves were opened and the ships allowed to fill. The breech plugs of 4-inch guns had been taken off and could not be found. During the night the magazines of the 'Don Juan de Austria' blew up. The 'Manila' was not burned because the Spanish officers begged that she be not destroyed because she was unarmed and a coast-survey vessel. Lieut. Fiske and Passed-Assistant Engineer Hall raised steam on the ship this morning, the 4th inst., and brought her out. At the time she was aground. The 'Don Antonio de Ulloa' was sunk and the 'Reina Cristina' and 'Castilla' were burning in outer harbor. Lieut. Fiske was sent ashore and brought off two tugboats, the 'Rapido' and 'Hercules,' and three steam launches."

Raleigh.—Protected cruiser. 20 officers, 293 men. Cost, \$1,100,000. Launched March 31, 1892. First commission, April 17, 1894. Capt. J. B. Coghlan. On service in the Philippines. Took part in naval battle at Manila, May 1, 1898. In his official report of the part taken by the Raleigh in this engagement Capt. J. B. Coghlan said:

"At a few minutes after 5 a. m. this vessel, so soon as the Spanish vessels at Cavité bore on the port bow, opened fire with the 6-inch gun, and then with the 5-inch guns in succession, as fast as they would bear. The secondary-battery guns did not seem to

reach the enemy, and their fire was soon stopped and not again used until the distance was considerably lessened. At 11.20 a. m., when signal was made to re-engage, this vessel started ahead full speed (using reserve speed) to keep up with the flagship, but it was found to be impossible, and, falling behind all the time, I cut across to gain line abreast of Cavité battery just as the flagship passed the 'Baltimore' at that port, at which time we opened fire with all guns. At 12, in obedience to signal, this vessel attempted to get into the inner harbor to destroy enemy's vessels, but, getting into shoal water—20 feet—was obliged to withdraw, and so reported. While attempting to get inside the battery was used on an enemy vessel at anchor (supposed to be the 'Don Antonio de Ulloa') until she sank. Not being able to find a channel farther inside, and everything in sight having been destroyed, this vessel at 1.30 p. m. withdrew and later anchored near the flagship."

When Aguinaldo informed Admiral Dewey that his troops had taken all of Subig Bay except Isla Grande, which he was prevented from taking by the German war ship "Irene," the admiral ordered the "Raleigh" and "Concord" to that place. They took the island and about 1,300 men with arms and ammunition.

Zafiro.—Special class. Supply ship. Lieut. W. McLean. Purchased by Commodore Dewey at Hong-Kong, with 7,000 tons of coal on board. Served with Asiatic squadron. Was present during naval battle at Manila, May 1, 1898.

Other Vessels on Active Service during the War. *Alliance*.—Wooden steam vessel. Commander A. Ross. On training service, chiefly at Newport, R. I., and New London, Conn.

Buccaneer.—Converted yacht. Lieut. A. N. Mayer. At Port Tampa, Key West, Hampton Roads, Va., and New York. No duty recorded.

Cheyenne.—Converted tug. Lieut. George H. Swan. Auxiliary naval force. Stationed in South Carolina and Florida.

City of Pekin.—Special class. Transport. Commander W. C. Gibson. Served at San Francisco, Cal., Hawaii, Guam, Philippines, Japan. Carried part of first expedition to Manila, starting from San Francisco, May 25, 1898. Called at Honolulu en route. Was accompanied by the "Australia" and "City of Sydney."

Choctaw.—Converted tug. Auxiliary naval force. Lieut. W. O. Hulme. Stationed at points in Florida, Louisiana, and Texas.

Elfrida.—Converted yacht. Auxiliary naval force. Commanded by (1) Lieut. M. A. Orlopp; (2) Lieut. W. H. Stayton; (3) Lieut. M. A. Orlopp; (4) Lieut. T. C. Zerega. Served at points in New York, Connecticut, and New Jersey.

Governor Russell.—Special class. Ferryboat converted into auxiliary gunboat. Lieut. C. H. Grant. Stationed at points in North Carolina, South Carolina, and Virginia.

Hector.—Steamer converted into collier. Commander F. M. Wise. On special service, chiefly at Key West and Port Tampa, Fla.

Iris.—Special class. Distilling ship. Lieut. A. B. Connor. Served chiefly at points in Virginia and New York.

Jason.—Armored iron vessel; low freeboard, single-turret monitor. Commanded by (1) Lieut. H. F. Fickbohm; (2) Lieut. G. I. Jones. Auxiliary naval force. Served chiefly at points in New York, Connecticut, and Pennsylvania.

Kanawha.—Converted yacht. Lieut. F. F. Fletcher. Served chiefly at points in Cuba, South Carolina, and Virginia.

Lehigh.—Armored iron vessel; low freeboard, single-turret monitor. Commanded by (1) Lieut. R.

G. Peck; (2) Lieut. A. B. Denny. Auxiliary naval force. Served chiefly at points in Massachusetts.

Massasoit.—Converted tug. Ensign J. Cottrell. Served chiefly at points in South Carolina, Florida, Georgia, and Virginia.

Montauk.—Armored iron vessel; low freeboard, single-turret monitor. Commanded by (1) Lieut. L. L. Reamey; (2) Lieut. H. R. Cohen; (3) Lieut. R. J. Beach. Auxiliary naval force. Served chiefly at points in Massachusetts, Maine, Delaware, and Pennsylvania.

Nahant.—Armored iron vessel; low freeboard, single-turret monitor. Commanded by (1) Lieut. C. S. Richman; (2) Lieut. G. B. Townsend; (3) Lieut. E. M. Harmon. Auxiliary naval force. Served chiefly at points in New York and Pennsylvania.

Passaic.—Armored iron vessel; low freeboard, single-turret monitor. Commanded by (1) Lieut. F. H. Sherman; (2) Lieut. L. W. Bartlett; (3) Lieut. J. W. Bostick. Auxiliary naval force. Served chiefly at points in Florida and Louisiana.

Powhatan.—Converted tug. Lieut. F. M. Russell. Auxiliary naval force. Served chiefly at points in Alabama and Florida.

Restless.—Converted yacht. Commanded by (1) Lieut. A. W. Dodd; (2) Lieut. A. H. Day. Auxiliary naval force. Served chiefly at points in Connecticut and New York.

Seminole.—Converted tug. Lieut. James H. Dilaway. Served chiefly at points in Massachusetts.

Sylph.—Converted yacht. Lieut. W. J. Maxwell. On special service. Served chiefly between Washington, D. C., and points in Virginia.

Tacoma.—Converted tug. Lieut. J. S. Watters. Auxiliary naval force. Served chiefly at points in Florida.

Waban.—Converted tug. Lieut. J. D. Adkins. Auxiliary naval force. Served chiefly at Key West, Fla.

Wyandotte.—Armored iron vessel; low freeboard, single-turret monitor. Commanded by (1) Lieut. J. B. Milton; (2) Lieut. T. I. Madge. Auxiliary naval force. Served chiefly at Boston, Mass.

Naval Militia.—The complete organization of the auxiliary naval force, consisting of 41 vessels, was as follows: At headquarters, J. R. Bartlett, captain, U. S. N., retired, chief; Herbert L. Satterlee, lieutenant, U. S. N., chief of staff; Henry W. Fitch, chief engineer, U. S. N., retired, fleet engineer; Warren L. Sawyer, assistant paymaster, U. S. N.; 1 chief yeoman, 1 stenographer, and 1 messenger. The first district, from the most easterly point of Maine to Hampton harbor, New Hampshire, R. J. Beach, lieutenant, U. S. N., assistant to chief, with headquarters at Portland. To this district were attached the monitors "Montauk" and "Wyandotte." The latter, however, was never sent to her station at Bath, Me.

The second district, from Hampton harbor, New Hampshire, to Newport, R. L. J. W. Weeks, lieutenant, U. S. N., assistant to chief, with headquarters at Boston. Attached to this district were the United States revenue steamer "Minnesota," the monitors "Catskill" and "Lehigh," the tug "Seminole," and the yacht "Inca." The third district, from Newport, R. I., to Seabright, N. J., J. W. Miller, lieutenant commander, U. S. N., assistant to chief, with headquarters at New York city. Attached to this district were the United States revenue steamer "New Hampshire"; the monitors "Jason," "Manhattan," and "Nahant"; the yachts "Aileen," "Elfrida," "Enquirer," "Free lance," "Huntress," "Restless," and "Shearwater"; and the torpedo boat "Manly." The monitor "Manhattan," however, was never sent to her station at Newport; the "Jason" was stationed at Fisher's island, and the "Nahant" at Tompkinsville.

The fourth district, from Seabright, N. J., to Metomkin inlet, Virginia, Lieut. J. S. Muckle, U. S. N., assistant to chief, with headquarters at Philadelphia. Attached to this district were the United States revenue steamer "St. Louis," the monitors "Canonius" and "Mahopac," and the side-wheel steamboat "Aretic." The fifth district, from Metomkin inlet, Virginia, to New River inlet, North Carolina, Isaac E. Emerson, lieutenant, U. S. N., assistant to chief, with headquarters at Baltimore, Md. The vessels attached to this district were the United States revenue steamer "Dale," the monitor "Ajax," and the yacht "Sylph." The sixth district, from New River inlet, North Carolina, to Jupiter inlet, Florida, George L. Morton, lieutenant, U. S. N., assistant to chief, with headquarters at Port Royal, S. C. The vessels attached to this district were the monitor "Nantucket" and the tugs "Cheyenne," "Chickasaw," and "Waban."

The seventh district, from Jupiter inlet, Florida, to Perdido entrance, Florida, J. C. Sutherland, lieutenant, U. S. N., assistant to chief, with headquarters at Pensacola, Fla. Attached to this district was the tug "Tacoma" and the battalion of the auxiliary naval force at the Pensacola Navy Yard. The eighth district, from Perdido entrance, Florida, to the most westerly point of Texas, J. W. Bostick, lieutenant, U. S. N., assistant to chief, with headquarters at New Orleans, La. Attached to this district were the monitor "Passaic" and the tugs "Choctaw" and "Powhatan." The ninth district, the Pacific coast of the United States, W. E. Gunn, lieutenant, U. S. N., assistant to chief, with headquarters at San Francisco. Attached to this district were the revenue cutters "Corwin," "Grant," "Perry," and "Rush," and the tugs "Active," "Iroquois," and "Vigilant."

There were commissioned in the naval service from the Naval Militia: lieutenant commander, 1; lieutenants, 56; lieutenants (junior grade), 44; ensigns, 95; surgeons, 19; assistant paymasters, 14; engineers, 21; mates, 13; a total of 263 officers; and there were enlisted 3,832 men from the same source. The officers furnished their own uniforms and side arms, and the men came into the service armed, uniformed, and equipped.

About the middle of August the patrol boats were put out of commission as fast as their presence at the mine fields was no longer necessary, the submarine mines being removed. The monitors were ordered to proceed to League Island Navy Yard, with the exception of the "Passaic," which was ordered to Pensacola, and the "Nantucket" to Port Royal, and the revenue cutters were returned to the Treasury Department. There was some delay in getting all the monitors that were destined for that point to League island, owing to the fact that they had to be convoyed by tugs, which at that time were hard to procure. The tugs attached to the force were then, with one exception, in Gulf waters, and as soon as they were no longer needed for duty they were also laid up. The last yachts to be put out of commission were the "Aileen" and "Elfrida," which had been for some time used in the quarantine patrol at Camp Wikoff, Montauk Point, New York; however, on Sept. 26 all the vessels of the force had been placed out of commission and their crews discharged. The service of the auxiliary naval force or Naval Militia by States during the war was as follows:

California.—The Naval Militia of this State at the outbreak of hostilities consisted of 37 officers and 527 men. Of this number 13 officers and 80 men were mustered into the naval service, all of whom served on auxiliary naval force vessels.

Connecticut.—The Naval Militia of this State furnished 15 officers and 168 men to the naval

service. This force was divided during the war, most of it being on the receiving ship "Minnesota," under United States naval officers. The battalion was mustered out at Boston, in September, 1898. Some of the officers of the Connecticut naval battalion were placed on duty as commanders of small boats in the United States navy for a short period.

Florida.—The Naval Militia of this State, which at the outbreak of hostilities, numbered 24 officers and about 200 men, supplied 6 officers and 93 men to the naval service. Of this number, 2 officers and 58 men served on auxiliary naval force vessels, and 4 officers and 35 men served in the Coast Signal Service.

Illinois.—The Naval Militia of this State furnished 19 officers and 709 men to the naval service. All volunteered for the war and saw active service in every field of naval operations on the Cuban and Porto Rican coasts. The majority of this number were assigned as follow: "Aecomae," 1 man; "Alexander," 1 officer; "Amphitrite," 2 men; "Annapolis," 8 men; "Baneroff," 6 men; "Cassius," 1 officer, 27 men; "Cincinnati," 60 men; "Cushing," 3 men; "Detroit," 2 men; "Dorothea," 3 men; "Fern," 1 officer, 8 men; "Foote," 2 men; "Franklin," 1 officer and 18 men; "Harvard," 57 men; "Hawk," 2 men; "Hector," 21 men; "Indiana," 17 men; "Kanawha," 1 officer; "Lancaster," 4 officers and 46 men; "Lebanon," 3 men; "Leyden," 1 officer and 4 men; "Mangrove," 1 man; "Maple," 9 men; "Marietta," 16 men; "Massachusetts," 1 man; "Montgomery," 20 men; "Nashville," 12 men; "Newark," 17 men; "New Orleans," 3 men; "Newport," 26 men; "Niagara," 4 men; "Oregon," 60 men; "Oseola," 1 man; "Peoria," 1 man; "Puritan," 6 men; "Resolute," 2 men; "Rodgers," 1 man; "San Francisco," 8 men; "Saturn," 1 man; "Scorpion," 1 officer; "Siren," 1 officer; "Solace," 1 man; "Southery," 1 officer and 9 men; "Sterling," 2 officers; "Stranger," 1 officer; "Suwanee," 4 men; "Tecumseh," 1 man; "Terror," 9 men; "Texas," 1 officer; "Vicksburg," 8 men; "Viking," 2 men; "Vulcan," 1 man; "Wasp," 3 men; "Wilmington," 13 men; "Winslow," 2 men; "Wompatuck," 5 men; "Yale," 84 men; "Yankton," 1 officer and 39 men.

Louisiana.—The Naval Militia of this State furnished a total of 19 officers and 214 enlisted men to the navy. In addition to this number about 200 men were recruited by the State authorities after the outbreak of hostilities, but were not taken into the regular service, enlistment in which had been stopped. Of the above number supplied to the service, 10 officers and 94 enlisted men were detailed to the United States steamer "Passaic," 7 officers and 97 men to the United States auxiliary naval force and at the Pensacola Navy Yard, and 2 officers and 23 men to the Coast Signal Service. Of this detail to the Pensacola Navy Yard, 35 were sent to the receiving ship "Lancaster" at Key West and afterward distributed to the ships of the North Atlantic fleet. In addition to the above naval militiamen, 6 of the Louisiana battalion served in the Revenue Marine Service, 20 served on army transports, 25 served in the various volunteer regiments recruited in the State of Louisiana, 3 enlisted in the Fifth United States Cavalry, 2 in the Eighteenth United States Infantry, and 2 in the volunteer artillery. These last were men who failed to get into the naval service, but were anxious to serve their country in any capacity.

Maryland.—The Naval Militia of this State at the outbreak of the war consisted of 20 officers and 320 men, and its commanding officer was authorized by the Governor to increase this number as occasion demanded. The total mustered into the United States naval service was 24 officers and 425 petty

officers and enlisted men, who were assigned as follow: "Ajax," 2 officers and 55 men; "Apache," 4 officers and 24 men; "Dale," 4 officers and 31 men; "Dixie," 10 officers and 267 men; "Dolphin," 1 man; "Elfrida," 5 men; Equipment Bureau, 1 officer; "Katahdin," 3 officers; "Lancaster," 25 men; "Minneapolis," 11 men; "Restless," 6 men.

Massachusetts.—The Naval Militia of this State supplied 38 officers and 384 men to the naval service. Of this number, 7 officers and 138 men served on the United States steamer "Prairie"; 20 officers served on the auxiliary naval force vessels "Minnesota," "Lehigh," "Catskill," "Governor Russell," "East Boston," "Wyandotte," "Inca," and "Seminole"; and 2 officers and 36 men served in the Coast Signal Service. After the outbreak of hostilities this organization was increased in accordance with an act of the Legislature of Massachusetts by 4 divisions, each containing 3 officers and 55 men.

Michigan.—The Naval Militia of this State, which at the beginning of the war consisted of 18 officers and 175 men, furnished 11 officers and 270 men to the naval service, all of whom served on the United States steamer "Yosemite," many of this number having joined the organization after the commencement of hostilities.

New Jersey.—The Naval Militia of this State furnished 34 officers and 373 men to the naval service. Of this number 20 officers and 261 petty officers and men served on the United States steamer "Badger" and United States steamer "Resolute"; 9 officers and 74 petty officers and men in the auxiliary naval force on the United States steamer "Montauk"; and 1 officer and 19 petty officers and men in the Coast Signal Service.

New York.—The Naval Militia of the State of New York furnished 57 officers and 800 petty officers and men to the United States naval service. The following statement will show, in detail, the disposal of this force:

	Officers.	Men.		Officers.	Men.
"Abarenda".....	—	2	"Michigan" (2 officers from "Yankee").....	—	—

			Total.....	57	800

North Carolina.—The Naval Militia of this State furnished 9 officers and 189 men to the naval service.

Pennsylvania.—The Naval Militia of this State at the outbreak of the war consisted of 19 officers and 252 petty officers and men; 15 commissioned officers and 84 petty officers and men were mustered into the naval service; 2 men from the ranks passed as officers and are included in the 15, but are not included in the 19. The reason why such a small number of men entered the service was that the Government stopped enlisting after two or three

divisions only had been examined, thus reducing the total examined by 4 commissioned officers and 84 petty officers and men. Two of the Philadelphia officers were unable to answer the call. Out of the two Philadelphia divisions examined, 49 were rejected physically, 21 were rejected because of under age, and the difference of 14 men did not report for examination. Those mustered into service were as follow: 1 officer to command the auxiliary naval force, fourth district; 1 officer to command United States revenue steamer "St. Louis"; 1 officer to command the United States steamer "Aileen"; 1 officer to command the United States steamer "Minneapolis"; 2 officers to command the United States steamer "Viking"; 6 officers and 58 men to the United States steamer "Arctic"; 2 officers to the United States steamer "Huntress"; 1 officer to the United States steamer "Sylph"; 21 men to the Coast Signal Service.

Rhode Island.—The Naval Militia organization of this State consisted of 15 officers and 159 men at the outbreak of hostilities, of which number 8 officers and 147 men were mustered into the naval service, not including the commanding officer, who, being on the retired list of the navy, was ordered to duty.

South Carolina.—At the outbreak of the war the Naval Militia of this State consisted of 21 officers and 302 men, which force was increased by 102 volunteers within ten days after hostilities commenced. Of this number, 18 officers, 6 mates, and 187 enlisted men were mustered into the naval service and were distributed as follow: "Celtic," 6 commissioned officers and 80 enlisted men; naval batteries, Port Royal, 5 commissioned officers and 40 enlisted men; Coast Signal Service, fourth district, 3 commissioned officers and 20 enlisted men; "Cheyenne," 1 commissioned officer and 15 enlisted men; "Chickasaw," 1 commissioned officer and 15 enlisted men; "Waban," 1 commissioned officer and 15 enlisted men; Assistant, naval station, Port Royal, 1 commissioned officer; "Massasoit," 1 mate; "Hercules," 1 mate; navy yard, New York, 4 mates; "Morrill," 2 enlisted men. Total (in United States navy, 211), 18 commissioned officers, 6 mates, and 187 enlisted men. In addition to the above, this organization furnished 16 men to the United States volunteer army; the remaining 198 men were not called out, but stood ready to serve at any time.

Virginia.—The Naval Militia of this State furnished 2 officers and 62 men to the navy, of which number 48 men were enlisted in the regular service and 2 officers and 11 men did duty in the Coast Signal Service.

Marine Corps.—This corps did excellent service in connection with naval movements during the war. The official marine record of service is not yet available for the purposes of this article. Marines, under First-Lieut. H. C. Haines, landed from the "Dixie" at Ponce, Puerto Rico, July 27, 1898, and aided the naval force in taking formal possession of the town.

Marine Battalion.—This battalion, organized at New York, April 17-22, 1898, under instructions from the Navy Department, consisted of 23 commissioned officers of the Marine Corps, 1 surgeon of the navy, and 623 enlisted men, all under command of Lieut.-Col. R. W. Huntington, U. S. M. C. The battalion was divided into 6 companies, 1 of which was an artillery company, having 4 3-inch rapid-fire guns. On April 22 the "Panther" sailed with the battalion of 24 commissioned officers and 623 enlisted men for Cuba, and arrived at Santiago de Cuba on the morning of the 10th. On the same day, at 1 P. M., the ship arrived at Guantanamo Bay, Cuba, and at 2 P. M. of that day the battalion landed, with stores, and prepared to go into camp. On the

11th the camp was attacked by a much superior force of Spaniards, and from that time until the 14th the battalion was constantly under fire, and repulsed the enemy on every attack. The holding of the position at Guantanamo Bay was of the utmost importance to the navy, as it furnished a base for the operations against Santiago and Admiral Cervera's division. Owing to the dense undergrowth, affording safe shelter to the Spanish sharpshooters, it would have been impossible for the vessels, by shelling the shore, to keep the enemy from harassing those on board the ships with their Mauser rifles to such an extent as to make it dangerous for them to remain there. Capt. George F. Elliott, on June 14, with a detachment of two companies of the battalion and 50 Cubans, was sent to destroy a well at Cuzeo, about 6 miles from the camp, which was the only water supply of the enemy within 12 miles. This force, amounting to about 275 men, attacked and defeated a body of about 500 Spaniards and accomplished the destruction of the well. About 1 A. M. on the morning of June 12, during a very severe attack on the camp, Assistant-Surgeon John Blair Gibbs, U. S. N., was killed by a Mauser bullet.

UNITED STATES, FINANCES OF THE. The net ordinary receipts of the Government for the fiscal year ending June 30, 1898, exclusive of the postal service, amounted to \$405,321,335, being greater than for any year since 1867. There was a falling off in customs revenue compared with the previous year of \$26,979,065; in profits on coinage, bullion deposits, etc., \$2,483,344; but there was a gain in internal revenue receipts of \$24,212,067, substantially offsetting the losses. In addition to the increased gains from the sources mentioned, the Government received in satisfaction of its advances to the Union Pacific Railroad, being in full for the principal and for interest advances to date of settlement, Nov. 1, 1897, the sum of \$58,448,224, and in reimbursement in full for the principal advanced to the Kansas Pacific Railroad \$6,303,000. Under this settlement the Government is reimbursed for all advances made to the roads except for the interest on the Kansas Pacific. Against these receipts no corresponding items of expenditures appear, consequently the deficit in ordinary revenue appears to be only \$38,047,247, instead of more than \$100,000,000, as would have appeared but for the receipts arising from the reimbursements in question. It should be stated that the expenditures on account of the redemption of the principal of these railroad bonds, and of the interest thereon for which these amounts were received in reimbursement, had to a large extent been made in previous years, and the items entered respectively in the accounts of redemption of principal and interest on the public debt and not as ordinary expenditures.

Negotiations which have been long pending for the sale of the Government's interests in the Central Pacific Railroad have also, it is announced, been concluded, the Government accepting twenty interest-bearing notes of like amounts, payable at intervals of six months, aggregating precisely the amount of the principal of the bonds and the interest thereon advanced by the Government.

To meet additional anticipated demands upon the Treasury, Congress passed an act which was approved June 13, 1898, imposing additional internal revenue taxes and a duty on imported tea. It also authorized the Secretary of the Treasury to issue, not to exceed \$100,000,000 of certificates of indebtedness, to bear interest at a rate not exceeding 3 per cent. per annum, payable not exceeding one year from date of issue, and also 3-per-cent. bonds not to exceed \$400,000,000, redeemable in ten years and payable in twenty years after their issue, the proceeds to be used only to meet the anticipated

war expenditures. No receipts from either taxes or bonds, however, appear to have entered into the accounts of the fiscal year in question.

The ordinary expenditures during the year in question, exclusive of the postal service, amounted to \$443,368,583, a net increase over that of the previous year of \$77,594,423. This increase was mainly due to the action of Congress in the anticipation of a war between this country and the Kingdom of Spain. Under date of March 9, 1898, an act was approved appropriating for the national defense the sum of \$50,000,000, to be expended at the discretion of the President, and a large portion of it was disbursed before the close of the fiscal year.

The monthly debt statement shows that at the close of the calendar year, Dec. 31, 1898, the public debt for which no reserve is held was \$1,323,940,981, a net increase for the year of \$189,354,645. There was a decrease of \$3,399,322 on the amount due on the national bank redemption account and some unimportant changes in other items. The increase was mainly due to the issue of the new 3-per-cent. bonds, authorized by the act above mentioned, to the amount of \$192,846,780. The act provided that the bonds, if sold, should at first be offered at par as a popular loan in such way as would give the citizens of the United States an opportunity to participate in the subscription, preference in the allotment being given to subscriptions of individuals, the lowest amounts to be first allotted. The bonds were dated Aug. 1, 1898, and subscriptions were invited June 13, 1898, to the amount of \$200,000,000. The United States bonds of other issues were at that time selling at such a rate above par as to insure the success of the new loan beyond question. Promptly upon the issue of the invitation for subscriptions there came a response from every section of the country, and upon the close of the thirty days prescribed as the period for subscriptions there had been received at the department 232,224 subscriptions for \$500 and less, and 88,002 for more than \$500.

The total of subscriptions of \$500 or less was \$100,444,560, but the aggregate subscriptions somewhat exceeded \$1,400,000,000, a sum greater than the entire public debt then outstanding. Before the bonds could in the course of business reach the subscribers they were worth a premium of 1 to 5 per cent. at least, and have not since been lower.

The following tables show the receipts and expenditures in detail for the two years, including transactions in the postal service:

RECEIPTS.

SOURCE.	YEAR ENDING JUNE 30,	
	1898.	1897.
Customs	\$149,575,062	\$176,554,127

The following table shows in detail the changes in the debt during the calendar year:

DEBT WITHOUT RESERVE.	OUTSTANDING DEC. 31,	
	1898.	1897.
Funded loan continued at 2 per cent.	\$25,364,500	\$25,364,500
Funded loan of 1907, 4 per cent.	559,650,200	539,641,500
Refunding certificates, 4 per cent.	39,100	44,220
Loan of 1904, 5 per cent.	100,000,000	100,000,000
Loan of 1925, 4 per cent.	162,315,400	162,315,400
Ten-twentieths of 1898	192,846,780
Old loans matured	1,237,200	1,330,270
Old demand notes	63,997	54,347
United States notes (greenbacks)	246,681,016	246,681,016
National bank redemption account	28,868,814	32,268,146
Fractional notes	6,889,974	6,886,937
Total	\$1,323,940,981	\$1,134,586,336

The changes during the year in the debt having an equivalent reserve in cash have not been important in amount, but there is still a steady reduction in the amount of Treasury notes outstanding and an increase in that of silver certificates.

The table below shows the changes in detail :

DEBT WITH EQUIVALENT RESERVE.	OUTSTANDING DEC. 31.	
	1898.	1897.
United States notes (greenbacks).....	\$100,000,000	\$100,000,000
Treasury notes (1890).....	96,523,280	106,348,280
Currency certificates (1872).....	20,685,000	44,555,000
Gold certificates.....	36,808,999	38,128,149
Silver certificates.....	399,430,504	387,925,504
Total.....	\$653,447,783	\$676,956,933

The changes in the condition of the Treasury is set forth in detail in the table below. It will be seen that during the year there has been an increase in the cash and cash items of \$69,039,981. Of these there was an increase of deposits in national banks of \$45,678,199 owing to the policy of the Treasury Department of letting subscriptions to the 3-per cent. remain in the depository banks until the amount should be needed for use; thus preventing any monetary disturbance from a temporary contraction of the money in circulation. There was also a notable increase of gold coin or bullion. The supply of gold coin during the year has been so much in excess of the demands of the Treasury that the metal has become a common medium of circulation throughout the country. There also seems to have been a great demand for the small silver coins, the amount of which on hand having largely decreased.

ITEMS.	YEAR ENDING DEC. 31.	
	1898.	1897.
<i>Liabilities:</i>

Silver certificates.....	7,098,509	11,229,912
Bonds and interest checks paid.....	25,667	29,288
Currency certificates (1872).....	220,000	1,240,000
Minor coins and fractional notes.....	329,272	1,086,754
Subsidiary silver coins.....	5,959,343	10,679,899
Total.....	\$930,431,351	\$861,391,370

The circulation of the country has also increased during the year in nearly all of the several kinds as will be seen by the following statement :

CIRCULATION OUTSIDE OF THE TREASURY.	IN CIRCULATION DEC. 31.	
	1898.	1897.
Gold coin.....	\$667,796,579	\$547,568,360
Standard silver dollars.....	65,183,553	61,491,073
Subsidiary silver.....	70,627,818	65,720,308
Gold certificates.....	35,200,250	36,557,689
Silver certificates.....	392,331,995	376,695,592
Treasury notes (1890).....	94,942,741	103,443,936
United States notes (greenbacks).....	312,415,738	262,480,927
Currency certificates (1872).....	20,465,000	43,315,000
National bank notes.....	238,387,729	223,827,755
Total.....	\$1,897,301,412	\$1,721,100,640

Gold coin alone has increased more than \$120,000,000—an unprecedented gain for a year. In the aggregate the gain has been \$176,200,772, nearly equal to the entire amount of gold coin in circulation in the country at the opening of the civil war in 1861.

The following table shows in detail the coinage of the year as compared with that of the previous year. There seems to have been a considerable falling off in the fabrication of double eagles and standard silver dollars :

CHARACTER.	VALUE.	
	1898.	1897.
<i>Gold—</i>		
Double eagles.....	\$46,974,460	\$59,894,820
Eagles.....	9,931,620	8,043,010

Total silver.....	\$16,485,584	\$24,327,787
<i>Minor—</i>		
Five-cent nickel.....	\$950,767	\$609,819
One-cent bronze.....	538,717	374,690
Total minor.....	\$1,489,484	\$984,509
Grand total.....	\$82,609,933	\$96,959,001

UNIVERSALISTS. The "Universalist Register" for 1898 gives statistics of this denomination, of which the following is a summary: Number of parishes in the United States, Canada, Scotland, and Japan (45 State and other conventions), 991; of families, 53,708; of churches, 805, with 48,433 members; of Sunday schools, 653, with 53,730 members; of young people's religious organizations, 501, with 14,315 members; of churches, 782; value of church property, \$10,259,963. The 13 educational institutions (including 3 divinity schools and 1 medical school connected with universities) return 162 professors and teachers, 1,443 students, and property the value of which is estimated at \$3,786,590. The Convention of Scotland, organized in 1875, had in 1894 churches at Larbert and Glasgow, with 95 members. No returns have been received from it since 1894. The mission in Japan was begun by the General Convention of 1890, and the National Convention of Universalists in Japan was organized in 1895. Three American and 3 Japanese missionaries are employed, and 7 students are recorded as in the field. The schools are the Uchu-Gakuin, the Kindergarten Training School, and the Shizuoka Girls' School. The Universalist Historical Society, organized in 1834, and incorporated under the laws of Massachusetts, has a library of about 400 volumes, besides important manuscripts. The Universalist periodicals include 5 general, Sunday-school, and young people's papers, and the "Universalist Register," a statistical yearbook.

URUGUAY, a republic in South America. The Senate has 19 members, 1 from each department, elected indirectly for six years; the Chamber of Deputies has 69 members, elected by direct suffrage for three years. The President, whose term of office is four years, at the beginning of 1898 was Juan Luis Cuestas, who as Vice-President succeeded Juan Idiarte Borda, assassinated on Aug. 22, 1897, for the remainder of the term ending March 1, 1898. The Cabinet appointed on Aug. 28, and reconstructed in December, 1897, was composed as follows: Minister of War and Marine, Gen. Gregorio Castro; Minister of the Interior and Justice, Edoardo Maccachen;

Minister of Foreign Affairs, Señor Salterain; Minister of Agriculture, Industry, Public Instruction, and Public Works, Jacobo Varela; Minister of Finance, José Ramon Mendoza; Minister of Foreign Affairs and of Worship, Dr. Mendilharzu.

Area and Population.—The republic has an area of about 72,000 square miles, with a population of 827,485 in 1897 according to the enumeration, probably nearer 877,000. The number of marriages in 1897 was 2,746; of births, 27,763; of deaths, 13,013; excess of births, 14,750. The immigrants in 1897 numbered 9,140, including 3,651 Italians, 2,552 Spaniards, 672 Brazilians, 483 French, 287 Germans, and 225 English.

Finances.—The budget for the year ending June 30, 1898, the same that has been published every year since 1893, made the total expenditures 13,647,924 pesos, of which 505,490 pesos were for the executive power, 62,045 pesos for the presidency, 117,407 pesos for foreign affairs and worship, 2,213,694 pesos for the interior, 832,026 pesos for finance, 953,346 pesos for public works, 1,730,507 pesos for war and marine, 5,721,735 pesos for the public debt, and 1,511,674 pesos for other expenses. The receipts from customs in 1897 were 8,547,179 pesos. The consolidated foreign debt on July 1, 1898, was 100,409,672 pesos; the total debt, including a loan of 3,875,800 pesos raised in 1897, was 120,315,676 pesos, requiring the payment of 4,861,774 pesos interest and 1,066,774 pesos for the sinking fund.

Commerce.—The value of the imports in 1897 was 19,512,000 pesos; of the exports, 29,320,000 pesos. The exportation of wool was 12,403,000 pesos; hides, skins, and leather, 6,684,000 pesos; meat, 4,313,000 pesos; tallow, 1,299,000 pesos; extract of meat, 1,183,000 pesos; cereals, 1,040,000 pesos; animals, 782,000 pesos.

The values in pesos of the commerce with different countries were as follows:

COUNTRIES.	Imports.	Exports.
Great Britain.....	4,844,000	1,755,000
France.....	1,959,000	4,971,000
Belgium.....	1,124,000	4,982,000
Brazil.....	1,621,000	5,939,000
Germany.....	1,828,000	3,065,000
United States.....	1,505,000	2,887,000
Spain.....	1,089,000	297,000
Italy.....	1,697,000	721,000
Portugal.....	18,000	162,000
Argentine Republic.....	2,951,000	4,016,000
Paraguay.....	93,000
Chili.....	86,000	223,000
Cuba.....	93,000	108,000
Other countries.....	4,000	94,000
Total.....	19,512,000	29,320,000

Navigation.—In 1897 there were 1,126 vessels, of 1,904,626 tons, entered and 1,024, of 1,796,529 tons, cleared at Montevideo, besides 2,439 coasting vessels, of 621,406 tons, entered and 2,447, of 621,244 tons, cleared. The mercantile navy, in 1898, numbered 23 steamers, of 7,654 tons, and 56 sailing vessels, of 13,697 tons.

Communications.—The railroads in operation in 1897 had a length of 1,010 miles. The telegraph mileage was 3,400 miles, besides 994 miles of railroad telegraphs. The number of messages in 1896 was 342,800. The post office in 1896 carried 10,512,887 internal and 6,642,842 foreign letters, etc.; receipts were 1,424,004 francs, and expenses 1,604,411 francs.

The Army and Navy.—The permanent army in 1898 consisted of 4 battalions of rifles, 4 regiments of cavalry, 1 regiment of field artillery, and 1 regiment of foot artillery; numbering in all about 310 officers and 3,170 men, besides 3,200 police troops. The national guard is about 20,000 strong. The regular infantry is armed with Mauser rifles. The

naval force consists of 3 gunboats and a steamer, manned by 22 officers and 162 sailors.

Coup d'Etat.—In the beginning of January the Government assembled the national guard in the capital preparatory to taking decisive measures against the Opposition in the Chambers, which threatened to restore the former *régime* of the Colorados, led by ex-President Julis Herrera y Obes, who still formed a large majority of the Chambers, the members of which were practically nominated by the late President Borda in 1896. As the election of the President rests with the Chambers, Dr. Herrera or some other violent Colorado was certain to replace Señor Cuestas at the end of his term in February unless some extra constitutional course was taken to prevent it. Señor Cuestas, who was himself a member of the Colorado party, on assuming the presidency after the assassination of Borda on Aug. 25, 1897, had made peace with the Blanco insurgents and laid down a policy of retrenchment and reform that made him a formidable rival of Herrera, who therefore attacked him fiercely in the Legislature and called upon him to resign. An alleged plot for his deposition and an attempt upon his life only rendered him more popular. On Jan. 9 President Cuestas proclaimed a dictatorship after having many officers arrested on suspicion of being engaged in a military plot. Disturbances occurred, in consequence of which he declared the Chambers dissolved on Feb. 10, proclaimed a provisional Government, and nominated a Council of State of 88 members representing all parties. This Junta appointed Señor Cuestas provisional Governor and Señor Maceachen Vice-Governor until after the popular elections to be held in November. The majority in the Legislature had put forward as candidate for the presidency a very old man, Dr. Tomas Gomensoro, who was a puppet of Dr. Herrera. All three parties in the republic requested acting President Cuestas to suppress the Chambers, and thus prevent the restoration of the old system of corruption and the probable revival of the civil war. He deferred action, hoping that the majority would succumb on seeing the hopelessness of resistance, until the last moment. But on Feb. 10 it became imperative to strike, for on that day the extraordinary session of the Legislature ended. Four days later the Chambers were to reconvene for the ordinary session, the first act of which would have been to elect a new president of the Senate, superseding Señor Cuestas as Vice-President and acting President of the republic preparatory to the election of a new President on March 1. As he had secured the support of the chief officers of the garrison and the volunteers as well as that of the principal citizens, the Legislature bowed to the state stroke without even formulating a protest.

The provisional Governor announced that the public revenue, administered with economy, was sufficient for all requirements of the state, and promised to publish a genuine budget, something not known for many years. An excellent wheat crop and an abundant wool clip, both of which realized good prices, were favoring circumstances for the Provisional Government.

Military Revolt.—Although at the time of the *coup d'état* President Cuestas had removed all inimical regimental officers and departmental prefects he knew of, Dr. Julio Herrera still had a following in the army as well as in the country. Three generals named Casimiro Garcia, Ricardo Estevan, and Santos Arribio planned a revolt and placed themselves at the head of two artillery regiments which on July 4 seized the arsenal in Montevideo and began fighting in the streets with the other regiments of the garrison, all of which were loyal to President Cuestas, who was supported by the

Blancos and the people generally. A state of siege was declared and the national guard called out. After two days of fighting, in which 60 persons were killed and 150 wounded, the revolutionists capitulated on condition of an amnesty being granted. Many of the higher officers were implicated in the conspiracy. The day after the surrender the ringleaders and their active accomplices were deported to Buenos Ayres, and subsequently a large number of military officers were degraded for signing a manifesto justifying the attempted revolution and accusing the Government of suppressing the liberty of the press and committing various acts of oppression. Several persons were arrested on July 20 for plotting against the provisional President. Later the exiled generals endeavored to raise a force for the invasion of the frontier from Argentine and Brazilian territory. In August the Cabinet was reconstructed, Dr. Mendizharzu assuming the Ministry of Foreign Affairs in place of Dr. Saltaíra, while Gen. Nicomedes Castro succeeded Gen. Gregorio Castro as Minister of War. The young man who shot President Idiarte Borda was tried a year after the deed was committed, and though sentenced to thirteen years' imprisonment, he was applauded by the public as a hero. The case was appealed, and a second jury absolved him from guilt because he acted under the influence of political effervescence. An invasion of rebels from Brazil in November was easily defeated by troops sent to the frontier.

UTAH, a Western State, admitted to the Union Jan. 4, 1896; area, 84,970 square miles. The population in 1890 was 207,905; the estimated population in 1895 was 247,324. Capital, Salt Lake City.

Government.—The following were the State officers during the year: Governor, Heber M. Wells; Secretary of State, James T. Hammond; Treasurer, James Chipman; Auditor, Morgan Richards, Jr.; Attorney-General, A. C. Bishop; Superintendent of Public Instruction, John R. Park—all Republicans; Adjutant General, John Q. Cannon; Coal-Mine Inspector, Gomer Thomas; Surveyor General, J. B. Blair; State Engineer, Willard Young; Fish and Game Warden, John Sharp; Regents of University, Rebecca E. Little, T. R. Cutler, James Sharp; Chief Justice of the Supreme Court, George W. Barch; Clerk, L. P. Palmer; State Bank Examiner, Robert R. Anderson; State Board of Medical Examiners, E. S. Wright, John F. Critchlow.

Finances.—The State Treasurer reports that for the two years ending Dec. 31, 1898, the money received into the treasury from all sources was \$2,025,409.10; balance on hand Dec. 31, 1896, \$420,950.38; total, \$2,446,359.48. The amount received from county taxes was \$1,601,543.08; from sale of State bonds, \$150,000; from sale of State lands, \$97,252.59; from sale of State school lands, \$47,517.15. The disbursements for the same period were \$1,961,343.90, leaving a balance on Jan. 1, 1899, of \$485,015.58. The amount paid on State district school account was \$623,781.08; for the Agricultural College, \$47,000; State land account, \$143,787.06; State school lands, \$9,197; amount of State bonds redeemed, \$150,000. The report of the State Auditor shows the balance in treasury Dec. 31, 1898, \$485,031.54; due from taxes for 1898, \$135,315.09; due from taxes prior to 1898, \$18,000; total resources, \$1,342,032.53. The liabilities Jan. 1, 1898, were: Bonded indebtedness, \$900,000; outstanding warrants, \$32,085.73; balance in favor of State school fund, \$246,061.46; due various land funds, \$61,855.38; total liabilities from all sources, \$1,342,032.53.

The total bonded indebtedness of the State is given as \$900,000, of which \$300,000, issued in 1890

at 5 per cent., is payable in 1910; \$250,000, issued in 1892 at 5 per cent., payable in 1912; \$200,000, issued in 1896 at 4 per cent., payable in 1916; and \$150,000, issued in 1898 at 3½ per cent., payable in 1918.

Valuation.—The Auditor shows that the property assessed for taxation in the respective counties of Utah by the county assessors and State Board of Equalization for 1898 amounted to \$100,241,331, as against \$102,435,714 for 1897. The State general-fund tax of 4½ mills on the dollar and the State school levy of 3 mills will yield \$751,135.31. The total amount of assessment on railroads, telephone, telegraph, and car companies, as reported, was \$11,464,592, against \$12,932,547 last year. Sheep were assessed at \$1.50 a head in 1897 and at \$2 in 1898, while cattle were assessed at \$10 both years.

Banks.—The total resources of the 11 national banks of Utah on Oct. 27 were \$7,337,955; loans and discounts, \$2,734,275; reserve, \$1,386,271; gold holdings, \$653,770; deposits, \$4,063,895.

Railroads.—On Aug. 21 articles of incorporation of the Utah and Pacific Railroad Company, with a capital of \$825,000, were filed with the Secretary of State, and the railroad from the Nevada terminus to Los Angeles, about 200 miles, is being built as rapidly as possible. The Ogden Short Line Railroad, which was sold in 1897 under foreclosure, has been absorbed by the Union Pacific; though the headquarters of the Short Line will still remain in Salt Lake and the road will continue to be operated practically on an independent basis. The year has been one of unprecedented prosperity in railroad matters in Utah. Though there has been no increase of mileage in the Rio Grande Western, yet the whole system has been greatly improved. In the year a bridge was built at Lamb's Cañon on the Park City line, additional machine shops were constructed, and handsome depots erected.

Education.—The business department of the Latter-Day Saints' College has grown within three years from 36 students and 1 teacher in one room to 240 students with a faculty of 9 instructors in ample quarters in the Templeton. A new normal school building has been erected at Cedar City, and equipped with every modern sanitary device. A tract of 15 acres surrounds the structure, and both building and grounds are the gift to the State by the people of Iron County. Already 94 pupils have been enrolled. The State district school tax fund in the treasury on March 31 was \$44,962.07, which gave 54 cents *per capita* to the 81,812 children of school age in the State. The Fort Hall Indian School has had a very large attendance, there being 100 boys and 80 girls. The number of books in the State law library was 8,219.

Agricultural College.—The workshops have been moved from the main building, as it was feared that the constant jarring of the machinery might weaken the walls. The new structure cost \$7,560 and contains a chemical laboratory. A line of poultry experiments required suitable equipment at a cost of \$1,000. The running expenses, salaries, etc., necessitate an appropriation of about \$1,000 a month. An appropriation of \$42,305 is asked for the coming two years.

Industrial School.—During the biennial period the title deeds to the new site of the State Industrial School at Ogden were secured and a tract of 18½ acres was purchased for farming. The grounds have been fenced, walks and drives laid out, a sewer put in, and a complete water-pipe system constructed. The total number of inmates reported since the opening of the new school, Oct. 31 1898, was 226, of whom 196 were boys and 30 girls. The number of boys in the school on Dec. 31, was 24, with 1 girl. The requirements for the next biennial

period are summarized as follows: Maintenance, \$1,000 per month; manual training, \$6,000; new buildings, etc., \$12,000; total, \$42,000.

Deaf, Dumb, and Blind.—During the past two years there have been 108 pupils in the school, of whom 90 were deaf and dumb and 18 blind. Of this number, 17 pupils came from Idaho and 1 from Wyoming, and for each of these non-resident pupils the school received \$250 a year. There were 5 graduates—4 boys and 1 girl; 2 others are working at the carpenters' trade taught them in the school.

Insane Asylum.—The number of patients confined in the asylum as reported was 276, of whom 146 were males and 130 females. The cash on hand May 1, was \$9,086.16. On Aug. 31 there were 284 patients; admitted during the month, 6; total number under treatment, 292; total number discharged, 7; cash on hand Sept. 1, \$675.11; received during the month, \$2,040; disbursed during the month, \$2,320.34; cash on hand Dec. 31, \$491.50. The actual expenses of the biennial term, ending Dec. 31, 1898, was \$79,831.78, and \$22,016.68 of the amount appropriated by the Legislature has not been drawn.

State Prison.—A pipe line 9,300 feet long, with a reservoir of 80,000 gallons capacity, now brings pure water to the prison. The sewage is conveyed away by a flume 1,200 feet long, and is used for fertilizing. During the biennial period 3,753 saddle cinches and 7,601 dozen pairs of knit socks were made by the prisoners, besides all the clothing of prisoners and insane patients. The cash receipts, besides State appropriations, were \$16,597.12, and the net profits \$2,987.84. On Dec. 31 there were 171 prisoners, at a net cost of 39 cents *per capita*. The total appropriations asked for by the Board of Corrections for the ensuing two years are \$658,47—for maintenance, \$52,942; for gratuities to discharged convicts, \$2,000; for alterations, etc., \$10,905.

State Board of Health.—The new State Board of Health was organized March 10, 1898, with rules and regulations for the inspection of cattle and their detention in quarantine as follows:

"No animals driven or shipped from infected districts within the quarantine lines defined by the United States Department of Agriculture shall enter the State of Utah unless they shall first have been inspected at the points designated by the State Board of Health, by an inspector of the State of Utah, and found to be free from any contagious or infectious disease or fever ticks; provided, that cattle may be shipped through the State on the condition that if found to be infected with splenic or Texas fever, they must be placed in quarantine pens when unloaded for feeding and watering.

"Inspectors having inspected animals from the quarantine district prescribed, and having found the said animals free from all contagious or infectious diseases and fever ticks, shall issue a certificate of health.

"All cattle offered for shipment without a certificate of health from the said inspector shall be regarded as infected, and must follow the rules and regulations hereinbefore stated.

"The expense of inspection, as herein provided, shall be defrayed by the owner or owners of the animals inspected."

State Land Board.—The first actual sale of agricultural land in Salt Lake County by the Land Board consisted of 1,960 acres for the sum of \$5,537, about \$2.83 an acre. Nearly all the purchasers paid one tenth down and the balance in 10 annual payments with 5 per cent. interest. There were 892 applications filed, with a total acreage of school sections of 53,356; value of improvements, \$101,599; value of land, \$248,379. The total

school lands vested in the State was reported to be 1,439,342 acres; number of acres sold, 1,642; left vested in the State, 1,437,699. During the year 78 applications to lease grazing land were received, representing 109,417 acres. Eight leases, representing 19,483.12 acres, were made at an appraised value of \$1,963, the resulting rentals amounting to \$255.30. The expenses incurred in 1897 were \$11,639.21, of which \$4,768.91 was for selecting and appraising lands and \$6,870.30 for clerks, office supplies, etc.

Agricultural Products.—The amount of wheat reported was 3,190,740 bushels, value \$2,169,703; oats, 838,355 bushels, value \$276,657; barley, 183,520 bushels, value \$82,584; rye, 42,696 bushels, value \$29,777; potatoes, 783,364 bushels, value \$235,009; cotton, 155 acres, value \$4,305.

Live Stock.—The annual report gives the number of milch cows as 56,698, value \$1,017,729; other cattle 358,293, value \$4,933,162; sheep 1,998,441, value \$3,036,830; hogs 53,790, value \$293,382; horses 71,178, value \$1,207,941; mules 1,648, value \$40,264.

Sericulture.—A new industry, sericulture, is fully established in the State, and a law passed by the Legislature places a bounty of 25 cents a pound on all cocoons raised. The bill also provides for the appointment of a Silk Commission to examine cocoons for which bounty is claimed, to furnish eggs to the people, provide a market for the silk, and furnish information on all branches of silk culture. The commission has organized classes in sericulture throughout the State. Most of the silk produced is used by families in the State for knitting, sewing, etc. The amount paid for bounties this year was about \$500.

Mineral Products.—Early in the spring the Intermountain Salt Company's refinery burned to the ground, and in May this company was consolidated with the Inland Crystal Salt Company. As the Intermountain Salt Company had a lease on the plant of the Nebo Salt Manufacturing Company of Nephi, the salt industry is now confined practically to the operations of the Inland Crystal Company. At the close of 1897 there were 106,000 tons of salt in stock, and in 1898 28,000 tons of all grades were marketed, as follows: Artificial rock refined salt, 10,000 tons at \$10 a ton; crude salt for stock uses, 3,000 tons at \$3 a ton; crude salt for other purposes, 11,500 tons at 75 cents a ton; artificial rock salt, 400 tons at \$8.50 a ton; mined rock salt, 1,000 tons at \$1 to \$1.50 a ton; and sulphurized salt, 2,000 tons at \$8 a ton. The sulphurized salt is a new article of manufacture, and is in great demand for medicinal stock purposes. The value of the 28,000 tons marketed was \$136,000, and the cost of manufacture, \$42,000.

In 1898 52,000 tons of lime rock, for the use of smelters as flux, was marketed—about the same amount as in 1897.

The total amount of pumice produced during the year was only about 144 tons, a marked decrease from 1897. The output of sulphur was 337 tons in 1898, against 1,095 tons in 1897.

The lithograph stone, a new building stone, has come into notice within the past half year, and 112 tons have been marketed.

The yield of gold, lead, and copper was greater than in 1897. The yield of gold in Utah since Jan. 1, 1898, is computed at 94,900 ounces; of silver, 7,544,722 ounces; of lead, 90,346,100 pounds; and of copper, 5,333,638 pounds. The gold yield of the De Lamar Mercantile mine, not included in the above, was 11,200 ounces. With the money value of gold at \$20.67 an ounce, of silver at 60 cents an ounce, of copper at 11½ cents a pound, and of lead at \$3.75 per 100 pounds, the total value of the mining pro-

duct is \$10,723,067.32. A little more than half of the ore mined is smelted in the State.

The cyaniding yield of gold is estimated at 60,750 ounces, and of silver 140,000 ounces.

Irrigation.—The Horseshoe Bend reservoir covers 940 acres, and holds water sufficient to flood 10,000 acres to the depth of one foot, with dam, headgates, canals, and a conduit for the flowing out of the water when the reservoir is full. The old river bed turns from north to east and back again, making a horseshoe bend, which, with the dam at the lower end, forms the reservoir.

Lafayette Day.—By the recommendation of Gov. Wells, Oct. 19, the day of the fall of Yorktown, was set apart as "Lafayette Day" in Utah. A portion of the day was devoted by the schools of the State to memorial exercises and collecting contributions to the monument fund, in accordance with the plan proposed by the commissioner general to the Paris Exposition, and sanctioned by the Utah Superintendent of Public Instruction.

Disasters.—Park City was devastated by fire in June, and 75 business buildings and 100 homes were in ruins, at a loss of more than \$600,000, with a small amount of insurance. The burned district covered about 30 acres, peopled by 500 persons who escaped with nothing but what was on their backs.

A fierce windstorm swept Ogden Dec. 9, in which a church was blown down, houses were lifted from their foundations, and much other damage was done, but without loss of life.

The Mormon Church.—Lorenzo Snow, eighty-four years of age, was chosen fifth president of the Church on Sept. 15, to succeed Wilford Woodruff, fourth president, who died in San Francisco, Cal., at the age of ninety-two years. George Q. Cannon was elected first counselor, and Joseph F. Smith second.

Utah in the Spanish War.—Gov. Wells, in his annual message, says: "It is a matter of pride to every citizen that the response of Utah to the President's call for volunteers to serve in the army of the United States in the war with Spain was at once spontaneous, enthusiastic, and complete." Utah's quota was one troop of cavalry, special mounted service, and two batteries of artillery; to which was added one troop of cavalry known as First Utah United States Volunteer Troop Cavalry, with officers commissioned by the Governor. Forty men were recruited for the regiment of United States Volunteer Engineers, commanded by Col. Willard Young, with Elias S. Kimball as chaplain and Dr. F. A. Meacham surgeon—all citizens of Utah. Captains Young and Grant were brevetted majors by the President, for gallantry at the battle of Manila.

Political.—The Republican State Convention assembled in Salt Lake City, Sept. 9, and nominated Hon. Alma Eldredge, of Coalville, for Representative in Congress and Charles S. Zane, of Salt Lake City, for Justice of the Supreme Court. The platform congratulates the country "upon the glo-

rious results accomplished in the war with Spain, the magnificent bravery of our soldiers, the grand and able management of the war by the Administration, and the successful and honorable peace. We indorse and applaud the Administration of President McKinley and the policies ably proposed and accomplished by him. We especially honor the brave admiral and the gallant fleet and army who have won for us the capital of the Philippines, and we believe in extending our commerce into that part of the world. While we insist in maintaining the Monroe doctrine in all its integrity, we believe it consistent with it and safe for us to hold and maintain possession for commercial purposes of other lands in any part of the world; and we believe in protecting our flag wherever it has been successfully raised." The platform demands "protection, bimetallism, and reciprocity," as Utah has grown rich through these principles; it favors the "independent free coinage of silver at the ratio of 16 to 1"; it recognizes "the uplifting tendency and prestige that women are giving to the commonwealth through the enlarged opportunities of political equality," and approves the efforts of the Utah women to establish "silk culture in the interests of labor," and commends "the women of the State upon the patriotic loyalty they have shown in cheerfully giving their sons, daughters, husbands, and brothers to fight the battles of our country in the cause of humanity. It says "the sugar industry has been established in this State under the wise principles of the Republican party," and the product in 1898 will reach nearly \$1,000,000.

The State convention of the Democratic party met in Salt Lake City, Sept. 14, and nominated Hon. Brigham H. Roberts, of Salt Lake City, as candidate for Representative in Congress, and Hon. R. N. Baskin for Justice of the Supreme Court. The platform reaffirms the Chicago platform of 1896, making the "free and unlimited coinage of silver at the rate of 16 to 1 the all-important principle"; it says "the war with Spain was necessary and inevitable if the nation was to have any regard for the protection of its citizens"; that "through the skill, willingness, sacrifice, and heroism of the army of the United States the war has been waged to a triumphant and glorious conclusion"; that "those guilty of any neglect of our soldiers must be held to a rigid accountability"; that "to the officers and men who volunteered from the State of Utah, and who have, wherever an opportunity has been afforded, as in the battle of Manila, so bravely upheld the honor of our State, we extend all praise, and fully assure them that the universal feeling is that the future has no reward too good for them."

At the election in November Hon. Brigham H. Roberts was elected to Congress, and Hon. R. N. Baskin Justice of the Supreme Court. The Legislature chosen at the same time stands politically as follows: Republicans, Senate 2, House 15; Democrats, Senate 10, House 26; Cannon-Fusion, 4.

V

VENEZUELA, a republic in South America. The Congress consists of a Senate of 27 members, 3 from each State, and a House of Representatives numbering 63 members, elected by the votes of all adult male citizens for four years, the same term as in the Senate. The President and the Council of Government are likewise elected for four years. The President for the term ending March 4, 1898, was Gen. Joaquin Crespo, the victor in the civil war of

1892. The Council of Government consisted in the beginning of 1898 of the following members: Manuel Guzman Alvares, President; Dr. F. Acevedo, Dr. H. Rivero, Gen. Custodio Milano, Luis Zagarzazu, José G. Riera, Tomas J. Guillen, Julio Montenegro, and Gen. Luis Ma Leon. The composition of the President's Cabinet was as follows: Interior, Dr. Heriberto Gordan; Foreign Affairs, Dr. Ezequiel Rojas; War and Marine, Gen. J. R. Ricart;

Treasury, Gen. Jorge Uzlar; Public Instruction, Federigo R. Chirinos; Fomento, Dr. A. Riera; Public Works, Ernesto Garcia.

Area and Population.—The area is estimated at 593,943 square miles. The population in 1894 was 2,444,816, all of whom were Catholics, except 3,515 Protestants, 411 Jews, and 5,906 others. There were 376,156 persons engaged in agriculture, 135,688 in industry, 8,341 in navigation, 1,052 in mining, 42,816 in trade, 3,675 in public office, 528 in religion, 6,038 in military service, 9,311 in liberal professions, 211,143 in domestic service, and 1,650,068 without profession. The number of immigrants for ten years ending in 1894 was 5,548.

Finances.—The budget for 1899 makes the total revenue 34,542,000 bolivars, or francs, of which 25,000,000 bolivars come from customs, 5,292,000 bolivars from internal duties, and 4,250,000 bolivars from state property. The expenditures are estimated at the same sum, of which 7,675,276 bolivars are for the interior, 944,730 bolivars for foreign affairs, 11,381,854 bolivars for the public debt, 122,720 bolivars for agriculture, industry, and commerce, 1,742,413 bolivars for posts and telegraphs, 2,693,682 bolivars for public instruction, 1,195,392 bolivars for public works, 4,214,665 bolivars for finance, and 4,571,268 bolivars for war and marine. The amount of the public debt on June 30, 1898, was 201,419,202 bolivars; of which 63,439,430 bolivars represent the internal debt, consolidated at 6 per cent. in 1896; 49,250,000 bolivars, a new loan raised in that year at 5 per cent.; and 66,614,550, a 3-per-cent. external debt.

Political Affairs.—On March 4, 1898, Gen. Ignacio Andrade, the President-elect, succeeded Gen. Joaquin Crespo. The new President appointed the following Cabinet: Interior, Gen. Zoilo Bello Rodriguez; Foreign Affairs, Gen. Juan Calcaño Mathieu; War and Marine, Gen. A. Fernandez; Treasury, M. A. Matos; Public Credit, C. V. Echeverria; Public Instruction, Dr. B. Mosquera; Posts and Telegraphs, Dr. J. L. Arismendi; Agriculture, Industry, and Commerce, Gen. N. Rolande; Public Works, Dr. Alberto R. Smith. Gen. Hernandez started a rebellion in the province of Zamora, in fighting which ex-President Crespo lost his life in April, but the rising came to an end when the revolutionist leader was taken prisoner on June 12. The Venezuelan and the British governments exchanged their cases relative to the Guiana boundary arbitration on March 18, and subsequently forwarded the voluminous documents to Prof. Martens, of St. Petersburg, the president of the Court of Arbitration, which is expected to render its decision in the course of 1899. An English syndicate has bargained for the monopoly of rubber exploitation in the vast Amazon territory of Venezuela. In the beginning of June the Government concluded an arrangement with an Italian colonization society, which engages to import 1,000 Italian families a year for fifteen years and settle them on ceded lands, supplying them with buildings and implements; while the Government grants exemption from customs duties and taxation and pays 18 bolivars a year for each immigrant. The company undertakes furthermore to establish a steamer service between Italy and Venezuela and to organize an agricultural bank with a capital of 20,000,000 bolivars.

VERMONT, a New England State, admitted to the Union March 4, 1791; area, 9,565 square miles. The population, according to each decennial census, was 154,465 in 1800; 217,895 in 1810; 235,966 in 1820; 280,652 in 1830; 281,948 in 1840; 314,120 in 1850; 315,098 in 1860; 350,551 in 1870; 332,286 in 1880, and 332,422 in 1890. Capital, Montpelier.

Government.—The State officers in 1898 were: Governor, Josiah Grout, until October, when he was

succeeded by Edward C. Smith; Lieutenant Governor, Henry C. Bates; Secretary of State, Frederick A. Howland; Treasurer, John L. Bacon; Auditor, Orion M. Barber; Adjutant General, T. S. Peck; Superintendent of Education, Mason S. Stone; Chief Justice of the Supreme Court, Jonathan Ross; Associate Justices, Loveland Munson, John W. Rowell, R. S. Taft, H. R. Start, L. H. Thompson, James M. Tyler; Clerk, M. E. Smilie. All the State officers are Republicans.

Finances.—The total receipts for the year, plus \$67,113.80 cash on hand from the previous year, were \$1,390,030.44. From corporations the State received \$387,724.22; from towns' account of State school tax of 1898, \$81,682.54; balance of 1897, \$4,320.44; from towns' account of State highway tax of 1898, \$81,682.54; balance of 1897, \$4,320.44. There was received from temporary loans, act of 1896, \$275,000; from the Superintendent of the State Prison, \$30,065.04; from the Agricultural College fund, \$8,130; from foreign insurance companies, fees and licenses, \$6,824; from the United States Government, for Soldiers' Home, \$5,943.75; for endowment of Agricultural College, \$23,000; from Judges of Probates fees, \$15,012; and from county clerks, judgments and balances, \$49,669.95. The most important items on the debit side of the Treasurer's report are these: Auditor's orders, \$652,769.61; distribution of school tax of 1897, \$87,127.40; distribution of highway tax of 1897, \$87,348.61; University of Vermont and State Agricultural College, account of the United States Endowment fund of 1890, \$23,000; temporary loans, act of 1896, paid \$280,000, act of 1894, paid \$70,000. The resources amounted to \$537,619.59, the liabilities to \$292,113.27. Also the State pays \$7 a month to soldiers enlisted for the war with Spain, making about \$7,000 monthly.

The amount available for the fiscal year from July 1, 1898, to June 30, 1899, was \$245,506.32. Loan on account of the State Asylum appropriation, \$50,000; Agricultural College fund, \$135,500.

Banks.—The total resources of the savings banks and trust companies in the State in 1898 were \$36,928,902.04, this being a net increase of \$1,402,941.42 over 1887. There are 23 savings banks and institutions in Vermont, and 18 trust companies. There were this year 108,511 depositors, an increase of 2,366 over 1897.

Militia.—On May 16, 1898, the National Guard consisted of 68 officers and 680 enlisted men, organized into a three-battalion regiment of infantry, one 4-gun battery of light artillery, and the Norwich eadets, officially the section of artillery. In response to President McKinley's call for troops in April, Vermont, whose quota was 627, raised a full regiment of 1,030, and therefore when the second call was made the State was exempted.

Prisons.—The State Prison, at Windsor, reports 277 inmates from July 1, 1896, to June 30, 1898. The total income was \$54,188.68, an increase over the previous two years due to the price paid for convict labor, having been raised from 50 cents a

EDWARD CURTIS SMITH,
GOVERNOR OF VERMONT.

day to 75 cents. The income exceeded the expenses by \$3,922.94.

From June 30, 1896, to June 30, 1898, there were 722 commitments to the House of Correction in Rutland, 112 inmates being already in that institution. The daily average, 145, was an increase of 29 per cent. over the previous term. The Industrial School received 1,252 from June, 1896, to June, 1898, 129 being girls. In July, 1898, 130 boys and 24 girls were in the school. The expense *per capita* to the State was \$138.30.

Insane Asylum.—The trustees in their report say: "An appropriation of \$22,000 was made by the last General Assembly for the construction of a pathological laboratory, a cold-storage plant, a new ventilating system for the south wing of the asylum, and other improvements. The expenditures have exceeded the sum appropriated by \$4,497.58. Our buildings were originally erected to hold 450 patients. Since our last report the annex (Shepley Cottage) has been completed, and accommodates 25 additional patients. The average number of patients during the biennial period has exceeded 500; so that the asylum has been to that extent overcrowded. We believe the biennial period which has just closed has been one of remarkable success. Many reforms have been introduced in the management; physical restraint has been practically abolished; the dietetics of the institution have been greatly improved; the danger of fire has been materially lessened by the new water system; the grounds have been improved by grading and the planting of shrubbery: the attendants secured have been men and women of greater intelligence and better training than formerly.

"Feeling the need of more land, in the spring of 1897 we leased the farm of James Somerville for two years at an annual rent of \$1,000, and at the same time took a bond for the purchase of the property for \$8,000, the rental in excess of the interest of the purchase money to be deducted from the purchase price, provided the State consummates the terms of the bond."

The superintendent says: "During the biennial period there were 13 readmissions. Of these 2 were admitted and discharged twice: thus the total number of 715 cases treated represented 702 persons. Of the total number of patients admitted within the period 63 were regarded as curable, 3 were not insane, and 138 were chronic or incurable. Of the 63 curable patients 25 have recovered, and 38 are still under treatment with every prospect of ultimate recovery. Notwithstanding the general belief in the incurability of insanity, facts incontestably prove that the majority of the insane *do* recover if proper treatment is early instituted.

"Of those discharged within the same period 55 recovered and 58 were improved. During the same period there were 74 deaths—49 males and 25 females. The fatality, based on the total number under treatment, is not great—10.34 per cent.—especially when it is remembered that soon after assuming charge in January, 1897, a severe epidemic of *la grippe* attacked patients and attendants alike.

"By reference to the financial exhibit it will be seen that there was chargeable to this biennial period \$14,688.66 stock on hand June 30, 1896; which, however, on inventory, Jan. 1, 1897, had diminished to \$3,350.99. In spite of this fact and extensive improvements and repairs, the weekly *per capita* cost for the period has been \$3.32."

Brattleboro Retreat.—The account of receipts and expenditures for the two years ending June 30, 1898, showed a deficit of \$2,566.95. The average number of patients treated was 188, 108 being men and 80 women. The total number received since July, 1896, was 161, and 75 of these were women.

Butter-and-Cheese Association.—The Vermont Butter and Cheese Makers' Association was organized in January, and held its first meeting in March. J. J. Jackson, of East Montpelier, was chosen president, and F. H. Bickford, of Bradford, secretary. At the March meeting there were addresses and discussions on subjects connected with the dairy business, and nearly a hundred samples of butter and cheese were exhibited. Many premiums and prizes, ranging from \$5 to \$25, were awarded.

Dewey Day.—On May 9 Montpelier, Admiral Dewey's native city, celebrated his victory at Manila Bay. Almost the whole town was decorated, and it is estimated that 10,000 persons from out of town came to witness the parade in the evening. A great meeting was held in Armory Hall. Mayor Senter, the chairman, said in opening the meeting: "Fellow-citizens: We are met to-day to celebrate one of the grandest victories in naval warfare. The people of Commodore Dewey's native town have met to-day to honor his achievements. Gen. Sedgewick said at Gettysburg, 'Put the Vermonters at the front, and keep the column well closed up.' We have put a Vermonter at the front, and if Sampson keeps the column well closed up we shall hear something before this meeting is closed that will make our hearts rejoice. I hope the speakers this afternoon will be brief as possible, and that their speeches will be as full of fire and fight as was Commodore Dewey a week ago last Sunday morning at Manila."

Dental Examiners.—The Board of Dental Examiners in their biennial report submitted in August, 1898, say that in the two years they granted 16 licenses for the practice of dentistry. Of those receiving these licenses 13 were graduates of dental colleges, and 3 were licensed upon examination. Two applicants failed to pass. The receipts for examinations and licenses amounted to \$90; the expenses of the board were \$80. The president of the board is Dr. S. D. Hodge, of Burlington.

Legislative Session.—Gov. Grout called a special session of the Legislature to meet on May 5, for the purpose of providing troops for the war with Spain, in accordance with the call of the President. In his message the Governor said:

"This State tendered fulfillment of the President's call upon it for troops to assist in the war against Spain the 23d day of last month, and has since been awaiting the pleasure of the War Department and co-operating with its officials.

"Vermont's quota for immediate service is 1 regiment of 1,008 enlisted men and officers; and you are asked to provide equipment for this regiment now offered the service, and also to place the military quota of the State at the disposal of the Government. Your attention is invited to the status of the militia when the present regiment of the Guard enters the United States service, and the desirability of a continuous military organization.

"At the special session in April, 1861, called to assist in preparing the troops from this State for the civil war, a State compensation of \$7 a month, extra to the United States pay, was granted each enlisted man; and you will be expected to regard the brave men now entering an unselfish war, waged in behalf of freedom and humanity, with at least as patriotic a consideration as favored those who went forth a generation since to battle for the integrity of the Union and the perpetuity of the nation.

"The regiment requested by the Secretary of War is about 350 in excess of our quota under the President's call, but it is necessary to furnish it or allow Vermonters to serve in other State organi-

zations; and it was taken for granted that the pride of this distinctive little commonwealth would be correctly anticipated by objecting to any such mixed service; besides, this overplus stands to our credit in case of future calls and places Vermont in this respect also at the head."

The Legislature promptly passed a bill the first section of which reads as follows:

"The commissioned officers, who have volunteered or may hereafter volunteer to serve in the army of the United States during the war between the United States and Spain shall receive, from the date of their mobilization in camp until they are mustered into the service of the United States, the same pay and rations as are received by like officers in the army of the United States, the non-commissioned officers, musicians, artificers, wagoners, and privates, in the army of the United States, and \$7 per month each in addition thereto; and after they shall be mustered into the service of the United States they shall receive, in addition to the compensation paid by the United States, the sum of \$7 per month each as long as he is in the service of the United States under such enlistment contract."

Another section specified that no money provided for in the act should be subject to trustee process.

Eleven other bills were passed at this session, among which were these:

Amending the quadrennial appraisal law.

The alien railway corporation law.

Providing for the re-enlistment of the National Guard at the close of the war.

To fill further quotas of troops.

To enable St. Albans to own an electric plant.

The regular session of the Legislature began Oct. 6; J. G. McCullough was elected President *pro tem.* of the Senate, and Kittredge W. Haskins Speaker of the House. The acts of general interest that were passed included the following:

Concerning the State seal.

Concerning free public libraries.

Exempting certain manufacturing establishments from taxation.

Providing for better administration of public schools.

Continuing the normal schools at Randolph, Johnson, and Castleton till A. D. 1920.

Providing for the conveyance of pupils to and from school.

Relating to evening schools.

Relating to instruction of the deaf, dumb, blind, and idiotic.

Concerning close-jail executions.

Concerning the plea of insanity in criminal cases.

Relating to conveyances and devises of property for religious purposes.

Appointing the following to be the legal holidays: Jan. 1, Feb. 22, May 30, July 4, Aug. 16, first Monday in September, Thanksgiving Day, and Dec. 25. When one of these days falls on Sunday the preceding Saturday is made the holiday. Aug. 16 is to be known as Bennington Battle Day, and the first Monday in September as Labor Day.

Amending the married woman's property act.

Relating to divorces.

Relating to registration of births, marriages, divorces, and deaths.

Establishing the Vermont Highway Commission.

Regulating the width of wagon-wheel rims.

Relating to formation of corporations.

Extending the powers of the Railroad Commissioners.

Several acts relating to insurance.

For testing milk and cream.

Regulating the sale of commercial feeding stuffs.

To prevent fraud in the sale of garden seeds.

Providing for payment of expenses of sick soldiers.

Several statutes regulating the taking of fish.

Several statutes relating to game.

Granting bounties on noxious animals.

Raising the age of consent from fourteen to sixteen years.

Relating to cruelty to animals.

Relating to gambling machines.

Forbidding desecration of the national flag.

Establishing a Board of Prison Commissioners.

To prevent pollution of public waters.

Political.—The Republican State Convention met in Montpelier in June. Edward C. Smith was nominated for Governor and Henry C. Bates for Lieutenant Governor. The platform adopted was in part as follows:

"We affirm our loyalty to the cardinal principles of the Republican party as enunciated in the platform of the National Convention at St. Louis in 1896, especially the doctrines of protection and sound money.

"We believe the United States should build and control the Nicaragua Canal.

"We heartily indorse the administration of President McKinley.

"We commend the wisdom of the State administration in providing for a full regiment of volunteers, thus anticipating the second call for troops and preserving the unity and individuality of Vermont soldiers in the war. We also approve the action of the Legislature in voting the State pay to those of our citizens who do our work and maintain our honor in this contest at the hazard of their lives."

Burlington was the place selected for the Democratic Convention, which was held in the middle of July, and nominated for Governor J. W. Moloney, of Rutland; Lieutenant Governor, A. Allen Olmstead, of Newbury. The platform reaffirmed the Chicago platform, protested against the annexation of Hawaii, approved the money of the Constitution, declared against the prohibitory law, asked for representation on all commissions and boards, and approved of William J. Bryan.

The representatives of the Prohibition party met in Burlington in June, nominating for Governor C. W. Wyman, of Brattleboro; for Lieutenant Governor, C. B. Wilson, of Bradford.

At the election the Republican candidate for Governor received 38,555 votes; the Democratic, 14,686; the Prohibition, 1,075. The State Senate has 30 members—all Republicans; the House, 201 Republicans, 42 Democrats, 1 Prohibitionist, and 1 Independent.

VIRGINIA, a Southern State, one of the original thirteen, ratified the Constitution June 25, 1788; area, 42,450 square miles. The population, according to each decennial census, was 747,610 in 1790; 880,200 in 1800; 974,600 in 1810; 1,065,116 in 1820; 1,211,405 in 1830; 1,239,797 in 1840; 1,421,661 in 1850; 1,596,318 in 1860; 1,225,163 in 1870; 1,512,565 in 1880; and 1,655,980 in 1890. Capital, Richmond.

Government.—The following were the State officers in 1898: Governor, J. Hoge Tyler; Lieutenant Governor, Edward Echols; Secretary of State, James T. Lawless; Attorney-General, A. J. Montagne; First Auditor, Morton Marye; Second Auditor, Josiah Ryland; Treasurer, A. W. Harmon; Adjutant General, W. Nalle; Superintendent of Free Schools, J. W. Snithall; Commissioner of Agriculture, Thomas Whitehead; Register of the Land Office, J. W. Richardson; President of the Supreme Court of Appeals, James Keith; Justices, John W. Riely, John A. Buchanan, George M. Harrison, and Richard H. Cardwell; Clerk, G. K. Taylor. All are Democrats.

Finances.—The receipts for the year 1897-'98 were \$3,230,277.40, an increase of \$99,022.05 over those of 1896-'97. The expenditures were \$3,200,903.72, an increase of \$45,445.61. The cost of criminal expenses was reduced from \$302,825.69 in 1896-'97 to \$236,881.73 in 1897-'98; government officers, who received \$120,525.70 the former year, were paid \$117,404.22. The Oyster fund receipts rose from \$29,984.90 to \$36,766.73, and the disbursements of that fund fell from \$32,511.90 to \$22,355.37. The charter fees were more than doubled, increasing from \$7,823 to \$21,442, the Legislature having raised the requirements for the granting of charters. New items of revenue are from fish-net and crabbers' licenses, this year \$695.30 and \$260.73 respectively.

Education.—The school population is 665,865. During the year 8,562 schools were conducted, and 369,520 pupils enrolled. The total amount expended for the support of the public schools was \$1,832,525, and the approximate value of school property owned by the school districts was \$3,100,000. The State Peabody Summer Normals held in July and August were well attended, and, in the judgment of the State Superintendent, accomplished good results. They were attended by 841 white and 409 colored teachers.

The State school fund, used exclusively for the pay of teachers, was \$962,482. The literary fund derived from fines and escheats, gave \$193,100.85 to be apportioned. From the gross amount received from those sources are deducted the salaries of county and city superintendents of schools, the expenses of the central office, and the appropriation for summer normal schools.

The Legislature passed an act providing that school text-books with the exception of United States histories should not be changed oftener than once in four years. The State Board of Education adopted a list in July and passed strict regulations in regard to the contracts with publishers, and the introduction of the books. One provides that if any publisher having a book or books on the list attempts to introduce any of his publications not there either directly or indirectly, or by combination with any other publisher, his contract may be declared null and void by the board. It is estimated that the changes effect a saving of 20 per cent. in the cost of books.

The selection of United States histories was intrusted to a committee of the Camp of Confederate Veterans of the State, who were to examine the current histories and reject such as were judged to be unfair to the South and offensive to Southern sentiment. The chairman of the committee resigned because the grand camp did not approve the view expressed in his report that the right of secession had ceased to exist, having been renounced by the South as a result of the war. Following is the passage in question:

"They [the children] should be taught that, overcome by physical power, the Confederate soldier laid down his arms at the end of the war, with a pledge of his honor that he abandoned the cause of secession for all time; that the Confederate soldier has lived up to that pledge ever since the war, with perfect faith and sincerity; and that all descendants of Confederate soldiers must live up to it with the same faith and sincerity for all time."

The report also said: "Your committee had rather see our children taught inaccuracies about the war, but in books written by authors who understood and appreciated the motives of the Confederate soldier, than to be taught perfectly accurate accounts of the battles and sieges, in books whose authors look upon the Confederate soldiers as criminals."

Charities and Corrections.—The appropriations to the State charitable institutions were somewhat reduced this year, and seem to have been inadequate for their proper support, placing the authorities in charge under the necessity of either running into debt or refusing applications for admission. Reports of all are not at hand; but the superintendent of the Central Hospital at Petersburg gives account of the effect of the reduction on his institution. He says that while he was able to report in 1897 that there was not a single legally committed insane negro in the State outside of that hospital, there were, in 1898, 66 such scattered through the counties, 40 of whom were in jails. An appropriation of \$86,000 was asked, but "only \$75,000 was allowed; which amount, in spite of the most rigid economy, was inadequate to provide for more than a daily average number of 852 patients. Applications were received seeking admission for 274 patients, as against 281 for the previous year. Of these 168 were admitted, 15 died in jail, and 35 were released as 'cured.' In many instances patients were brought here from the jails, half naked, ill fed, and otherwise apparently so neglected as to make the inference a fair one that the average jail in Virginia is a discredit to any enlightened community. In this institution we support a patient—that is, clothe, feed, nurse, and give him medical attention—for 25 cents, or a fraction less, a day; while to keep him in jail costs 50 cents a day for board alone, and the jailer is permitted to expend \$30 a year for clothing for each insane person, and the physician is paid 75 cents or more for each professional visit. For the past six months an average of about 50 insane negroes have been supported in the jails at a cost to the State of not less than \$6,350. The same number of patients can be, indeed are, cared for in this hospital for that length of time for \$2,260, a difference of more than \$4,000."

The average cost *per capita* at the Western Hospital is \$117 a year.

From the report of the Penitentiary Board for the year ending Sept. 30, it is learned that 552 prisoners were received and 570 discharged, the whole cost of transportation to and from the prison amounting to \$5,838.54. There were 1,275 in charge Sept. 30, of whom 1,011 men and 65 women were employed by the shoe company. Less than a dozen able-bodied men are unemployed. The excess of discharges over entrances is due to the operation of the conditional-pardon law of this year's Legislature. The receipts were \$130,581.42, of which more than \$125,000 came from the labor of convicts. The expenditures were \$75,507.41, of which \$32,677.80 was for officers and guards and \$24,334.40 for provisions. The prisoners have earned \$20,231.86 by overwork; this goes into the prisoners' fund, from which \$14,290.33 has been paid on prisoners' orders, and \$4,771.75 paid to prisoners on discharge. The institution is overcrowded.

Boys convicted by the courts are sent to the Laurel Reformatory, which was established by private subscription. The State pays 25 cents a day for each boy committed, and \$10 a year for clothing.

Military.—The number in the organized militia at the opening of the war was given as 3,139. The quota for Virginia was 2,913. Under the second call 2 battalions of infantry were required.

The Governor applied to the United States Treasury Department for reimbursement of the \$2,957.81 expended for clothing and shoes for the volunteers. The Comptroller has withheld payment on account of a claim by the United States against Virginia in connection with the Indian trust funds.

Lawlessness.—According to a list of lynchings in the various States, four occurred in Virginia in 1898. A dispatch in December says that for the

first time indictments have been found in the State against lynchers. The grand jury of Patrick County indicted six men for the murder of a half-witted white man, who on Sept. 13 was said to have attempted to assault a young woman. He was arrested, and while the case was in progress he was taken from the officers by a mob and shot to death. His lynchers were men of bad reputation, at least two of them having been in State Prison. The victim of the lynching had escaped from a lunatic asylum. He once had been acquitted of a charge of house-breaking on the ground of insanity.

Richmond.—It is reported that business has been more prosperous in Richmond this year than for many years past. The record of manufacturing establishments shows an increase in the sales over 1897 of \$2,531,350, with greater activity in the iron trade than in any other, and particularly in the building of locomotives for export. There are now 1,142 manufacturing establishments, employing 17,317 hands, with \$16,276,500 capital invested, and the year's sales aggregate \$34,865,725.

The jobbing interests have more capital invested than in 1897 by \$154,500, and their sales exceed by \$1,352,738. The boot and shoe trade increased 34 per cent.

The earnings of the railroads also show an increase, and the bank clearings exceed those of 1897 by \$17,279,645.09. The total resources of the banks amount to \$19,007,987, and including the three trust companies, one of which was formed during the year, aggregate \$20,447,000. This is an increase for the year of \$2,000,000. There was an increase of over \$1,000,000 in deposits. There were 51 failures reported in the year 1897, with total liabilities of \$940,300. In 1898 there were only 35 failures, with total liabilities of only \$148,500. Richmond people paid in taxes to the city \$1,059,421.55; to the State, \$435,331.23; and for licenses, \$16,642.13.

Norfolk.—The shipments of wheat from Norfolk and Portsmouth in 1898 amounted to 1,118,482 bushels, and of corn to 11,847,956 bushels.

Legislative Session.—The session of the General Assembly which began Dec. 1, 1897, ended March 4, 1898. John F. Ryan was Speaker of the House.

Many bills were introduced proposing changes in the election laws and four were passed. They make changes in regard to electoral boards and election judges and other minor matters. A proposed constitutional amendment providing for changing the time of electing local officers from May to November and beginning their term of office in January instead of July, was referred to the next session; and also one repealing the provision that restricts taxation of the oyster industry.

An act passed for the purpose of facilitating the collection of delinquent taxes resulted during the year in some gain to the treasury, but was very unpopular and went by the name of "the landgrabbers' act." It came before the Supreme Court, where it was attacked as unconstitutional, the contention being that the act of Feb. 11, providing the manner of selling unredeemed lands held for the State in the name of the Auditor was repealed by an act of Feb. 24, providing a method of redemption. It was also contended that the act came under the class of those required by the Constitution to be passed by a recorded vote, and since the act was not so passed it was invalid. The court upheld the constitutionality of the law by a decision in December.

The commission appointed to confer with commissioners from other States in regard to uniformity of legislation was continued, and the Legislature adopted the act recommended by the national conference, entitled "a general act relating to negotiable instruments."

The laws in regard to liens, mortgages, and deeds of trust and assignments, and transfers of such claims, and their discharge and form of record, etc., were amended, and the limit of time for outlawry may be extended with some exceptions. Amendments were passed also to the laws governing contracts, negotiable instruments, and power of trustees and executors. An agent conducting mercantile business is to be presumed to have full power to act for his principal unless a written instrument restricting his power is recorded with the county clerk and posted in the place of business.

The codes of civil and criminal procedure were amended by various provisions governing method and details. A married woman may sue in her own name, where she was formerly required to sue in the name of her next friend. Husband and wife may not testify for or against each other as to a contract where one of the parties is incapable of testifying. Failure to make a motion for a new trial where an appeal, writ of error, or supersedeas lies to a higher court is not a waiver of any objection made during trial. Wages of minors are not liable for the debts of their parents. The maximum penalty for attempt to poison was changed from five to eighteen years.

Some amendments were made to the laws on militia. Provision was made for the preparation and preservation of lists and muster rolls of Confederate soldiers.

An amendment changed the standard bushel for oats from 32 to 30 pounds, and that of Irish potatoes from 60 to 56; and fixed that of cotton seed at 32.

Trade-marks and labels must be registered and are protected by law. The use of trading stamps is prohibited.

Provision was made for conditional pardons to Penitentiary convicts. If a minor under sixteen is convicted of a misdemeanor the judge or justice may substitute stripes for fine or imprisonment, in case the parent or guardian consents. The Prison Association can receive only minors under seventeen instead of twenty-one as heretofore, and the court may require payment for support from parent or guardian.

No city, town, or county may impose a privilege tax for the publication of a newspaper.

Railroad and canal companies are required to make reports for purposes of taxation of the amount of property in each county, corporation, and school district.

A general law was passed defining and regulating fraternal beneficiary societies, etc., making them exempt from provisions of insurance laws; they are to file reports with the auditor of public accounts; the law does not apply to orders that do not have as their principal object the issuance of benefit certificates. Fire insurance companies and associations are not to enter into combinations for controlling rates, nor to allow their agents to do so; they must make affidavit annually that they have not done so; an agreement to permit any person to make rates or the buying of rate books made by any person are to be deemed violations of the law. Such companies are required to refund a proportionate amount of premiums in certain cases where the policy contains provision that in case of loss an amount less than the face of the policy or only a certain proportion of value of property at time of loss shall be paid. An alien casualty insurance company, besides complying with provisions relative to admission of companies of other States, shall have a deposit of \$200,000 in the United States dedicated to its business and liabilities in the United States.

The office of Commissioner of Labor Statistics was created; the Governor to appoint.

The laws in regard to peddlers' licenses, pawn-brokers, and junk dealers were modified, and it was provided that dealers in farm and garden seeds shall be bound as guarantors that the seeds are as represented. Local authorities may pay public money for extermination of the San José scale; formerly the owner was liable.

Other enactments of the Legislature at this session included the following:

Prohibiting the manufacture and sale of adulterated candy, and also of adulterated wheat flour, unless marked.

Requiring corporations organized as social clubs to pay a license tax to dispense liquor.

Amending the law providing for fines for profanity and drunkenness, so that it does not apply to towns and cities having police regulations on the subject.

Amending the law on collateral inheritance tax so that it does not apply to property used exclusively for State, county, municipal, charitable, educational, or religious purposes.

Requiring railroads to carry bicycles as baggage.

Providing that the penalty for an excessive express charge is not to be enforced if the excess is refunded within ten days after demand.

Prohibiting imitations of butter from being colored like or sold as butter, and requiring placards, "Imitation butter used here," to be exhibited in hotels, bakeries, etc., where oleomargarine, butterine, or the like is used.

Providing that building and loan associations and similar institutions may elect trustees for a fixed term; rights and powers of the original trustees are vested in new trustees.

Providing for listing by owner of bonds, notes, and other securities, and statement of indebtedness of owner; no deduction for indebtedness on account of non-taxable securities or for debts created to evade taxation.

For taxing slot machines \$2.50 a year.

Providing for fine or imprisonment for riding a bicycle, vehicle, or animal on any sidewalk in an unincorporated village.

Abolishing the office of Fish Commissioner and the Board on the Chesapeake, and creating a Board of Fisheries to enforce the laws relative to oyster and fish industries.

Changing the limit of the open season for oysters from April 1 to April 15, with exceptions.

Requiring companies other than those for works of internal improvement, incorporated under general law, to file annually a list of their officers and directors; and in cases where the officers and directors are not residents of the county where the principal office is located, to appoint agents upon whom process may be served.

Requiring employers to provide seats for women in their employ.

Forbidding proprietors of billiard or pool tables to allow minors to play without consent of parents or guardians, and forbidding the selling of articles for use in games of billiards or pool to college students under twenty-one.

Changing the law for taxation of building and loan associations so as to require a license tax of \$50 on companies with a capital stock of less than \$25,000.

The Senate passed a bill to submit the question of calling a constitutional convention to vote in the spring of 1899. The House amended it by fixing the time in the autumn of the same year, but the Senate refused to concur, and the bill failed.

The reductions made in salaries and appropriations amount to about \$100,000 a year. For criminal expenses \$260,000 was appropriated, though \$300,000 has been the cost. Other amounts appropriated were: State University, \$45,000; Medical College, \$4,000; Soldiers' Home, \$35,000; Deaf, Dumb, and Blind Institute, \$35,000; Central Hospital, \$75,000; Western Hospital, \$85,000; Southwestern Hospital, \$49,000; oyster navy, \$20,000; public printing, \$25,000; Eastern Hospital, \$68,500; Colored Normal and Collegiate Institute, \$15,000; Military Institute, \$30,000; Polytechnic Institute, \$15,000.

Political.—No State officers were elected this year. At the congressional elections in November all the Democratic candidates were successful. Official tabulation of the returns shows that the total vote was 173,368, of which the parties received as follows: Democratic, 105,439; Republican, 66,156; Prohibition, 988; scattering, 785.

The Legislature for 1899 stands: Democrats in the Senate 35, in the House 95; Republicans, 4 in each house: 1 Populist in the Senate; and 1 Independent in the House.

W

WASHINGTON. A Pacific coast State, admitted to the Union Nov. 11, 1889; area, 69,180 square miles. Population, according to the census of 1890, 349,390. Capital, Olympia.

Government.—The State officers for the year were: Governor, John R. Rogers; Lieutenant Governor, Thurston Daniels; Secretary of State, Will D. Jenkins; Treasurer, C. W. Young; Auditor, Neal Cheatham; Commissioner of Public Lands, Robert Bridges; Superintendent of Public Instruction, Frank J. Browne; Attorney-General, Patrick H. Winston.

Finances.—The total receipts for the two years ending Oct. 31, 1898, were \$3,984,049.30; the total disbursements, \$3,443,424.31. The general fund amounted to \$42,426.13; the military fund to \$9,166.61; the interest fund to \$19,798.20; the permanent school fund to \$243,425.93; the current school fund to \$187,955.46; the revolving fund, Penitentiary, to \$115,764.11; the grain inspection fund to \$9,544.87; the university fund to \$1,624.39; the fish hatchery fund to \$15,744.42; the United

States fund to \$9,135.93; the printing and binding fund to \$817.51; the harbor fund to \$1,513.48; the State library fund, \$12,255.89; special land deposits, \$998.31; special tide land deposits, \$99.25; deposits for survey of tide lands, \$210; making a total of \$670,480.49.

Owing to the failure of the Legislature of 1897 to make appropriations from the revolving and grain inspection funds for use of departments dependent upon those funds, a large part of the money was diverted from its usual channel and applied direct. As a consequence, the volume of business in these funds was comparatively small.

The permanent school fund also showed an unusually large balance of cash on hand, due to the failure of the Board of State Land Commissioners to find investments other than general fund warrants, which, owing to the premium thereon, can not be secured for this fund in sufficient amounts to absorb the surplus.

State Institutions.—The State Board of Audit and Control succeeded the Boards of Trustees and

Directors on April 1, 1897. Their report of the institutions under their charge from that date to Sept. 30, 1898, show expenditures and statistics as follow: For Western Washington Hospital for the Insane, expended \$109,516.65. There was on an average 533.75 patients daily during the year ending in October, 1898. For the Eastern Washington Hospital for the Insane \$87,318.97 was expended, the average daily number for the year being 290.23. For the State Penitentiary \$87,318.97 was expended, the total number of convicts received for the two years ending in September, 1898, being 298; number released, 377; number remaining, 320. For the State Reform School \$25,908.82 was expended. There were in the school on Sept. 30, 1898, 111 boys and 39 girls. For the Soldiers' Home \$31,644.38 was expended. The Governor, in his message to the Legislature of 1899, says: "In the face of a slightly rising market the saving for the full biennial term will be considerably more than \$60,000. Added to this the following will show a decrease in expense of management: Expenses of the various boards of trustees for the two years ending March 31, 1897, \$9,908.50; expenses of the State Board of Audit and Control for eighteen months ending Sept. 30, 1898 (this amount includes all office expenses which are not included in trustees' expenses), \$5,775.01."

Education.—The State has 1,975 public schools, of which 35 were organized in the past year. The total number of teachers employed during the year was 3,321—1,007 males and 2,227 females. The average salary of the former was \$42.13 monthly; of the latter, \$34.53. In 1898 97,916 pupils were enrolled; of these 49,908 were boys and 48,008 were girls. There are 101 private schools in the State, having a total enrollment of 3,853. The total receipts for the school year, of 1898 amounted to \$2,490,180.32. The sum paid out was \$1,815,662.72, leaving a balance of \$674,517.60 at the close of the year. In the cities the salaries of teachers have been reduced, while those of rural teachers have been increased since the report of 1896.

In connection with the schools the festival of Bird Day (May 6) was established this year in Washington. The object is to prevent the destruction of song birds either wantonly or for their feathers.

Irrigation.—O. R. Holecomb, Commissioner of Arid Lands, says in his report: "Through the broad-minded policy of Thomas Cooper, Western land agent of the Northern Pacific Railway, a number of reports of reconnoissances of irrigable lands were obtained at practically no cost. The greatest region in the State in which irrigation is carried on is doubtless the Yakima country. In this region irrigation has hitherto been obtained by comparatively cheap and inexpensive systems. The lower levels have, however, all been practically covered by irrigation systems. A system to cover about 215,000 acres of the higher lands of this section was projected by Col. L. S. Howlett, in 1895-'96. This system provided for a main canal 150 miles in length, taking water from Natchez river. Under this system were selected 85,566.97 acres of vacant public land, and the total estimated cost of the system is \$2,824,200. There were of public, railroad, and private lands under his system a total of 285,000 acres of irrigable land, making the cost per acre for irrigating under this system \$9.90. The great amount of cash outlay necessary to construct this system has prevented any work being undertaken upon it, although the plans are approved by the Department of Interior, and the selected public lands are withdrawn from entry and settlement. Materials and supplies in the construction of this system, exclusive of labor, will cost approximately \$900,000. A very economical plan to irrigate 8,470

acres of land north of Columbia river in Douglas County, by a gravity canal from Priest rapids, 31 miles in length, is about to be accomplished. Another very promising irrigation field comprises the lands in the vicinity of Pasco. Surveys have been made to ascertain the possibility of watering certain of these lands by gravity from Snake river and others by gravity from Yakima river by means of crossing the Columbia with submerged pipes. Precipitation of moisture in this district is very slight, not exceeding 7 or 8 inches per annum, and as all this falls during the winter and spring months no crops can be successfully matured without irrigation. The seasons are longer here than in any part of the Northwest, excepting other portions of the lower levels of the Columbia similarly situated, because of the low elevation and the cloudless skies. Fruits and vegetables are matured two weeks earlier and grasses cut two weeks later than in the Yakima and Walla Walla districts. It has been estimated that there are in the State about 3,000,000 acres of arid lands. It is calculated that of these at least 1,000,000 can be profitably irrigated."

Products.—Wheat is the staple crop of Washington, the soil and climate are particularly favorable to it, and there are no pests; so that general failure of the crop never occurs, and the yield is probably the heaviest of any wheat-growing region in the world. The total amount of wheat from August, 1897, to September, 1898, inspected was 12,755,418 bushels.

The State Dairy Commissioner, a newly created officer, says in his first report, that of 1898: "Washington is fast becoming a great dairy State. Only a few years ago almost all the butter and cheese consumed in the State was shipped from California and the Middle West. Creamery butter manufactured in this State will compare favorably with butter manufactured in the older sections. The rivalry between creameries has been productive of much good in raising the quality of butter to its present high standard. The enterprise of the creamery men of the State is demonstrated by the fact that we have a well organized 'Dairymen's Association' in a flourishing condition, which is well attended and has its annual meetings. The professors of the Agricultural College, as well as experts from other States, deliver lectures on dairy subjects, which are of great benefit in creating an interest in the scientific methods of dairying."

The total value of the fishing appliances and canneries in the Puget Sound region in 1898 was \$1,769,980; 3,516 men were employed, and 400,200 cases of salmon were packed. The Washington side of Columbia river gives \$865,680 value of canneries and appliances, 1,775 total number of men employed, and 111,525 the number of cases of salmon. The Fish Commissioner says in his report: "During the last two years there has been a remarkable increase in the interest manifested by the citizens of the State in the fishing industry, especially is this true of those directly interested. A great many persons who, even one year ago, knew very little of the scheme of artificial propagation, have investigated the matter, and are to-day the strongest adherents and supporters of this means for keeping up and the rebuilding of the great salmon industry of the State. The season of 1898 shows a considerable falling off in the output of the fisheries of this State. The shortage in the Columbia river district of the salmon pack is not far from 10 per cent. of that of 1897. The output from the Columbia river district fisheries, taken as a whole, is not materially less than for the season of 1897, but the Washington side of the river shows a greater falling off in proportion than that shown by the whole district, including both States. The season has

been a disappointment to a large portion of the pound-net fishermen of Baker's Bay and adjacent localities. The remarkable decline of the sturgeon fisheries on Columbia river is a startling example of the destruction of a great industry. The reports for the season of 1898 show that this branch of the Columbia river fisheries has declined until it is not 10 per cent. of what it was in 1892."

Volunteers.—The Governor says in his message: "When called upon by the President for troops in the recent Spanish war, one regiment of infantry was named as the quota of the State of Washington. I immediately communicated by wire with the several captains of the different companies of the Guard throughout the State. Sunday morning, May 1, the full regiment was in camp just outside the city of Tacoma; more men offering than the Government would, at that time, accept. Afterward, under a second call the State was asked to furnish additional men to fill up the regiment to a maximum of 1,326, which was done."

State Capitol.—On this subject Gov. Rogers says in his message: "The State of Washington is and has been since its organization without a suitable building for the various State offices. Offices are rented at an annual rental of over \$6,000. Some inconvenience results from crowded quarters and lack of proper appliances. To remedy this, some years ago an architect was employed, a plan adopted, and a foundation prepared for the erection of a Capitol building, estimated to cost about \$1,000,000. The Constitution of this State provides in the most explicit terms that the indebtedness of the State shall never exceed the sum of \$400,000. There has been donated, however, by the General Government to the State of Washington 132,000 acres of wild land for the purpose expressed of aiding in the construction of public buildings. Laws have been passed creating a Capitol Commission and providing for the creation of a Capitol Building fund to arise from the proceeds of the lands when sold. On this imaginary fund, which has never contained a dollar, warrants bearing 8 per cent. interest, aggregating \$95,374.73, have been issued. These, with accrued interest, amount at the present time to about \$125,000. For this sum, which is increasing at the rate of about \$8,000 annually, the State has the foundation before referred to, for which the contractors received less than \$48,000. During the legislative session of 1897 a bill was supposed to have passed, although it lacked the constitutional number of votes in the House, appropriating \$500,000 from the aforesaid Capitol Building fund. On \$250,000 of this, by the terms of the bill, the State guaranteed interest at the rate of 4 per cent. The bill did not adequately protect the State, did not receive a constitutional majority, and was vetoed."

Political.—The Republican Convention met in Tacoma, Sept. 22. The platform contained the following declarations:

"We indorse the conduct of the Administration of President McKinley relating to the measures and events which led to the war with Spain, the conduct of the war throughout, and are now in favor of the retention of the conquered territory.

"We favor the existing gold standard and oppose the free and unlimited coinage of silver.

"We indorse the action of the present Republican Congress which has re-enacted in law a protective tariff through the Dingley bill and restored prosperity to the country.

"We demand the completion of the Nicaragua Canal as a United States water way, at the earliest practicable time.

"We favor the construction of the Puget Sound, Gray's Harbor, and Columbia Canal, and the improvement of the Columbia and Snake rivers, thus

uniting all navigable inland seas and rivers of this State with the Pacific Ocean.

"We are in favor of upbuilding the American merchant marine and the protection of American rights in every quarter of the world with an adequate navy.

"We are in favor of the equal taxation of all classes of property upon the basis of value, and we therefore oppose the amendment to the Constitution proposed by the late fusion Legislature upon the subject of taxation.

"We urge the restoration of the State normal schools and commend the citizens of this State for their private maintenance of these schools, necessitated by the failure of the late Legislature to make proper appropriations.

"We recommend the establishment of a system of postal savings banks.

"We glory in the achievements of our army and navy in the prosecution of the war with Spain, and especially in the name of the people of this State thank the volunteers from the State of Washington for their patriotic action in enlisting in the defense of their country.

"We demand the repeal of the forestry reserve order to the extent of reopening for settlement every acre of reserved land in this State which is suitable for agricultural, logging, or mining purposes; and we pledge our nominees for Congress, when elected, to work to this end.

"Firmly believing in the principle of equal rights to all and special privileges to none, we recommend to the voters of the State a careful consideration of the proposed constitutional amendment granting equal suffrage."

The fusion platform declared for the initiative and referendum; for issue of currency by the Government only; for free coinage of silver at 16 to 1; for liberal exemption from taxation of personal property and improvements on land; against any further issue of Government bonds; for election of United States Senators by the people; and in favor of the single tax and woman suffrage.

The officers to be voted for were a justice of the Supreme Court, members of Congress, and members of the State Legislature. Two Constitutional amendments were submitted, one for the single tax on land and one for woman suffrage.

In the election the Republicans were successful. Their candidate for justice, T. J. Anders, was elected by a plurality of 8,023, in a total vote of 74,024. The two Republican candidates for Congress were elected by pluralities of 3,424 and 2,602. The new Legislature has in the Senate 6 Democrats, 15 Republicans, and 13 Populists; in the House, 3 Democrats, 70 Republicans, 4 Populists, and 1 Independent. Both of the constitutional amendments were defeated. Two thirds of those who voted on the single-tax amendment voted against it; on the woman suffrage amendment the adverse majority was a little less.

WEST AFRICA, the west coast of Africa not already occupied by French, British, Portuguese, and Spanish colonies and stations, the independent republic of Liberia, or the Congo Free State, has since 1884, with a great part of the interior, been partitioned between England, France, and Germany.

Great Britain's possessions comprise the older colonies of Sierra Leone, Gambia, and Lagos, the Gold Coast, the Niger Coast protectorate, and the Niger territories.

France possesses the colony of Senegal, French Guinea, the French Soudan, and the French Congo.

The German possessions in West Africa are Togoland and Cameroons.

The Portuguese possessions are Cape Verde, Portuguese Guinea, Prince's and St. Thomas islands,

and Angola in the south, including Ambriz, Benguela, Mossamedes, and the Portuguese Congo.

Spain claims the coast region south of Morocco, where are the settlements of Rio de Oro and Adrar, near Cape Nun the station of Ifni, and farther south the island of Fernando Po, with Annabon, Corisco, Elobey, and San Juan, on the Guinea coast.

Revolt in Sierra Leone.—The colony of Sierra Leone, consisting of the peninsula on which Freetown is situated, the island of Sherbro and some other islands, and a strip of coast about 20 miles broad extending 180 miles, has an area of about 4,000 miles. The British sphere of influence behind the colony, a thickly populated territory of 30,000 square miles, was proclaimed a protectorate after the Anglo-French delimitation agreement of Jan. 21, 1895; and to meet the expense of a frontier force of 600 men and an administrative and judicial system without calling on the colony or the Imperial Government for aid, Sir Frederick Cardew, who was administrator of the protectorate as well as Governor of the colony, proclaimed, in addition to a system of trade and spirit licenses, a native hut tax, to go into practical operation on Jan. 1, 1898, with the other provisions of the protectorate ordinance. A great protest was raised against the tax, not only among the negroes of the protectorate on whom it was imposed, but among the merchants and in the press of Freetown. Formerly the colony itself was subjected to a tax of 5 s. on every house, and many poor people had their household goods seized by the bailiffs and sold at auction, or were sentenced to work in the chain gang because they could not pay; but when Sir John Pope Hennessy came out as Governor he repealed the tax in 1872. His memory is celebrated to this day, and now the colonists feared the reimposition of direct taxes. In the protectorate some of the Timanis of the north—Fulah Arabs in race, superior in intelligence and character to the Mendis of the south—determined that they would not or could not pay the tax, which was imposed at the start only in 3 of the 5 districts, those nearest to the coast, and only at the lowest rate, 5 s. a hut per annum, with exemption of the smaller villages. Bai Bureh, a champion of the natives who had already made himself obnoxious to the Government, headed the opposition and intimidated those who were preparing to pay by threatening to kill any man who did so. The commissioner of the Karene district, Capt. Sharpe, began the collection of the tax at Port Lokko. The traders were prepared to pay, but said they dared not do so on account of the natives, who threatened to burn their houses if they paid. The commissioner summoned the five head men, who not only refused to pay, but said they had agreed to kill the first man who did. On this they were arrested and sent to Freetown jail. After this a leading native, Sorie Bunkey, was declared *Alicarti*, or paramount chief, at Port Lokko by Commissioner Sharp, and was intrusted with the collection of the tax. He collected a great part of the tax assessed on the town, but he was killed when on the way to deliver the money at Freetown. Capt. Sharpe sent a message informing Bai Bureh that he was coming to collect from him, and received a defiant reply threatening to kill the first man who set foot in his town. The commissioner, having obtained re-enforcements from Freetown, sent a detachment of frontier police to arrest him. This small force encountered several thousand well-armed natives, who compelled the police to retreat to Karene town, where they were closely besieged and reduced to the last stages of hunger. The natives had not rebelled against the order forbidding the slave trade or against the wholesale freeing of the slaves whenever these sought refuge with the

British commissioner or in the colony, although slaves were the only laborers in the country and the only source of wealth for the chiefs and superior natives. The hut tax bore on the common people, who regarded it as so unjust and oppressive and impossible to meet that they would rather burn their huts, many of which were not worth 5 s., than pay such a heavy tribute to their white masters, whom they did not yet acknowledge and had never seen; for the frontier police, now at their mercy, were natives like themselves. When the Governor learned of the plight of the police besieged in Karene, he dispatched a company of West Indian troops to their relief. The black soldiers proceeded up the Great Searcies river in a steamer to Robat, and then 50 miles across country by way of Karene to Port Lokko, on the Sierra Leone river. All the villages between Robat and Port Lokko were burned by the soldiers. From Karene, which was now occupied by a sufficient force of frontier police, Major Norris had to fight his way; and at Port Lokko he was compelled to throw up intrenchments, which his company had difficulty in defending against the incessant attacks of the natives. On learning of the precarious situation of the troops, the Governor dispatched a second West Indian company direct up the Sierra Leone river with a convoy of armed boats. The naval gunners, arriving on March 5, soon raised the siege of the camp at Port Lokko by shelling the village and burning it to the ground, upon which all the natives ran away. One of the companies held Port Lokko as a base of operations, while the other proceeded up country to aid the frontier police. A third company was dispatched from Freetown, and others were sent later, until by April 1 there were 6 companies of the West India regiment in the Karene district. Bai Bureh, who was an able commander, maintained a stout resistance, and even inflicted considerable losses upon the British troops. Encouraged by his success, other chiefs of the Timani tribes revolted. Further re-enforcements arrived from St. Helena, bringing the number of troops up to 800. This force was strong enough to traverse the disturbed district in all directions, clearing from before them the natives who fought from behind trees with trade guns; so that by the end of April the country was reported by Col. Marshall, commanding the troops, to be tranquil. Bai Bureh was still at large, but the natives were sufficiently cowed, and all the houses on which the tax had been levied had been destroyed by the soldiers to enforce the lesson.

More serious difficulties, however, followed in the wake of the Timani rising. The more numerous and more barbarous Mendi tribes, which had paid the hut tax uncomplainingly, upon seeing how a comparatively few natives could hold at bay all the British forces in the country, entered into a conspiracy to exterminate all the whites and Sierra Leone people. Such a widespread plot was rendered possible by the secret society called the Poro, to which all the Mendis, Timanis, Konnos, and Kissis belong. War against the whites was planned in the Poro bush at Bompeh, and the signal of the burned leaf was sent forth to all the Mendi chiefs. The outbreak was arranged to take place at the beginning of May, as before troops could be sent up the rains would have set in, rendering difficult the movements of large bodies of men. The disturbances began at Kambia, in the Bandajuma district, on April 27. Factories in that district were looted, and native traders murdered. When the insurrection became general throughout the district and spread to the frontier neighborhood of Imperri, opposite the island of Sherbro, troops were withdrawn from Karene to re-enforce the frontier police of this part

of the protectorate. In the first week disturbances broke out in the Ronietta district, where insurgent bands captured Kwalu and advanced across the colonial frontier. Many traders, white and colored, many native missionaries and Christian natives, and at Rotifunk some of the American missionaries of the United Brethren in Christ, were massacred before they could be rescued by the gunboats that were sent to bring away traders, missionaries, and officials from dangerous positions on the coast. On the island of Sherbro and at other places within the colony the natives rose and murdered Sierra Leone traders and missionaries, more than 200 people altogether, and sacked and burned the factories. At Shengay the headquarters of the American mission were burned.

The Timanis resumed aggressive tactics after the Mendis rebelled. The insurgents invaded Kwellu, close to Freetown, and in that city a force of volunteers was enrolled to guard against a rising in the town or the suburbs. From Mano, on the border of Liberia, to Bendin, which the rebels burned to the ground, the whole country was devastated.

The American missionaries murdered at Rotifunk were Miss Mary Archer, Miss Marietta Hatfield, Miss Ella Schenk, and Mr. and Mrs. J. N. Cain. At Taïama, Mr. and Mrs. McGrew, American missionaries, were murdered on May 8. All British and American missionaries who could escape took refuge in Freetown, and were urged by the Government to return to their homes. The missionaries appear to have been murdered partly to strike terror into the other English-speaking people, and partly because the natives have a strong feeling against missionaries on account of their opposition to the customs of fetishism and sacrifice. In the north, only one missionary, Rev. W. J. Humphrey, was killed, and that was because he resisted the insurgents. Additional naval forces and West Indian troops from Lagos were hurried to the scene of conflict. It was estimated that 1,500 traders were massacred. Columns of troops were speedily organized for the relief of outlying posts, and the punishment of the rebels as far as possible. These operations were suspended at the beginning of August, when the rains had rendered the roads impassable. Before the end of May the Kwellu district was in the possession of the British, who destroyed the native towns. They retook Rotifunk, and extended their occupation until the rebellious chiefs were ready to sue for peace. Bomphe, the chief stronghold of the Mendis, was captured on June 13 as the result of a sanguinary battle in which the insurgent natives suffered nearly all the loss. At Shengeh and elsewhere, whenever the rebels resumed their depredations, a column marched in and destroyed their villages and plantations. While operations were suspended during the rainy season, Sir David P. Chalmers, who once was Chief Justice of Sierra Leone, was sent out by the Imperial Government as a special commissioner to inquire whether the insurrection was caused by the imposition of the hut tax and the steps taken to enforce it; it having been stated that a direct tax of this kind is peculiarly obnoxious to the customs and feelings of the natives of Sierra Leone, and that much offense had been given by the brutal and insulting way in which the collection of the tax was carried out by the native police. He was directed to report whether in the circumstances of the protectorate it was necessary or expedient to impose the tax. In regard to the later general rising he was instructed to inquire into the operations of secret societies, into the alleged incitements of the Freetown press, and of traders and others in the colony. The instructions also embraced an inquiry into the scheme of administration adopted for the protectorate, as well as the

best method of raising revenue, and into the desirability of reimposing direct taxation in the colony. For the larger operations planned for December a special regiment was recruited in the West Indies, and placed under the orders of Col. E. R. H. Woodgate, with Lieut.-Col. G. G. Cunningham next in command. A detachment of artillery and a section of engineers were attached to the command, while it was intended to use gunboats in all the rivers and creeks, and land marines to operate throughout the coast districts. Operations against the rebels were renewed in September. The native troops, divided into six columns, marched in parallel lines through the protectorate, while the marines scoured the coast districts. The rebellion had entirely subsided, and Bai Bureh and the other rebel chiefs were delivered up to the British.

Anglo-French Delimitation Agreement.—In the times of the slave trade the European countries possessed only trading-posts on the coast. Great Britain retained her stations afterward chiefly as bases for combating the slave trade, while those of Spain, Portugal, and the Netherlands fell into decay. In 1865 the British Government contemplated abandoning its possessions except a naval station at Sierra Leone. After having, in 1861, acquired the Dutch posts on the Gold Coast and established an administration at Lagos, Liverpool and Hamburg merchants built up a trade in West Africa, chiefly in gin and firearms. France in Senegambia was the first to organize a military and civil power in these regions. The occupation of Togoland and Cameroons by Germany in 1884 stimulated the British to extend their sphere of activity, principally by means of the chartered Company of the Niger, organized in 1885, which bought out the French merchants established on the river, supplanted the incipient German trade, made treaties with the native chiefs controlling the navigable waters of the Niger, and established tolls and tariffs that secured to itself a practical monopoly of the trade. In the Berlin-African conference of 1885 the Niger was declared an international stream, but the regulation of navigation was left to Great Britain. At the same conference the conditions governing the acquisition of African territories were laid down. For establishing suzerain rights on the coast effective occupation was declared necessary. The Hinterland behind the coast territories was regarded as belonging presumptively to these. Great Britain proposed that effective possession should be required in the interior also, but France objected. French activity in the rear of Sierra Leone and Gambia had already circumscribed the Hinterland of these British colonies. Germany subsequently renounced the ambition to acquire vast territories in the interior of Africa, assigning the Hinterland of the Cameroons to France, which had already conquered powerful Mohammedan states in the Soudan, and aimed to unite in a continuous empire Algeria and Tunis in the north, the French Congo in the south, and the coast territories of Senegambia, French Guinea, the Ivory Coast, and Dahomey, as well as to extend this empire eastward across the continent to the Nile valley. Dahomey, Futa Jallon, and the states of the French Soudan, Timbuctoo on the Niger, Kong, and other territories were acquired at the cost of much blood and treasure. The British subjugated Ashanti, but left to the Niger Company the main task of forestalling the French in the regions of the middle and upper Niger and Lake Chad. The delimitation of the colonies of Gambia and Sierra Leone having been arranged in 1889, a boundary was also settled between the British Gold Coast and the French Ivory Coast, and one between Lagos and Dahomey; both ending at 9° of north latitude, beyond which the vast regions in

the bend of the Niger and beyond that river were still left ownerless. The agents of the Niger Company were busy in these regions, and when it was claimed in 1890 that the Emperor of Sokoto had accepted British protection, the French Government agreed on a line running from Say on the Niger to Barraua on Lake Chad, as a limit by which French development from Algeria in the north, as well as British development from the Nigerian territories in the south, should be bounded. The same agreement provided for the appointment of an Anglo-French Commission to which should be intrusted the task of determining the respective spheres of influence of the two countries in the region which extends to the west and to the south of the middle and upper Niger. This commission met in 1892. The Dahomey war, which occurred in the same year, rendered unacceptable to France the proposition to divide the two spheres by a line drawn from Say to the point where the western boundary of the Gold Coast is intersected by 8° of north latitude. When negotiations were resumed in 1894 a prolongation of the frontier of Lagos and Dahomey northward to the middle Niger was discussed, but England would not accept this delimitation unless it was accompanied by a settlement of other questions pending between the two countries. The proceedings were resumed once more in 1896, when England proposed a line from Ilo on the middle Niger down to the extreme point of the boundary already agreed upon between Lagos and Dahomey, thus including in the British sphere the Bussa territory and the sultanate of Borgu, over which a protectorate had been declared on Jan. 1, 1895. The French, who had been active in these regions and had established a military post at Fort Arenberg, opposite Bajibo, laid claim to the whole right bank of the Niger nearly down to the confluence of the Benue, restricting the Hinterland of Lagos to 8° of north latitude. The British commissioners rejected this proposal, asserting that Gando, Borgu, Mossi, and other countries west of the Niger were dependencies of Sokoto or were British by virtue of separate treaties with their rulers. The French had learned to doubt all the treaties made by the Niger Company, asserting that the original treaty with Sokoto conferred trading rights only; that Sokoto's extent had been magnified so as to include independent countries as large as itself; and that the company's agents claimed to have made treaties with rulers when they had been dealing with vassals or rebels. As the countries in the bend of the Niger were the Hinterland of Senegal and of the French colonies on the Guinea coast as well as of the British colonies, they insisted on the doctrine of effective possession. The Royal Niger Company, which had always been unwilling to imperil its dividends by incurring heavy military or political expenses, determined to recover lost ground. It organized a military force, and in 1897 began a war of conquest against the native tribes which was carried up to the territory occupied by the French on the Niger. Crossing the river, a British force threatened Fort Arenberg, and induced the small garrison of blacks to evacuate it by asserting that it was a part of Bajibo, a British station. The object of the French advance into this region directly in the rear of Lagos was to obtain a port on the lower Niger, an outlet for the interior of Dahomey and the French annexations in the middle and upper Niger below the rapids of Bussa, above which for more than 600 miles the river was not navigable. The French Government, fearing a collision between the Niger Company's forces and its own, requested that pending the discussion of frontier lines troops should not be sent into the territory under dispute. The British Gov-

ernment promised that the troops of the Niger Company should not advance beyond 9° of north latitude. This undertaking did not prevent the French from occupying fresh posts in the region west of the Niger or the British from fitting out expeditions from the Gold Coast and Lagos. In order to deal with the new crisis thus precipitated the Anglo-French Commission renewed its sittings in November, 1897. One of the charges that the French brought against the British was that they supplied their enemies with arms. The British had entered into a temporary alliance with Samory, the chief of the predatory Sofas, with whom the French had long been at war. In the early part of 1897 Lieut. Francis B. Henderson went up from the Gold Coast to Wa and Bona, where a colored agent named Ferguson, who was afterward killed, had already concluded treaties, and after a battle with the Sofas went to Samory's camp and arranged a treaty with the robber chieftain.

The Sultan of Sokoto, whom the English regarded as Emperor of all the Mohammedan states of the Niger, was inclined to repudiate the British protectorate. The ruler of Nupe had denied it, but was brought to terms early in 1897; and now the British threatened a campaign against Sokoto, which was menaced also by Rabah, the conqueror of Bagirmi and Bornu, who had established his residence in the city of Kano, previously subject to Sokoto. After the British campaign against Nupe and Ilorin the Sultan of Sokoto refused the subsidy of £3,000 offered by the Niger Company, and tried to get up a league to fight the British. The rapid development of the military power of the Niger Company caused him to change his mind, and as the result of months of negotiation he declared his acceptance of the British alliance early in 1898.

Bonduku, which the English troops from the Gold Coast had taken and shortly afterward evacuated, was occupied by a French force under the direction of M. Clozel before the close of 1897. The activity of the British Niger Company on the upper reaches of the lower Niger, where the French had occupied Bussa and the whole country over which a British protectorate had been declared on Jan. 1, 1895, was hindered by the necessity of subduing the hostile tribes in the original protectorate. Thus a vigorous campaign was carried on against the Ibouzas on the borders of the delta, between Benin city and the river, who were accused of practicing human sacrifices. For this reason the officials of the company, willingly promised not to disturb the French in Bussa, and waited for the Imperial Government to come to their aid with new military forces. Lieut. Bretonnet, commanding the first expedition sent out from Dahomey, had marched to the west of Niki, whose King was very jealous of Europeans, and reached Ilo and thence marched along the bank of the Niger in February, 1897, down to Bussa, where the French were welcomed by the King, whom they aided in a long war waged upon him by his rival Cora with bands raised in Wa and Borgu. The Bariba chiefs, through whose country the French marched, were then friendly; but after Capt. Baud and Capt. Vermeersch arrived later to occupy their country they aided the King of Borgu in his resistance. Lieut. Bretonnet, after the other officers had occupied Borgu, provided for keeping up the line of posts from Kiama to Bussa and up the river to Ilo. Niki was not captured by the French without severe fighting. The French force of 150 men advancing northward from Carnotville under Major Ricort, after several encounters with the King's troops, entered the capital on Nov. 30, 1897, after which the King's army disbanded, all the Baribas in the region capitulated, and the French troops, joined by those that marched down from the north by way of Wa-

gadugu, Parna, Konkodiri, Kandi, Sori, and Bue, remained in undisputed possession of Paraku, Niki, Shori, and Kiama, as well as Lafagon and Bussa on the Niger—of the whole of Borgu, in fact, as well as of Mossi and Gurnu—until a British force marched up from Lagos to challenge their rights at Borea and seized the country south of that place. From Say, which was occupied by troops of the French Soudan, a line of French posts, including Bikini, Karamama, Ilo, Gamba, and Lafagon, occupied the right bank of the Niger down to Bussa. The French, advancing from the north, took possession of Wagadugu, the capital of Mossi, the King of which country accepted French protection. After Niki, the capital of Borgu, was occupied the old King died, and his eldest son was installed as King. The new King's brother fled to the English and persuaded them that he was the rightful King, and was anxious to cede the country to them if they would establish him on the throne. Col. McCallum proclaimed this pretender King of Borgu on March 9. Col. Northcott, who commanded the column sent from the Gold Coast, reached Wa, capital of Dagarti, Feb. 1, 1898, and found it in the possession of the French, who had driven the Sofas out of this country and occupied the towns devastated by them. It was guarded by a small black force, and when the English commander ordered the blacks to withdraw they did so. He raised the English flag in the adjacent village of Nasa and at Wa. Lieut. Caudrelier, commander of the French troops, arriving shortly afterward, demanded that the British withdraw. When they refused he hoisted the French flag at Wa again alongside of theirs. In the back country of Lagos another French force, coming southward from Niki, came into contact with a British outpost at Borea, Feb. 9, and ordered the negro sergeant in command to haul down the British flag. Meeting with a refusal, he encamped his force about three miles from the town. About the same time it was reported that a French expedition had crossed the Niger and advanced 100 miles into the territory reserved for British influence by the Say-Barua agreement, and was at Argungu, on the border of Gando; that the Sultan of Sokoto had forbidden the party to advance into his dominion; and that the agent general of the Royal Niger Company, William Wallace, was fitting out a force to expel the French. The British minister at Paris asked for an explanation, and M. Hanotaux denied that a French expedition had entered Sokoto or the British sphere, but later he explained that it was an expedition fitted out by Prince d'Arenberg; that Capt. Casamajou, its commander, had disobeyed the positive orders of the French Government in passing south of the Say-Barua line. The French Minister of the Colonies immediately sent orders for him to move northward. Major Lugard, with 100 British officers and an equal number of non-commissioned officers, left England for the Niger in the first part of 1898 to organize two imperial battalions of native troops, each about 1,200 strong, one of Hausas raised at Lagos and one of Yorubas recruited in the Niger territory. Indian engineers were dispatched from Madras. Not counting these new formations, there were in the Niger territories and the Lagos and Gold Coast Hinterland between 5,000 and 6,000 British troops, all natives except the officers. In moving troops up from Ashanti, the British officers disturbed the commerce of the Gold Coast for some time by impressing carriers, traders, and all the natives who could be caught into the service of transporting supplies up country. The British and French forces, seeking to put into practice the theory of effective possession and to occupy as many points as possible in the bend of the Niger, divided into small parties

which rushed through the country, raising a flag over every village where one was not already displayed. The soldiers of both nations had received positive orders not under any circumstance or upon any provocation to accept a conflict. It happened several times that an English detachment, finding a place occupied by the French, marched on and raised the British flag at a point farther north. In the same manner, French parties passed by points that were found to be in British occupation and established posts beyond. Hence the two countries had stations dotted over the map in inextricable confusion. The English marched through the neutral zone established in March, 1888, between their Gold Coast Hinterland and that of German Togoland, established a line of communications through Yeji and Salaga, and north of the zone raised the British flag at Gambaga and Bawku. When the German Government made an earnest protest, they withdrew from the neutral territory. A Franco-German convention fixing the boundary line between Dahomey and Togoland, leaving to France everything north of 11° of latitude, went into effect on Jan. 12, 1898.

The British headquarters on the Niger, established at Lokoja, where the Benue enters the Niger, by Lieut.-Col. Pilcher, after the arrival of Col. Lugard, were moved up to Jebba, close to the principal scene of the scramble, where the French held Bussa, on the Niger, and a line of communications through Kiama and Ashigire to Niki, while a short distance away the English were spread out from Leaba to Okuta, Bere, and Borea, which was disputed by the French and was on the line of French communications from Niki through Shori to Carnotville, in the north of Dahomey. The English had reached Boria from Lagos through Saki and Ilesha, to the east of which, between it and Jebba, far to the south of their other posts, the French had planted their flag at Kishi. The Yoruba regiment, raised at Ibadan by Col. Lugard, departed for the Niger before the beginning of March, and the Niger regiment was already at Jebba. These new troops established strong posts on the west bank at Fort Goldie and Leaba.

Lieut.-Col. McCallum, the Governor of Lagos, reached Okuta, the main British post in the disputed district on the Niger, on March 11. With 500 West Indian and Hausa troops on the frontier and 1,000 more in reserve, besides friendly Baribas and other native irregulars at command, the British military force in this region was greatly superior to the French, even before the arrival of the new imperial troops at Jebba. In the back country of the Gold Coast also the British gradually developed a superior force and were able to put 3,000 men into the field—Hausas, West Indians, Fantee police, and friendly Koranzas. The regular force of the Niger Company, about 1,000 strong, was enlarged by recruiting more Yorubas and men from the best tribes on the Niger. The Lagos troops found admirable auxiliaries in the Baribas who had not come to terms with the French, and had been expelled from Niki and those of the country occupied by themselves. They took possession of the important Bariba town of Bode. As they held Ilesha and Saki already, and the northern towns of Bere and Okuta, the Baribas accepted an alliance. Col. McCallum arranged a peace between the prince, whom he had proclaimed King of Niki, and the King of Yoruba, an old enemy of Borgu. The isolated French post of Kishi, a Yoruba town, was wrested from the French in May by the instrumentality of the native population, which drove out the small garrison and admitted an English force. The French, after protesting against the occupation of the town by the British, established a post outside of the town walls and hoisted the French flag.

The Delimitation Commission, composed of Martin Gosselin and Col. William Everett, acting for England, and René Lecomte and Col. Louis Gustave Binger, French delegates, came to a virtual agreement on the main points in dispute before the end of May, and on June 14 signed the Niger convention settling the whole question and relieving the tension, which, on the English side, had given rise to a dangerous war spirit. The French had to give up the coveted strip of territory on the maritime Niger; while the English were obliged to yield the rights asserted on the principle of Hinterland or based on dubious treaties, and relinquish their claims to vast regions over which the French had established the more palpable title of effective occupation.

Beginning in 9° of latitude at the northern end of the conventional boundary already fixed between the Gold Coast and the Ivory Coast, the new boundary follows the course of the Black Volta up to 11° of latitude, and then runs east along this parallel till it meets the boundary arranged between Togoland and Dahomey, making a deflection so as to include in the English sphere the towns of Bawku and Sapeliga. This limits the Hinterland of the Gold Coast to the parallel of 11°, to which Germany had agreed for Togoland, leaving to France Gurunsi and the valuable territories of Mossi and Gurma beyond; while Great Britain retained Gona, Mamprusi, and Dagarti, the country about Wa, where French and British troops were watching each other. The French were compelled to haul down their flag at Wa; but in compensation the British had to evacuate Bona and Dokta, west of the boundary.

The extension of the Lagos-Dahomey boundary runs northward to the vicinity of Borea, and then curves inward toward the Niger, so as to give to France Niki; while England obtained Bussa and the whole navigable part of the Niger. The line was drawn so as to leave on the English side the villages of Okuta, Borea, Tereh, Gbani, Ashigire, and Dekala, and strike the Niger 10 miles above Gere or Ilo. There the line crosses the Niger, giving to France a triangle on the east bank south of the Say-Barua line, embracing the Zaberma and Mauri countries. It follows a dry water course, the Dallul Mauri, up to a point 100 miles from the city of Sokoto, runs around the arc of a circle with this radius until it cuts the parallel of 14° the second time, follows this parallel eastward for 70 miles, then runs due south to 11° 21' of north latitude, runs eastward again for 250 miles, then due north to 14° of latitude, then eastward and into Lake Chad to the meridian passing 35' east of the center of the town of Kuka, and thence southward to the southern shore of the lake, where it meets the boundary agreed upon between the Niger Company's territory and Cameroons. The treaty provided for the demarcation of the boundaries by a joint commission within a year. The two powers agreed reciprocally to treat with consideration the native chiefs who, having treaties with one of them, come under the sovereignty of the other by virtue of the treaty. In return for the renunciation of territorial rights on the lower Niger, and in consideration also of an agreement to throw open the French colonies of the Ivory Coast and Dahomey to British trade for thirty years at only the same rates of duty as are charged on French goods (the English Government giving the same undertaking in respect to its colonies of the Gold Coast, Lagos, and the Niger territories), the French obtain the lease for thirty years of two bonded areas, not to exceed 50 hectares each, one at the mouth of the Niger and one between Leaba and the junction of the Mossi and the Niger, and also a right of way from the latter across British territory to some point on the French frontier. This will enable the French to land, store, and

transship goods destined for the interior of Dahomey or for French territories on the middle or upper Niger without payment of duties.

The convention secures to France the chief object held in view in the French policy and pursued with pertinacity and extraordinary exertions and sacrifices, but till now constantly threatened by Great Britain; that is, the continuity of all the French possessions in West Africa, the title to the whole central part of the great shoulder of Africa. The states of the central Soudan do not yet acknowledge the suzerainty of any European power, and it is still possible for the British, either from the Niger or from Egypt, to cut off the French Congo from the northern territories; but since the English Government conceded to Germany the country of Adamawa and the extension to Lake Chad, and since Germany relinquished to France all rights east of the Shari river, the French have already approached Lake Chad with a line of posts from the French Congo. Before the Anglo-French convention was signed M. Gentil emerged after two years of exploration in Central Africa, having established a post at Krebedje, on the Tomy, a tributary of the Koama, then crossed over to the Gribingi, a tributary of the Shari, and explored both rivers and Lake Chad in a steamer. The convention places in the French sphere the country conquered by Rabeh and specifically resigns to France all the shores of Lake Chad, except a strip giving access to the lake of about twice the length of the shore reserved by Germany, all comprised between the point where the parallel of latitude passing through Barua meets the shore of the lake and the frontier settled between France and Germany in the convention of Feb. 4, 1894. Immediately after the signing of the convention the British and French governments withdrew their troops from the places in which their sovereignty was not sanctioned by the arrangement. The French Chambers had not acted on the convention when the period of six months fixed for its ratification was nearly at an end, and consequently a new convention prolonging the period for six months was signed on Dec. 8.

After the settlement of the boundary dispute the British Government made arrangements with the Royal Niger Company for the transference of the territories to imperial administration. It was decided to withdraw the charter and wind up the company. The English forces that were released by the conclusion of the agreement with France returned to their interminable task of reducing to subjection the savages of the Niger coast region and compelling the more formidable rebel chiefs of the Fulah tribes to observe their treaty obligations. A part of the troops were sent to reassert British power in the Sierra Leone protectorate. The French military forces were set free for the accomplishment of the final overthrow of Samory. A line of posts was established along the Bandamina river through Kong to the French Soudan, and another up the Komoe river through Bonduku and Bona. In the spring Samory's Sofas had held the French garrison at Kong besieged for weeks; but after the French made Bona a base of operations for the junction of the Ivory Coast and the Soudan and captured Sikasso, his power began to dwindle. Many of the Sofa chiefs were won over to the French, one after another. When a double line of posts connected the Soudan with the coast, Samory withdrew, with the followers who remained faithful to him, westward across the Bandamina. Lieut. Woelfel with a force of Soudanese *tirailleurs* disputed the passage of the Cavally with him, and having the aid of the inhabitants of the country, hemmed in the exhausted and famishing Sofa army on Sept. 9, driving it into a morass, where 30,000 prisoners were taken. Sa-

mory escaped, with a small remnant, to a retreat in the mountains, where he was captured on Sept. 29.

WEST INDIES. With the exception of Hayti-Santo Domingo, Cuba, and Puerto Rico, all the West Indian islands are dependencies of European powers. In speaking of the West Indian colonies it is usual to include British Guiana, French Guiana, and Dutch Guiana, on the mainland of South America, and also British Honduras in Central America.

The most striking occurrence in the West Indies during 1898 was the hurricane that swept over the islands Sept. 11, 12. The islands that suffered most severely were Barbadoes, St. Lucia, St. Vincent, and Jamaica. Great loss of life through land-slides and floods occurred, and many towns and villages were destroyed. Prompt measures were taken by the British Government to relieve the distress.

In Mr. Chamberlain's dispatches to the colonial governors during 1898 are foreshadowed important political changes in the British West Indian colonies in the near future. The colonies are nearly all in a very unsatisfactory financial condition; and although this is due in a large degree to the effects of the continental beet-sugar bounty system, an effort is to be made, by combining some of the smaller colonies, to reduce expenditure within the limits of the local revenue. In 1898 a Department of Agriculture for the West Indies was established, following the suggestions in the report of the West India Royal Commission of 1897. At the head of this department is Dr. Morris, assistant director of the Royal Botanic Gardens at Kew. Early in September, 1898, a conference of scientific men, sugar experts, and planters of the British West Indies was held in Barbadoes. The following resolution, which sums up the situation in a few words, was unanimously carried: "This meeting of delegates from British Guiana, Trinidad, Jamaica, Barbadoes, and Antigua, while fully recognizing the efforts of the Right Hon. the Secretary of State for the Colonies to afford relief to the West Indian colonies, suffering from the serious depression of the sugar industry, regrets that, so far, the attempts to arrange reciprocal relations between the United States and the West Indies, as well as to obtain the abolition of the bounty system, have met with no success. This meeting would strongly urge upon the British Government that nothing short of the speedy rehabilitation of the sugar industry can restore prosperity to the West Indies and British Guiana; and they respectfully demand, as British subjects, the right to compete in the home markets at the natural cost of production with sugar imported from foreign countries; and urgently call upon her Majesty's Government, as the only effective remedy, to take such steps as will either prevent the importation of all sugar on which export bounties are given or annul by countervailing duty all the advantages derived from such export bounties."

British Colonies.—The British West Indian possessions, including British Guiana and British Honduras, have a total area of 128,802 square miles, and a total population of 1,576,811. They are divided into eight distinct colonies. Each colony is administered by a Governor assisted by a legislative body which in some of the colonies is nominated by the Crown, in others elected by the people. The revenue of the British West Indian colonies in 1897 was £2,346,923, and the expenditure £2,509,503. The total public debt was £5,299,361. The total tonnage of vessels entered and cleared was 10,154,357, of which 7,801,818 was British. The total imports in 1897 were valued at £7,443,276, of which £3,368,419 came from England and £2,000,000 from the United States. The exports were valued at £7,166,893, of which £2,436,628 went to the United

Kingdom and £2,800,000 to the United States. The principal articles of export were sugar, molasses, rum, fruit, cocoa, and coffee. The chief articles of import were cotton goods, foodstuffs, and wearing apparel.

The Bahamas have an area of 4,465 square miles, and had a population in 1897 of a little more than 52,000. The death rate of the colony was 24.7, and the birth rate 45 per 1,000 in 1897. The revenue in 1897 was £62,754, and the expenditure £63,405. Of this latter sum £8,384 was expense on account of public debt, and £6,644 for public works. The public debt in 1897 was £119,026. The value of imports and exports in 1896 was £194,744 and £139,000 respectively. In 1897 the value of the imports was £186,010, of which £131,000 worth came from the United States and only £46,000 worth from the United Kingdom. The exports in 1897 were valued at £149,000, the United States taking £114,000 worth and the United Kingdom £13,600 worth. The principal articles of export were sponges, oranges, salt, sisal fiber, grape fruit, pineapples, turtle shell, and timber. Owing to the low price of sisal fiber in the American and English markets, the whole sisal industry of the islands was in danger of complete collapse; but an improvement in price toward the end of the year served to avert the disaster. The mean temperature for 1897 was 79.4°, the rainfall 62.27 inches. The Governor of the colony is Sir Gilbert T. Carter.

Jamaica has an area of 4,193 square miles and a population estimated in 1897 at 706,394. The general revenue for the colony's financial year 1896-97 was £591,864, and the general expenditure £629,764, showing a deficit of £38,000, which was covered by a surplus from the previous year's revenue of £78,117. Some of the principal items of expenditure were: Charges on debt, £82,417; education, £67,540; public works, £78,516. The public debt of the colony in 1897 was £1,787,479. The exports of the colony in 1896 were valued at £1,873,105, and the imports at £2,288,946. In 1897 the imports were valued at £1,856,378, of which £730,891 or 39.4 per cent. came from the United States; the exports at £1,470,241, of which £832,189 went to the United States. The great decrease in the trade of the island in 1897 amounting to 21.51 per cent. in the exports and 18.9 per cent. in the imports was attributable to a severe drought and the low price of the colony's products in the English and American markets. The principal articles of export are sugar, rum, fruit, coffee, and dyewoods. In 1897 they showed relatively to the value of the total exports thus: Fruit, 34.3 per cent.; coffee, 14.4 per cent.; dyewoods, 11.6 per cent.; sugar, 10.1 per cent.; rum, 8.4 per cent. The vital statistics show 15,535 deaths, or a rate of 22.1 per 1,000, and 27,064 births, or a rate of 38.5 per 1,000. Of the total deaths 46.7 per cent. were of children under five years. Of the births, 16,563 were illegitimate, a rate of 61.1 per 100. The criminal statistics show a daily average of 1,159 persons in jail. The total convictions for all offenses in 1897 numbered 16,665. There were 1 murder and 5 cases of manslaughter. There were 162 post offices in the island in 1897, and 67 telegraph stations. The number of letters and post cards passing through the post was 4,375,374. The number of passengers carried on the Jamaica railway in 1897 was 384,611. In 1896 1,167 East Indian indentured immigrants were imported as laborers. There are about 12,000 East Indians in Jamaica, and they constitute a most important factor in the productive efficiency of the colony. The Governor of the island in 1898 was Sir Augustus Henning, who succeeded Sir Henry Blake, one of the most popular governors in the island's history. Early in September, 1898, a hurri-

cane swept over the island, doing great damage to property and to the crops. Turks and Caicos islands, dependencies of Jamaica, have an area of 223 square miles and a population of about 5,000. They are governed by a Commissioner and a legislative board. In 1897 the revenue was £9,477, and the expenditure £8,384. The exports were £43,303; the imports, £33,339. The Commissioner is Edward J. Cameron. The Caymans, small islands northwest of Jamaica, are also dependencies of that island. Their area is about 90 square miles, and their population 5,000. Coconuts and turtles are the principal articles of export.

Barbadoes has an area of 166 square miles and a population estimated at 190,000 in 1897. The death rate was 26.12, and the birth rate 38.7, in 1897; 7,197 births were registered, of which 3,897, or 54.15 per cent. were illegitimate. The apparently high death rate is due to infant mortality among the black population. The island is one of the most healthful places in the world, and possesses a delightful climate. The mean temperature in 1897 was 79.2°, the rainfall 65.09 inches. The revenue in 1897 was £184,706, and the expenditure £173,551. The public debt on Dec. 31, 1897, was £409,150. In 1896 the imports were valued at £1,048,887, and the exports at £758,238. In 1897 the imports were valued at £1,008,699, of which £321,908 worth came from the United States, and the exports at £736,162, of which £429,527 worth went to the United States. Sugar and molasses make up about 96 per cent. of exports. During the past three years an industry has sprung up in manjack, a kind of asphalt. Petroleum has also been discovered in the island, and attempts are being made to develop an oil industry. Although there was a falling off in the value of the exports in 1897, the amount of sugar and molasses was greater than in 1896. The low price of these products accounts for the decrease in value of the total exports. Early in September, 1898, Barbadoes, in common with several of the other West Indian islands, was visited by a destructive hurricane. About 10,000 houses were destroyed and more than 100 lives lost. The Imperial as well as the local Government took energetic measures to relieve the suffering of the houseless negroes, and a public fund was started at the Mansion House, London. The Governor of the colony is Sir James Shaw Hay.

The Leeward Islands, consisting of Antigua, Barbuda, Redonda, St. Kitts, Nevis, Anguilla, Montserrat, Dominica, and the Virgin Islands, have an area of about 740 square miles, and a population estimated in 1897 at 138,000. The colony is divided into five presidencies, the central Government having its seat in Antigua. The revenue in 1897 was £124,768, and the expenditure £140,926, showing a deficit of £16,158. The public debt was £335,621. In 1896 the imports were valued at £402,198, and the exports at £316,510. In 1897 the imports decreased to £312,657, of which £124,064 worth came from the United States; and the exports increased to £328,496, of which £223,150 went to the United States. The exports consisted of sugar (£236,209), lime juice and limes (£24,514), molasses (£12,506), rum, and coffee. The Governor of the colony is Sir Francis Fleming.

The Windward Islands consist of St. Lucia, St. Vincent, Granada, and the Grenadines, and have a total area of 506 square miles and a population estimated in 1897 at 154,743. The revenue in 1897 was £142,456, and the expenditure £143,157. The public debt was £338,849. In 1896 the imports were valued at £404,967; and the exports, at £339,260. In 1897 the figures were: For imports, £480,432, of which £102,007 (excluding St. Vincent, for which island returns are not available) came from the United States; and for exports £453,818, of

which £65,824 (excluding St. Vincent) went to the United States. The colony suffered severely in the hurricane of September, 1898. The principal articles of export are cocoa, spices, sugar, and arrowroot. The Governor of the colony is Sir Alfred Moloney.

Trinidad and Tobago, which form one colony, have a total area of 1,864 square miles, and a population estimated in 1897 at 252,544, of whom 83,032 were East Indians. Of this number about 10,000 were employed as indentured laborers on the estates in Trinidad, and the remainder were time-expired laborers and their descendants. In 1897 7,927 births and 7,091 deaths were registered. Of the births 59.2 per cent. were illegitimate; 25 per cent. of the deaths were of children under two years of age. The revenue in 1897 was £611,434, and the expenditure £632,364. The debt was £916,518. In 1896 the imports were valued at £2,463,525, and the exports at £1,896,748. In 1897 the imports were valued at £2,161,231, of which £450,664 worth came from the United States; and the exports at £1,994,926, of which £628,264 worth went to the United States. The principal exports were sugar (£537,107), cocoa (£532,123), asphalt (£138,801), and bitters (£40,106). The chief imports were live animals, food and drink (£1,328,502), and manufactured articles (£254,311). The mean temperature was 79.13°, and the rainfall was 77.68 inches. The figures for Tobago for 1897, which are included in those given above, were: Revenue, £8,107; expenditure, £8,386; debt, £9,203; imports, £11,656; exports, £4,968 (exclusive of £14,433 exports to Trinidad); population, 20,785. The Governor of the colony is Sir Hubert Jerningham.

British Guiana has an area of 109,000 square miles according to the latest Government returns; but until the settlement of the Venezuelan boundary dispute it remains doubtful whether this figure is too small or too large. The population in 1897 was estimated at 289,000, of whom about 110,000 are East Indians. Of this number about 18,000 were working as indentured laborers on the sugar estates. The revenue for the colony's financial year 1897-98 was £505,369, and the expenditure £562,598, showing a deficit of £57,229. The imports in 1896 were valued at £1,341,710, and the exports at £1,899,457. In 1897 the imports were valued at £1,382,976, and the exports at £1,783,764. Of the imports £740,878 worth came from the United Kingdom, and £341,739 worth from the United States; of the exports £949,015 worth went to the United Kingdom, and £704,596 worth to the United States. The principal articles of import were rice (£95,933); flour (£139,107); linen, cotton, and woolen goods (£156,120). The principal articles of export were sugar (£1,023,523), gold bullion (£456,436), rum (£132,586). The attempt in 1896 to establish a rice industry has met with little success, and sugar still gives employment directly and indirectly to about 80 per cent. of the population. In 1897 the colony had 21 miles of railway open, 272 miles of telegraph line, and 39 miles of telephone line. In 1898 the exports of sugar increased from 99,789 tons in 1897 to 106,000 tons; but the increase was not due to increased yield, but to the fact that about 15,000 tons of sugar remained over from 1897. The export of gold showed a considerable decrease in 1898, the figures for that and the three previous years being 1895, 122,023 ounces; 1896, 124,713 ounces; 1897, 122,702 ounces; 1898, 113,000 ounces. This falling off in an industry which it is hoped will help to tide the colony over its present financial difficulties was due in a large measure to unfavorable weather in the gold regions, both very dry weather and very wet weather making it impossible to work the placers. In addition

to this must be mentioned the absence of capital for the working and development of the quartz mines, and the indecision about the boundary. The Governor of the colony is Sir Walter J. Sendall.

British Honduras, on the mainland of Central America, has an area of 7,562 square miles, and a population estimated in 1897 at 34,277. The revenue in 1897 was £64,613, and the expenditure £66,459. The debt was £34,736. The value of the imports in 1897 was £292,613, and of the exports £288,969. The mean temperature in 1897 was 78°, the rainfall 87.9 inches. The chief articles of export are mahogany and logwood. The Governor is Col. David Wilson.

French Colonies.—These have a total area of 48,067 square miles, and a population of 393,692.

Guadeloupe has an area of 583 square miles, and a population estimated in 1897 at 170,000. The dependencies of Guadeloupe are Désirade, Isles des Saintes, Petite-Terre, Marie-Galante, St. Barthélemy, and part of St. Martin. They have a total area of about 103 square miles, and a population of 24,000. In 1896 the imports were valued at 21,762,773 francs, of which 5,376,645 francs' worth came from the United States; and the exports at 18,793,995 francs, of which only 16,298 francs' worth went to the United States. The trade of the colony is chiefly with France.

Martinique has an area of about 400 square miles, and a population estimated at 190,000. The imports in 1896 were valued at 22,885,505 francs, of which 9,430,648 francs' worth came from France, and 7,002,303 francs' worth from the United States. The exports were valued at 21,431,026 francs, of which 19,326,309 francs' worth went to France, and 32,348 francs' worth to the United States. The principal articles of export were sugar and cocoa. An attempt has been made recently to cultivate indigo, but it has met with little success.

French Guiana has an area of about 47,000 square miles, and an estimated population of 26,000. The trade of the colony is insignificant. In 1896 101,938 ounces of gold were exported. There is a dispute as to the boundary with Brazil, and some fighting was reported early in 1899.

Dutch Colonies.—These have a total area of 46,496 square miles, and a population of 113,539. Curaçao and its dependencies, Bonaire, Aruba, St. Eustache, Saba, and part of St. Martin, have a total area of about 436 square miles, and an estimated population of 49,000. The imports in 1896 were valued at 3,000,000 guilders. The value of the exports is not given in the statistics published by the Dutch Government.

Dutch Guiana or Surinam, which is on the mainland of South America, has an area of about 46,000 square miles, and a population estimated at 68,000. The revenue in 1897 was 2,245,498 guilders, and the expenditure 2,245,498 guilders. The imports were valued in 1896 at 5,335,180 guilders, and the exports at 4,391,728 guilders. An interesting report on the gold industry of Dutch Guiana was issued by the British Foreign Office in 1897. It appears to justify the opinion which has been expressed by experts that with better methods of mining, and with the country more liberally opened up, a considerable development of the Surinam gold industry may be looked for.

Danish Colonies.—The Danish West Indies have a total area of 142 square miles, and a population of 32,819. They consist of the islands of St. Thomas, St. Croix, and St. John. The imports in 1896 were valued at 1,306,000 kroner, and the exports at 680,000 kroner (a kroner is about equal to 26 cents). As no official returns are available, the figures relating to the value of imports and exports are only estimates.

WEST VIRGINIA, a Southern State, admitted to the Union June 19, 1863; area, 24,780 square miles. The population, according to each decennial census, was 442,014 in 1870; 618,547 in 1880; and 762,749 in 1890. Capital, Charleston.

Government.—The following were the State officers during the year: Governor, G. W. Atkinson; Secretary of State, William M. O. Dawson; State Superintendent of Free Schools, J. R. Trotter; Auditor, L. M. Lafolette; Treasurer, M. A. Kendall; Attorney-General, Edgar P. Rucker; Librarian, P. S. Shirkey; State Bank Examiner, O. B. Wetzel; Adjutant General, J. W. M. Appleton; Commissioner of Labor, I. V. Barton; Chief Mine Inspector, J. W. Paul; Game and Fish Warden, Frank Lively—all Republicans; Presiding Judge of the Supreme Court of Appeals, John W. English; Associate Judges, Marmaduke H. Dent, Henry Brannon, and H. C. McWhorter; Clerk, O. S. Long—all Democrats except McWhorter, Republican.

Finances.—The receipts for the year ending Sept. 30, 1898, were \$1,824,624.07: State fund, \$1,280,925.10; the general school fund, \$436,534.75; the school fund, \$107,164.22. The disbursements were \$1,544,403.09: State fund, \$1,104,032.31; general school fund, \$385,337.90; school fund, \$55,032.88. The balance in the treasury Oct. 1, 1897, amounted to \$782,639.50; in 1898, to \$1,062,860.48. The Governor borrowed from different banks in the State the sum of \$28,000, to meet the necessary expenses in furnishing two regiments of volunteer soldiers called for by the President to meet the emergency of the Spanish war. From the Treasurer's biennial report of October, 1898, we quote the following: "The improvement during the last two years has been very gratifying. The balance in the State fund at this season of the year is unprecedented, and this is all the more gratifying because of the fact that there are few deficiencies to provide for. The total balance in the treasury to the credit of the three funds is \$1,062,860.48. This is available cash, subject to check, and the depositories are paying interest on it at the rate of 3 per cent. per annum. This amount is divided as follows: To the credit of the State fund, \$424,641.17; to the credit of the general school fund, \$367,026.10; to the credit of the school fund (uninvested), \$271,193.21. In addition to this the amount of the school fund invested is \$656,800. The amount disbursed for school purposes during the last two years was greater than ever before, and the school fund has been increased nearly \$100,000."

The annual tax imposed upon the railroads of the State amounted to somewhat more than \$400,000.

Banks.—There are 74 State banks, 2 more are being organized, and 2 have gone into voluntary liquidation since 1897. The report on the condition of the banks Sept. 30, 1898, gave the total resources as \$18,801,206.24. The principal items were: Loans and discounts, \$12,336,379.43; overdrafts, \$92,130.67; real estate and mortgages owned, \$134,316.40; stocks and bonds, \$1,172,322.81; due from banks, \$2,311,974.64; cash and cash items, \$1,502,639.21. The principal items in the liabilities were: Capital stock paid in, \$3,543,672.13; dividends unpaid, \$9,289.70; undivided profits, \$648,578.41; deposits, \$13,069,263.84; bills payable and rediscounts, \$95,825.22; due to banks, \$676,078.79.

The aggregate capital paid in of all State banks on this date (Sept. 30, 1898) shows an increase over 1897 of \$91,261.60. The aggregate deposits of this year show an increase over 1897 of \$1,863,309.58, while the total loans and discounts of 1898 show an increase of but \$1,482,955.79.

Insurance.—The number of companies admitted in the two years was as follows: Fire and

fire-marine, 79 in 1897 and 86 in 1898; life (legal reserve), 36 in each year; assessment, 23 in 1897 and 22 in 1898; fidelity, guarantee, and surety, 1 in each year; miscellaneous, 13 in 1897 and 14 in 1898; total in 1897, 152, in 1898, 159. The following is quoted from the Auditor's report: "The amount of taxes on premium receipts paid into the State treasury during the fiscal year 1897 was \$22,880.90, and \$23,997.18 for 1898. The receipts from assessment insurance companies (which pay a tax of \$20 on certificate of authority) amounted to \$440 for 1897 and \$460 for 1898. This gives an aggregate of \$23,320.90 paid into the State treasury by insurance companies during the year ending Sept. 30, 1897, and \$24,457.18 during the year ending Sept. 30, 1898.

In 1896 the fire and marine companies wrote risks to the amount of \$32,182,295.56, received premiums to the amount of \$426,169.11, and incurred losses to the amount of \$183,906.22. The life companies (legal reserve) wrote risks to the amount of \$7,610,053.35, received premiums to the amount of \$726,103.83, and incurred losses to the amount of \$215,116.56. The miscellaneous companies wrote risks to the amount of \$10,734,771.85, received premiums to the amount of \$47,791.66, and incurred losses to the amount of \$28,404.36.

In 1897 the fire and marine companies wrote risks to the amount of \$47,460,791.08, received premiums to the amount of \$609,588.09, and incurred losses to the amount of \$348,397.63. The life companies (legal reserve) wrote risks to the amount of \$9,661,665.30, received premiums to the amount of \$787,953.01, and incurred losses to the amount of \$293,278.55. The fidelity, guarantee, and surety companies wrote risks to the amount of \$65,700, and received premiums to the amount of \$525. The miscellaneous companies wrote risks to the amount of \$11,133,052.17, received premiums to the amount of \$51,127.68, and incurred losses to the amount of \$17,089.01.

State Institutions.—The superintendent of the Weston Insane Asylum says that the appropriation for the past two years for current expenses—\$130,000 for each year—is not sufficient to carry on properly the institution for the number of employees and patients it now has. "We have about 75 more patients and 8 more employees than we had a year ago. The number of patients is 1,021, and we also have 170 employees." The institution has this year a new laundry at a cost of \$20,000, on which remains an unpaid balance of \$9,975. The colored hospital has been remodeled, at a cost of \$1,850. Two Sterling water-tube boilers, of 250 horse power each, were purchased at a cost of \$4,100, half of which amount remains unpaid. The electric light plant cost \$4,600. The second hospital for the insane admitted in the year 155 patients, being a greater number than in any previous year. There were discharged as recovered 63, which exceeds previous years; while the death rate was very low, being 5.9 per cent. on the whole number treated. The number remaining in hospital Oct. 1, 1898, was 311.

The State Penitentiary has about 557 inmates. The Legislature did not appropriate sufficient funds for its support, so the Board of Public Works borrowed \$10,000 to meet the deficiency. It is nearly on a self-supporting basis.

The Boys' Reform School in the past year has admitted 100 boys and discharged 59. There are at present 200 inmates, 29 of whom are colored. Instruction is given in farming and mechanics, the reform school board having purchased a 53-acre farm, including a brick residence, for the use of colored boys. The new purchase adjoins the present property, and part of it is underlaid with

coal. A Reform School for Girls is being erected, for which the last Legislature voted a small appropriation, and the citizens of Salem gave 38 acres of land and drove a well for the institution. The Legislature has provided for the establishment of a Home for Incurables. It is to be at Huntington, will cost \$200,000, and will accommodate 1,000 patients.

Education.—The State has 5,940 common schools, their total value, buildings and grounds, amounted in 1898 to \$3,065,848.25. The expenditure for the year was \$1,960,413.54. The State School Superintendent in his report says: "For the school year ending June 30, 1898, the total enumeration was 302,354, an increase of 1,825 over the previous year, and of 45,994 over 1888. Of the number enumerated, 158,527 (or 52.4 per cent.) were in actual daily attendance, while in the previous year and in 1888 the per cent. was only 44.3 and 47.6 respectively. The large per cent. of attendance in 1898 is due almost entirely to the compulsory attendance law, passed in 1897, which requires all children between the ages of eight and fourteen to attend school at least sixteen weeks each year. The whole number of teachers employed during the year was 6,808, an increase of 156 over the preceding year, and of 1,570 in ten years. Of these, 4,096 were men and 2,712 were women. The enrollment for the year was 236,935. The average number of pupils for each teacher was 34.8. As the average length of term for 1898 was 5 $\frac{1}{2}$ months, and the average salary \$29.21 a month, the approximately average yearly salary was \$165.09."

The school libraries contain 13,448 volumes.

There are 7 normal schools in the State.

The West Virginia University had 874 students in the year 1897-'98, an increase of 309 over the previous college year.

The United States Government appropriates \$5,000 annually toward the support of the West Virginia Colored Institute. From this fund its president and 4 instructors in mechanics and farming are paid, and also all purchases for these departments are made. The school has a regular cadet company, which is armed and uniformed by the State. The boys' department is overcrowded, and the Governor in his message recommends that an appropriation be made to enlarge the main building.

Industries.—On Jan. 1 the Commissioner of Labor, I. V. Barton, sent out 1,200 letters to that number of manufacturers in West Virginia, asking for information as to any additional employees, increases or restorations of wages, or any changes in business since Jan. 1, 1897. Twelve questions were asked. Of the letters received about 80 per cent. report an increase of labor employed, or an average of 40 per cent. since Jan. 1, 1897. The wage increases were confined chiefly to the coal miners, and otherwise there are few advances to record. There were a few reductions during the first six months of last year, but there were none in the last six months. Several restorations of reductions made some time previous occurred during the year, and are almost on a par with an increase. The industries of West Virginia include steel and iron making, lumbering, mining, marble and stone quarrying, glass and woolen making. The woolen industry gives employment to 5,000 people, 900 of whom are employed at the knitting factory at Martinsburg.

Political.—In the election for members of Congress the Republicans carried the First, Second, and Fourth Districts, and the Democrats the Third.

The Legislature for 1899 stands: Republicans, 17 in the Senate and 34 in the House; Democrats, 9 in the Senate and 37 in the House. Nine seats are contested.

WISCONSIN, a Western State, admitted to the Union May 29, 1848; area, 56,040 square miles. The population, according to each decennial census since admission, was 305,391 in 1850; 775,881 in 1860; 1,054,670 in 1870; 1,315,497 in 1880; and 1,688,880 in 1890. By the State census of 1895 it was 1,937,915. Capital, Madison.

Government.—The following were the officers of the State in 1898: Governor, Edward Scofield; Lieutenant Governor, Emil Baensch; Secretary of State, Henry Casson; Treasurer, Sewell A. Peterson; Attorney-General, William H. Mylrea; Superintendent of Public Instruction, John Q. Emery; Railroad Commissioner, Duncan J. McKenzie; Insurance Commissioner, William A. Fricke, resigned, and succeeded in October by Emil Giljohann—all Republicans; Adjutant General, C. R. Boardman; Clerk of the Land Commission, E. Wyman; Labor Commissioner, H. Erickson; Factory Inspector, H. P. Fischer; Dairy and Food Commissioner, H. C. Adams; Bank Examiner, E. I. Kidd; Fish and Game Warden, J. T. Ellarson; Board of Arbitration, R. O. Jeardeau, R. H. Edwards, Thomas Waddell; Board of Control, James E. Heg, succeeded in April by N. B. Treat, Richard Guenther, William P. Lyon, E. R. Petherick, Clarence Snyder; Chief Justice of the Supreme Court, J. B. Cassoday, Republican; Associate Justices, Silas U. Pinney, Democrat, who resigned in November, and was succeeded by Joshua E. Dodge, Democrat, John B. Winslow, Democrat, Alfred W. Newman, Republican, who died Jan. 12, and was succeeded by Charles V. Bardeen, Republican; Clerk, Clarence Kellogg.

Finances.—The total receipts of the treasury during the year ending Sept. 30 were \$5,274,121.18, and the disbursements \$4,525,160.39. The receipts of the general fund were \$2,971,140.72, and of these the largest item was license fees from railway companies, \$1,247,357. The balance remaining Sept. 30 was \$201,042.86.

The bonded debt of the State, created in 1861-'65 for war purposes, has all been paid or converted into certificates of indebtedness to the trust funds, except \$1,000, which was paid from the general fund Aug. 13, 1888. The distribution of the debt among the funds is: School fund, \$1,563,700; Normal School fund, \$515,700; University fund, \$111,000; Agricultural College fund, \$60,600; total, \$2,251,000.

The valuation of taxable property by the State board gave a total of \$600,000,000. The State tax was \$1,492,570, the total of special charges for State and county institutions was \$216,628.37, special loans amounted to \$108,828.03, and school district loans to \$100,753.29, making a total of \$1,918,779.69. The total of town, city, village, and county taxes was \$14,818,899.23.

Education.—The school population in 1898 was 708,535; the enrollment in public schools, 430,827; the number of schoolhouses, 6,940; teachers, 12,465. There were 152 free high schools with courses of four years and 57 with courses of three years. The receipts for the year were \$6,747,316.64, including \$1,437,372.86 on hand at the beginning of the year, and the disbursements \$5,290,506.40.

The enrollment of normal pupils in the 7 normal schools was 2,797. These schools have graduated in all in the advanced course, 2,180, and in the elementary 1,208. The receipts were \$351,449.20, and the disbursements \$340,623.31.

The students in the several colleges and schools of the State University numbered 1,767, of whom 947 were in the College of Letters and Science, which includes the School of Economics, Political Science and History, and the School of Education. There were 227 in the College of Mechanics and Engineering, 277 in that of Agriculture, 182 in the

College of Law, 61 in the School of Pharmacy, and 141 in the School of Music. The attendance has increased very nearly 500 in four years. The receipts for the year, including the balance on hand Sept. 30, 1897, of \$31,372.03, were \$478,706.69, and the expenditures \$449,330.16.

Charities and Corrections.—There are 309 men and 157 women at the Soldiers' Home, at Wau-paca, which is operated at a cost of about \$40,000 a year.

At the Delavan School for Deaf-Mutes 104 boys and 97 girls are taught. The cost averages about \$200 a year for each.

The Institution for Imbeciles, near Chippewa Falls, has 347 inmates.

The insane are cared for at two hospitals; 922 were under treatment Oct. 1, 1896. The current net expenses for both institutions amount to about \$213,000.

The School for the Blind, at Janesville, had an enrollment of 103 Oct. 1, 1896. The net expenses amounted to \$35,956.42.

The School for Dependent Children, at Sparta, had 237 in attendance Sept. 30, 1896. The current expenses were \$46,759.

There were 582 inmates in the State Prison at the same date. The cost of maintenance *per capita* is about 32½ cents a day.

There were 328 boys at the Industrial School, at Waukesha, at that time, and the expenses amounted to \$61,192.83.

A new reformatory, intended for first offenders, has been established at Green Bay, for which the Legislature of 1897 appropriated \$75,000.

Military.—The number of men furnished by the State for the Spanish war was 5,469—four regiments of infantry and a battery. The number of deaths among them is unofficially given as 131. The expenses for their pay, etc., amounted to \$88,191.90.

The expenses of the militia were less this year than usual, as there was no encampment; they amounted to \$43,354.87.

During the past biennial term 1,204 new claims for civil-war pensions have been entered; 554 have been settled, of which 311 were allowed and 243 rejected; 125 of those rejected were for increase.

Insurance.—The report of the Insurance Commissioner, rendered in March, covers the business of 1897. It shows 153 fire and marine companies operating in the State, an increase of 33 since Jan. 7, 1895.

During this period (1895-'98) 10 companies applying have been refused license, of which 5 have since failed, 3 reorganized, and 2 refused on purely legal ground are still in business. No company has failed during this time while licensed by the present Commissioner.

The amount written in Wisconsin by stock and mutual fire companies during the year 1897 was \$292,895,316.46, for which \$4,218,523.33 were received as premiums and upon which \$1,600,544 were paid for fire losses, making the ratio of losses to premiums received 37.94 per cent.

An insurance suit of great importance to the State and the companies was decided March 1. The Commissioner threatened to revoke the license of the Travelers', of Hartford, unless back taxes which he claimed were due from it should be paid, and the company brought suit for an injunction to restrain him from so doing. The company had a license for life business, but the greater part of its transactions were in accident insurance; and for this the company procured no license, claiming that the whole business was covered by the license it had. The Supreme Court decided against the company on this question and on the further claim

for back taxes for the years the company had done business in the State without the accident license. The amount involved was about \$104,000. Other companies are affected by the decision. The receipts of the department in 1897 were \$166,075.

Banks.—The number of State banks in 1898 was 133, an increase of 3; private banks, 114, an increase of 4. There is but one savings bank, which is at Beloit, though some of the others have a savings department. All of these have an aggregate capital of \$7,944,413.38, deposits of \$42,721,155.03, and resources of \$55,023,310.48.

The aggregate increase in resources over those of 1897 is \$8,420,770.20; loans and discounts, \$4,267,576.72; deposits, \$8,331,414.33; and available cash, \$1,766,887.42. The increase in the items, resources, loans and discounts, and deposits is by far the largest that has been made in any previous equal length of time in the history of the State.

Building and Loan Associations.—A decision important to shareholders was rendered in January. A Minneapolis association which went into the hands of a receiver had securities amounting to about \$100,000 on deposit with the Wisconsin State Treasurer as security for Wisconsin shareholders, but the receiver claimed them as part of the general assets. The Supreme Court decided that they should be used solely for the benefit of the Wisconsin shareholders.

There are 53 of these associations doing business in the State, all domestic. Their liabilities and assets aggregate \$3,568,440.

Labor.—The Labor Commissioner's report shows that during the two years past 1,292 changes have been ordered, of which 1,021 affected the conditions in factories and workshops, including the dismissal of 327 children under fourteen illegally employed. A table relating to all industries gives the following figures for 1897: Capital invested, \$189,760,669; value of goods made and work done (gross product), \$169,946,673; value of stock and other materials used, \$98,130,070; industry product (gross product less value of stock and materials), \$71,816,603; wages (labor's direct share of product), \$36,583,044; profit and minor-expense fund (industry product less wages), \$35,233,559; percentage of industry product paid in wages, 50.94; percentage of industry product devoted to profit and minor expenses, 49.06.

Products.—The wheat crop of the State in 1898 is given as 11,885,000 bushels; the wool clip as 4,475,952 pounds.

The shipments of iron ore from Marquette aggregated 2,278,000 tons, an increase over 1897 of 232,500 tons.

The fisheries department during the season of 1897 made distribution of 60,685,920 fish.

Political.—State officers were elected in November.

The Republicans assembled in State convention in Milwaukee, Aug. 17. On national affairs the resolutions approved the Administration, the conduct of the war, and the St. Louis platform. On State affairs they approved the Administration and called for the following measures: Laws "to compel all persons and corporations engaged in business within the State, except such fraternal and other associations as are now expressly exempted from taxation by law, to contribute their just and equal share toward the burden of taxation"; to forbid the issue to public officials of passes, franks, or privileges of free transportation of personal property or messages, and making the giving or receiving of any such a penal offense; amendment of the caucus and convention laws; prohibition of advance payments from the State treasury on account of salaries of officers and employees; and abolition of the lobby at the Legislature by law.

The ticket follows: For Governor, Edward Scofield; Lieutenant Governor, Jessie Stone; Secretary of State, William H. Froehlich; State Treasurer, James O. Davidson; Attorney-General, Emmet R. Hicks; State Superintendent, L. D. Harvey; Railroad Commissioner, Graham L. Riee; Insurance Commissioner, Emil Giljohann; Chairman State Central Committee, Joseph B. Treat.

The State Democratic Convention met in Milwaukee, Aug. 31. A committee was appointed to confer, with a view to fusion, with a committee of the Populist convention, which was in session at the same time. The committee reported in favor of giving to the Populists the nomination of the Superintendent of Public Instruction, and a resolution was offered proposing to add the Secretary of State, but the whole plan of fusion was defeated by a vote of 361 to 294.

The platform approved the war and praised the soldiers and sailors; condemned the War Department "for the blunders and crimes committed against the brave boys in blue in camp and on foreign battlefields by selfish contractors, incompetent surgeons, and vain, heartless army officers, appointed for political purposes"; and pledged to the sailors and soldiers who should survive this war "earnest and loyal support to secure the punishment of the guilty parties."

On State matters it made nine charges against the Republican party; among them were: The carrying upon the pay roll of clerks and employees who rendered no service; the vetoing by the Governor of legislation imposing restrictions or obligations upon corporations; violation of a promise not to remit judgment in the treasury cases; payment of salaries before they became due; loaning of money from the treasury without security and without authority of law.

Hiram W. Sawyer was nominated for Governor; P. V. Deuster for Lieutenant Governor; and Messrs. Stromme, Malek, Graec, Schindler, and Wileox for the offices of Secretary of State, Treasurer, Attorney-General, Insurance Commissioner, and Railroad Commissioner respectively.

The Populists in convention nominated, Sept. 1, John F. Schindler for Secretary of State and E. C. Craig for Superintendent of Public Instruction, and then took a recess to await the outcome of the conference for fusion; this having failed, they placed a full ticket in the field.

The Socialist-Labor and Socialist-Democratic parties also nominated candidates.

At Oshkosh, Aug. 26, the Prohibitionists in State convention adopted a platform with the following, among other statements:

"Believing that many reforms are imperatively needed in our State relating to equal taxation, ownership, regulation, taxation, and control of monopolies; the abolition of the free-pass and frank system of bribing county officials; reduction in the cost of State, county, city, and town government; and that as the purchasable saloon vote is the one great hindrance to the election of honest men to deal with these questions, we demand prohibition.

"We demand that all territory hereafter acquired by as well as that lately annexed to the United States shall be under prohibition; that we put upon our banner, never to be taken down, the motto, 'No more saloon territory.'"

The candidates chosen were: For Governor, E. W. Chapin; Lieutenant Governor, W. W. Cooper; Secretary of State, E. S. Cronk; Treasurer, William Larsen; Attorney-General, Wesley Mott; Superintendent of Schools, Edward Berg; Railroad Commissioner, George Clithero.

The election resulted in the choice of the Repub-

lian candidates. The Governor, who was the only officer renominated, fell behind his ticket about 7,000. The vote for Governor stood: Scofield, Republican, 173,137; Sawyer, Democrat, 135,335; Worsley, Populist, 8,577; Chapin, Prohibitionist, 8,078; Tuttle, Socialist-Democrat, 2,544; Riese, Socialist-Labor, 1,473. All the Republican candidates for Congress were elected, and Republicans have a majority of 91 in the Legislature.

An act to revise the laws authorizing the business of banking, passed by the Legislature of 1897 with the provision that it should be submitted to popular vote, was rejected at the election. It provided for important changes in the banking laws, with a view to greater protection against loss and misappropriation of funds, and for the creation of the office of Commissioner of Banks.

Judicial.—The constitutionality of the election law providing that no name shall appear more than once on the official ballot was attacked, but was upheld by a decision of the Supreme Court in September.

The law providing for additional restrictions regarding preferences, etc., in cases of insolvency was declared by the same court unconstitutional in so far as it was made applicable to notes and warrants of attorney, and judgments and executions to enforce the same, given more than sixty days before an assignment for the benefit of creditors.

The law requiring examination for plumbers was declared unconstitutional, in February, in the Milwaukee Superior Court. A plumber to whom a license was refused assailed in court the reasonableness of the requirement that journeyman plumbers must be experts in house drainage and plumbing ventilation. The court pronounced this requirement unreasonable. It also held that the provision that any member of a firm or corporation, by passing the examination, shall satisfy the requirement of the law as to such firm or corporation, is not in accordance with the principle that legislation of this sort shall treat all persons alike under like circumstances and conditions.

Semicentennial Celebration.—Wisconsin celebrated this year the fiftieth anniversary of its admission to the Union. Local celebrations took place at the county seats, May 28. The official celebration was held in Madison, June 7 to 9 inclusive. The principal events were a parade of the university faculty and students, orations and addresses at the armory, reunions of veterans, former members of the Legislature, State officials, and members of constitutional conventions, a procession of veterans, meetings of bar and press associations and women's organizations, displays of fireworks, band concerts in Capitol Park, conventions of pioneers, historical societies, and others, and, on the closing afternoon, a war-song concert, by a chorus of 400 adult voices and 500 school children with a military band.

Milwaukee held a carnival in the week from June 27 to July 3. The programme was arranged so that the successive days were known as reception day, military day, municipal, industrial, carnival, and naval day.

WYOMING, a Northwestern State, admitted to the Union July 10, 1890; area, 97,890 square miles. Population in 1890, 60,705. Capital, Cheyenne.

Government.—The following were the State officers during the year: Governor, W. A. Richards; Secretary of State, Charles W. Burdick; Treasurer, Henry G. Hay; Auditor, William O. Owen; Adjutant General, Frank A. Stitzer; Attorney-General, B. F. Fowler; Superintendent of Education, Estelle Reel—all Republicans. Supreme Court—Chief Justice, A. B. Conaway, Republican; Associate Justices, Samuel T. Corn, Democrat, and C. N. Potter, Republican; Clerk, R. H. Repath.

Finances.—According to the Treasurer's report the receipts for the year ending Sept. 30, 1898, from all sources amounted to \$274,581.61. The total disbursements were \$263,290.97. The balance in the treasury Oct. 1, 1897, was \$92,495.05; on Sept. 30, 1898, it was \$103,785.69.

The larger items of revenue were: Secretary's fees, \$8,912.95; care of patients at State Hospital,

\$6,260.69; common school land income fund, \$13,140.83; State charitable, educational, penal, and reformatory institutions land income fund, \$9,624.92; and Agricultural College land income fund, \$3,572. The chief items of expenditure were: General fund, \$119,127.82; university income tax, \$7,043.69; State bond tax, \$19,140; fund for the insane, \$15,486.29; Rawlins Penitentiary Building tax, \$3,075.23; hospital maintenance tax, \$9,696.82; charitable institutions tax, \$6,723.21; common school land income fund, \$12,617.55; State Hospital insurance fund, \$14,696.34; common school land income fund, \$12,144.64; common school permanent land fund, \$5,768.35. The total bonded indebtedness of the State was \$320,000. The Auditor's statement showing the valuation for State revenue as made to the several counties by the State Board of Equalization gives for the year 1898 the following figures: The County of Albany, \$3,941,635.07; Big Horn, \$1,006,872.25; Carbon, \$3,508,478.05; Crook, \$1,443,242.84; Converse, \$1,540,608.75; Fremont, \$1,242,661; Johnson, \$1,152,983; Laramie, \$5,595,281.93; Natrona, \$1,161,308.50; Sheridan, \$1,917,353.51; Sweetwater, \$3,750,118.03; Uinta, \$3,420,704.26; Weston, \$1,107,444.55; total, \$30,789,291.74.

Insurance.—In the year ending Dec. 31, 1897, there were 44 insurance companies doing business in the State. Their total amount of written insurance was \$5,738,940.40; premiums received, \$121,773.27; losses paid, \$34,242.53; losses incurred, \$35,169.04. There were 10 life insurance companies doing business in the State in 1897. The amount of insurance in force at the beginning of that year was \$4,189,412.94; the amount issued was \$52,786; that terminated amounted to \$611,592; that in force Dec. 31, 1897, \$4,130,606.94. Amount of claims paid during the year, \$23,811.70. Premiums collected, \$126,731.11. The accident and miscellaneous insurance companies number 10. Their claims paid in 1897 amounted to \$1,849.90; premiums collected to \$3,930.10. Six assessment life insurance companies did business to the amount of, claims paid, \$1,792.94; claims incurred, \$1,792.94. Three building and loan associations had 8,151 shares in force.

Education.—The number of public schools taught during the year ending Sept. 30, 1898, were 495. Pupils enrolled, 13,042; of these 6,643 were males, 6,399 females. The average cost of tuition per month amounted to \$3.07. The total number of teachers for the year, 536—434 being females and 102 males; the average compensation to the latter was \$60.40, to the former \$42.86. There are 338 school buildings in the State, the cost of these for the year

DE FOREST RICHARDS,
GOVERNOR OF WYOMING.

amounted to \$236,600.70. All but one have books, the total number of volumes being 4,240. There has been an increase in the number of children attending the school, in the number of teachers employed, a lengthening of the terms, improved attendance, and more money than formerly spent for the maintenance of the schools. The State University, situated at Laramie, enrolled the past year 186 students, which is the largest number it has ever had. The receipts for the year were \$54,923.43; its expenditures, \$41,974.22.

From the annual report of the College of Agriculture we quote the following: "The expenditures were this year larger than ever before. Most of this increased expenditure went for new apparatus and better facilities in the laboratories. The accession of books is very marked, and the amount spent in this direction will from year to year be rather increased. Numerous machines and a tool room have been added to the department of mechanical engineering. A commodious wing for increasing the room to be devoted to foundry work was built on the Mechanical Building in the summer of 1897. The greenhouse was also enlarged by the addition of a wing greater than the main portion of the building. Notwithstanding the growth of about 50 per cent. last year, the increased attendance in all departments of the university this year has been great. The institution as a whole has grown nearly 20 per cent."

The total sum available for the year ending June 30, 1898, was \$30,017.26; the amount expended was \$21,017.45, leaving a balance of \$8,999.81. There were 19 students, one of whom was a woman. The report gives the following statement of the college property for the year ending June 30, 1898: Value of all buildings, \$102,000; of other equipment, \$45,000; number of acres, 356; acres under cultivation, 180; acres used for experiments, 180; value of farm lands, \$9,540; number of bound volumes, June 30, 1898, 5,750; pamphlets, 4,000.

State Lands.—The State Board of Land Commissioners in their biennial report say: "A comparison with the report of the Register submitted two years ago shows an increase in the business of leasing lands belonging to the State. The total number of leases has increased 154 per cent.; the number of acres leased, 127 per cent.; and the annual rentals, 141 per cent. Much of this increase is due to the selection of additional State lands, which are leased as fast as selected. But the real increase of demand, showing the tendency of the people to fence and control their grazing land, is probably best shown by reference to the tables of common-school land under lease now and two years ago. During that period the number of leases has increased 61 per cent. The success of the management of State lands in the manner in which it is now conducted by the board—that is, of leasing small tracts to adjacent settlers—seems well assured. The very large demand for such lands, several times what the State is able to supply, is sufficient evidence of the advantage to the people. This demand has suffered no diminution in spite of the fact that applicants themselves have placed the rental at a figure which is somewhat higher than what it was believed it should be for a fair profit to the lessees."

The number of leases Sept. 30, 1898, was 1,448; number of acres, 888,613.57; valuation, \$748,592.64; average value per acre, \$84; annual rental, \$37,431.40.

Valuations.—The Board of Equalization, in their report for 1898, says: "While we find, during this period, an increase in the valuation of railroad property, land and improvements on land, and farming utensils and mechanics' tools, yet the larger part of our increased valuation has come from the increase

in valuation of cattle and sheep, and our greatest loss has been the decrease of \$440,000 in the assessed valuation of horses. While the number of horses returned for taxation has increased about 10 per cent., the total valuation has fallen about 38 per cent. and the average valuation 37 per cent. The number of cattle has decreased $6\frac{1}{2}$ per cent. since 1895, while the value has increased 38 per cent. since 1895 and 56 per cent. since 1893, giving an increased valuation for assessment purposes of almost \$900,000. The number of sheep has increased 35 per cent., while the total valuation has increased 65 per cent., making an increase in the valuation of \$1,150,000. Since 1893 the number of sheep has increased more than 100 per cent.; the total valuation has increased 92 per cent. The removal of duty on wool caused an actual loss of \$2.50 per head in valuation of Wyoming ewes, and a loss of 43 cents per head in the average assessed valuation of all sheep. This loss is now being regained, the average assessed value being \$1.82 per head, against \$1.97 per head in 1893. Wyoming stands eighth in the list of sheep-owning States, fifth in regard to the gross amount of wool produced, and seventh in regard to the yield of seoured wool." A comparison of the total valuation of all kinds of property in 1895 with that of 1898 shows a net gain of \$950,352.95.

State Prison.—The State Board says, in its annual report: "The percentage of increase in the number of convicts under the care of the State for the past year has more than kept pace with that of former years." The average daily number in the year ending Nov. 30, 1898, was 136.11; the net cost for the year, \$23,508.08; the daily *per capita*, 44.3 cents. Of the 51 prisoners discharged during the year, 42 were discharged by reason of expiration of sentence and without pardon, 5 were pardoned prior to expiration of sentence, 1 was pardoned on completion of sentence for the purpose of restoring him to citizenship, 1 was released upon writ of *habeas corpus*, and 2 escaped. No deaths occurred during the year. A new penitentiary building has just been completed at Rawlins.

Charities.—The new building of the Wyoming General Hospital was completed and the work was accepted May 4, 1898, and the building was occupied by the hospital management about May 15. The cost of the building, ready for occupancy, was \$16,065.37. The amount realized from insurance on the old building and appropriated for the reconstruction of it was \$15,000. The hospital is now conceded to be one of the best equipped and best managed of any in the West. The patronage very largely increased during the year, and the results attained were highly satisfactory. The expense of maintenance was necessarily increased with the increase in number of patients and the inevitable extra expense connected with the establishment of the hospital in its new quarters. The earnings, however, show a marked increase over those of former years. The total days' attendance of patients for the year ending Sept. 30, 1898, was 7,236—an average daily attendance of 19.8—and the statement of earnings, without any allowance for uncollected accounts, shows them to have been \$8,431.60. The amount received in the State treasury for care and treatment of patients at the hospital was \$6,260.69.

The Superintendent of the Hospital for the Insane says, in his report: "The number of patients at the date of the last report, Oct. 1, 1897, was 68—48 men and 20 women. The number since admitted is 28—22 men and 6 women. The whole number under treatment during the year was 96—70 men and 26 women; the daily average having been 72.9. Of these 11 were discharged as recovered, 1 as improved, and 7 have died. There are remaining at

the date of this report 77—55 men and 22 women. The number of admissions the past year has greatly exceeded that for any previous year."

The total expense of the hospital for the year was \$15,537.61, a daily *per capita* cost of 58½ cents. For the previous year the total expense was \$14,355.50, a daily *per capita* cost of 62½ cents. The expenses the past year were almost \$1,200 in excess of the preceding one. Of this amount, \$460 represented the increased cost of transportation and \$350 the increased cost of additional help. Deducting the cost of transportation, repairs, and improvement, leaves as the running expenses \$12,474.18, a daily *per capita* cost of almost 47 cents. For the preceding year the amount was \$11,800.85, a daily *per capita* cost of 51½ cents.

The number of inmates of the Wyoming Soldiers' and Sailors' Home at Cheyenne is steadily increasing, and the home is becoming of more importance as a charitable institution each year. The total cost for eighteen months ending Sept. 30, 1898, was \$7,718.32. The average attendance was 20.

The number of deaf and blind pupils receiving education at the expense of the State at the date of the last report was 8—6 of whom were deaf and were at the Colorado School for the Deaf and the Blind at Colorado Springs; 1 blind pupil was at the Nebraska Institute for the Blind at Nebraska City, and 1 blind pupil was at the Utah State School for the Blind at Ogden. The cost of board and tuition of these pupils is \$250 each per school year at Colorado Springs and Ogden and \$200 each at Nebraska City. The expense of transportation and clothing is borne by the parents of the pupils.

Communications.—The number of miles of railroad in the State is 1,180.54; the number of miles of telegraph is 1,020.6. The total valuation of railroad and telegraph property, for purposes of taxation, is \$7,330,636.

Bounty on Wolves.—The Treasurer says, in his report: "One of the heaviest drafts upon the general fund during the past two years has been for wolf bounties. This tax seems unavoidable, as it is in the nature of self-preservation; but it should be made more effective if possible. A law uniform with the laws of the surrounding States should be passed. It is very apparent that this State now pays for the destruction of wolves which should be paid for by Colorado, Montana, and Nebraska. One feature of the new law should be a large bounty on female wolves, and a small one on the males and pups. Under the present conditions the breeding of wolves is a profitable industry, and the female wolf is too valuable an animal to destroy for the reward offered."

Political.—The Republican State Convention was held in Douglas, Aug. 11. The significant portions of the platform were these:

"We most cordially approve the Administration of President McKinley. He has met the unusually grave and difficult questions which have arisen since his incumbency of the presidential office in a manner so wise and patriotic as to challenge the admiration of all parties at home, and to win the approval of the best people throughout the civilized world.

"We most heartily approve of the annexation of the Hawaiian Islands, and hail with pleasure the American flag which has been there planted as an emblem of liberty by a Republican Administration.

"We invite a comparison between the low wages and low prices of live stock and farm products which existed prior to the adoption of the Dingley bill by a Republican Congress and the condition at the present time, and call attention to the fact that the Congressmen elected by votes largely secured through misrepresentation at our last State election voted and worked against the adoption of this measure and all Republican legislation, which has meant so much to the people of our State."

On State issues it called attention to the increase of revenues under the Republican administration and commended the course of Gov. William A. Richards.

The State ticket nominated was as follows: For Governor, De Forest Richards; for Secretary of State, Fenimore Chatterton; for Auditor, Leroy Grant; for Treasurer, George E. Abbott; for Superintendent of Schools, Thomas T. Tynan; for Judge of the Supreme Court, Jesse Knight.

The Democratic Convention, held in Casper, nominated the following ticket: For Governor, Horace C. Alger; for Secretary of State, David Miller; for Treasurer, Luke Voorhees; for Auditor, Charles H. Priest; for Superintendent of Schools, J. F. Brown; for Judge of the Supreme Court, C. E. Blydenburgh.

The Populists placed this ticket in the field: For Governor, E. B. Deall; for Secretary of State, S. H. Seeley; for Treasurer, John W. Rouse; for Auditor, J. F. Pierce; for Superintendent of Schools, Mrs. M. A. Stocks.

At the election the entire Republican ticket was elected. The plurality for Richards, for Governor, was 1,394. In the new Legislature the Republicans have 12 members of the Senate and 35 of the House, while the Democrats have 7 Senators and 3 members of the House. The Republicans elected their candidate for member of Congress by a plurality of 2,296.

Y

YOUNG MEN'S CHRISTIAN ASSOCIATIONS. The fourteenth International (triennial) Conference of Young Men's Christian Associations was held at Basel, Switzerland, in July. Mr. R. Sarasin-Warney, of Basel, was chosen president. Accounts were given by representatives of the associations in different countries concerning the condition of the societies in their several states. A delegate from Portugal, represented in the conference for the first time, reported that while no association existed in that country in 1894, there were now six, with 300 members. Delegations were present also from Russia and Finland, Italy, Austria, Hungary, Spain, Japan, France, Great Britain, America, and the Protestant countries of Europe. The stated topics

were considered of "Service," by Dr. von Braun, of Stuttgart, the Rev. J. Picard, of Paris, and the Rev. Glyn Davis, of Wales; "Standing of Young Men's Christian Associations," by M. Emanuel Sautter, of Paris, and Mr. L. W. Messer, of Chicago, Ill.; "The Dangers that threaten Young Men's Christian Associations and how to avoid them," "Work among Soldiers, Students, and Railway Men," "Prayer," "Bible Classes," and the "Aggressive Work of the Association." A united communion service was held. At the farewell meeting the benediction was pronounced by fourteen delegates in as many languages. The next International Conference was appointed to be held at Christiania, Norway.

YUKON DISTRICT, THE CANADIAN. The following facts regarding the geography of the much-discussed Yukon or Klondike district are compiled from reports, etc., prepared by R. E. Gosnell, late legislative librarian of British Columbia, Dr. G. M. Dawson, and William Ogilvie.

The Yukon district has an area of approximately 192,000 square miles, within Canadian territory, more than 150,000 square miles of which are included in the watershed of Yukon river. In other words, its area is almost equal to that of France, and greater than that of the United Kingdom by more than 70,000 square miles. The northern portion of British Columbia is included strictly within the Yukon basin, which, with the southern part of the Yukon, is drained by three great river systems. Its waters reach the Pacific by the Stickeen; the Mackenzie, and eventually the Arctic Ocean, by the Liard; and Bering Sea by the Yukon. The Stickeen makes its way through the coast range in a south-westerly direction, while the Liard in a southeasterly direction cuts across the Rocky mountains into the Mackenzie valley. The watershed separating these rises to a height of 2,730 feet. The whole northern country may be said to be in a general way a continuation of the more pronounced physical features of British Columbia. The mountain ranges, however, which are more sharply defined in the northern part of British Columbia, generally converge toward the north until they merge into each other and broaden out into one composite area. The region, as a whole, being a portion of the Cordillera belt of the western coast, is naturally mountainous, but it comprises also important areas of merely hilly or gently rolling country besides many wide, flat river valleys. It is more mountainous and higher in the southeastern part, and subsides gradually and apparently uniformly to the northwest, the mountains becoming isolated and more separated by broader tracts of low land. The general base level or height of the main valley within the coast ranges declines from a height of about 2,500 feet to 1,500 feet at the confluence of Lewis and Pelly rivers, and the average base level of the entire region is a little over 2,000 feet.

The mountain axis next in importance to the coast ranges is that forming the water parting between the upper Liard and Yukon on one side and the feeders of the main Mackenzie river on the other. This represents the northwestern continuation of the Rocky mountains proper, and forms, so far as has been ascertained, the culminating range of several parallel ridges. Its summits attain heights of 7,000 to 9,000 feet.

A third notable mountain axis, designated as the Cassiar range by Dr. Dawson, is cut through by Dease river in its upper course, and farther to the northwest appears to form the line of water parting between the tributaries of the upper Liard and those of the branches of the Yukon. Peaks near the Dease range between 7,000 and 8,000 feet. In the northwestern portion of the region the mountain ranges and ridges are in general lower and irregular.

In regard to the sources of the Yukon, Dr. Dawson says, whether reckoned by size or distance from its mouth, the source of the Lewis must be placed at the head waters of the Hootalinqua, in approximate latitude $59^{\circ} 10'$ and longitude $132^{\circ} 40'$. In regard to the Pelly, it is not absolutely certain that the Pelly proper rises farther from the common point at Fort Selkirk than its great branches the McMillan and Ross rivers. The volume of water in the Yukon is small compared with many of the large rivers of the American continent, and is about half that of the Mackenzie. The large rivers by which the Yukon district and the northern por-

tion of British Columbia are intersected constitute the natural and principal routes of travel, and during the summer months render communication comparatively easy. In size and general character the Stickeen closely resembles the Skeena, which enters the coast in a parallel direction about 200 miles farther south. The former is navigable for stern-wheel steamers of light draught to Glenora, 126 miles from Rothsay Point, and under favorable circumstances to Telegraph creek and the Great cañon, which extends many miles, and is quite passable for either steamers or boats, though traversed by the Indians in winter on the ice. The head waters of the Stickeen are unknown, but lie for the most part south of the fifty-eighth parallel of north latitude, in a country said to be very mountainous, interlocking there with the northern branches of the Naas or western feeders of the Black, a tributary of the Liard. From Telegraph creek, the head of navigation, a pack trail, 62½ miles long, constructed by the British Columbia Government, follows the valley of the Stickeen close to the river to the head of Dease lake, which is the center of the whole Cassiar mining district. This route Dr. Dawson says has long been known to the Indians, the Stickeen having been to them from time immemorial an important avenue of trade, by which, as by the Skeena, the coast tribes penetrated a considerable distance inland. Stern-wheel steamers for the navigation of this river require good engine power, and should draw not more than four feet of water when loaded. According to Mr. J. C. Calbreath, a man of very long experience in the district, who is opening a route from Telegraph creek to Teslin lake for the British Columbia Government, the Stickeen generally opens for navigation between April 20 and May 1. Ice or sludge begins to run in the river about Nov. 1. The river freezes over about the end of November. The highest water occurs in early summer, generally in June.

A trail was at one time opened from Fraser lake overland to Dease lake, over which cattle were driven; but this latterly has not been used. The Dease river can scarcely be considered navigable for steamers, though it constitutes a fairly good boat route. The upper Liard and Frances rivers are navigable for large boats, with occasional portages, but not for steamers. The difficulties of the lower Liard are such as to render it an undesirable route even for boats, and scarcely suited as an avenue of trade between Cassiar and the Mackenzie.

Little is known of the Taku river, but Indians ascend it in canoes about 80 miles. From Taku inlet an Indian trail leads southeastward to the Tahltan, eastward to Teslin lake, and northeastward to the lakes near the head of the Lewis. The rivers draining the upper Yukon basin have in general low grades, and afford better navigable water.

The Yukon is continuously navigable for small steamers from its mouth, in Bering Sea, and following the Lewis branch to Miles cañon; thence, after an interruption of about 3 miles, to the head of Bennett lake, and to an additional considerable distance by the waters extending southward from Tagish lake.

From the site of old Fort Selkirk the Pelly might be navigable by small steamers of good power to within about 50 miles of the old Fort Pelly banks; and the McMillan branch is also navigable for a considerable distance. The same may be said of Stuart river; but White river, so far as known, is very swift and shoal.

The total length of water that may be utilized for navigation for light stern-wheel steamers on the main river and its branches east of the one hundred and forty-first meridian, or Alaskan bound-

dary, measured in straight lengths of 50 miles, is estimated by Dr. Dawson at 1,000 miles, and, following the sinuosities of the various streams, would be very much greater. This does not include the Poreupine river; and, with the exception of a single break—Miles cañon, on the Lewis—it forms a connected system, all parts of which lie east of the above-named meridian.

Resources and Development.—In 1898 mining conditions gradually settled down in the famous Klondyke region. Early in 1897 Major Walsh had been sent up as Canadian administrator, and in the succeeding year the district was formally detached from the Northwest Territories to which it had nominally belonged, and was governed direct from Ottawa. Mr. Sifton, Dominion Minister of the Interior, paid a visit of inspection to the region; and mining regulations were made in accordance with his experience and the advice of Major Walsh. Meanwhile the discontent natural to a large and fluctuating population—chiefly alien—culminated in all sorts of vague charges against the local administration of affairs, and these charges were taken up by the Opposition press through the country and supported in a very general way by Miss Shaw, the special correspondent of the London "Times," who visited the district in the summer of 1898. She asserted that there were irregularities in the post office, very poor sanitation in Dawson City, lack of proper surveys, too high charges for recording claims, etc., and unfair arrangement of royalties. The latter was the most important matter, and regarding it Major Walsh said in his official report of Nov. 5, 1898: "On my arrival in Dawson I found a great many questions awaiting solution which could only be disposed of by the authority of the commissioner. For instance, the question of royalty, over which there had been considerable discussion, appeared to be somewhat mixed. I immediately announced that the royalty would be collected on all claims, leases of which were renewed subsequent to the date when the law came into force. Nearly all the leaseholders of largely prospected claims showed a disposition to respect the collection of royalty; others, however, were not so tractable, their principal objection being that the leases were granted for one year; and that, once being granted, subsequent restrictions could not be placed upon them. I pointed out to leaseholders that the collection of royalty was necessary for the maintenance of the courts of justice, for police protection, mail communication, and for public services. While acknowledging the force of these reasons, they submitted that more thorough examination of the real cost of outputting gold would convince the Government that the royalty is a severe tax, and expressed the hope that next year would see it removed. The royalty was not collected from any claims which had not got into good working order, or which could not show a profit after paying the royalty, and this would represent a large sum. Again, more than half the leases were exempted from the royalty on account

of having been renewed previous to the date of the law requiring the payment of royalty coming into force. The collection of royalty will amount to about \$500,000."

Meantime Major Walsh had resigned his commissionership and been succeeded by William Ogilvie, the explorer, who was given general instructions to investigate under oath the alleged wrongdoings in the territory. Mr. Fawcett was succeeded as gold commissioner by Gordon Hunter, of Victoria, B. C. But the latter gave up the office, and E. C. Senkler, of Nelson, B. C., was then appointed.

The estimated output of gold for 1898 was \$10,000,000, by Major Walsh. A correspondent of the Vancouver "World" gave the following from private estimates of the respective mine owners: Bonanza, \$7,000,000; El Dorado, \$10,000,000; Hunker, \$2,500,000; Dominion, \$350,000; Sulphur, \$150,000; total, \$20,000,000.

Mr. F. C. Wade, Crown prosecutor in the Yukon, on Sept. 21, 1898, spoke at Toronto in the following terms of the royalty and the gold production: "That subject [the gold output] never came within my province; but up to the time Major Walsh left I understood that about \$500,000 had been collected in royalty. That would make the gold output \$5,000,000. Not all the royalty had been collected at that time, by any means, and outside of that you have to remember that direct taxes, like an income tax, or a royalty, are no sure index of the wealth from which they are derived. I think that Capt. Healey, of the North American Transportation Company, whose estimates are generally pretty safe to proceed upon, is not out of the way in placing the gold output this year between eight and ten million dollars. This, however, is no indication of the gold-producing power of the country."

In an interview after his return, Major Walsh spoke of the population of Dawson City as 30,000, of whom 80 per cent. were foreigners. Capt. Constantine, of the mounted police, early in August gave the following account of the place: "The trading companies—i. e., the North American Transportation and the Alaska Commercial Company—have erected large and expensive stores and warehouses, costing \$250,000 each. There are four saw-mills, any number of dance houses and saloons, a hospital in charge of Father Judge, the Jesuit missionary, a general hospital in course of erection by subscription, a Church of England mission, a Presbyterian mission, as well as a Roman Catholic one. All supplies are very costly. Lumber that would sell in Ontario for \$10 a thousand is worth \$200 at the mill. The cost of transportation to the mines, where it is used for sluice boxes and other necessary things, is 40 cents a foot. Wages are high, the ordinary rate being \$15 a day or \$1.50 an hour. The wages went to that figure by the action of a few of the owners of exceedingly rich claims, who were anxious to work out their claims and get out of the country as quickly as possible."

In December a fire occurred at Dawson, in which much valuable property was destroyed.

INDEX TO THE THREE VOLUMES OF THE THIRD SERIES. 1896-1898.

- Abbey, Henry E., obit., i, 542.
Abyssinia, i, 1; ii, 1; iii, 1.
Abyssinian priests dancing, illustration, i, 6.
Acheen, war in, i, 509.
Acoustics, i, 639; ii, 670; iii, 629.
Acton, Thomas C., obit., iii, 520.
Adams, Alva, port., ii, 141.
Aërial navigation, ii, 4.
Aërolite, great Spanish, i, 51.
Afghanistan, i, 7; ii, 8; iii, 2.
Agrarian agitation, ii, 69.
Agrarian socialism, ii, 75; iii, 70.
Agricultural Congress, i, 71.
Agriculture, i, 778.
Ahmad Khan, Sir Saiyid, obit., iii, 582.
Aitclison, Sir Charles, obit., i, 596.
Alabama, i, 9; ii, 9; iii, 3.
Alaska, census statistics, i, 790; map, ii, 444; boundary treaty, 789.
Albania, disturbances in, iii, 726.
Albania, centennial of, ii, 561.
Alcock, Rutherford, obit., ii, 628.
Alcohol used in the arts, i, 200.
Alfieri di Sostegno, Marchese Alberto, obit., ii, 629.
Alger, Russell A., sketch and port., ii, 776.
Algeria, i, 296; ruins of Kalaa, ii, 24.
Algotometer, the Temple, i, 677.
Alien ownership of land, ii, 193.
Allen, Frederick De Forest, obit., ii, 577.
Allen, Harrison, obit., ii, 577.
Allen, Joseph H., obit., iii, 520.
Alley, John B., obit., i, 543.
Alliance of Reformed Churches, i, 681.
Allison, Joseph, i, 543.
Alloys, i, 463; iii, 433.
Altar in Copan, illustration, i, 17.
Alula, Ras, obit., ii, 629.
Aluminum, i, 461; ii, 510; iii, 431.
Alvary, Max, obit., iii, 582.
Alvord, Thomas G., obit., ii, 578.
American Board, i, 142.
Ammen, Daniel, obit., iii, 521.
Anderson, Sir W., obit., iii, 582.
Angeline, Princess, obit., i, 543.
Anglican Church, the right of public meeting, ii, 15.
Anglican Churches, i, 11; ii, 11; iii, 4.
Anglican orders, validity of, i, 15.
Anglo-Chinese agreement, new, ii, 138.
Antananarivo, illustration, iii, 414.
Antarctic regions, i, 306; ii, 337.
Anthony, G. T., obit., i, 543.
Anticigarette law in Iowa, i, 360.
Anti-Italian demonstrations, i, 83.
Anti-Semitism in Galicia, iii, 69.
Antislavery laws in Egypt, i, 258.
Antitrust law, in Texas, ii, 765.
Apportionment law in Indiana, i, 357.
Appropriations, i, 217.
Arbitration treaty with Great Britain, ii, 788.
Arbor Day, i, 814.
Archæology, i, 16; ii, 20; iii, 13.
Archbishop of Canterbury, i, 725; charge of the, iii, 12.
Arden, T. B., obit., i, 543.
Argentine Republic, i, 24; ii, 25; iii, 18; Chilean boundary, iii, 20.
Arizona, i, 26; ii, 27; iii, 20; statehood, i, 27; iii, 21.
Arkansas, i, 27; ii, 28; iii, 21.
Armaments. Czar's proposal for reduction of, 688.
Armenia, i, 210, 735; outrages, 690; ii, 770; grievances, iii, 727.
Armitage, Thomas, obit., i, 543.
Artemis, Agrotera, temple of, ii, 21.
Ashanti war, i, 818.
Ashley, J. M., obit., i, 543.
Asia, colored map, iii, 124.
Asmara, Abyssinia, illustration, i, 2.
Asnyk, Adam, obit., ii, 629.
Associations for the Advancement of Science, i, 30; ii, 31; iii, 24.
Asteroids, i, 47; ii, 52; iii, 51.
Astronomical progress in 1896, i, 46; in 1897, ii, 49; in 1898, iii, 50.
Astrophysical standards, i, 51.
Atkinson, George W., port., ii, 823.
Atkinson, John, obit., ii, 578.
Atlanta, Ga., Exposition at, i, 811.
Atomic weights, i, 120; ii, 127; iii, 117.
Atwood, Melville, obit., iii, 521.
Augur, C. C., obit. and port., iii, 521.
Aumale, Henri E. P. L., obit., ii, 629.
Aurère, Paul, obit., i, 597.
Ausgleich, the, i, 66; iii, 66.
Australasia, i, 53; ii, 55; iii, 57.
Australian Federation, i, 57.
